"People are becoming more and more eager to get out of doors. so let us make the most of porches, however hopeless they may seem at first. No porch exists which cannot be made more livable and attractive at the same time. The principal things to keep in mind as fundamentals, no matter what kind of a porch engrosses attention, are first to secure some privacy by the use of awnings or even simple Japanese screens, second, to make the porch comfortable and inviting, the chairs must be carefully selected for comfort first of all, and, third, to make it colorful and very gay and happy, with plenty of little intimate things about so that it has some personality of its own."

LIVE STOCK

HOG CHOLERA IS CAUSE OF LOSSES

Measures to Control Various Diseases Are Needed.

(By J. W. LUMB, Extension Veterinarian, Kansas State Agricultural College.)

Knowledge is power in the control of swine diseases.

It has been estimated that only 50 per cent of the pigs farrowed live to marketable age. It is commonly assumed that 90 per cent of all losses from diseases in swine may be charged to hog cholera.

While in continuous use, the old hog lots and houses may become centers for external parasites such as lice and mange mites and more death dealing microscopic organisms, those that cause pig diseases such as scurvey, scours, infectious nasal catarrh, bronchitis, infectious odema, swine pest, undesirable sequels to wound infections, eczema, necrobacillosis of the skin, nose, stomach, and intestines, and various types of pneumonia. Besides all these troubles, there are the ever present large round worm eggs.

Preventive measures to control pig diseases should begin before the litters are farrowed.

Thoroughly clean farrowing house, removing all litter and scrubbing floor and walls with boiling water and lye.

Wash sows with soap and water before placing them in cleaned houses.

Within two weeks after farrowing, remove sow and pigs directly to a field that has not been used for hogs for at least one year.

Remove sow at weaning time.

Allow no other hogs in the pasture.

Keep pigs on the pasture until four months old or until they are past the period of greatest danger.

Plow hog yards and lots each year and plant crops to help destroy round worm eggs.

Liver Fluke of Sheep Cause of Much Damage

(Prepared by the United States Department of Agriculture.)

A poster dealing with the common sheep liver fluke has been issued by the bureau of animal industry, United States Department of Agriculture, to enlist the aid of live stock owners in checking the spread of the parasite. The poster describes and illustrates the life cycle of the fluke and outlines simple methods of control. Since young flukes spend a part of their life history in the snail, it is especially important to drain, fill, or fence off wet areas in which snails breed. Snails may also be destroyed by the application of copper sulphate, as a spray or powder, to infested pastures.

Besides killing many sheep and cattle annually, flukes cause an annual loss of fully $300,000 because of damage to livers as a food commodity. These parasites, sometimes incorrectly called leeches, are spreading from the West coast, Rocky Mountain states and South toward the East and North. Copies of the poster may be obtained on request to the bureau of animal industry, United States Department of Agriculture, Washington.

Manicuring Cattle to Save Much Discomfort

Cattle kept in the stable or in yards often suffer discomfort because of excessive growth of the claws. This is due to lack of wear, writes Dr. L. Van Es, in Kansas Farmer. Excessively long claws lead to a faulty position of the limbs, strains of tendons and pain during motion. This discomfort and pain may reduce the milk yield.

Heavy bred bulls are particularly apt to suffer, and their usefulness may become impaired. They should have their claws properly trimmed about twice a year. With appropriate tools the excessive horn may be removed and the whole smoothed with a rasp. It may be necessary to throw the animal but this should not keep the job from being done.

Oats Replace Corn for Hogs in Purdue Ration

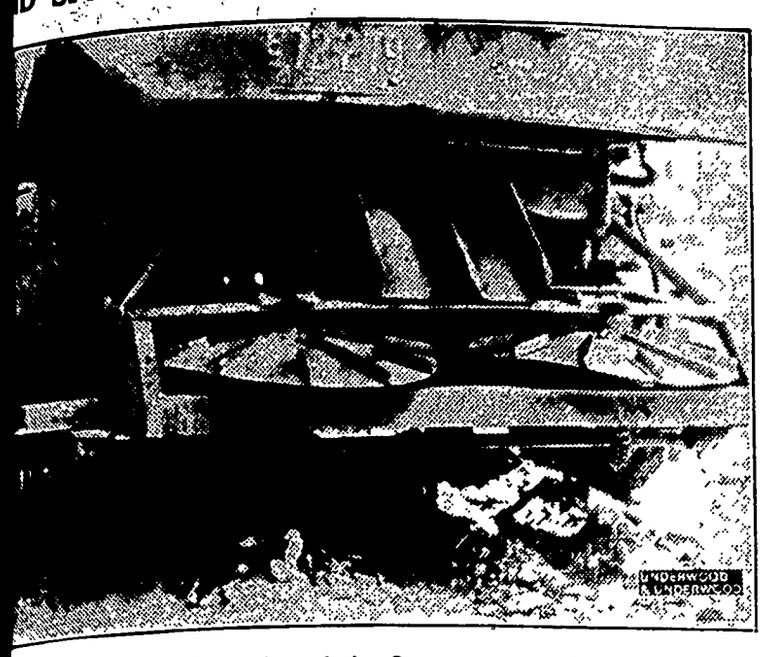
Swine feeding results at Purdue University, LaFayette, Ind., show that oats in rations for swine should be limited to one-half the weight of the ration. More than this weight is not used economically and gains are slower.

The corn replacement value of oats varies according to the amount of oats used. When one-fourth of the ration was oats, one bushel of oats replaced two-thirds of a bushel of corn. Where oats made up one-half the ration, a bushel of oats was equal to only one-half bushel of corn.

Get Lambs Eating

Many shepherds clip the wool from around the ewe's udder which, of course, lessens the wool haul damage but with wool always on fences and troughs one has to get the lambs to the eating habit as soon as possible. Lambs a few weeks old enjoy nibbling at grain, oats, bran and cracked corn with a sprinkling of linseed oil meal which makes a fine lamb feed, and it is surprising how soon the lambs become accustomed to eating grain corn.

D SPRINKLER USEFUL HIGHWAY DEVICE



e new device, the invention of the Oregon state highway department, is used to sprinkle sand over icy pavements during the winter months ver the soft tar streets during the summer time. The sand runs down ute onto the revolving disks which spread it evenly over the street. cket and chain drives the disks.

ST NATIONAL TOMOBILE SHOW

Twenty-Eight Years o at Madison Square Garden, New York.

lling the first National Automo- ow, held 28 years ago at Madi- quare Garden, New York, Frank tt, prominent in engineering cir- nd who every year has attend- national show, recites some in- ing reminiscences. To quote Mr.

e first show was held Novem- to 10, 1900. Thirty-one different of cars were shown. Eight steam driven, eight electric and by gasoline motors. Twelve of iteen gasoline cars were fitted single cylinder motors, two with ylinders and one had three cyl- s.

t of the thirty-one makes of cars on display only four are still be- nade.

wer plants with one or two ex- ns were located inside of the and under the front or rear seat.

Steering Wheel Not Favored:

e steering wheel made its ap- nce on one or two cars, one com- tor saying editorially, 'A few adopted that foreign freak, the , which is inconvenient and com- ed and cannot compare with the

e show, which was sponsored by utomobile Club of America, was nqualified success, and the club in for a lot of praise for the effi- manner in which it handled 'New 's first real automobile show.'

ne publication contrasted the ex- ion with the 'farce held in 1899 n dozen vehicles were gathered her and palmed off as an automo- show, at which vigilant guards ented visitors from kneeling to under the carriages—and prompt- ent away anyone exhibiting too intelligent curiosity.'

addition to viewing the cars the rs were treated to test demon- tions in the garden. These tests designed to show that the cars d run and could be steered and ped.

Car Specifications.

is interesting now to recall some he specifications of cars at the show. Here are a few:

ops—mostly none; some canopy. ders, or mudguards—metal frame patent leather sewed over the e. Windshield—none; used gog- Steering gear—stick or lever; or two had wheels. Springs—full tic or long semi-elliptic. Lamps— sene; carbide with gas and water a part of the lamp; electric on ries. Drive—chain. Signal—me- ical and electric bells. Ignition— e and break; one or two with jump k. Instruments—no speedometers, eters nor gauges."

ort Circuits Cause Failure of a Battery

ternal short circuits cause sud- failure of a storage battery, but every sudden failure of a bat- is the result of a short circuit. ow can a motorist tell if short uiting has been the cause? This he natural question that immedi- y comes to mind.

he story is told in the process of arging the battery. After the have been on charge for 12 rs or so the trick is to feel the ery posts to note whether they are m or cold. If you find one that's m the indications are that there short circuit in the particular

xas Is Now Spending $700,000 on Old Roads

etermined to maintain the excel- status of its state highways, as is now spending $700,000 to age 396 miles of old gravel and adam roads in 23 of its counties. ork under this appropriation con- ted the initial project of the 1928 lway program, which called for surfacing of approximately 1,000 s of gravel and rock roadbed with alt. The 396 miles of roadway ted by the appropriation for new face construction are being given asphalt surface treatment.

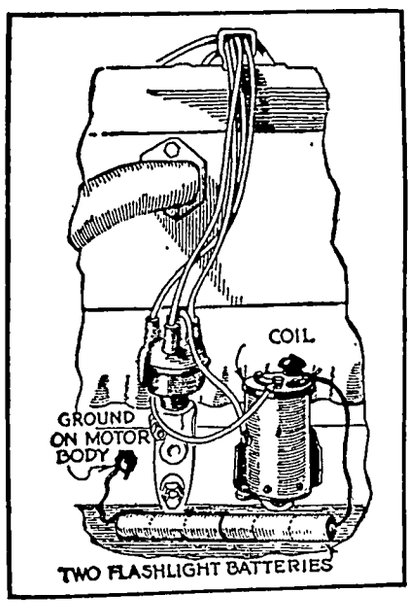
Loose Nuts Will Cause Cylinder Head to Blow

Much trouble is caused by not knowing whether a repairer has completed the job. Mechanics are subject to lapses of memory as well as anyone else, and it sometimes happens that in replacing a cylinder head a repairer will overlook the importance of tightening the cylinder head bolts after the engine has warmed up.

This is necessarily an expensive proposition for the car owner who fails to check up on repairs, for it means that the cylinder head gasket is likely to "blow," causing all varieties of water, oil and compression leaks. It is too late to tighten up the bolts after the gasket has been subjected to strain.

Flashlight Battery Will Start Motor if Stalled

If the battery is so low that the car won't start, even with the hand crank, a couple of flashlight batteries will do the trick. The illustration shows how to connect them. Remove the ignition coil wire leading to the ignition switch, and replace it with a wire from one end of the two flashlight



How to Wire Flashlight Batteries.

batteries connected in series (you must have at least four cells). Then connect the other end of the two batteries to the metal crank case. Crank the motor, and when it starts, speed it up to send a charge through the storage battery. A few minutes' run will put enough charge in the battery so you can start the car again with the crank.—Popular Science Monthly.

Many Parts Forgotten When Autos Are Oiled

It pays to keep in mind many of the less conspicuous parts of the car which are not properly lubricated because they are overlooked so easily. One of these, almost inevitably forgotten in the lubricating process, is the top of the steering gear post. A few drops of light oil applied at this point every few thousand miles will take away that grinding noise when one tugs at the wheel, as in parking.

Clutch and brake pedal shifts need a little lubricant once in a while. Neglect causes excessive wear, resulting in noisy pedal action. Don't neglect the windshield supports and anchors.

AUTOMOBILE ITEMS

Auto insurance on the installment plan has made its appearance in several states.

* * *

If the rubber knob on the gear shift lever continually works loose, remove it and place a heavy lock washer inside of it.

* * *

That Wisconsin man who wrecked his car because it wouldn't start was just about one degree madder than the rest of us.

* * *

If the country was as much concerned about the prevention of automobile accidents as about the prevention of flu we wouldn't be so badly run down.

* * *

After a new car has run 400 or 500 miles it is advisable to take down the crankcase and clean it thoroughly in order to remove all the filings, casting scales, etc., that could not be removed at the factory

Great Value of Clover as Crop

Big Returns Obtained From Plant as Builder of Worn Soils.

Of all the legumes grown in Illinois, probably none has greater possibilities for soil improvement than sweet clover, according to O. H. Sears of the University of Illinois. The increased yields of crops following its use testify to the worth of this legume for "soil-building" purposes.

Returns Comparable.

That the returns secured from the use of sweet clover as a green manure crop are comparable with those obtained from other system of farming, is shown by the fact that both first and second year corn after sweet clover yields as well as that on land to which farm manure has been applied when both the sweet clover and manure plots have received limestone and phosphate applications. As an average of the last rotation on four experiment fields located on dark colored soils, the yields were 65 and 62 bushels per acre, respectively, on first and second year corn for both the sweet clover and farm manure plots.

It is of interest to find that on the same fields the response to phosphate fertilization has been more pronounced on plots growing sweet clover than on those receiving farm manure. In fact, in these cases, no increased corn yields have resulted from application of phosphate in addition to the manure, whereas, on the sweet clover plots an average increase of four bushels per acre has been recorded. These results which are typical of those secured throughout the state, indicate that on those soils in need of phosphate applications, greater returns will likely be secured where sweet clover is being used as a source of organic matter than will be obtained where manure is spread liberally.

Potash Profitable.

There are also indications that the purchase of potash salts may become a profitable practice when used on land where sweet clover has been employed for soil building purposes. Particularly on the lighter soils of the state, there appears to be an increasing need for potassium with the increased growth of sweet clover green manure crops.

It appears, therefore, that in order to secure the greatest benefit from the sweet clover crop, consideration should be given to other soil improvement practices which may enhance its value.

Seed Is of Importance in Growing Many Crops

Only the soil itself is a more important factor in the growing of grain, flowers, clover, vegetables, or any crop, for business or pleasure, than the seed used. Farmers and gardeners have no control over the growth in the spring and again before maturity in the fall. There may be a drought, or a flood, or a half storm, and all are beyond the control of man. But he has control over the seed used and his profit or pleasure is largely determined by the sort of thing he sows.

"One has every reason to be suspicious of cheap seed just as one is suspicious of a cheap horse or cow," states W. J. W. Lennox of the Dominion seed branch at Vancouver, B. C. "When you are offered a No. 1 horse at a low price, you immediately start looking for defects, and if you don't know very much about a horse, you will have him taken to a veterinary for examination. Follow the same rule with your seed supply."

More Barley Should Be Be Cultivated for Stock

Those who have studied the yields of oats and barley over a period of years are of the opinion that, except for sections where chinch bugs are bad or the soils sandy, barley should be more generally grown with a corresponding reduction in the acreage of oats. Figure this out for your own community. Take the average yield of oats and of barley and reduce this to pounds. Then subtract from this the 30 per cent hull which is found in oats and the 15 per cent common to barley. This will give the hull-free grain per acre which on the average will he from 25 to 50 per cent in favor of barley.

Around the Farm

Seed testing is cheap insurance.

* * *

Drained soil will become warm earlier in the spring than wet soil.

* * *

For temporary pasture during the last half of the season, sudan grass is splendid.

* * *

Many successful farmers are specializing in two or three lines to offset the effect of changing price cycles.

* * *

By modern methods of sewage treatment, the liquid may be made to contain fewer bacteria than many of our private sources of drinking water.

* * *

After a calf is seven weeks old the milk can be entirely eliminated from the ration. Thereafter a vigorous calf will consume 13 pounds of gruel daily until weaned at the age of four months.

Morgan Wasn't Signing Any Document Unread

A fresh anecdote about the late J. Pierpont Morgan is related by John L. Merrill, president of All America Cables.

"When I was a young man," he tells, "I was sent to obtain the signature of Mr. Morgan on a copy of the minutes of a board of directors. The directors had lacked the necessary quorum, so another signature was needed to approve the minutes.

"When I entered the office, I said: 'The president says these minutes are all right, and if you will sign them I will go right away and not take up more of your valuable time, sir.'

"'What is your name?' he asked.

"'John Merrill,' I replied.

"'Well, Merrill,' he said sternly, 'that signature of mine is worth some dollars to me. No paper that requires my signature is too long for me to read.' And he took the papers and read them with care before he signed."—Kansas City Star.

The Crop That Failed

Representative Gilbert N. Haugen of Iowa said at a recent banquet in Northwood:

"The farmer is plucky, yes, too plucky. He ought to grumble more at his hard lot. Instead, in his plucky way, he laughs about it.

"A stranger from the city told the farmers in the general store at Croydon Four Corners about a crop failure, but an elderly farmer said:

"'Yep, stranger, I went through that crop failure, too. It wa'n't nothin', though, to the crop failure of '79. Back in '79 our corn crop sure did fail us. Yes, it sure did. Why, we had corn for dinner one day, and pap ate 14 acres of it."

Dumb-Bells

Little Marjorie went with her mother to her older sister's school exhibition of physical training which took the form of Indian-club drill, dumb-bell exercises, and so on. Marjorie watched with delighted interest, and while the second group came on she whispered eagerly to her mother:

"What are those?"

"Dumb-bells," laconically answered her mother, her attention on the performance.

"Yes, I know," returned the little girl, "but I mean, what are those things in their hands!"

The Curious Cat

"Yes," gushed the first young thing, "my husband is a poet!"

"And do you get your eats at your parent's home or his?" purred the other one.

Fault-finding is never insincere. This is why it is so hateful.

Radiola 33 - newest RCA achievement

A high quality "all-electric" receiving set for inexpensive A.C. operation. An amazingly fine instrument at this remarkable price.

BULK *to fight constipation*

Post's BRAN FLAKES WITH WHEAT
Cases of recurrent constipation, associated with too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

FLAVOR *so you'll like it*

Two reasons why it's the most popular bran cereal in the world

Isn't it good to know that Post's Bran Flakes is as appetizing as it is effective in combating constipation!

Millions of people have found that the crisp, toasty flakes keep inviting the appetite. Important, since bran must be eaten every day to be effective. And Post's Bran Flakes *is* effective, keeping you normally regular and well . . . Pour the delicious flakes right out of the package into a bowl of fresh milk or cream and add fruit—or eat them in muffins or bread, they're equally tempting. Keep this up for two weeks and see how much better you feel—and how much more you enjoy breakfast!

Winners Will Go To Algona

The first two in each subject listabove will be permitted to comte with the first two making the ghest scores in same subjects from ber schools at Algona next Fri- y. A far as we know each of our igible students are very willing to tend the meet at Algona and they ll be accompanied by a member the faculty and will start early ough to be in Algona by 9:00 clock in the morning.

P. T. A. Brought Out Crowd

Our P. T. A. program was well tended on Tuesday evening of this eek. Miss Myrtle B. Johnston dissed "Making the Home More autiful," and Mr. Barlowe the bject of "Electricity in the Home.' oth discussions were interesting d profitable and we were fortumte in having them here for an evning.

Manual Arts Were Exhibited

Mr. Heiden had placed on exhibion work of his manual arts deartment which the audience were vited to visit in the manual arts room. Although the work was done by Freshman boys alone every one admitted it was excellent. There were porch swings, book racks, waste baskets, bread boards, meat boards, card trays, in fact almost anything a boy might find ueful in the home.

Game Period Was Enjoyed

Mr. Joregnson and Miss Root directed the play hour following the program and everyone seemed to enjoy himself.

COUNCIL PROCEEDINGS

Klemme, Iowa,
March 11, 1929.

Regular meeting of the Town Council held at the Mayor's office.

Wes Schuldt, A. Wellemeyer, C. A. Larsen and H. L. Suckow present.

Motion made and seconded to allow the following bills:

Bills allowed.

The bill of H. S. Schwartz for $5.00 for shoveling snow off crossings not allowed as no authority was given for this work.

Motion made and seconded that Fred Gates shall draw a salary of $75.00 per month beginning March 1st as marshall and street commissioner.

The five members of the council shall act as judges and clerks of the election to be held Mar. 25, 1929.

Motion made to adjourn.

A. J. KUDJE,

COUNCIL PROCEEDINGS

Klemme, Iowa
April 1, 1929

The first regular meeting of the new council called to order by Mayor Grange, with C. A. Larsen, Conrad Quandt, Arthur Wellemeyer, W. F. Missman and H. F. Jost as members of the council present.

The council proceeded at once to appoint a clerk, and A. J. Kudje was retained in the office.

The bond of C. G. Waterman as Treasurer was on motion approved.

Motion made and seconded that all the books of the town shall be examined every three months at the regular meetings of the council and a sworn statement shall be furnished by the Treasurer as to receipts and expenditures at these regular periods of examination.

The entire council wish to make this statement to the public that their regular and special meetings will be held at the town hall and extend a cordial invitation to every one interested to be present at those meetings which will be held every 2nd Monday of the month at 7:30 p. m.

Motion made and seconded that this meeting be adjourned to April 8, 1929.

A. J. KUDJE,
Clerk.

KLEMME SCOUTS PUT UP BIRD HOUSES IN PARK

Monday and Tuesday evening the Scouts of Troop 56 put up martin houses in the Klemme park.

The Flying Eagle Patrol, with Wayne Pavey as Patrol Leader put up an eight sided, eight room house.

The Owl Patrol, of which Byrnes Missman is the Patrol Leader utilized the old flag pole on which they mounted their martin house.

The houses are already occupied by birds.

J. P. LARSEN DIED THURSDAY NIGHT

FUNERAL SERVICES WERE HELD SUNDAY AFTERNOON

J. P. Larsen Had Lived In Klemme Since 1891

With the passing of Mr. J. P. Larsen last Thursday evening at the home of his son, Clarence, the ranks of the old settlers of this community were again thinned, for Mr. Larsen had lived in this community since 1891. He had a great deal to do in the way of building up the town of Klemme and surrounding vicinity. Being a carpenter and a contractor he built many of the places in and about Klemme.

Funeral services for Mr. Larsen were held Sunday afternoon at the Methodist Church, in charge of Rev. H. E. Whyte. The following obituary was read:

Jens Peter Larsen was born May 1, 1845 in Denmark, being 83 years, 11 months and 18 days of age at time of his death.

At the age of 34 he left his native country and came to America, arriving at Halifax, Nova Scotia in the month of April 1879. Later he became engaged in rail road bridge building in the western states of Oregon, Utah and Idaho. In 1885 he came to Garner, Iowa and two years later was married to Miss Caroline Renziehausen. Soon after they moved to Minneapolis where they lived three years. In 1891 they came to Klemme where he has since made his home.

During the years from 1891 to 1916 he was actively engaged as a builder and contractor in this section and the many places erected by him are a monument to his work.

Throughout his entire life he has been known for his fairness and his honesty, believing that petty falsehoods and unfairness were beneath his dignity.

During the last two years he has been gradually failing in health and about 3 weeks ago was confined to his bed. At 9:00 p. m. Thursday at the home of his son, Clarence, he passed away, the end coming gradually He retained consciousness and recognized his family until the very last.

Father Larsen is survived by one brother in Wisconsin and a sister in Denmark, two sons: Clarence of Klemme and Oscar of Ames. His wife passed away August 23, 1925 and a son Arthur in 1904.

Mr. Larsen was confirmed in the Lutheran Church in Denmark and will be remembered as living a clean moral and upright life. He remarked shortly before his death as being prepared to go.

Burial was made in the Klemme Cemetery.

Card Of Thanks

We wish to thank our neighbors and friends for their assistance given us during the illness and death of our father; and thanking those who contributed flowers and other expressions of sympathy.

C. A. Larsen and family.
Mr. and Mrs. Oscar Larsen.

BEN GREIMAN SHOT IN ANKLE IN RIFLE ACCIDENT

Ball From Small Bore Rifle Lodges In Farmer's Ankle

Ben Greiman, farmer living north and west of Klemme was the victim of an accident Saturday when he was accidently shot in the ankle by a neighbor's boy.

Mr. Schlawin and his son were at the Greiman farm. The boy had a 22 cal. rifle which he was carrying and was reminded by his father that the gun was cocked. Either in letting down the hammer or accidently pulling the trigger the gun discharged and the rifle ball lodged in Mr. Greiman's ankle, shattering some of the bones.

Medical attention was given at once and late reports are that Mr. Greiman is making a good recovery.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

There will be preaching service both morning and evening next Sunday at the regular hours. It is encouraging to have the broken ranks filling up so well again since the roads have become fit for automobiles, after the long winter blockade. New interest is being manifested in all branches of the church. Let us keep it up; we must now make up for lost time.

We have been having some very interesting and helpful meetings in the Epworth League. We now have 39 members on the roll and the attendance of late has been running between 25 and 30, and we belive that this number can still be increased.

The Methodist Hospital at Sioux City is in the midst of a financial campaign to pay off the indebtedness on its very fine building and equipment where a great ministry of healing is being carried on. The campaign is being carried on all over North West Iowa and in the near future will come to our community. The territory nearer Sioux City of course will be expected to meet the heavy end of this campaign, but since it is a conference institution we are also directly related to it and have some responsibility in the matter. Therefore may we all take a friendly attitude towards the project

Friday, May 3rd is the date for the great "Mens Council" to be held in Algona This will be an opportunity to hear some real talent, and we should have a large delegation present from ou rcharge. You cannot afford to miss it. You will have a chance to hear Mario Cappelli the great American-Italian tenor sing That would be worth going for, but that is only part of the story. We will also hear Ralph Ward of Chicago speak, likewise Bert Smith, rganizer of mens work thru-out the world, and last but not least, the great southern Negro orator, Lorenzo H. King. Let's go! There will be a program for the women also.

"ABE" LAURITSEN WILL FINISH COURSE AT UPPER IOWA

Will Have Completed Four Year Course In Three Years

Last week we neglected to state that "Abe" Lauritsen was another Klemme young man who would be a college graduate this year.

"Abe" will graduate from a four year course at Upper Iowa University, Fayette, this summer.

Mr. Lauritsen, after graduating from high school took two years of college work and then secured a position as coach at the Renwick high school, where he made good.

Instead of teaching again last fall Mr. Lauritsen decided to complete his college course, and with his summer work at school is able to finish the four years in three.

Has Good Positions Offered

"Abe" has already been chosen by two prominent schools who want his services as coach. We understand he has signed a contract to teach in the Orange Township Consolidated School near Waterloo, a school which has been famous the past few years for its basketball teams. He wa also elected at Belmond a coach.

MRS. "ABE" LAURITSEN QUEEN OF UPPER IOWA

FAYETTE, April 18.—Ada Friday Lauritsen of Renwick and Klemme will represent Upper Iowa university next week at Des Moines as this school's candidate for queen of the Drake Relays. Mrs. Lauritsen is a freshman at Upper Iowa. She is the wife of Adolph E. Lauritsen, a college senior here and former athletic coach at Renwick.

GEORGE ALBERS HAS ACCIDENT WHICH BREAKS BONE

George Albers is hobbling around as the result of an accident Monday evening. Mr. Albers was putting his cattle into the barn when he slipped and fell, the fall breaking a small bone in his foot or ankle and which caused him a great amount of pain.

STOLEN CAR FOUND NEAR WHITTEMORE

MERKEL CAR STOLEN AT BELMOND SATURDAY NIGHT

Was Found Demolished On Road Near Whittemore Monday

Walter, son of Mr. and Mrs. Peter Merkel, acompanied by Lester Swanson, son of Mr. and Mrs. Oscar Swanson, drove to Belmond last Saturday night in the Merkel Ford two door sedan and parked the car on the street At about 10:30 o'clock the boys went to get the car, and found that it had dissappeared. Authorities were notified but no trace could be found of the car.

Tuesday Mr. Merkel was notified that the car had been located over in Kossuth county.

The car was found abandoned and in a wrecked condition on a road four miles southeast of Whittemore Monday. Several passersby had noticed the car and notified the sheriff at Algona. It was hauled in and as it bore a Hancock County number and Garner authorities were notified and Mr. Merkel was called to come after it.

A Mr. Wm. Cramer reported that a car traveling at a high speed hit his car Sunday night while trying to pass him, forcing him into the ditch and wrecking his car. The unknown car and driver kept on.

It is thought the stolen Merkel car was the one which figured in this accident as the front wheels are bent, the radiator wrecked, the hood missing and the fneders bent. In other words the car is in such bad condition that it may not pay to fix it up. A leak in the engine is thought to have forced the driver to leave thec ar.

Mr. Merkel has had the car just about a year and it was practically as good as new Unfortunately the insurance on the car expired Friday noon and was stolen that evening. Mr. Merkel had planned to get it insured that same day, but could not locate his insurance agent he wished to renew the policy with.

On checking up the mileage on the speedometer Mr. Merkel says the car was run a little more than one hundred miles after being stolen. No doubt the work was done by an amateur, or "joy-riders" otherwise the car would not have been found so close to home.

HANCOCK COUNTY REAL ESTATE TRANSFERS

Trades In Land And Town Property Recorded The Past Week

Owen F. Conwell, Admr. to Geo. W. Griggs. Administrator's Deed, date 5-6-22, $50.00, lots 17-19 blk. 1 Clines add. Goodell.

Jennie E. Pritchard, hus. to Charlie Nedved. W. D., date 2-28-29, $1.00 NE¼ 21-96-24.

R. L. Muhm to Theodore Freerksen. W. D., date 4-17-29, $13,000.

PUBLIC NOTICE

The Trustees of Ell Township at their annual meeting held in April decided to raise the price of Cemetery Lots from $10.00 to $20.00 for residents of the township and $25 a lot for non-residents. The cost of care annually has been raised from $1.25 to $2.00 per lot. All money for the care of the lots should be paid to the Sexton and Caretaker, Fred Gates, not later than June 1, 1926. Township Trustees. 2tc

4-H CLUB OF ELL TOWNSHIP WILL STUDY CANNING

Art Of Canning Was Discovered Frenchman 100 Years Ago

(Mildred Hampel, Club Reporter)

Do you know that the Art of Canning is a hundred years old? During a French War at that time there was a big shortage of food and it was especially hard to get unspoiled food to the front where it was needed by the soldiers. Finally it became a serious matter and the French Government offered a prize of twelve dollars to the person who could think of some way of keeping the food.

Frenchman Won Prize

A Frenchman by the name of Appert conceived the idea of placing the food in bottles, corking them, and sealing with parafin; he won the prize. Later on tin cans were used in canning by the Englishmen, and finally glass jars.

Girls Will Can Fruit, Vegetables

It's the art of canning that is to be studied and discussed by the Crafty Canners of Ell Township their 4-H work for the coming year. Saturday, April 13th a meeting was held at the home of their leader, Mrs. Chas. Griffen. The goals of the year's work were discussed, namely: Each girl to can six varieties of vegetables and six varieties of fruit, at least a total of thirty-six jars. Each girl to plan her food budget for one winter month. Each girl to improve three food habits

Mrs. Griffen gave a demonstration on the canning of chicken which proved to be very valuable and interesting.

New Members Added To Club

New club members present we Reva Elder, Adeline Greimann, Estella Griffen.

Delicious refreshments were served at the close of the meeting. The next meeting will be held at the home of Miss Ethel Barz, April 27

CONSTRUCTION GANG AT WORK EAST OF KLEMME

Favorable Weather Needed For Grading Township Road

The Fox Construction Co. moved their machinery and equipment on the grounds Thursday to begin the work of grading the township road, running north from the Swanson school house, two miles east of this city.

Five miles of road will be built and will connect with a gravel road connecting with the pavement east of Garner.

After this new road has been built and graveled it will give farmers along the road a fine outlet for traffic in several directions of travel.

We understand plans are made to gravel the county road running east from Klemme to the Cerro Gordo county line early this summer when the new grade has sufficiently settled and is in good condition.

KLEMME TEACHERS RECEIVE TEACHING OFFERS

Two Grade Teachers Elected At Larger Schools

Miss Phyllis Root, 5th and 6th grade teacher of the Klemme school has been elected as a grade teacher at both the Holstein and the Sioux Center schools. Both of these offers are from large schools and carry an increase in salary. Miss Root is undecided as to which of the two schools she will elect.

Miss Lenora Wheatman, 1st and 2nd grade teacher has been elected by the Iowa Falls schools as a teacher in the grades as a special instructor for the over-flow in grades two and three. She has not as yet signed a contract for that position.

Both of these young ladies are to be congratulated on their good fortune in securing positions in larger schools at increased salaries.

They have been fine teachers in our school and are deserving of advancement.

PUBLIC NOTICE

I will not be responsible for any debts contracted by my wife. Chris Anderson. 2wc

1—Vice President Curtis calling the senate to order at start of the extraordinary session of congress. 2—Body of the late Ambassador Myron T. Herrick being escorted through New York enroute to Cleveland for burial. 3—King George of England, with Queen Mary, at Bognor, on his first public appearance since his serious illness.

NEWS REVIEW OF CURRENT EVENTS

Congress Is Struggling With Farm Relief and Tariff Change Problems.

By EDWARD W. PICKARD.

CONGRESS, which met in extraordinary session at the beginning of the week, is struggling with the problem of farm relief, for the solution of which mainly it was called to Washington by President Hoover. On the first day the usual process of organization was carried out, Nicholas Longworth being re-elected speaker of the house and Vice President Curtis taking his place as presiding officer of the senate. Possibly for the purpose of avoiding any objections to the seating of De Priest and Michaelson of Illinois, Mr. Longworth swore in all the new members of the house at one time. De Priest, colored, was under indictment for months as a member of a gambling ring, but the case was dropped recently. Michaelson was indicted in Florida on charges of smuggling liquor into the country. The administration's farm relief measure was promptly introduced by Representative Gilbert N. Haugen of Iowa and the next day it was approved by the new committee on agriculture by a vote of 19 to 2.

Tuesday President Hoover's message was read to congress. It was brief and business-like, as might have been expected, but did not meet with unanimous approval. Some of Mr. Hoover's supporters in the campaign were decidedly disappointed in his handling of the farmers' problem, these including Senators Capper, Brookhart and Norbeck. The President recommended legislation covering eight matters, as follows:

Creation of a federal farm board, an enormous revolving fund and other machinery for stabilizing agriculture on a basis more profitable to the farmers.

Limited revision of the tariff to increase the protection of the farmers and to furnish adequate protection to those industries in which changed economic conditions have produced slackened activity and lessened employment.

Reorganization of the tariff commission and of its method of operation.

Provision for domestic valuation of imports in cases of foreign undervaluations.

Provision for the taking of the census of 1930.

Reapportionment of representatives in congress.

Suspension of the national origins immigration restriction system.

"Minor administrative authorizations," possibly including the transfer of prohibition enforcement to the Department of Justice.

The control of farm production and improvement of marketing by Mr. Hoover's plan, as embodied in the bill before the house, would be committed to the supervision of a federal farm board which would use a government revolving fund to finance farmer-controlled corporations and associations. The President is known to be opposed to the export debenture plan though he made no mention of it in his message. The scheme was offered in the senate's bill for agricultural relief, which varied in other respects from the house measure.

Concerning tariff changes the message was rather vague. It said congress should be careful not to make alterations that would impair our export trade or cause retaliation by other nations. The President's recommendation that the national origins immigration restriction system be suspended probably will meet with more opposition in congress than any other of his suggestions.

POLICIES of the federal reserve board which affected stock market activities by restricting the amount of money for speculation were attacked in the house by Frank R. Reid of Illinois and Loring M. Black of New York. Representative Reid offered a resolution for appointment of a committee of nine to investigate the administration of the federal reserve system, suggesting that the board might have been unduly subject to foreign influences.

Representative Black defended speculative activities on the New York Stock exchange and insisted there was no occasion for alarm on account of the greatly expanded operations there. He asserted that the federal reserve board was injuring business generally by attempting to curb speculation. The board, according to Mr. Black, is exceeding its powers under the law.

APPOINTMENT of Charles G. Dawes as ambassador to Great Britain was confirmed by the senate without roll call. Other Presidential nominations were those of Joseph M. Dixon of Montana to be first assistant secretary of the interior; Oscar B. Colquitt of Texas as a member of the board of mediation; John M. Morin of Pennsylvania as member of the United States employees' compensation commission; Patrick J. Hurley, assistant secretary of war; Ernest L. Jahncke and David S. Ingalls, assistant secretaries of the navy; Capt. Joseph J. Cheatham, paymaster general of the navy with the rank of rear admiral, and Maj. Gen. Charles McK. Saltzman (retired), member of the federal radio commission, and Charles J. Rhoads, commissioner of Indian affairs.

WET members of congress lost no time in getting into action along their favorite lines. On the first day of the session a lot of bills and resolutions were introduced in the house designed to repeal or weaken the prohibition legislation, and others were offered on succeeding days. Of course not one of these measures stands any chance of being considered by this session.

Wisconsin's lower house, obeying the mandate of the referendum, voted to repeal the state prohibition act and to wipe out the state prohibition commission, and hurried the measure on to the senate. The bill takes the Badger state out of prohibition enforcement, but leaves the matter optional with municipalities. Cities and villages can adopt any regulatory or prohibitory ordinances they see fit. If they want to they can adopt the abandoned state dry code as their own, but effective only within their own borders.

Washington's reply to Canada's protest against the sinking of the rum runner I'm Alone in the Gulf of Mexico by a coast guard vessel was delivered to the Canadian legation. Its contents were not made public, but it was understood to be conciliatory and designed to confine the dispute to legal aspects of the case. The issue may have to be determined by arbitration.

HARRY F. SINCLAIR, seeking to avoid imprisonment for contempt of the senate, has asked the Supreme court of the United States to reconsider its recent decision upholding his sentence. Meanwhile it is reported that he has lost control of the Sinclair Consolidated Oil corporation and that his place as chairman of the board may be given to Col. R. W. Stewart, whom John D. Rockefeller ousted from the chairmanship of the Standard Oil Company of Indiana. The Sinclair company is said to be dominated now by a new group of financiers.

RUSSIA, supported by Germany and Turkey, again presented to the League of Nations preparatory disarmament commission her plan for the immediate reduction of armaments. But France and Japan attacked the scheme as impractical, the other delegates were unfriendly, and the commission voted against it. The Soviet plan provides for reducing armaments one-half, one-third or a fourth, according to the present military strength and various categories of the countries. It would establish definite figures on the number of effectives and the amount of material for the armies, navies and air forces, as against the conservative idea of merely seeking an agreement on broad general lines as recommendations for some future plenary disarmament conference which should fix the amounts and numbers and fill in all the details and particulars.

H. G. WELLS, the noted English novelist and publicist, addressing the German reichstag in Berlin, gave utterance to a grim prophecy. He said: "Our world is marching on to a new war, into which we will fall headlong as we did in 1914 unless we start to work systematically for peace. The chief danger is connected with Russia, which, through compulsory isolation, is becoming a country of inwardly concentrated patriotism which is likely to lead to a tremendous struggle between Russia and the western powers. The Russians will call it a battle against western capitalism, but it will be more than that. War may break out in Asia or elsewhere, but it will spread all over the world in a useless and gigantic war."

GENERAL CALLES, having the Mexican rebellion practically cornered in the state of Sonora, went to work carefully and systematically to crush it finally there, the campaign being under the active direction of General Almazan. Federal forces were being concentrated, coming from the east and south. The program was temporarily disarranged by a new uprising in Coahuila and a battle in Pulpito pass, the entrance to Sonora. Federal aviators reported that General Caraveo had 1,500 insurgents defending the pass and that hundreds of Yaqui Indians were hidden in the mountains ready to engage in guerrilla warfare. General Enriquez, one of the rebel commanders in the battle of Jiminez, surrendered to General Almazan. The latter said Enriquez would not be executed but would be treated as a prisoner of war—quite a departure from the usual Mexican practice.

SO WIDELY divergent were the proposals of the allies and the Germans in the matter of German reparations that the conference of experts in Paris ended in complete failure, Schacht offered for Germany 37 annuities of 1,650,000,000 gold marks, or more than three billion dollars total less than the sum demanded by the allies; and he would not increase the offer by a cent. Lord Revelstoke's subcommittee could devise no compromise, and it was therefore decided it would be useless for the commission to continue its labors. The delegates of the allies blamed Doctor Schacht for the breakdown of the negotiations, saying he had injected political matters into what was meant to be a purely financial settlement. Germany's credit abroad is likely to suffer greatly.

KING BORIS of Bulgaria, who has been on a round of visits to various European courts, was saved from probable assassination by the vigilance of the Sofia police. They discovered two bombs in the king's private railway coach which was being prepared to meet him at the border and bring him to his capital. The police said they had received warnings that the Communists intended to kill the monarch if the bomb plot failed.

BABE RUTH being one of our national "heroes," his every move is of interest to the people. So it is in order to report that the King of Swat took unto himself a bride last week in the person of Mrs. Claire Hodgson, a former actress who hails from Georgia. They were married early in the morning and set up housekeeping in a New York apartment. Their family includes the Babe's adopted daughter, Mrs. Ruth's daughter by a former marriage, and Mrs. Ruth's mother and two young brothers.

JOSEPH W. BAILEY, former representative and senator from Texas and almost the last of the noted orators of the South, fell dead in a courtroom in Sherman, Texas, in the midst of a lawsuit. Death was caused by a clot of blood in the heart. After his service in the national congress Mr. Bailey in 1920 sought the governorship of Texas, but was defeated by Pat Neff largely because of his activities against prohibition and woman suffrage.

The body of Myron T. Herrick, late ambassador to France, was interred in Cleveland, Ohio, after impressive ceremonies in the Trinity Episcopal cathedral which were attended by eminent representatives of the American and French governments and as many of his sorrowing fellow citizens as could crowd into the edifice. The streets through which the cortege passed with military escort were thronged with people, despite rain.

UNITED STATES NOW OWNS 9,000 ISLANDS

All Are Outside the Boundaries of States.

Washington.—Acceptance by congress of the Samoan islands as part of the United States' territory definitely adds six more bits of land to the thousands of islands the nation now owns.

"The United States has acquired some 9,000 islands outside the boundaries of the 48 states," says a bulletin from the Washington, (D. C.) headquarters of the National Geographic society.

"This host of territorial islands is scattered from the South Pacific north across the Arctic circle. They sprinkle the seas of both hemispheres for a distance of 15,000 miles from St. John, in the Virgin islands, to Balabac island, on the outskirts of the Philippines.

A "Milky Way" of Islands.

"While 9,000 islands are few, perhaps, beside the island collections of Great Britain, Holland and France, yet American territorial islands decorate the oceans like star galaxies ornament the heavens.

"The Philippines are the 'Milky Way' of the United States' island constellations. They alone comprise approximately eight thousand islands. Everyone knows about Luzon, the monster Philippine island, as large as Ohio in area. Almost nothing is known of the seven thousand islets in the Archipelago having an area of one-tenth of a square mile or more.

"Then there is the scarf of Aleutians swung across the blue sea void toward Asia. The United States coast and geodetic survey does not know for sure how many Aleutians there are, but it is endeavoring to find out by airplane surveys. Then, down in the panhandle of Alaska lie many more islands behind whose protecting flanks, steamers thread their way up the Inland passage. Other islands fret the Alaskan coast, including a famous little sandbar of an island behind which Wilkins and Eielson took off to fly across the top of the world.

"How large is Hawaii? That all depends upon how the territory is measured. By square miles of land the Hawaiian islands have an area equal to Connecticut and Rhode Island. By their spread over the Pacific ocean the islands occupy a region as long from east to west as the United States is wide. Wake island, of the territory of Hawaii, an uninhabited atoll 18 feet above sea level, lies nearly 3,000 miles away from the Island of Hawaii.

"To American citizens who wish to be marooned on an uninhabited island with ten selected books, the United States offers endless opportunities. In the West Indies there are some very nice islands on which nature, barring occasional lapses, maintains the quietness of a good library. Wake island, previously mentioned, assures almost perfect privacy. The nearest bit of land is 300 miles away.

Choosing a Sequestered Spot.

"Rose island, in the Samoan group, has unusual advantages for the seeker of literary leisure. It is 80 miles east of its nearest neighbor; climate, equable; real estate, one island half a square mile in area comfortably situated within a coral breakwater; inhabitants, none; fishing, excellent, although many species are poisonous. New packets of ten selected books could be obtained by the small boat which comes to Rose island annually to deposit emergency stores of food and water for the use of sailors who might be shipwrecked.

"The Samoan islands loom large in the history of the United States' foreign policy. The joint agreement of Great Britain, the United States and Germany to establish a protectorate over the islands, represented, it was said, the first departure from our nation's historic attitude toward alliances. The joint protectorate did not work out well, so, by treaties in 1900 and 1904, the United States took control over the eastern half of the islands containing Pago Pago harbor, the finest in all the South seas. Congress, after all these years, has passed a resolution accepting the twenty-year-old gift of the islands from the Samoan chiefs.

"In the lists of American territorial possessions one group of islands seldom appears. The status of 70 guano islands scattered all over the Pacific is indefinite. Even the position and existence of some of them is indefinite. By a law passed in 1856 the United States extended temporary protection to American citizens exploiting guano deposits on bird islands. While the United States is not obliged to maintain sovereignty over guano islands, neither has she surrendered all rights. Over some islets and banks such as Navassa island, between Jamaica and Haiti, Quita Sueno bank, Roncador cay, Serrana bank, and Swan islands, all in the western Carribbean, and Gente Hermosa or Swains island near Samoa, the American flag flies without question."

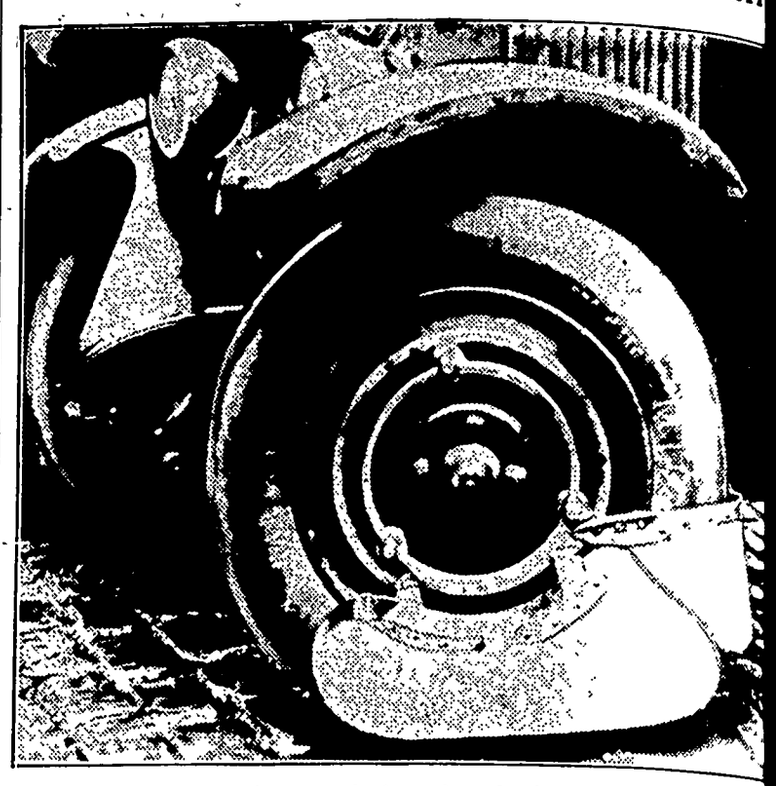
Loaded With Narcotics

Calcutta.—Narcotics valued at $35,000 were taken from a ship raided by police here recently. The vessel was from China and was found to contain firearms, besides the cargo of narcotics.

Golf Ball Explodes

Chicago.—Harold Carver, aged ten, threw a golf ball into a fireplace "to see what would happen." It exploded and his face was badly burned.

NEW ANTI-SPLASH DEVICE DEMONSTRAT



An anti-splash device, attached to the wheels of automobiles, which successfully demonstrated in Parisian streets recently. The thaw followed the cold snap of several days, necessitated something like this.

OWNERS REPLACE CAR SPARK PLUG

Annual Practice Has Advantages in Better Motor Work and Economy.

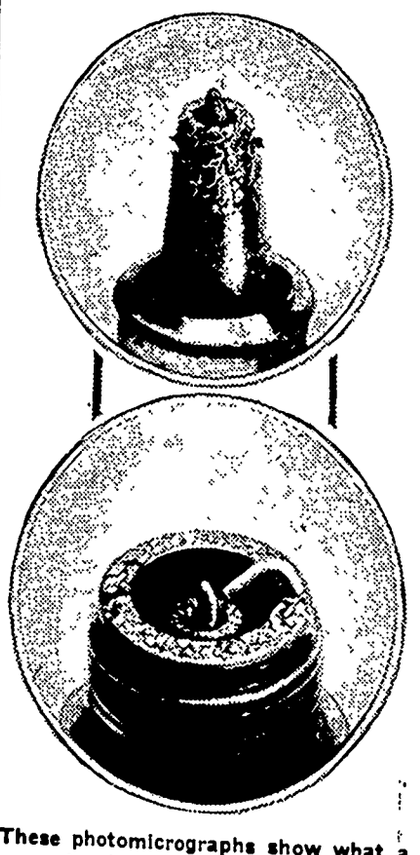
May 5 to 11 has been designated as National Change Week for 1929. During that time millions of motor car owners will replace the spark plugs in their cars with new sets, having learned by experience that the practice has advantages in economy and improved engine performance.

One reason why spark plugs should be changed at least once a year is shown in the accompanying photomicrographs of a spark plug's electrodes after that length of service.

Electrode Burned Away.

The center electrode is burned away. The ground electrode is likewise pitted and burned and its surface is no longer parallel to that of the center electrode. This results in a small spark, of no great intensity, and a gap setting altogether too wide for the spark to jump under load conditions, heavy pulls and rapid acceleration. Obviously, the corrosion means a weaker spark, a heavy loss o power and waste of fuel.

Exhaustive laboratory tests have proved that each spark plug fires its



These photomicrographs show what a spark plug looks like after firing an automobile engine twelve months. The carbon-crusted surface of the insulator and the pitted electrodes divert the current which is weakened and diffused instead of sending a hot intense spark across the gap, with the result that fuel and power are wasted. Engineers advise changing spark plugs at least once a year in automobiles and oftener in power plants of tractors, trucks and stationary engines.

charge more than 20,000,000 times in driving a car 10,000 miles.

The intense heat, the ravages of chemical reactions which are set up and the tremendous mechanical shock to which spark plugs are subjected in such an ordeal inevitably take their toll.

Encrusted With Carbon.

The insulator becomes encrusted with bits of carbon. In time and with the aid of intense temperatures these carbon particles impregnate the surface of the insulator, causing a partial short circuit. The result in the case of the spark plug is a diffusion of current from the electrode, a consequent loss of intensity in the spark and of efficiency in engine operation.

Experiments of automotive engineers have shown that changing spark plugs every 10,000 miles, or once a year, not only saves their cost in gas and oil but restores in large measure new car power, speed and acceleration, with all the pleasure that any car owner derives from these features of his motoring.

THE MOTOR QUI

(How Many Can You Answe

Q. When and where was first automobile race held?

Ans. In Chicago on Nov ber 25, 1895. Six cars star from Jackson Park to Evans and back again. The course 54 miles and was run under favorable conditions, the ro being heavy with mud and slush. Charles E. Duryea in 10 hours and 23 minutes. T cars finished.

Q. When a motorist discov that his brakes are not functi ing 100 per cent, what sho he do?

Ans. He should have the checked immediately both safety and economy.

Q. How many motor vehicl are there in the United State

Ans. 24,592,370.

Q. How many motor truc are there in the United State

Ans. 3,123,774.

High Compression Term Is Tersely Explai

In the days of muzzle-loading non, the tighter the charge was pa with the ramrod the greater the of the shot.

Similarly in the high-compres engine of today the gas charg packed into a smaller space, with result that when the spark plugs the compressed mixture there is g er force or power exerted on the tons.

This greater power impact with tendant increase in heat, makes it essary that the spark plug be of correct type in order to avoid ignition and rapid wearing out of plug.

Another important pointer is the plug gap should be set at .020 high compression engines becaus compression increases a greater sistance to the flow of electricit set up and a narrower gap is ne sary to enable the current to j from one electrode to the ot Spark plugs may not deliver a sp unless the points are set at the pro gap and it is advisable to check gap from time to time.

Increased Adoption of Automobile Fuel Pu

Widespread adoption of the pump during the past 12 months among the important developme that have taken place in the auto tive equipment field.

Prior to July, 1927, not a single was equipped with a fuel pump of kind. Today there are 30 users o in this country and abroad, and number will be greatly increased year.

It is interesting to recall that fuel pump which had been under for many years, made its initial pearance in 1927. At present th are three-quarters of a million now in service equipped with pump.

The fuel pump has really added other manufacturing activity to the dustry, and its quick acceptance many prominent car manufacturers gether with a huge increase in ot business has necessitated building pansions totaling three-quarters o million dollars. These expansi when completed early this year, further increase production facilit which have been at capacity dur 1928.

AUTOMOBILE NOTES

New auto license plates come cle Keep them that way.

Add anomalies: A champion flagp sitter fell out of a rumble seat was injured.

* * *

The arrival of the first motor in a remote village anywhere has double significance. The moment er the car arrives the place is longer remote.

"It Was a Famous Victory"

By ELMO SCOTT WATSON

ONE of the last acts of the closing session of the Seventieth congress was to pass a bill providing for the erection of a national monument on the Cowpens battleground in South Carolina. When this monument is erected, tardy recognition will be given to a "famous victory," one which is perhaps little known to most Americans but which was one of the most important of all the revolutionary conflicts. The story of the surrender of Cornwallis at Yorktown, the crowning event of the Revolution, is known to all, but Yorktown might not have been possible had it not been for two earlier victories. One of them took place at Kings Mountain, when the frontiersmen of North Carolina, South Carolina and Virginia overwhelmed the British leader Ferguson, and the other was the battle of Cowpens.

In connection with the action of congress providing for the Cowpens national monument the historical section of the army war college prepared a "historical statement," printed as a house document, which gives by far the best account of this battle that has yet been written. The importance of that battle is shown in the following statement from the document:

"Tarleton (leader of the British at Cowpens) in his narrative, commenting on the two disasters which the British suffered in South Carolina, said that the fall of Ferguson at Kings Mountain was a catastrophe which put an end to the first expedition into North Carolina and that the battle of Cowpens overshadowed the commencement of the second expedition. This comment, taken in conjunction with the apprehension of George Washington that "the Southern states will look upon this victory as much more decisive in its consequences than it really is," briefly summarizes the result of the battle of Cowpens. The effect at the time was to hearten greatly the patriotic cause and to distress the British army and their Tory sympathizers beyond measure. It was the second link in the chain of events soon to be followed by others, which finally led to the surrender of Cornwallis' army at Yorktown.

"To have a proper understanding of this battle and its importance it is necessary to take into account the military situation in the South and some of the previous events. Briefly, these were as follows:

"Following the capitulation of Charlestown on May 12, 1780, all of South Carolina was in a condition of subjugation within a few months, and in September, British headquarters were moved to Charlotte Town, N. C. Prior to this Lieutenant Colonel Ferguson had been detached with a small force of provincials to organize the militia and operate on Cornwallis' flank. On the seventh of October his entire command was lost at Kings Mountain. Following this disaster the British field army was withdrawn more than sixty miles to Wynnesborough and there remained on the defensive while awaiting information relative to the rehabilitation of Gate's army (which had suffered disastrous defeat at Camden on August 16) now commanded by Greene.

"Lieutenant Colonel Tarleton, the only officer remaining after Ferguson's death, used by Cornwallis for the command of roving troops, was sent into the district north of Ninety-Six to oppose General Morgan, and somewhat later Cornwallis resumed his march northward. Tarleton and Morgan met at Cowpens on the seventeenth of January and in a battle noted for the unusual tactics adopted by the Americans the British were defeated with heavy losses by a force inferior in numbers, a considerable portion of which was militia.

"Cornwallis hoped to destroy or drive out of South Carolina the corps commanded by General Morgan. . . . There was also hope that by rapid marches the British main army would get between Greene and Virginia and by that means force the Americans to fight without receiving any reinforcements from that state or, failing in this, to oblige Greene to quit North Carolina with precipitation and thereby encourage the friends of the Crown to make good their promises of a general rising to assist the British commander in reestablishing the royal government.

"Morgan's purpose had been to harass Cornwallis' foraging and scouting parties and being more than a hundred miles away from Greene at the time, Cornwallis believed that Tarleton could crush Morgan before Greene could come to his aid. Morgan knew that Tarleton was coming after him but he had no intention of engaging in a battle until he could do so on ground of his own choosing.

"The place where General Morgan established his camp the night of the sixteenth was near the intersection of the Mill Gap road and the road from the present city of Spartanburg running northeast into North Carolina and crossing the Broad river at Island Ford . . . . The position selected for the action lay on both sides of the Mill Gap road with both sides of the camp. The ground is slightly undulating and at the time was covered with trees of red oak, hickory and pine. Being used for the grazing of cattle there was but little if any underbrush. Two very slight elevations topped the ridge along which the Mill Gap road runs and these were selected as lines of development for the American troops.

"The main position was on the elevation just south of the ravine in which camp was established. To its front for 300 yards there is a scarcely perceptible slope downwards; beyond this the slope is greater, dropping off into a shallow ravine 700 yards from the main position. To the rear of the main position and just west of the camp site is an elevation slightly higher than that of the main position. This ridge continues across the road in a south and southwest direction but at a slightly less elevation. From either side the terrain between the two was visible under and through the trees. The ground offered no cover for either the attack or the defense except such as was furnished by the trees. The flanks of both armies were exposed as the terrain was favorable in all directions for the operations of mounted troops. The ravine in which Morgan camped and one on the opposite side of the road offered but little interference with the movement of foot or mounted troops.

"Morgan's plan of battle was to use the Marylard Continentals and the Virginia militia (of equal worth to the Continentals as many had served in previous campaigns) in his main position on the summit of the southermost ridge and astride the Mill Gap road. Washington's dragoons to the number of 80, augmented by the 45 militia under McCall, were tho main reserve posted in the rear of the northernmost ridge where ground cover was sufficient to protect them from hostile observation and fire and sufficiently near "as to be able to charge the enemy should they be broken." The militia were to form an interrupted line on the flanks in front, which position was to be held only temporarily, when they were to withdraw and reform on the flanks of the main position after reorganization had been effected and lend what assistance they could as an additional reserve.

"At this time Howard's Maryland and Delaware Continentals consisted of 237 men. They were placed on the left of the line, astride the Mill Gap road. To their right were Captain Beatie's and Major Triplett's companies of Virginia militia, under the command of the latter and totaling about 100 men. Captains Tate and Buchanan, with about 100 of the Augusta riflemen of Virginia, supported the right of the line. In the advanced position, which was to be abandoned early in the fight, were about 308 militia from North Carolina, South Carolina and Georgia, under Colonel Pickens. These troops were situated to guard the flanks. Major McDowell of the North Carolina volunteers was posted on the right flank, 150 yards in front of Howard's line. Major Cunningham of the Georgia volunteers was on the left flank at the same distance in front of Howard's line. To the right of Major McDowell were posted the South Carolina volunteers under Colonels Brannon and Thomas. To the left of Major Cunningham was posted the remainder of the South Carolina militia under Colonel Hayes and Major Hammond. The latter commanded Major McCall's regiment, he being with Colonel Washington.

"From Pickens' line of militia small parties of riflemen were sent 150 yards farther to the front to skirmish with the enemy. McDowell commanded those in the right sector of the skirmish line and Cunningham, those in the left sector. Patrols covered the front and flanks to give warning of Tarleton's approach.

"Tarleton broke camp at 3 o'clock in the morning, determined to engage the Americans before they could cross the Broad or in case they made an early march and continued their withdrawal to strike them when astride the river.

"When the British commander saw the disposition of Morgan's troops he was delighted for he believed that he could make short work of them. He had a force of about 1,000 men and although he believed that Morgan's force totaled less than 1,920, he felt that he could ignore the value of the 1,000 militia and 300 backwoodsmen in Morgan's army and make a quick job of the 500 Continentals and 120 cavalry. Deploying his troops along the line of Morgan's front he moved to the attack at about eight o'clock. Driving in the front line skirmishes under Cunningham and McDowell, from whose fire Tarleton's infantry had suffered but little, he advanced against Pickens' line of militia which kept up a fire by regiments for a short time and then, according to their orders, retreated. The British line had still suffered but little as it approached the Continentals and Virginians under Howard. As Howard's men opened fire the British advance was temporarily checked. At this moment, Tarleton sent the two troops of dragoons, which he had posted on each end of his line to guard his flanks, into action. He now had about 750 infantry in line, supported by two guns (three-pounders) and was opposed by less than 450 infantry in Howard's line. The militia which had withdrawn to the flanks of Howard's line had not yet reformed and it was doubtful at the moment whether they would be of any use. Tarleton's dragoons charged upon them and were cutting them down when Washington counter-charged with his cavalry on the left of Howard's line and relieved the pressure there somewhat.

It became evident to Howard that when Tarleton should bring his reserves into action his exposed right flank might be thrown into confusion and he ordered the flank company to change front to the right. His orders were misunderstood and this company began to retreat. The officers along Howard's line, seeing this, and supposing that orders had been given for a retreat, faced their men about and began to retire. Morgan, who was engaged in reforming the militia, was surprised to see his Continentals, who had fought so valiantly at Camden, in apparent retreat. He quickly rode over to Howard. "What are you retreating for?" he shouted. "Simply a change of position to protect my right flank," replied Howard. "Are you beaten?" asked Morgan. Pointing to his men, Howard said, "Men who are retreating in that order are not beaten."

Morgan then ordered Howard to continue his retiring movement until he reached the rising ground in the rear and then rode back to select the position where they were to make their stand. The British, seeing this movement and believing victory within their grasp, pressed forward with fixed bayonets. Tarleton's cavalry was ordered to charge. By this time not more than thirty yards separated the "retreating" Americans and the victory-flushed redcoats. Suddenly Howard gave a sharp order. His men wheeled right-about face and from their guns poured a sheet of flame which stopped the British in their tracks and threw them into great confusion. Howard then gave the order "Charge bayonets!" Back over the ground which they had just crossed swept Howard's Marylanders. Like a thunderbolt Washington's cavalry dashed down upon them. The panic which caught the British infantry spread to Tarleton's dragoons and a general flight followed. Tarleton tried in vain to rally his men but it was useless. Within twenty minutes after the battle began it was over and the British were completely defeated. Tarleton had suffered a loss of 110 killed, 200 wounded, and 531 taken prisoner. The American loss was slight—12 killed and 60 wounded. The spoils of their victory amounted to 2 standards, 2 cannon, 800 stands of arms, 100 dragoon horses and 35 wagons.

"It appeared to the British when Howard's line fell back," writes the army war college historian, "that victory was at hand and so it would have been had the line been composed of men less inured to battle than were the Continentals of Maryland and Delaware. There was no delay or hesitation when the order to halt, face the enemy and fire, was given, and there then occurred in a moment a scene of dumbfounded surprise, confusion and panic seldom witnessed in battle. The outcome resulted in one of the most gloriously unexpected victories of the Revolutionary war.

As a result of this brilliant victory, Morgan and his men were given the thanks of the United States "for their fortitude and good conduct displayed in the action at Cowpens" under a resolution of congress, March 9, 1781. The resolutions further provided that a gold medal be presented to General Morgan; silver medals to Colonels Washington and Howard and a sword to Colonel Pickens.

Tarleton, in his report to Cornwallis, attributed his defeat "to the bravery or good conduct of the Americans; to the loose manner of forming which had always been practiced by the King's troops in America; or to some unforseen event, which may throw terror into the most disciplined soldiers or counteract the best-concerted designs." Whatever the reason, however, it was a crippling blow to Cornwallis, for the victory of Cowpens had deprived him of his most effective light infantry and, as later events proved, it led eventually to his downfall. On January 19 Cornwallis started in pursuit of Morgan to cut him off from joining Greene and, if possible, to recapture Morgan's prisoners. By a superb march Morgan eluded him and joined Greene in North Carolina. Then followed the masterly series of maneuvers by the "Rhode Island blacksmith" (Greene) which ended in the battle of Guilford Court House and finally forced Cornwallis to retreat into Virginia. He took his position at Yorktown. Washington completely deceived the British in the North as to his future plans, marched South, swooped down upon Cornwallis—and the rest is history!

Prickly Pear Is Valuable as Feed

Particularly Advantageous in Times of Drought on Stock Ranges.

(Prepared by the United States Department of Agriculture.)

A silage crop that keeps without need for a silo is substantially the description of the prickly pear as it grows in the four states bordering on Mexico. It has proved a valuable stock feed, particularly in times of drought on the range, such as may be expected from time to time. As a forage crop it stores itself, and the three or four-year-old sections of the plants are relished by cattle.

Variety of Cactus.

The prickly pears are varieties of cactus, and may be divided roughly into spiny and spineless forms, according to Farmers' Bulletin 1072-F, "Prickly Pear as Stock Feed," just issued in a revised edition by the United States Department of Agriculture. The "spineless" varieties are not smooth but are relatively free from spines and cattle can eat them without inconvenience. The custom is to burn the spines off the sping varieties with a gasoline blowtorch or to chop them by machinery.

Although able to survive severe droughts for months at a time, the prickly pears require good water supplies at some time each year. They do not thrive under severe cold, and the spineless varieties, as a rule, do not thrive if the temperature falls below 20 degrees at any time. The spiny varieties may tolerate temperatures five degrees lower. The best prickly pear region in the United States is in Texas southward from the Edwards plateau.

Valuable as Feed.

In times of drought the prickly pear has proved a great value in carrying herds of cattle until pasturage is revived by rain. Prickly pear is growing in favor as a succulent forage that may take the place of silage in the ration, usually with a dry forage and a concentrate added in case of dairy cows. In Texas some varieties of prickly pear will produce without cultivation, but cultivation is likely to prove profitable in developing a greater tonnage of economical feed. Prickly pear is propagated from cuttings, and the cuttings are so bulky that freight costs are likely to prove excessive if extensive planting is attempted. David Griffiths, author of Farmers' Bulletin 1072-F, recommends starting with comparatively few plants, as they multiply rapidly for transplanting.

The bulletin, which may be obtained free on application to the United States Department of Agriculture, Washington, D. C., gives details of the propagation, cultivation and feeding of prickly pears, and mentions the areas where the different varieties may be grown.

Damage From Corn Rots May Be Greatly Reduced

The Indiana experiment station and the United States Department of Agriculture have shown that the condition of the soil has a close relation to the damage from corn rots. If the soil is uninfected and its fertility is increased by the addition of lime and phosphorus where needed, the extent of the damage will be greatly reduced.

Crop rotation is generally beneficial in checking the damage from disease. Where corn rots are prevalent, clover or a legume crop should be grown in the rotation once every four years, and corn should not follow either corn or wheat.

The Illinois and Indiana experiment stations have found that some strains of corn are damaged far less than others by the corn rots. Beginning with a strain which has possibilities for improvement, the continuous selection of seed from healthy plants may be expected eventually to produce strains strongly resistant to these diseases.

Around the Farm

Careful attention should be given turkey eggs which are to be used for hatching.

* * *

A portable brooder house is an aid in preventing chick troubles. The brooder house and chick range should be on clean ground.

* * *

It is always essential to maintain an area immediately around the young trees free from competitive vegetation which would, if present, slow down the growth of the trees.

* * *

If a patented silo is to be built, do not accept lumber having loose knots, any sapwood, or pieces with bark. Sapwood, as a rule, is less durable than heartwood and will nearly always decay first.

* * *

Protect all planted fruit trees from injury by rabbits and field mice, especially during the fall and winter. One-inch mesh poultry wire, old newspapers, or gunny sacks torn in strips six to eight inches wide make satisfactory protectors.

* * *

The grape is attacked by a number of insects and a few diseases which are capable of causing heavy loss. However, on the average farmstead, grapes of fair quality are sometimes grown without any spraying treatment being given them.

Are *You* Ready

When *your* Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you *can* be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. Yet you have eased your child without use of a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the crueler pangs of colic, or constipation or diarrhea; effective, too, for older children. *Twenty-five million bottles were bought last year.*

Fletcher's CASTORIA

Wisdom is merely common sense in an uncommon degree.

GREAT DISCOVERY KILLS RATS AND MICE, BUT NOTHING ELSE

Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O (Kills Rats Only) is a new exterminator that can be used about the home, barn or poultry yard with safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee.

Insist upon K-R-O (Kills Rats Only), the original Squill exterminator. All druggists 75c, or direct if not yet stocked. Large size (four times as much) $2.00. K-R-O Co., Springfield, O.

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Emil Beier was a Garner caller Monday evening.

Owen Neuhring and Will Suckow were Britt visitors Thursday.

Elmer Schaefer was a Belmond caller Saturday.

Quentin Stille and family were Britt shoppers Saturday.

Miss Lydia Beier visited at the Ben Ridder home Wednesday.

Bill Suckow was a caller at the Will Lemke home Tuesday evening

Carl Reimer was kept busy at the Emil Beier home last week painting the house.

Mrs. J. J. Lemke attended the Eastern Star meeting in Garner on Friday evening.

Miss Lydia Beier visited at the Roy Schaefer and Carolus homes on Friday.

Mrs. Herman Gast and sons Kenneth and Loren were Mason City shoppers Saturday.

Mr Carlson and Buzz visited at the Clyde Marshall home Sunday evening

Mr and Mrs. Will Lemke and daughter Ethel were shopping in Mason City Saturday evening.

Glenn Young of Rudd visited with his friend Alvin Kalka at the J. J. Stille home Saturday.

Mrs Roy Schaefer and Lydia Beier visited at the Fred Gates home Friday evening.

Ben Reimer and family were calling at the Fred Gates home Saturday evening

Mr and Mrs. Harvey Harberts were Sunday callers at the Clyde Marshall home.

Mr. and Mrs. Geo. Schoenwetter and children visited the former's parents at Garner Sunday.

Miss Esther Larson visited her friend, Mabel Schaefer one night last week.

Miss Lydia Beier and Grandma Beier enjoyed a Sunday dinner at the Wilbur Haefner home.

Mrs. Elmer Schaefer and infant son visited at the Fred Meckstroth home in Garner Friday afternoon.

Glen Stille spent a few days visiting with his grandparents, Mr. and Mrs J. J Stille last week.

Miss Francis Tanner spent last Thursday night at the Gast home, a guest of Miss Mildred.

Lester Bredlow is working for his brother-in-law, Will Suckow this week.

The W. F. M. S. will hold their May meeting at the Henry Wade home on May 1st.

Mr. and Mrs Lew Abele and children visited relatives in Garner on Sunday.

Mr. and Mrs Art Knoke and daughters visited at the Alfred Ausburn home near Britt Sunday.

Miss Frieda Schuldt was a Sunday caller at the Clyde Marshall home.

Mrs. Herman Gast and twin girls visited with her parents, Mr. and Mrs. Wil Bredlow at Garner Tuesday

Helen, Ethel, Lorraine and Bill Lemke visited with their grandmother, Mrs. Whitney, at Britt on Sunday.

Willa Wareham and Agatha Stieman and friend visited at the Jack Stiemam home at Austin, Minn. Sunday.

Mr. and Mrs. Albert Lange and daughter, Mary were entertained at the Art Schoenwetter home Sunday.

Willard Tyler and family and Maurice Carothers were dinner guests at the Quentin Stille home Sunday.

Miss Alice Carolus has been confined to her bed the past week and will be for some time due to heart trouble.

Rev Whyte was out calling on the people of his church that live in the north part of the township last week, the Frank Bredlwo and the Ben Reimer and Kropp homes.

Mr. and Mrs. Chas. Smith and children of Mason City were entertained at the Elmer Schaefer home Sunday, making the trip in their new Essex sedan purchased recently.

A 4-H club meeting was held Saturday at the Ralp Upmeyer home to reorganize for another year. Quite a few girls will take up the work under the leadership of Mrs. Upmeyer.

A basket social was held at the Tanner school last Friday evening. A fair sized crowd was present to listen to a fine program given by the pupils. The sale of baskets brought the school the tidy sum of $35.

Herman Lemke was reported to be resting somewhat easier at the last report. He is still at the Mercy hospital and in a critical condition. Mrs. Lemke stays with him constantly and the children go down as often as possible.

A birthday dinner was held at the Albert Riemer home Sunday in honor of Mrs. Emil Blumer and Mrs. Will Reimer. Those present were: Mr. and Mrs. Ben Reimer and Lois, Carl Reimer, Mr. and Mrs. Will Reimer, Mr. and Mrs. Emil Beier, and Mr. and Mrs. Emil Blumer and children.

The W. F. M. S. plan on having their thankoffering public meeting in the church on May 5. As it will be impossible to secure a returned Missionary at this time Rev. Whyte has consented to give an appropriate talk. The Kings Heralds will please bring their offerings in sealed envelopes as formerly.

NOTICE

Proposals For Erection Of School House In Liberty Township

Notice is hereby given that the proposals for the erection of a brick school house in Liberty Township, District No 2, in the county of Hancock, state of Iowa, will be received by the undersigned, at the Center School House, District No. 5, Liberty Township at 8:00 o'clock p. m. on Monday, April 29, 1929, at which time the contract will be awarded to the lowest responsible bidder. The Board reserves the right to reject any or all bids.

Plans and specifications may be seen at my place in Liberty township.

JOSEPH SCHULDT, Secretary.
Klemme, Iowa, April 2, 1929.

Mrs. Hattie Lanaman and daughter, Laura, and Mrs. Dewey Rice and children of Clarion, came last Friday for a visit with Klemme relatives and friends. They were entertained for dinner at the C. G. Waterman home.

Sunday Mr. and Mrs. R. A. Jorgenson entertained the following company for dinner and the Mr. and Mrs. T. F. Mitchell Swea City; Mrs. Mary Waterman Iowa City; and C. G. Waterman family and Mr. and Mrs. C. F. Klaus of this city.

Spring Garden Tools

Before planning your Garden come to us and look over our fine line of tools, etc. which you will need. We especially call your attention to the following items:

Garden Spades & Forks Garden Hoes
Garden & Lawn Rakes

RELIABLE SEEDS

We carry a full line of reliable seeds for your vegetable and flower garden which will grow and give you satisfaction. Get your onion sets here.

LAWN MOWERS

If you need a new lawn mower see us. We have good mowers at the right price.

Our Garden Tools Will Make Your Garden Smile!

Spring Showing of General Motors Cars.

This week, throughout America, the public is viewing the newest models of General Motors products. Check and mail the coupon below. It will bring this Spring Showing into your own home.

CHEVROLET—Last year the public bought more than 1,000,000 Chevrolets. This enabled Chevrolet and General Motors to effect one of the most remarkable feats in industrial history: almost overnight, Chevrolet was changed from a 4-cylinder car to a Six *in the price range of the four*. The new Chevrolet Six is *new* in every respect: smoother, more powerful, and luxurious bodies by Fisher.
7 models—$525 to $725

OAKLAND—General Motors' policy of continuous improvement is nowhere more notice-able than in the *new* models of the Oakland All-American Six. The distinctive style and advanced engineering principles which Oakland represents have made it a center of unusual public interest at automobile shows. All-American in name, the new Oakland is All-American in its qualities of speed, snap, power and stamina. Fisher makes the bodies.
8 models—$1145 to $1375

BUICK—This famous member of the General Motors family, year after year, has given increasing value. Over 2,000,000 Buicks have been built and sold and of this total 1,500,000 are still serving their owners. The *new* Silver Anniversary Buick, with masterpiece Bodies by Fisher, comes in three wheelbase lengths. All are powered by the Buick Valve-in-Head engine, which is vibrationless beyond belief.
19 models—$1195 to $2145

PONTIAC—Since General Motors introduced the Pontiac Six three years ago, its sales have practically *doubled* each year. Now General Motors offers, in the *new* Pontiac, a "*Big six*," at the same base price. It has big-car power, big-car performance and big-car luxury in the Bodies by Fisher. It is appealing particularly to families which are "stepping up" in car ownership. 7 models—$745 to $895

OLDSMOBILE—General Motors took this long-established car and remade it to provide a fine car at low price Last year the value of Oldsmobile was so marked that the public bought over 50 per cent more than the year before. The *new* Oldsmobile models, with Bodies by Fisher, offer still further improvements — and the prices have been reduced! Oldsmobile also has new Special and De Luxe models with extra features, at slightly higher prices.
7 models—$875 to $1035

VIKING—There was demand for an 8-cylinder car of General Motors quality in the medium price field. General Motors chose Oldsmobile to design and build the new car, and three years were spent in its development and test. The result was revealed last month in the Viking, the latest member of the General Motors family. Viking has the world-famous 90-degree V-type engine and Fisher's newest creations in bodies. 3 models—$1595

LaSALLE—When General Motors introduced LaSalle, two years ago, it set a style which was widely copied both in America and Europe. The *new* models are as distinguished as the first. Built by Cadillac, LaSalle enjoys the same mechanical excellence: 90-degree V-type engine of 8 cylinders; transmission that permits gear shifting without noise or clashing at any speed. The bodies, by Fisher and Fleetwood, offer a choice of colors to express individuality.
14 models—$2295 to $4900

CADILLAC—What more can be said of Cadillac? For twenty-five years the world's standard of comparison in the fine car field. The choice of kings, presidents and leaders of business and society in every country. To the unparalleled performance of Cadillac's 90-degree V-type 8-cylinder engine has been added the silent transmission and many new advances in design. Your choice of colors in bodies by Fisher and Fleetwood.
25 models—$3295 to $7000

ALL PRICES F. O. B. FACTORIES

NOTICE

Proposals For Erection Of School House In Twin Lakes Township

Notice is hereby given that the proposals for the erection of a Brick School House in Twin Lakes Township, District No. 1 (NW corner of Section 12), in the county of Hancock, State of Iowa, will be received by the undersigned, at the Center School House, District No. 5, Twin Lakes Township at 2:00 o'clock P. M. on Monday, May 6, 1929, at which time the contract will be awarded to the lowest responsible bidder. The Board reserves the right to reject any or all bids.

Plans and specification may be seen at my place in Twin Lakes township.

JULIUS PRIEBE, Secretary,
Goodell, Iowa, April 5, 1929.

KLEMME LOCALS

Supt. M. F. Penrod went to Des Moines Friday afternoon to take in the state spelling contest. His neice was one of the contestants.

Mrs. Frank Rosendahl and family and the Gilbert Schaefer family visited Sunday at the Erwin Rosendahl home.

The home talent play put on by the Auxiliary ladies Wednesday evening and again tonight is certainly worth the money. If you want a real good laugh, then see this one.

Mr. and Mrs. Henry Lewis have further remodeled their home by having hard wood floors laid in the kitchen and some new built in features added.

Mrs. Henry Schroeder, of Chicago, came Tuesday morning for a visit at the home of Grandma Schroeder and to assist in caring for Mrs. Croner.

Earl Finn, Peter Merkel and Alfred Merkel were at Belmon Sunday to see if they could get any information regarding the car stolen from Merkel.

Dr. McMahon of Garner brought a patient to Dr. Missman's office Monday to have some X-ray pictures taken of a little boy who had his arm fractured.

Sunday Mr. and Mrs. Emil Patet entertained Mr. and Mrs. Victor Weideck, and Mr. and Mrs. Julius Meyer and daughter, Lila, of Hayfield.

Mr. and Mrs. John Kessler, Mr. and Mrs. George Bohning and daughter, Grace, of Belmond, visited at their Earl Finn home Sunday. Miss Grace Bohning remained for a tw weeks visit.

Miss Mae Griggs, daughter of Mr and Mrs. J T. Griggs, who teaches in the second grade at the Iowa Falls schools, was been re-elected to that position and will return next fall.

Mr. Henry Schroeder drove in from Chicago Saturday evening for a visit with his mother, Grandma Schroeder, and sister, Mrs. Marlin Croner, and to look after business in this territory.

Mr and Mrs. Oscar (Scoop) Larsen, of Ames, came Friday, being called here by the death of J. P Larsen, father of Oscar. They returned home to Ames again Sunday evening.

Mr. and Mrs. R. A. Jorgenson, Mr. and Mrs C. G. Waterman, Mrs. Paul Grange and Mrs. John Lemke attended Eastern Star lodge at Garner last Friday evening. Following the degree work a nice lunch was served.

"Bill" Brady and "Shorty" Kruger, of Belle Fourche, South Dakota, visited with Earl Finn Tuesday. They were on their way to Winterset. They will return to Belle Fourche again early enough to ride in the annual rodeo there.

The rains of the past two or three days have put in a crimp farm work, and has raised cane with dirt roads again. If April showers bring May flowers—there should be no trouble in finding plenty of them next week. This mornng the river was out of its banks and the water stood over the grade west of Otto Lemke's farm.

Out of town relatives who were here to attend the funeral of Mr. J. P. Larsen Sunday were: Dr. and Mrs. Spooner of LuVerne; Mr. and Mrs. Albert Yahnke and daughter, Alva, of Garden City, Minn., Mrs. Mart Palmby, Garden City, Fred Yahnke and family, Buffalo Center, Mrs Leach of Dows, Mr. and Mrs. Dan Palmby of Iowa Falls, Mr. and Mrs. Buford Meyers and family of Mason City, and Mr. and Mrs. Rob Wilson of Cornelia.

Mr. and Mrs. Ed. Rhodes were Klemme callers Saturday.

Leon Sherwood and Jule Cook were Hampton callers Thursday.

E. J. Nelson and son Boyd were Mason City callers Friday.

Mart Kearney went to Williams Sunday

Mr. and Mrs. Lee Robinson are the parents of a baby boy.

Gus O'Krueg is the owner of a new Chevrolet Landau.

Geo. Griggs spent the week at his cottage in Ventura.

Robert McNutt is now carrying mail on route one again.

Miss Mae Griggs, second grade teacher in Iowa Falls, spent the week end with her parents.

Harold Savogue and Louise Ahrenkeil attended the show in Belmond one night last week.

Mr and Mrs. "Speck" Houghton returned from their honey-moon trip Saturday.

Mr and Mrs. Henry Busse and daughters visited at the August Robes home at Belmond Sunday.

Mr. and Mrs Presley Griggs of Ventura spent Sunday at the Geo Griggs home.

Mr. and Mrs. Ellis Burk of Belmond attended the funeral of Mr. Larsen in Klemme Sunday.

Mr. and Mrs. Swen Hegland were transacting business in Minneapolis one day this week.

Howard Hill and lady friend Miss Miller of Cedar Falls spent Sunday evening at the home of his cousin Mrs. Ed. Hemingway and family.

Mr. and Mrs. E. J. Nelson and family attended the Golden Wedding of Mrs. Nelson's parents at Rowan, Wednesday.

Mr. and Mrs. Geo. Johnson, of Iowa Falls spent Sunday at the home of her brother, Leon Sherwood and family.

Mr. and Mrs. Gus O'Krueg and Mr. and Mrs. Geo. Ruka, Mr. and Mrs. Jay Griggs attended the funeral of Mr Larsen at Klemme Sunday.

Mr. and Mrs. Earney Strasburg and daughter, Mae, of Meservey spent Friday evening at the Jay T. Griggs home.

Mrs. Jule Cook returned to her home Sunday after spending a week with her sister, Mrs. Alf. Carpenter, after coming home from the hospital.

The Ladies Aid of the Reformed Church met at the home of Mrs. Henry Barz on Wednesday.

Mick Merkel, Mr. and Mrs. Pete Merkel and Mrs. Benj. Mullin were in Mason City on business Monday.

Mr. and Mrs. Fred Barz and family visited at the Walter Rosendahl home Sunday.

Mrs. Lubbe Albers and John, Harold and Louise visited at the Geo. Albers home Sunday.

Mr. and Mrs. Wm. Waddingham and Virgil and Lucille spent Sunday at the John Newberger home.

Mr. and Mrs. Chris Blumer visited at the Herman Thiemann home Sunday evening.

Mr. and Mrs. Wm. Reumen and family visited at the Geo. Albers home Sunday.

Mr. and Mrs. Carl Pearson and family visited at the John Newberger home Sunday.

Mr. and Mrs. John Meinderts visited relatives at Buffalo Center last Friday.

Mr. and Mrs. Jim Fox called at the John Bock home Sunday evening.

Mr. and Mrs. E. C. Buentenbach and family visited with the William Rockow family at Garner Sunday.

Dale Schlei spent Sunday at the John Bock home visiting with Mitchell.

Jennie, Marie and Johanna Albers spent Sunday afternoon at the Henry Thiemann home.

Mr. and Mrs. John Meinders and family visited at the Luke Wessels home at Belmond Sunday.

Mrs. Benj. Mullin visited her sister at Mason City last Friday and Saturday.

Rev. Grosshuesch called at the homes of Mrs. Lubbe Albers and Jake De Veries Monday evening.

Mrs. Elko Buss and Gail and Alvina visited at the George Thiemann home Sunday evening.

Mr. and Mrs. George Thiemann and family called at the Henry Barz home Monday evening.

Mr. and Mrs. Alfred Josten and family and Leo and Opal Back visited at the Herman Back home Sunday.

Mr. and Mrs. V. Mullin and family and the Mullin Brothers from Hardy, visited at the Benj. Mullin home Sunday.

Mr. and Mrs. Walter Anderson and family and Mrs. Chris Anderson visited at the Herman Thieman home Sunday evening.

The Henry Thieman home was the scene of a pleasant surprise party Sunday when the George Thiemann family, Herman Thiemann family and Mr. and Mrs. Chris Blumer arrived at noon with well filled baskets to help Mrs. Henry Thiemann celebrate her birthday. The day was spent visiting and was greatly enjoyed by all those present.

FIRE BOYS WILL HAVE ANNUAL DANCE NEXT WEEK

Bad Weather In February Delayed Annual Benefit

The local voluteer fire company are planning to hold their annual benefit dance at the Idle Hour on Friday evening, May 3rd.

This dance at first was planned to be held in February but on account of bad weather was postponed to the present date.

The money raised will be used to buy needed equipment.

The boys work entirely without any compensation. Whether or not you dance you should buy a ticket for this dance, as it will be for your own good as well as the fire company.

Telephone Types Who Deserve No Quarter

The type who always opens up with a lengthy anaylsis of the weather—the type who is forever repeating, "What's that?"—the type who always gets cut off—the type who speaks a language that resembles a combination of Eskimo and Norweginn—the type who always calls the wrong number—the type who invariably gets a busy wire—the type who jollies the operator—the type who curses the operator—the type who always has to borrow a nickel—the type who wrongfully bangs the instrument on the line—the type who makes believe that he is the butler—the type who, to the accompaniment of a clashing jazz band, announces to his spouse that he is being detained at the office—the type who merely repeats the word "yes" throughout the conversation—the type who, just around the corner, stuffs a handkerchief in the mouthpiece and pretends that he is hundreds of miles away . . . the type who calls up at three o'clock in the morning to report that he has been arrested—the type who stations himself in a booth for one solid hour—the type who begins the conversation with "Guess who this is"—the type who speaks in a low whisper . . . the type who, in the middle of the conversation suddenly says, "Good-by"—the type who never says "Good-by."—Kansas City Times.

"Jocko" Something of a Freak of Nature

A putty nose and a tail a yard long are among the attractions possessed by a monkey newly placed in the famous London zoo. It comes from the African Gold coast. These monkeys have weak circulations in their tails, for the blood has to be pumped so far by the heart. A touch of cold weather, and the tail wilts like a dahlia in a frost. After stormy blasts in the bay of Biscay the average length of the decoration when the creature reaches this country is from six inches to a foot. Even if the tail is still all there, it has been blighted and fades away in the zoo.

Many putty-nosed monkeys eat their cold-storaged tails. They are quite given to this habit until the zoo uses a certain red ointment, which spoils the flavor.

The new putty-nose was brought to England in wonderful condition by the donor, a Mr. Woodward, who is a laboratory expert at the Medical Research institute at Sekondi, where the yellow fever scourge is tackled.—London Times.

Indian Decoration Day

An annual Decoration day, in both name and deed, is observed by lower Yukon river Indians. Fifteen families of Indians from Nulato and other villages met at Koyuruk, Alaska, to fulfill a queer custom, that of erecting houses over the graves of those who died the past year.

The shelters of the old graves were given a fresh coat of highly colored paint. Many of the unique mausoleums are constructed with skill and care, have windows, floors and rugs, other articles such as were used by the departed ones. Food and drink are renewed each year during the potlatch following Decoration day.

Every western Alaskan Indian tribe has some different method of protecting the spirits of departed ones.

Whales Are "Brainy"

The largest brain in the world, according to speakers at a congress of natural science, recently held in England, is possessed by the whale.

Prof. W. Weygandt argued against a prevalent belief that the largest brain claim is shared by whales, elephants and man. He stated that the whale alone justified the claim, the largest whale ever caught having a brain weighing 7,000 grams.

The human brain, he added, seldom exceeds an average weight of 1,280 to 1,460 grams in the male and 1,140 to 1,340 in the female.

Home

The word "home" is indeed like unto an alabaster box of ointment, very precious, whose fragrance fills the life. Into it has been gathered our most sacred memories, our tenderest associations, our brightest hopes. It matters little whether the home of one's childhood has been a cottage on the hillside or a house in some city street—round it is woven a romance of interest that grows with the years; to it, from distant places alike of work and thought travels back the heart with wistful regret.—Exchange.

Drake's Drum

There is a legend in Devon, that in times of danger to England a booming sound is heard, as of the playing of a gigantic drum. This has been called Drake's drum, it being popularly supposed that the famous admiral is thus endeavoring to awaken the people to the realization of danger. There is no actual drum, of course. After the World war broke out there were many who declared that they had heard this "drum" on the night of the 4th of August, 1914.

Modern Superstitions

School children in London still wear charms against various evils, according to a recent survey. Blue beads are worn to ward off colds. Forty per cent of the youngsters are addicted to wearing amulets of various sorts.

SUMMER CARE OF THE SHEEP FLOCK

Blowfly Is One of Most Persistent Trouble Makers.

With the coming of warm, pleasant weather we also have certain pests to combat and the blowfly is one of the most persistent trouble makers in the good old summer time, says a writer in the Missouri Farmer. As a preventive use some good healing remedy on the shear cuts. Sheep dip is good, add a little pine tar to keep flies away. In docking the late lambs one must observe them closely for blowflies. The wool should be kept clean and clipped closely from the rear end of the sheep during fly time.

Should you find maggots developed on the sheep some gasoline poured on the spot will rout them quick and not cause the wool to fall out. Sheep dip is also good but if you get too strong a mixture the wool will slip and the skin be blistered. Follow up the treatment with a little pine tar to avoid a second attack. Once the blowfly gets in his work the same sheep seems more susceptible to his ravages. Just a stain on the wool will often be the source of infection if not taken care of promptly. We always keep some tar mixed with a little sweet oil, a can of the best sheep dip and some gasoline handy in hot weather. Gasoline will give instant relief from maggots and cause no harm, but it evaporates very quickly and must be followed up with some other remedy that is a fly repellant. One needs to see his flock pretty often in warm weather to avoid losses from the causes mentioned above.

Should you notice a sheep limping see if there is any caked mud between the toes, or possibly you may find a hedge thorn. We have some osage orange hedge on the farm and quite often thorns give trouble. Also you will find a little gland opening between the toes, this sometimes becomes closed and always causes lameness. When it does squeeze the contents of the opening out and the trouble disappears.

Biennial Sweet Clover Now Extensively Grown

Biennial sweet clover is being extensively grown in parts of the United States at the present time, both as a pasture and hay crop. It fits into a crop rotation very nicely, is beneficial to the soil, provides a very heavy yield of pasture per acre and a fair yield of hay. Many men have pastured sweet clover pasture for a number of years with all kinds of stock to very good advantage and with no loss or sickness. Many also have fed sweet clover hay to all kinds of live stock with very good results.

Occasionally there has been a case of bloating of animals pasturing on sweet clover pasture and occasionally there has been losses of animals receiving sweet clover hay in winter due to a sickness that has the symptoms of some form of poisoning. These losses have been very small, however, in proportion to the amount of sweet clover that has been used and it is commonly believed at the present time that a farmer who is having difficulty providing good pasture for his stock can very well take the risk of growing and pasturing sweet clover, as the advantages of the sweet clover pasture are pretty apt to be greater than the risk.

Live Stock Notes

Watch the horses' and mules' shoulders.

* * *

Exercise pregnant ewes as much as possible.

* * *

Disinfect old hog houses with crude oil to keep down lice.

* * *

Sows and litters should be protected against cold and rains.

* * *

Alfalfa and clover pastures are good to keep a pig's appetite keen.

* * *

Plenty of milk and good pasture makes lambs fat, tender, and juicy.

* * *

Lambs on grass, and calves on clover, are making a lot of old farms over.

* * *

There are advantages in having early spring pigs if we take good care of them.

* * *

Pounds of lamb produced per ewe is the best test of the ability of a market lamb producer.

* * *

Sheep may be fed raw potatoes nearly as well as cattle and can usually be fed about two and half pounds of potatoes per head.

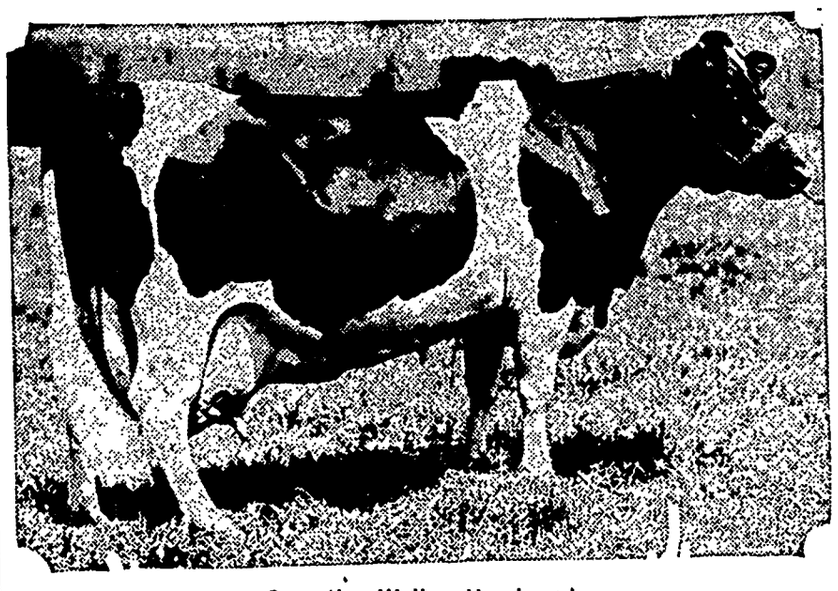
* * *

It is not necessary to feed coal to hogs, as wood charcoal is excellent, cheaper and safer. Charcoal helps to correct indigestion.

* * *

About two pounds of cooked potatoes with grain and hay constitute a satisfactory allowance for sheep. Sliced, raw potatoes may be fed if they are free from disease and dirt.

Holstein Nears 1,500-Pound Mark



Carnation Walker Hazelwood.

Three-fourths of a ton of butter in 365 days is the approximate amount that could be made from nearly 15 tons of milk produced during the past year by Carnation Walker Hazelwood, a 2,000-pound Holstein-Friesian cow, and the new national senior four-year-old champion. According to the Holstein-Friesian Association of America, she is the one hundred and thirty-second Holstein cow to produce more than 1,000 pounds of butterfat in one year, has just won sixth place among all breeds for all-time records, and is one of the three cows now living that have equalled that production.

On four milkings a day, Hazelwood, owned by Carnation Milk Farms of Seattle, Wash., produced 29,082.5 pounds of milk containing 1,198.85 pounds of butterfat, equivalent to 1,498.56 pounds of butter. This tops the record of Redfield Segis Johanna, former class champion, owned by the South Dakota State School and Home for the Feeble-Minded, whose production in 365 days was 31,060.6 pounds of milk containing 1,182.93 pounds of butterfat (1,476.66 pounds butter).

In a seven-day official test period, while making this long-time record, Hazelwood produced 32,979 pounds of butterfat (41,223 pounds butter). Other records include 25,532.1 pounds of milk containing 976.21 pounds of butterfat (1,220.26 pounds of butter) as a junior two-year-old in 365 days, a seven-day record of 34.586 pounds of butterfat (43,232 pounds butter) and a 30-day record of 127.65 pounds of butterfat (159.56 pounds butter) as a senior three-year-old.

In making this new record, producing enough butterfat to supply 82 people for one year, Hazelwood ate more than 17 tons of food, according to the figures of A. M. Ghormley, manager of the farm, divided as follows: 3½ tons of grain and other concentrates, 4 tons of choice alfalfa hay, 10 tons of silage, beets and mangels, and green grass, 365 pounds of molasses, and 66 pounds of salt. This would bring the daily ration to total 96 pounds, divided into 18 pounds of grain and other concentrates, 22 pounds alfalfa hay, 54 pounds of green feed, 1 pound of molasses and some salt.

Good care was also a factor in securing this record production, as Hazelwood weighed 2,050 pounds just before she freshened, and approximately a ton when the year's record ended. She carried calf for 127 days of the test, and is expected to freshen in July. Hazelwood is sired by Segis Walker Matador 166136, nine of whose daughters have records of more than 1,000 pounds of butter in one year, and is out of Hazelwood Ormsby Korndyke De Kol 290090.

Cleaning of Seed Wheat Is Favored

Copper Dust Treatment Is Quite Useful in Control of Smut.

(Prepared by the United States Department of Agriculture.)

Cleaning of seed wheat for the removal of weed seeds is generally recognized and recommended as good farming policy, and in recent years, says the United States Department of Agriculture, the desirability of the copper carbonate dust treatment of seed wheat for control of stinking smut or bunt has also had general acceptance. Early applications of the copper carbonate treatment were largely in hand machines, but more recently power dusters have been perfected. Leaflet 33-L, "The Combination Cleaning and Treating of Seed Wheat," just published by the Department of Agriculture for free distribution points out that the cleaning and treating of seed wheat may well be applied in a single operation.

Useful Machines.

The authors point out that several successful machines for either the cleaning or treating operations are on the market and that they may be combined and mounted on trucks so as to be easily moved from farm to farm, or set up as stationary equipment. Also several makes of machines designed to combine cleaning and treating in one operation are now on the market. Last year an eastern railroad mounted equipment in an old baggage car to serve wheat growers along its lines and to demonstrate the value of the two treatments.

Mounted Machine.

The leaflet also contains a section describing a combined machine mounted on a truck and driven by a small gasoline engine which was operated as a community enterprise in San Luis Obispo county, California, last year. The county farm bureau financed the equipment which in 1927 operated for nearly three months and served 134 grain growers, handling more than 35,000 bushels of seed wheat. In 1928 more than 200 farmers were served and even more seed grain was cleaned and treated. This outfit can handle grain at an average rate of more than 50 bushels an hour. The cost of the farmers is low. It averaged $1.94 a ton in 1927. The leaflet, which includes photographs and a drawing of the equipment in use, may be obtained free on application to the United States Department of Agriculture, Washington, D. C.

Baby Chick Feed

Experts in poultry feeds urge the importance of proper feeding of baby chicks to give them a good, healthy start and to put them in a healthy, vigorous, growing condition. Chick diseases are prevented if care is taken in the method of feeding. The best of grains should be used for chicks. Regularity in feeding is immensely important. Pure, clean water should be available. Brooder facilities, in fact, orderliness and cleanliness should prevail.

Barley Production Shows Big Increase

Becoming of More Importance as Feed for Stock.

(Prepared by the United States Department of Agriculture.)

In 1928 the production of barley in the United States was more than 100 per cent greater than in 1921, and was by far the greatest production on record. This production, says the United States Department of Agriculture, resulted from an increase of about 30 per cent of the acreage seeded to barley, coupled with a relatively high average yield of more than 28 bushels an acre.

In many parts of the United States barley is becoming of more importance in the feeding of live stock. Exports of barley from the United States to Europe were heavy last year, owing to a shortage of feed grains in Europe. Indeed, the European situation has had much to do with the increase in barley production in the United States in recent years. Large exports to Europe in 1927 and 1928 maintained a price in this country which was probably higher than normally would have prevailed. In 1928, however, the price of barley decreased appreciably under the weight of the largely increased supply.

In the United States the acreage and the production of barley have increased steadily since 1866. Barley acreage has been expanded steadily in Minnesota, North and South Dakota, Wisconsin, and the irrigated western areas. World production of barley has been increasing since 1920.

Usually a rather definite relation exists between the total supply of corn and barley in the United States and the price of barley. In 1927, however, this relationship was modified by the influence of a shortage of feed grains in Europe, with the result that acreage in the United States was expanded unduly.

Agricultural Notes

Young chicks should be raised on clean ground, if possible, to keep them from getting worms.

* * *

Cows in milk and sheep need the largest amount of salt. Fattening cattle, horses, dry cows, and stock cattle require less.

* * *

With some varieties, summer pruning has hastened the bearing of young apple trees and increased crop production.

* * *

While rape is usually quite palatable, complaint is sometimes made that it is difficult to get hogs to eat it. However, if they are given access to no other green feed, they will usually learn to like it before receiving any serious setback.

* * *

Tree fruit plants and hardy grapevines may be pruned any time during the winter. The particular date is not important except that the work may be more accurately and comfortably done during periods of moderate temperatures.

POULTRY

GROWING CHICKS REQUIRE PROTEIN

Larger Amounts Given First and Gradually Decreased.

"Increase in muscle and nerve tissue and the total weight of growing chicks, is largely due to the protein content of the feed ration," said Prof. G. F. Heuser, at the Cornell university at Ithaca, N. Y.

Chicks grow rapidly in the beginning. During the first month they have the fastest growth, and after the second month the rate of growth begins to decrease until the time of maturity. Since protein is needed for growth larger amounts should be fed at first, and less as the chicks grow older."

According to Professor Heuser, the experiments at Cornell show that certain amounts of protein are best for chicks at different ages and that feeding more than these amounts will not give greater growth, but that feeding less than these amounts is apt to result in decreased growth.

These experiments show that the best amount of protein in the feed for chicks from one to six weeks old is 20 per cent; for chicks of from 6 to 12 weeks, 17 per cent; and for those from 12 to 20 weeks old, 14.5 per cent.

Large amounts of protein feed will not hasten maturity, but enough should be fed so that the best possible growth can be attained at the time of maturity and this will mean larger eggs and better production.

Cannibalism Is Serious Habit Among Hen Flock

What is known among poultry raisers of experience as cannibalism among hens is in many cases a really serious proposition. If a hen with nothing else to occupy her gets to pecking at one of her mates and perchance plucks a feather and that feather perchance is a new one and a little blood should appear, another and more vigorous peck is made; this time a real wound is made and more blood is brought forth. From this time on this old hussy becomes a veritable cannibal. Others of the flock are more than likely to join her in this cannibalism and it takes but a short while for them to actually get their victim down and tear her to pieces. Poultry experts of the Ohio Experiment Station have found that trimming off the point of the under beak just about down to the quick will at once stop the mischievous work of an individual so treated. Sometimes it is but necessary to trim one or two individuals that happen to be leaders in the trouble.

Crooked Breast Bones in Turkeys Avoidable

There are two things responsible for crooked breast bone in turkeys. The first would be faulty breeding, that is, because there is a lack of the mineral matter of the right sort, because of faulty metabolism of the same. Another reason is faulty roosting places or letting them roost too early, that is, a round roost is more likely to cause a crooked breast bone than a flat one and too small a roost, that is, a roost that is too small in diameter is more likely to cause crooked breast bones than a flat roost. The toms naturally are heavier than the pullets and a round roost or a roost that is too narrow would account for the fact that the toms had crooked breast bones while the pullets had none.

Theories to Determine Sex of Little Chicks

Many rules and theories have been proposed for determining the sex of the chicks at hatching or even from the egg. To date, most methods have proved unreliable. In the Barred Plymouth Rock breed, the size of the white spot on the head may be used to separate with some degree of accuracy the two sexes. The chicks with the large head spots are usually males. The crossing of certain breeds will result in chicks, the sex of which may be separated relatively accurately on the basis of color.

Brooding Chicks

The most important consideration in brooding chicks is to keep them always on fresh soil to prevent the contraction of disease and parasites which come from soil recently used by other fowls. In order to prevent soil contamination the brooder house needs to be of a type which can be moved easily. To make the brooder house safe from rats and other vermin, it must have a tight floor, and in order to be readily movable this floor must be made of boards.

Care of Young Turkeys

The young turkeys, when first hatched, require good attention. First, look for lice and be sure to get rid of every one or they will get the young turkeys. Use any good insect powder, dusting it on them, then put them in a paper sack and shake them up. Second, be sure to keep them dry and warm—not too closely confined. Place the mother in a coop with a little pen in front so the little turkeys cannot run away, for, at first they are very shy.

Many things bad for the country are tried on it, but the country, like the universe, is strong.

To insure glistening-white table linens, use Red Cross Ball Blue in your laundry. It never disappoints. At all good grocers.—Adv.

"Give me a sentence with the word 'megaphone.'" "You think you megaphone of me, eh?"—Judge.

Not That Foolish

"Don't try to make a fool of me!" he hissed.

"Why not tell me not to make a flower out of the rose, dear?" she asked, sweetly.

Two Evils

George Bernard Shaw, ever audacious, has plunged with characteristic heat into the discussion of women's clothes. He had a number of interesting things to say, one of which caused something of a sensation:

"The highest medical demonstration would not prevent me from wearing corsets," declares Mr. Shaw, "if I had to wear skirts."

IT'S DANGEROUS GROUND

you stand on—with a cough, a cold or grippe, and your blood impoverished. You must do something! Dr. Pierce's Golden Medical Discovery enriches the blood—builds health and strength.

Silas H. Eidson, Route 5, Box 4, St. John, Kans., remarked:—"I have used Dr. Pierce's Golden Medical Discovery, 'Anuric Tablets' and 'Pleasant Pellets' and I surely can say that they have done wonders for me. I had whooping cough and pneumonia when I was 19 years and was troubled ever since with indigestion, constipation and kidney trouble. I tried doctors but did not get relief. I had given up all hopes, but thank God I am a well man today. I certainly can recommend Dr. Pierce's medicines to be all that is claimed for them."

All druggists. Tablets or fluid.

Send Dr. Pierce, Buffalo, N. Y., 10c if you desire a trial pkg. of tablets.

What we need is more schools that will turn out self-providers.

"WORTH WEIGHT IN GOLD"

Verdict of Woman Who Tried Pinkham's Compound

Tully, N. Y.—"It hurt me to walk or sit down without help and I felt sick and weak. My mother-in-law took Lydia E. Pinkham's Vegetable Compound and she induced me to take it. I am now on the fourth bottle and have also used Lydia E. Pinkham's Sanative Wash. The medicines that will do for me what the Vegetable Compound and Sanative Wash have done are certainly worth their weight in gold. I think I have given them a fair trial and I expect to take two more bottles of the Vegetable Compound."—Mrs. Charles Morgan, R. F. D. 1, Tully, N. Y.

It isn't easy to get along on a short allowance.

Too many young men mix rye with the wild oats they sow.

Acidity

The common cause of digestive difficulties is excess acid. Soda cannot alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children, too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

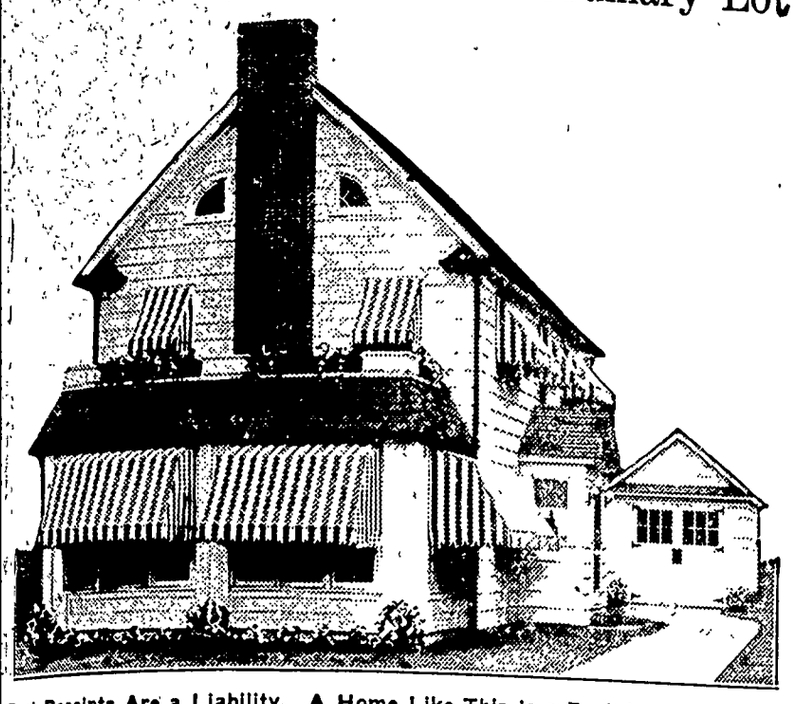
Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy NR Tablets has proven the safe, dependable relief for these conditions.

Attractive Design Suitable for Either Corner or Ordinary Lot



Rent Receipts Are a Liability. A Home Like This Is a Real Asset and Gives You a Standing in Your Community. This Home Was Selected for Its Beautiful and Convenient Floor Layouts.

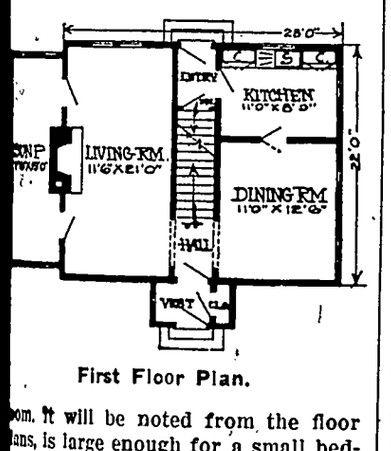
By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Some homes are designed especially for a corner lot, especially if the lot is narrow in its extent on one or the other of the streets. For a lot of this character the colonial home is excellent. It may be placed facing either one of the streets because of its design and the end appears to be the front.

A design for a colonial home that may be built either on a corner lot or an ordinary lot is shown in the accompanying illustration. As will be seen the sun parlor is built on one end and faces the street. This plan can be reversed if it is desired.

The house is 22 feet wide by 28 feet long. It contains five rooms besides the sun parlor, bath and a sewing room on the second floor. The sewing

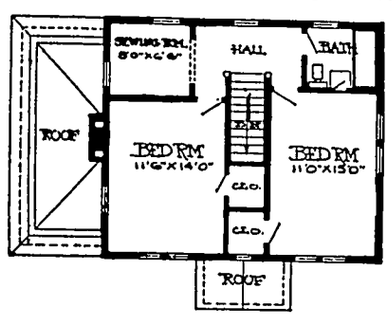


First Floor Plan.

room, it will be noted from the floor plans, is large enough for a small bedroom.

This is a true colonial design both in exterior appearance and the interior arrangement. The entrance door is through an outside passage and leads into a narrow hall out of which rises the stairs to the second floor. As arranged according to the plan shown, the living room is at the left and extends the whole width of the house, being 21 feet long and 11 feet 6 inches wide. In the center of the outside wall of this room is set an open fireplace with french doors leading to the sun parlor on either side. The sun parlor is 19 feet long and 7 feet 6 inches wide and has almost continuous windows, making it a very attractive sunny and airy room.

To the right of the entrance hall through a cased opening is the dining room. This is also large, being 11 feet



Second Floor Plan.

by 12 feet 6 inches. At the back is the kitchen, 8 feet by 11 feet.

The stairs leading to the second floor end in a hall at the back off of which open two large bedrooms, sewing room and the bathroom. One of the bedrooms is 11 feet by 15 feet, and the other is 11 feet 6 inches by 14 feet. The sewing room is 8 feet by 6 feet 6 inches. Off the two large bedrooms are closets of large capacity. It will be noted that these bedrooms are corner rooms and are light and airy.

The house is of frame construction with shingles for siding. This follows the colonial design so common in New England and makes a most attractive house. Another feature that indicates the colonial are the half fan lights in the end gables opening into the attic.

This is a very attractive and popular home building design. Because its foundation walls are straight and as are also the side walls, it is a comparatively inexpensive home to build. At the same time it provides five large and comfortable rooms and all the conveniences to be found in the modern home.

Brick, Stone Standards Used in Ancient Egypt

Centuries ago, during the heyday of kingship in Egypt, building was done with both brick and stone.

Biblical narratives of brickmaking in the early Egyptian days tells of how, as an added punitive resort, Pharaoh compelled the Israelites to make bricks without straw, which was about as near an impossibility as his devilish malignity could conjure up. But it seems that, even so, the bricks were made. They were not of the durable type, however, and none of them remain to tell the story of the same-time construction fashion of the period.

Other Egyptian kings, with greater imaginations and a plentitude of willing or impressed subjects, built enduring monuments in the way of pyramids that still dot the sand-strewn country here and there and bespeak exceptional engineering ability. Today these pyramids continue to attract the interest of the world at large as well as the speculation of the world's construction wizards who haven't yet come to an agreement on how the task was accomplished. How the elevated stones of such tremendous size is still conceded to be a mystery.

Today, in the Egyptian desert, the natives use a sort of adobe composition made of mixed mud and sand, in making their primitive homes. The mixture is applied soft and the sun does the rest. It does not make for symmetrical walls or attractiveness, but the native doesn't mind that. All he wants, generally, is shelter from the storms. He isn't troubled with rainy seasons or frigid temperatures.

Proper Insulation Pays; Helps Cut Down Expense

Insulation properly applied is not expensive. It can be shown that it pays its own way, first, by making it possible to reduce the size of the heating plant, and, second, by reducing the necessary consumption of coal.

Insulation goes on quickly—is not difficult or expensive to apply. Furthermore, it can be obtained from almost any reliable building supply dealer. Like all other materials used in building, it must be applied properly to get the desired results.

Another interesting thing about insulation is that it works almost as well in summer as it does in winter, for then it keeps the heat out and makes your house a more comfortable place to live in. Some of the modern comforts with which we surround ourselves, which, having once been luxurious, are now coming to be thought of as necessities, add to the cost of living, make it more difficult for us to build our homes on limited incomes; but insulation pays its own way. It is a bad building investment to do without it.

Sheathing in Small House Stops Fire Risk

Necessity for installing fire-stopping between a brick veneer exterior and the sheathing of a wood frame house can be eliminated through the use of an incombustible mineral sheathing.

Such a sheathing provides its own fire-stop on the inside of the structure. Nor can the blaze travel far up in the air space between the brick and the sheathing because of the facing of incombustible materials on both sides.

In laying brick veneer over mineral sheathing the bricks are tied in with metal ties, which are nailed into the sheathing with no more difficulty than the same ties are nailed into wood. This is made possible by the gypsum composition of the incombustible sheathing.

Mineral sheathing comes in large panels, which are tongue-and-grooved and which, in consequence, make possible a wall that is sealed against the infiltration of wind and which cut down the escape of furnace heat.

Leak Stopped in Time Saves Money

A leak once started will often baffle the best of repair men. It keeps getting worse. By and by a large area will have to be stripped and reshingled to get at the leakage that in itself may cover one square foot. Stopping the leak counts for little, as new ones appear in other locations without warning. Shingles are expensive.

WEDDING BELLS, FIRE BELLS

(© by D. J. Walsh.)

WHEN Dave Harris pushed his way through the revolving door of the Dennis Jewelry company, he felt that all eyes were upon him. Not that this young man of twenty-eight had a conscious makeup or was particularly noticeable from any other handsome man of his age—but, nevertheless, when he stepped up to the counter and rather diffidently whispered he would like to see something in engagement rings he was absolutely convinced that a hundred eyes were peering at him.

Dave was a private in ladder company B, city fire department. He had entered the state agricultural college with the intention of taking charge of his father's farm, but cattle and corn and harness and hay had no appeal to him, and not being particularly fitted to sell bonds he joined the fire department.

And the first thing he did to distinguish himself was to become engaged to be married.

Dave's choice was Dolly Mason, pretty and sprightly and the belle of the neighborhood. Her wavy hair and sparkling blue eyes and cheerful disposition endeared her to all those with whom she came in contact. It was no wonder that company B considered Dave the luckiest fellow in the world.

Dolly had often told her sweetheart that while she was decidedly strong for wedding bells she was equally opposed to fire bells as far as Dave was concerned. She wanted him to go into business, some undertaking more substantial and less risky.

"How about my selling ice cream freezers at the North pole?" jokingly remarked Dave one afternoon. "Or selling foot-warmers to the Filipinos."

"Davie, do be serious," replied Dolly. "You know how downright in earnest I am about it."

"Of course you are, dear, but you must be practical. If there is one thing I am fitted for it is the fire department, and with the fire department I stick." His jaw became set, and whenever this happened Dolly knew there was no use arguing any further.

But Dave had persuaded Dolly to marry him notwithstanding his chosen work, and as he departed from the jewelry store with the diamond solitaire safely in his pocket he whistled gayly and made a beeline to Dolly's boarding house. He found her at the piano lazily running her fingers over the keys.

She struck a final note on the piano and looked up smilingly. "Hello, Davie," she said. "Working hard today?"

"I should say so," he replied. "Been a terribly strenuous day."

"Many of those awful fires?" she inquired reproachfully.

"Not a one," the young man replied. "But I've been shopping. And not after collars and ties, either."

"Been buying some shoes or a hat?"

"Wrong again, honey, but look at this!" and excitedly he removed the top of a little box. The sparkle of the precious stone caught Dolly's eyes and she gasped in amazement. "And it's for you, darling—the future Mrs. David Harris."

Dolly glanced at the ring and then at Dave and then again at the ring. Tears came to her eyes. She arose from the piano and went to the window. Tears were now streaming down her face and she gazed at the little garden with its many-colored flowers, but everything was a blur. Dave, in his astonishment, lifted himself from the piano bench and went to Dolly's side and reached for her hand. She drew it away and burst out crying.

"I can't," she sobbed. "I can't. Oh, I do love you, Dave, but you won't listen to me. You know how I do want you to go into some business."

And then Dave realized fully for the first time the seriousness of the situation. Nothing in the world he'd rather do than be with the fire department, and yet he could not lose Dolly. Perhaps after all he had been unreasonable. Dolly's uncle would be only too glad to have him with him in the real estate business and at present business was booming. He would doubtless earn a considerable amount of money and it would result in a little bungalow and everything else that went with it. Why, the problem was very simple after all. He'd send in his resignation to the chief and things would be happily settled.

Dolly covered her face with her hands and cried convulsively. Dave stroked her head and wondered how he could do anything to hurt her.

"Honey," he said softly, and was about to continue when he abruptly paused. He drew himself up with a start, turned his head quickly and listened with tenseness. Off in the distance he heard the peal of fire bells. And Dolly heard them also. She stood up and they stared at one another. And simultaneously through each their minds ran the same question: Would it be wedding bells or fire bells? There was intense quiet all about them. And Dave detected the 6-18-6 alarm.

"My God," he cried in a whisper, it's in the tenement district."

Dolly's face was pale and the corners of her mouth quivered in her effort to speak. The handsome young man before her was for the first time in his life at a loss what to do. In his imagination he saw smoke-filled rooms filled with children with outstretched arms. He could see mothers frantic with fear and fathers helpless to save the ones they loved. At the same time he could see his fond hopes shattered. Dolly would marry some one else and—

But something at that moment suddenly brought him to a decision. It was the sound of a second alarm. He tried to speak to Dolly, but words failed him. He saw grief in her eyes and yet he could see the love in them that tells more than mere spoken word. He paused a moment, turned hastily and darted from the room. But during that moment's pause he knew he had lost Dolly forever.

The next morning the headlines in the papers told the story—"Young Fireman a Hero" and "Dave Harris, Fireman, Saves Lives." But praise from all quarters of the city did not awaken him from the realization that he and Dolly had separated. It was paying dearly, he thought, to win glory only to lose happiness. His hand unconsciously touched the little box in his pocket and the thought of the future that might have been made this the saddest day in his whole life.

Perhaps if he could see her he might straighten things out! Yes, he would resign this very day and the unhappy yesterday would be entirely forgotten. He ran to the telephone and called up her office. While he waited for the connection it seemed that a weight had been suddenly lifted from his heart. He stood there nervously, longing to hear the sound of Dolly's voice. And then he was told that Dolly did not come to work that day. Poor child, he thought, no wonder she is feeling ill from the strain of yesterday. And then he called up her boarding house. And here he was told that Dolly had moved the night before—address unknown. Dave mechanically hung up the receiver. He unsteadily walked to a chair and sat down. Dolly gone! Dolly gone! The words ran through his brain and tortured him. And he sat there staring at the floor.

Weeks passed. Dave had pulled himself together, but the little box—a sacred reminder—remained in his pocket always. His promotion had been rapid and his savings had been well invested, and Dave not only had money in the bank, but an equity in a little house off in the country. He would have his mother come and live with him in his loneliness.

And then came an alarm—the third of the day. To Dave one alarm was the same as another. But to each fire he gave all that was in him.

"Where is it this time?" yelled a passerby as Dave swung onto the speeding ladder wagon.

"In the neighborhood of James and Pine," he called back as he adjusted his helmet. And the neighborhood came to his mind immediately—rows of old residences turned into rooming houses.

As usual, Dave's truck was the first to reach the scene of the fire. Dave's trained eyes told him at once that the house was doomed. Smoke and flames poured from the top windows and a reddish glow could be seen through the windows of the third floor. Dave's wagon pulled up directly in front of the burning house. The chief began to give orders.

"A ladder to the third floor, Harris," he called out. "Look out for the walls—they look bad."

The crowd gave out a roar as the ladder extended itself and was tilted over to the building. Dave was the first to mount the rungs. And he started upward. Small flames now were coming out of the third-story windows and the sound of cracking walls could be heard above the din of the puffing engines.

"Down from there," megaphoned the chief to Dave. "Walls coming down—down, Harris." But at one of the windows Dave saw a figure—arms outstretched, and he heard a smoke-muffled cry. And he continued up the ladder. The multitude below yelled to him in alarm. "The walls are falling" came to him from hundreds of mouths, but Dave still saw the figure in the window and continued upward unmindful of the warning.

Through the smoke he put his arms around the figure and pulled it through the window. The crowd below gave out a mighty yell. Dave steadied himself and carefully began to descend. Great hisses of flames now shot from the third-floor windows and bricks began to fall. Dave continued in his descent, his only thought being to protect the figure he firmly held in his arms. And he suddenly realized it was a woman he was holding. To protect her face he started to cover it, and then he stopped. And her eyes opened just a few inches from Dave's eyes. And then the din below seemed to cease suddenly and all was quiet except the sound of two beating hearts.

"Dolly," he said tenderly.

"Davie," she murmured. "I want you always." And underneath his great helmet he kissed her.

Grecian Painted Walls

Instead of wallpaper, the ancient Greeks had painted walls. Instead of bare colors of bands and panels, such as are being used to some extent today, they were inclined to make their walls more the colored setting for their finer wall paintings, which were works of art. Instead of hanging paintings on the walls, they painted them there. Little attention was paid to furniture from an artistic standpoint. For the Greeks regarded furniture as something useful, not ornamental.—Detroit News.

Saving Oil Tanks

The high mortality among the crude oil storage tanks of the country, so great that it is estimated that in some sections one out of five must be replaced annually, may be alleviated through a series of tests being conducted in Texas by the United States bureau of mines. The corrosion of the tanks is due to the high sulphur content of the crude oils, and to overcome this, the bureau experts are trying out aluminum as a substitute for the iron and steel, which are unable to stand the action of the hydrogen sulphides in the crude oil.

Bad as the Ponies

"I learned something at the dog races today."

"Yeah? What was that?"

"That it is a heap wiser to put a mustard or a muzzle on a dog than it is to put your money on it."—Cincinnati Enquired.

RRIAGE LICENSES ISSUED THE PAST WEEK

he following marriage licenses e issued in Hancock County this week:

rank A. Tienam, Titonka, and a Boehnke, Garner. Issued on il 23, 1929.

William F. Davis, Britt, and Anna Kelly, Britt. April 24, 1929.

has. D. Pruit, Nashville, Indiana Mary Denger, Elma, Iowa.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English Service.
11:00 a. m. Sunday school.

The teachers will read their annual reports and pupils will be promoted. All scholars should be present.

The Bible Class will meet Tuesday evening at 8:00 o'clock. The Choir will meet Saturday evening. The Senior at 8:15, Junior 7:30.

On Ascension Day, Thursday May 9th, there will be a German Service at 10:00 o'clock in the morning.

At 2:00 o'clock in the afternoon the annual business meeting of the Congregation will be held. All voting members should be present.

MAY COURT CASES HAVE BEEN FILED

TWENTY FIVE NEW CASES ON MAY COURT DOCKET

May Term Will Be Light And Of Short Duration, Likely

The May Term of the Hancock County District Court will perhaps be a rather tame affair as but a small number of new cases are listed on the docket and are as follows:

Chas. A. Schoenwetter vs Fred Oxley, et al. Plaintiff asks defendant to re-pay taxes on N½ 13-95-26 in the sum of $738.76.

Farmers State Bank, Kanawha, vs Joseph M. Shaw et al. Plff asks judgment on note for $4,653.04 and for writ of attachment.

Farmers State Bank, Kanawha vs J. J. Tebbin. Plff asks judgment on note for $2,316.00.

J. T. Cheney vs Harry L. Fraser. Plff asks judgment for $5,000 and foreclosure of mortgage on NW¼ and W½ of NE¼ 8-97-25.

Mrs. Sarah Fiegel vs Susan A. Roberts et al Action to quiet title to W½ of NE¼ and SW¼ of NE¼ 3-97-26.

Nels Munson vs A. W. Lee et al Plff asks judgment for $3,730.22 and foreclosure of mtg on N 19 ft and 2 in of lot 6 block 7 Andersons add to Britt.

Edward Chapman vs Helen Chapman. Plff asks that he be divorced from deft

Jennie Larson vs L. L. Coomes et al Plff asks judgment for $17,-107.00 and foreclosure of mtg on N½ SW¼ and S½ NW¼ 20-97-23.

First Trust & Savings Bank, Chicago vs Julia A. Thompson et al. Plff asks judgment for $5,137.22 and foreclosure of mtg on S½ SW ¼ and SW¼ SE¼ 5-97-24.

Chas. Fenninger vs Herman Schleusner. Plff asks judgment for $1,186.99 for rent due etc and for attachment.

Prudential Insurance Co. vs. C. H. Lackore et al. Plff asks judgment for $24,525 63 and foreclosure of mtg on E½ 30-97-24.

Ostby Anderson Co. vs Rose A. Hejlik et al. Plff asks judgment on note for $350.00.

Equitable Life Assur. Soc. vs Geo Cooley et al. Plff asks judgment for $13,125.00 and foreclosure of mtg on N 50 a of NW¼ 6-97-24 and lands in Winnebago Co., Iowa.

State Bank of Belmond vs Jennie Sporaa. Plff asks judgment on note for $174.96.

T. G. McDermott vs Selby Poultry Co. Plff asks judgment for $30 on account of damage to automobile.

E. D. Miller vs L. R. Matthews. Plff asks judgment for $250 on account of damages to automobile.

Farmers Savings Bank, Corwith, vs Dr. C. Stull. Plff asks judgment for $630 on account of rent due.

L. A. Jensen vs Fred Kopischke. Plff asks judgment for $150 on account of legal services rendered.

Gust Johnson vs J. C. Hanson et al. Plff asks judgment for $302.50 on account of rent due.

J Yepson & Son vs C. C. Cook. Plff asks judgment on note for the sum of $433.39.

J. Yepson & Son vs Thos. L. Anderson. Plff asks judgment on notes for $536.08.

J. Yepson & Son vs. B. O. Lewison. Plff asks judgment on note for $138.33

J Yepson & Son vs Dale Wagoner et al. Plff asks judgment for $201.-86 on book account.

Walt Veech vs J. A. Medlin et al. Plff asks judgment for $1,748.89 and foreclosure of chat mtg.

L. A. Andrew vs Piercy Reibsamen et al. Plff asks judgment for $886 55 and foreclosure of chat mtg.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning worship at 10:00 o'clock
Sunday school at 11:00 o'clock

Liberty Church

Morning worship at 11:30 o'clock.
Sunday school at 10:30 o'clock.

Evening Program, Klemme

Epworth League 7:15 o'clock.
Evening Preaching Service o'clock.

May 12th, one week from this coming Sunday is Mother's Day. We plan to make this a special day in several ways at both churches. The Mothers are invited to be our honored guests. Others are invited to do them honor with your presence. New members will be received into the church. The rite of baptism will be administered to any deisring it whether young or old.

AVERY LADIES HOLD ALL DAY MEETING AT WHITE HOME

Interesting Lesson In Remaking Of Old Clothes Was Studied

The Womens' Training School of the Avery Township Farm Bureau met at Mrs. Allie White's hom efor an all day meeting Wednesday, May 1st.

The lesson was given in an able and interesting manner by Miss Myrtle B. Johnston, our present County Demonstrator.

The women brought old garments which they remade into a child's coat without basting.

The sewing machines were loaned by the Wellemeyer Dept. Store of Klemme.

Any woman who has spent hours trying to line a coat or sew on a collar so that it will be finished correctly ,could very profitably go to the leader of her district and examine the sample coat, which she made.

If the women of our township will adopt the suggestions given in our training school, it will help us toward our Farm Bureau goal of a Happy and Prosperous Family on each farm.

ELL TOWNSHIP 4-H CLUB MET WITH MISS ETHEL RARZ

Girls Were Shown How To Can Rhubard By Their Instructor

Saturday, April 27th , the Ell Township 4-H Club met at the home of Ethel Barz. Mrs. Chas. Griffen, their leader, demonstrated how to can rhubard. A social hour followed the business meeting. A delicious luncheon was served by the hostess. Because of the rainy weather some were not able to attend. The next meeting will be held May 11, at the home of Emma Goll.

FARM BUREAU DRAWS BIG CROWD

WON PIE EATING CONTEST IN AVERY TOWNSHIP

Avery Township Farm Bureau Has Another nteresting Meeting

(By Mrs. Howard C. Barger)

The regular monthly meeting of the Avery Township Farm Bureau was held Friday evening, April 26, in the new school house in District No. 8, three miles east of Goodell.

The Township Director, Virgil A Cook, called the moeting to order The Goodell Band opened the meeting with several selections. The 4-H Club Girls of Pleasant Township, Wright County, presented a home talent play, "There Isn't a Man in the House." Virgil Cook spoke on "The Value of 4-H Club Work. Mrs C. A. Arnold, our Township Chairman, gave a short talk on "The Need of 4-H Club Work in Our Township." Aileen Jenison and Margery Avery sang Carolina Moon

Pie Eating Champions

The pie eating contest was won by Harvey Hubbard and his partner, Ruby Halfpop, in the young men's class, and by Howard Barger and his partner, Mrs. C. A. Arnold in the married men's class. Two chocolate pies were presented to the winners.

Following the refreshments, Wm Geallow played numerous selections on the mouth organ, accompanied by Merle Avery on the organ.

The building was filled to overflowing.

The Cashman Department Store of Goodell donated the coffee.

Mrs. Eli Hetland, assisted by Mrs. William Geallow, acted as hostess of the evening.

ROBBERS ENTERED GARNER AUTO CO.

BREAK CASH REGISTER AND STEAL $71.50 IN CASH

Get Two New Ford Cars An dCash At Belmond Garage

Sometime Monday night or early Tuesday morning robbers gained entrance to the Garner Auto Co. here by prying open a window at the rear of the building on the west side of the workshop and from that point entered the office where they pried open the cash register with a small bar and took $71.50 in cash. John Pritchards desk was also broken into and damaged and papers strewn about by the thieves in their search for cash or valuable papers. Notes and checks were not taken.

From Bernard Smid's car the robbers took a nice robe belonging to Smid and a watch belonging to Henry Suckow, who had left it in the car. This was about the extent of articles taken here.

Thieves Worked Belmond Too

Shortly after the robbery in this city had been checked over, Mr. L. Tokman, proprietor of the Ford garage at Belmond, and his mechanic, George Heginger, drove into Klemme. They had been tracking the robbers car from the imprint of a new Fisk tire and a new Goodyear tire and had followed the tire trail as far as the Wes Lenz farm north of Klemme where the trail turned west a half mile. At this point the Belmond men found Mr. Tokman's cash register, which had been stolen, lying in a field close to the road and all smashed up; papers laying all over the field.

Entered Garage At Belmond

Mr. Heginger, who sleeps in a room over the Belmond garage, related how that he was awakened at sometime after two o'clock by a disturbance in the garage. Getting up to investigate he was confronted by four armed and masked me and ordered to open the safe. He explained that he was the mechanic and did not know the combination. He was questioned as to whether or not the safe contained money and assured the robbers Mr. Tokman was in the habit of keeping only papers and records in the safe.

The robbers could not open the cash register so picked it up and loaded it into a car, and proceeded to help themselves to two new Ford cars on the floor which they drove away, according to Tokman.

After the robers had left, Heginger went to Tokman's house to tell him of the happenings. It was an hour or so later when they notified authorities. The car tracks were easily traced on the damp paving. It was these tracks which they later traced to the Lenz farm, thence west, where they turned around and went east on the township road and where the tracks were lost.

Mr. Tokman and Mr. Heginger identified the car tracks at the Ford garage here as being the same which they followed at Belmond.

At this time no trace has been found of the robbers.

Tokman says they got about $18 in cash in ruining his $500 cash register.

KLEMME YOUNG MAN IS NOW SECTION FOREMAN

Milvern Lau, who has been working for some time on the section here for the Rock Island, Monday was sent to Swea City to take over the position there as section foreman. He was sent up there as a relief foreman, but his chances are fine to receive a permanent appointment.

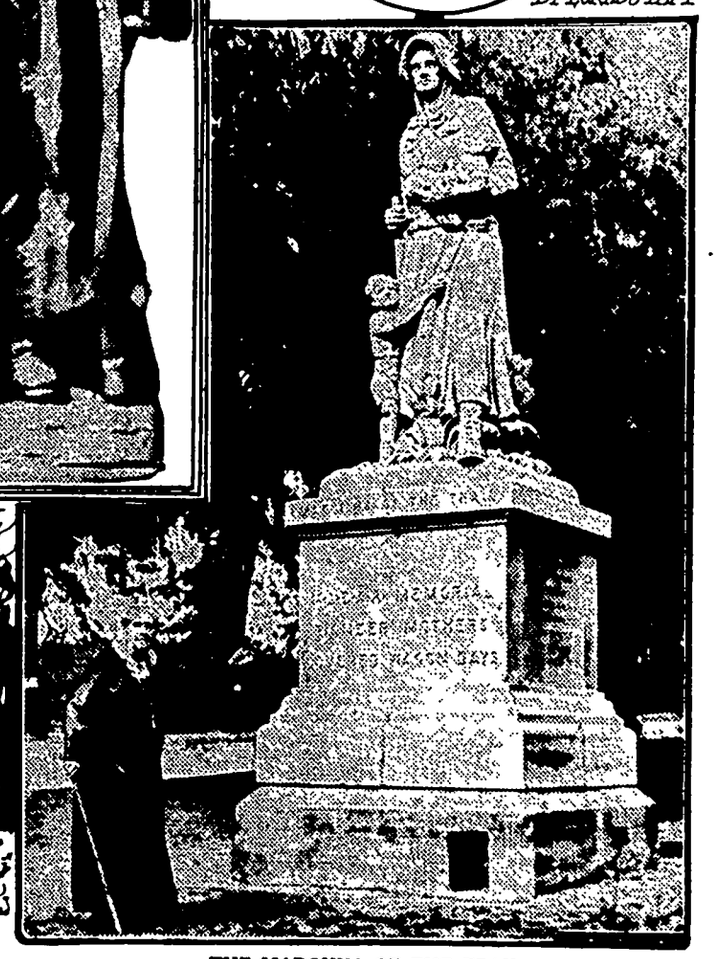
Milvern is to be congratulated on his good fortune. He is probably the youngest section foreman on the entire line and with such a start we predict that he will make rapid advancements in railroading.

Mothers of Men Who Won a Wilderness

THE OKLAHOMA PIONEER WOMAN, BY BRYANT BAKER

THE KANSAS PIONEER WOMAN, BY BRYANT BAKER

THE PIONEER SPIRIT, BY LORADO TAFT



THE MADONNA OF THE TRAIL

By ELMO SCOTT WATSON

She came to rock the cradle of a new empire. Adventure calls to men, but duty summons women. And so, when the time was ripe to breed new stars for the flag, she set forth from Maine and Ohio and Killarney's loveliness and her Swedish village and her fjord home to mother the wilderness.

Only God and she knows the fullness of her giving to the young Northwest.

She lived in sod houses and hay-roofed huts, with the newest neighbor often a day's trudge away.

She had no decencies. She did not even know the luxury of floor or fireplace. Her meal was ground in a hand mill and her baking range was a makeshift oven in the yard.

She helped in the fields—at the plowing and the sowing, and she helped to scythe the crop and bind the sheaves.

She watered stock and spun and knitted and tailored. She made a garden and preserved the winter food, milked her cows and nursed her children. The sleepy-eyed sun found her already at her tasks, and the midmoon heard her croon the baby to rest.

Her "beauty sleep" began at ten and ended at four. Year in and year out she never had an orange, a box of sweets or a gift of remembrance.

She fought drought and dearth and savages and savage loneliness, her "Sunday bests" were calico and linsey woolsey. She grew old at the rate of twenty-four months a year at the grubbing hoe and the washtub and the churn.

She bore her bairns alone and buried them on the frozen prairies.

But she asked no pity for her broken arches, her aching back, her poor, gnarled hands. Or for the wistful memories of a fairer youth in sweeter lands.

She gave America the great Northwest, and was too proud to quibble at the cost of the stalwart sons to whom she willed it.

She mothered MEN!

SUCH was the tribute which a noted writer, Herbert Kaufman, once paid to "the Prairie Mother," the women pioneers of that great region comprising Minnesota and the Dakotas, the empire known as the new Northwest. But what he said of the prairie mother was true of all pioneer women who were mothers of the frontiersmen who won a wilderness, whether that wilderness was the wooded lands east of the Mississippi or the great plains and mountains of the trans-Mississippi west. For the pioneer mother of America was one of the most heroic types of motherhood the world has ever known and as Mother's Day approaches this year it is interesting to note that America in recent years has shown its appreciation of that fact and has been busy in many places perpetuating her memory.

One of the leaders in this movement have been the Daughters of the American Revolution who began some two years ago to mark the National Old Trails route from the Atlantic to the Pacific with heroic statues of the women who followed that trail across the country. The design of a St. Louis sculptor, A. Leimbach, known as the "Madonna of the Trail," was accepted and twelve of these statues, each eighteen feet tall, are today standing along the trail in the states of Maryland, Pennsylvania, West Virginia, Ohio, Indiana, Illinois, Missouri, Kansas, Colorado, New Mexico, Arizona and California. In nearly every case these statues were unveiled on Mother's day and special interest was attached to the ceremonies in California because one of the women who participated in them was Mrs. Caroline Cook (who is shown in the picture above), an eighty-three-year-old pioneer mother who crossed the plains in a covered wagon.

Two years ago an Oklahoma oil millionaire, E. W. Marland, announced his intention of honoring the pioneer women who settled on the famous Cherokee strip, the last American frontier, by erecting a monument to them. He asked the leading American sculptors to submit models for such a monument and twelve of them responded. The design submitted by Bryant Baker was chosen and it is from this model (shown above) that the statue more than forty feet in height, will be cast and stand on a knoll near Ponca City, Okla. It will be one of the most colossal that has been made in recent years and will be second only to the statne of Liberty in New York harbor in size and majesty.

The state of Kansas is also planning to honor its pioneer woman and has accepted another design by the same sculptor for that purpose. In January of this year one of the features of the celebration of the sixty-eighth birthday of Kansas was the dedication of the site on the state house grounds in Topeka where this statue is to stand. The Pioneer Women's Memorial Association of Kansas, which is sponsoring the movement, is raising a fund of $25,000 for this memorial. In both the Kansas and Oklahoma pioneer mother statues, the sculptor has emphasized the qualities of teacher and worker as well as mother in the women who first came to those states and helped make them the abode of civilization.

When the town of Elmwood, Ill., commissioned its most famous son, Lorado Taft, to model a statue which would typify the pioneer spirit, the sculptor did portray that idea with the figure of a pioneer man. Today the statue which stands in the park square of Elmwood and which was unveiled last year shows a stalwart frontiersman standing, gun in hand, defiantly braving the dangers which beset a wilderness breaker. Close beside him stands a woman, a typical pioneer mother shielding in her strong young arms, her baby, and facing with her husband the dangers of the new land.

How worthy the pioneer mother is of having her memory perpetuated in enduring stone or bronze is forcibly impressed upon anyone who reads the history of the American frontier. Volumes could be written about the pioneer woman alone how she did her share in making a home for her mate, how when it was necessary she could handle the rifle and the ax to defend that home, how she braved all the terrors of flooded rivers, prairie fires, snow-filled mountains, hunger, thirst and sickness as she marched by his side in carrying the star of empire westward. One instance of the westward faring pioneer is typical. It is the story of the settling of Nashville, Tenn., of which a recent writer has said. "It is an Odyssey without parallel in the annals of Tennessee, if indeed it can be matched anywhere. "Here is that story as Emerson Hough tells it in his book "The Way to the West":

"In 1779, one James Robertson of the Watauga settlements of North Carolina, a steadfast man, heard certain voices that called him to the West. James Robertson, the steadfast, forming his company for this uncertain, perilous enterprise, said: "We are the advance guard of a civilization, and our way is across the continent." Simple words—yet that was in 1779!

Now, for the building of this one town, the town that is now the city of Nashville, and the capital of Tennessee, this leader had gathered three hundred and eighty persons, men, women, and children. All the women and children, one hundred and thirty in number, in charge of a few men, went by boat, scow, pirogue, and canoe, in the winter time, down the bold waters of the Holston and Tennessee rivers. The rest traveled as best they might over the five hundred miles of "trace" across Kentucky. Of this whole party two hundred and twenty-six got through alive.

The boat party had many hundreds of miles of unknown and dangerous waters to travel, and the journey took them three months, a time longer than it now requires to travel around the world. They ran thirty miles of rapids on the shoals of the Tennessee, pursued and fired upon by Cherokees. Of this division of the party only ninety-seven got through alive, and nine of these were wounded. One was drowned, one died of natural causes and was buried, and the rest were killed by the Indians. Their voyage was indeed "without a parallel in modern history." Among those who survived the hardships of the journey was Rachel Donelson, later the wife of Andrew Jackson.

The path of empire in America, the path of corn and venison, was a highway that never ran backward. These men would never leave this country now that they had taken it. But what a tax was this that the barbaric land demanded of them! In November of 1780, less than a year after the party was first organized, there were only one hundred and thirty-four persons left alive out of the original three hundred and eighty, but in the settlement itself there had not been a natural death. The Indians killed these settlers, and the settlers killed the Indians. Death and wounds meant nothing to the adults. The very infants learned a stoic hardihood.

The spring of 1781 found only seventy persons left alive. But when the vote was cast whether to stay or return, not one man voted to give up the fight. In that West corn was worth one hundred and sixty-five dollars a bushel, and in its raising the rifle was as essential as the plow. Powder and lead were priceless. Man and woman together, fearless, changeless, they held the land, giving back not one inch of the west-bound distance they had gained!

In 1791 there were only fifteen persons left alive out of the three hundred and eighty that made this American migration. There had been only one natural death among them. In such a settlement there was no such thing as a hero, because all were heroes. Each man was a master of weapons and incapable of fear. No fiction ever painted a hero like to any one of these. One man, after having been shot and stabbed many times, was scalped alive, and jested about it. A little girl was scalped alive, and lived to forget it. An army of Indians assaulted the settlement, and fifteen men and thirty women beat them off. Mrs. Sally Buchanan, a forgotten heroine, molded bullets all one night during an Indian attack, and on the next morning gave birth to a son

This was the ancestral fiber of the West. What time had folk like these for powder puff or ruffle, for fan or jeweled snuff box? Their garb was made from the skin of the deer, the fox, the wolf. Their shoes were of hide, the beds were made of the robes of the bear and buffalo. They laid the land under tribute. Yet, so far from mere savagery was the spirit that animated these men that in ten years after they had first cut away the forest they were founding a college and establishing a court of law. Read this forgotten history, one chapter, and a little one, in the history of the West and then turn, if you like, to the chapters of fiction in an older world. You have your choice of lace or elkskin.

A Woman Homesteader

I walked with quick steps up the coulee trail;
I had to hurry lest the creeping dark
Would catch me and my nervous hands would fail
To find the wire gate that closed the park
Against stray cattle. Here my cabin stood,
In a small wilderness of quaking asp;
Here I "homesteaded." No one thought I could
Two years ago, but now I calmly pass
A bristling porcupine, a rattlesnake,
The watching eyes of some wild, hidden thing—
A coyote sneaking near the dried-up lake,
A row of stunted pines where finches sing,
The mule-eared deer that often come to sup,
And nuzzle one another at my spring
(Which, after cleaning, is but just a cup),
And yet, tonight, how glad I was to bring
My hands in contact with the wire bight
That held my gate. I thought, "Real homesteading!
I hate the dark; I only love the light!"
Quickly I shut the door and slid the draw
Across the iron latch, and dropped the clamp,
Firmly in place, but not before I saw
Near Tiger Butte the glimmer of a lamp.
I stood a moment puzzled by the light—
Startled, perhaps, and curious as a deer
That lifts its head to catch the rushing flight
Of a young grouse. And then my silly fear
Vanished like mountain mist. My lamp! A match!
To cheer that other soul I knew had come
To plough and fence; to have a garden patch;
To live with God as I and build a home.

—Lillian T. Leonard in Scribner's Magazine.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

DEADLY ROMANCE

ONE afternoon recently a man drove his family into the country. It was a beautiful day, spring was at its best, and the trip was a joyful success. Around noontime the picnic lunch was spread near an old stone walled spring. Here on the back road the romance of days gone by when father had been a boy on the farm, returned to life. And the water so sparkling, and so clear!

Now for the other side of the picture. Two weeks later the parents and the two children became sick. Three weeks later all of them had gone through serious illness, the youngest child unsuccessfully. The romance had been attractive but the unseen typhoid germs had got in their work. Things at the spring had not been what they seemed to be.

City dwellers take pure, clear and safe water as a matter of course. Aren't they paying taxes and water bills for just that thing? Very well, and very logical. But many urbanites forget that at the city line the filtration plant and its intelligent overseers cease to function. It therefore does not pay to become too enthusiastic over the old oaken bucket, the spring by the wayside and the antique pump.

Quite true, some states, but by no means all of them, annually check up on the highway water supplies on the main traveled roads for the protection of the motoring public. They even placard as "Safe" or "Unsafe" every individual source of supply that is likely to serve the passing automobilist. But even in these careful jurisdictions the by-roads in all probability will be missed. Better go thirsty, therefore, if the romantic water supplies cannot present clear proof of their safety.

In this connection, a word to country dwellers. Have your individual supply checked annually by a recognized laboratory. A small money outlay will be necessary but it's nothing compared to doctor bills or funeral expenses. In addition, obtain and study the literature published by your state department of health on this most important subject. Don't take any chances on your water supply no matter how good it looks or tastes.

Acting upon this advice may save illness and even death.

* * *

QUACK, QUACK

THE barefaced assumption of scientific superiority displayed by quacks should be enough to settle anyone. Add to this the studio portraits of the wizards themselves, and the last vestige of appeal should be gone. But, somehow, the thing works just the other way.

The ability to toot their own horns is their only merit. Having failed in the ethical practice of their professions—medical or dental, if, indeed, they possess even these qualifications—these egotistical gentry purchase space in newspapers (when they can) and in this manner brazenly admit to the world that they have beaten it, including all the scientists and leaders of their chosen calling. Thus they are able to effect marvelous and hitherto unknown cures for as low as a dollar down! Which, it must be confessed, is low indeed.

And so it comes to pass that hundreds of thousands of dollars annually are expended by people who still believe in fairy stories. If this was all there was to it, possibly no objection would be made. If a fellow wants to throw his money away, that's his business. But when it comes to throwing health away, then the matter assumes public importance and a warning is quite justifiable.

In all fairness, quacks sometimes cure people. But their main interest usually is in the money they can extract—not in the amount of health they can bestow. As a matter of fact, many instances are on record where a physical condition has been aggravated for the sole purpose of prolonging the cure.

Indeed, sometimes the outlook as stated by this particular brand of medico has been so unpleasantly (and untruthfully) tragic that the patient upon hearing the verdict has straightway left the office and committed suicide!

The legitimate medical profession, on the other hand, is the foundation of the nation's health. Each community has its share of honest, well-informed and experienced practitioners. What more do you need? Can you afford less?

If you are looking, therefore, for "value received" and health, don't make friends with the quacks.

HENRY'S HOMECOMING PERFECT

(© by D. J. Walsh.)

THE Ladies' Aid society of the Middleton Methodist church was in a high state of excitement. They had appointed themselves the committee to arrange for the dinner on the occasion of Henry Brewster's visit to his home town on Thursday—Henry Brewster, president of the M., L. & M. railroad, the Henry Brewster they had known as a boy, born and brought up in Middleton, but who had left there twenty-five years ago to seek his fortune. The townspeople of Middleton still claimed him for their own and had followed his brilliant career faithfully. They had named the park down by the depot Brewster park, for had not Henry Brewster's railroad brought Middleton out of the shadows? And now he was coming home—just for a few hours, it is true, but nevertheless, Middleton was preparing to receive her illustrious son!

The good ladies of the "Aid" were assembled in the Sunday school room.

"Of course—soup and chicken," said Mrs. Ezra Miller, president of the "Aid," and ten voices echoed, "soup and chicken."

"William says they have new fancy olives down at the store and we can send to Davisburg for hearts of celery, also salted almonds. I'll bring over my currant jelly and sweet cucumber pickles," volunteered Mrs. Annie Smithers, "and I'll make the salad dressing for the cabbage salad."

"Mashed potatoes, gravy . . . and maybe some scalloped potatoes . . . more tasty, don't you think? 'n' squash, hot biscuit, some clover honey, maybe. I remember Henry was fond of it as a boy . . ."

"Mince pie 'n' pumpkin pie with whipped cream and coffee . . ."

Libbie Adams, Middleton's "old maid," bent her head over her sewing. Libbie was one of the "Aid's" most active members, but today she had remained silent.

"Seems you should take a little interest in Henry's coming," spoke up Mrs. Adams. "You used to be such good friends, sweethearts almost, raised together as you were, Libbie."

"You haven't left me much to say," replied Libbie dryly. "Dinner all planned, banners and town hall—parade—speeches—I haven't had much to say in planning for Henry."

"Well, you might say the plans are satisfactory. It's no small matter, an affair like this, especially for a big man like Henry."

"That's just it. If I had anything to say about it, I would make it a home affair. A good dinner right down in this dining room of the church he attended as a boy, forget all the fuss and feathers. I'm in favor of letting Henry forget he is a rich man, the president of the railroad, a personage. I'd do away with the speeches and banners and fussing; just remind him he is home again among old friends, and forget the chicken and hearts of celery and fancy olives."

"What! Not have chicken?"

"Oh, have it your own way, folks, but I knew Henry Brewster better than all the rest of you. We both lived with my Aunt Minnie for eleven years after his folks died. Don't change your plans. He will appreciate it—"

"But not have—chicken," repeated Mrs. Miller incredulously.

"Henry probably eats chicken every day of his life. Chicken isn't a treat for city folks. But as I said, just go on . . ."

"But what could we have—if not chicken?"

Libbie continued to sew, and there was silence for a moment.

"'Pears like maybe Libbie is right," spoke up timid little Mrs. Potter. "I presume he does have chicken at all those banquets and such. But I can remember when he used to come here to the church socials—how he would eat! 'Pears like Libbie may be right."

The "Aid" turned to Libbie expectantly. "Well, suppose you tell us what you have in mind, Libbie," said Mrs. Adams briskly and a trifle sourly. Mrs. Adams was not accustomed to having her plans questioned. "We haven't much time. Here it is Monday and Henry coming Thursday."

Libbie Adams folded her sewing and placed it carefully in her bag. She placed her thimble in its case and wound up a spool of thread. Then she spoke:

"I didn't mean to have you change your plans, folks, but you asked me 'n' I told you. Now, if you will let me take over the dinner for Henry, I'll do it. I'll get everything ready, do the buying and all that and you can settle afterward, but Henry's dinner—won't be—expensive. I am going to give him what he used to say was 'the best meal under the sun and moon.' I can just hear him say it."

As they were about to disband, Libbie added:

"You folks come down here about eleven and see that the table is all right and fix the flowers and all that. I am glad it is fall so we can have asters. Henry used to be so fond of asters and had a bed of them right alongside of the path to the barn."

One by one the ladies of the "Aid" came down the stairs of the church that Thursday morning, sniffed, stopped, sniffed again, advanced another step, stopped and stood still! And then in a chorus, a despairing chorus, they spoke just two words: "Sauer kraut!"

Libbie Adams was bending over the stove, her face flushed prettily with the heat. Six juicy elderberry pies, steaming hot, were lined up on the table. She laughed at the dismayed faces before her. Then she bent over and opened the oven door. Two great baking pails, the largest to be found in Middleton, held Henry Brewster's dinner. Sauerkraut and spareribs!

"I'm mixing up the dumplings now," she informed them. "The biscuits are in the oven and the coffee is ready. Will you put the cream on the table—and the flowers? It is train time now and the men have gone to meet Henry. Well! What's the matter. You look scared to death!"

The president of the M., L. & M. railroad laughed like a boy as he came down the stairs into the basement dining room of the church.

"By George! It takes me back to the days when I was a kid. Never ate such good things in my life as we had down here at those church suppers." He stopped short. "What—do—I—smell? Not sauerkraut! Don't tell me—sauerkraut—I can never stand the disappointment if it happens—to—be chicken! Not sauerkraut—honest? By George!"

He sat at the head of the table surrounded by his old friends. His face was radiant. The minister asked grace and out in the hot kitchen Libbie Adams bent her head, her hands pressed tight to her breast. Then she and Mrs. Miller picked up the great steaming platters and entered the dining room. Henry Brewster looked up, pushed back his chair, and rose to his feet. He took the platter from Libbie's hands, deposited it carefully on the table, and then turned and held both her hands in his.

"Libbie, my old friend—my chum . . . you make this homecoming perfect! I have been thinking about you all these years . . . have wanted to come back . . . and now I am—home. Those years have been kind to you, Libbie . . . and we will talk about the ones to come after we have had dinner . . . and there is room right here by me—for you."

An hour later he pushed back his pie plate and leaned back contentedly in his chair.

"The homecoming—perfect! Home town . . . home folks . . . best meal under the sun and moon . . . sauerkraut and elderberry pie . . . and Libbie Adams right here beside me again . . ."

Good Health Maxims Found in Gypsy Lore

A codification of the rules of health, so modern in its spirit that it would appear to have been prepared by present-day scientists, has been found in gypsy lore more than 2,500 years old. The American Magazine, publishing these gypsy health rules for the first time in English, recommends them to the consideration of all who seek physical normalcy.

The gypsy health doctrine is based on the fundamental theory that there is no more dangerous sickness than sadness. As a matter of fact, the gypsy language has no word for "sick." Instead of saying, "He is sick unto death," the gypsy says, "He is sad unto death."

In the gypsy code, happiness means health. A modern scientist, commenting on this ancient health rule, says: "It is only recently that science has discovered that the gastric juices are influenced by the mental condition of the individual, and that food wetted with tears is like poison to the body; that the quality of the food is not half so important as the mental condition of the eater. The gypsy, it appears, has known this for thousands of years."

Investigators for the magazine, studying the gypsy application of these health rules, report: "It is a well-known fact that gypsies eat foods that would kill any white man, yet when a gypsy is not hungry he cannot be made to eat even a morsel. The gypsy wonders that we can eat when we are not hungry, or drink when we are not thirsty; he wonders that we can remain alive after doing so."

One of the gypsy health rules says: "The poison is not in the food; it is in the mouth of the eater."

Plea for Rights of Child

The "child's bill of rights" is the aim of the American Child Health association. "The ideal to which we should strive is that there shall be no child in America that has not been born under proper conditions; that does not live in hygienic surroundings; that ever suffers undernourishment; that does not have prompt and efficient medical attention and inspection; that does not receive primary instructions in the elements of hygiene and good health; that has not the complete birthright of a sound mind in a sound body; that has not the encouragement to express in fullest measure the spirit within, which is the final endowment of every human being."

Mendelssohn's Greatness

Mendelssohn advanced and widened the field of philosophy and criticism by his original and productive work. He was a bright star in the realm of philosophy, and many great men that rose later used him, not only as a source of knowledge, but also as a source of inspiration. He was inspired with a holy and pure zeal for deeper knowledge and for truth.

As a German philosopher, he was the first to write in a clear style and in an excellent language many important philosophic problems. He formed the basis of philosophic and esthetic criticism in Germany.—Boston Herald.

CONTROL MOSAIC BY GOOD ROGUING

Remove Entire Root System of All Diseased Plants.

In the control of mosaic in red and purple raspberries, roguing out diseased plants has been demonstrated to be a successful control measure.

The use of stock practically free from mosaic is essential in setting out new plantings of red or purple raspberries. All wild and cultivated raspberries should be removed within 200 or 300 feet of the new plantings. Success in keeping mosaic under control depends upon careful roguing the first and second years.

The roguing must be done so as to prevent the scattering of aphids on the diseased plants, as these tiny insects carry the infection from one plant to another. It is also essential that the entire root system of all diseased plants be dug up and removed from the planting, for all parts of diseased plants harbor the mosaic virus. To be on the safe side, the plants adjacent to a diseased plant should also be removed, for in many cases they have already been infected when the diseased plant is discovered.

The first roguing should be done as soon in the spring as the leaf symptoms are definite enough, which is usually in late June. One and two-year-old plantings should be rogued at least two or three times during June, July and August. Planting mosaic-free stock and roguing should insure practically no losses from mosaic for five years under average conditions.

Most standard varieties, such as Cuthbert, Marlboro, June, Ontario and Columbia, are easily rogued, but mosaic spreads rather rapidly in them so that they are scarcely profitable if mosaic is very prevalent. Herbert and St. Regis, on the other hand, escape infection quite regularly, while Latham, a new variety, shows considerable resistance to the disease in that the plants are less seriously affected than those of more susceptible kinds.

Perfect Apple Variety Not Yet Been Discovered

There is no such thing as a perfect apple variety. All of them have their faults. However, every variety is at its best in certain parts of the country and many of them are quite exacting as to soil requirements. Even the human factor enters in. A certain man may make a great success with a certain variety where another would fail. In this day of specialization, a man must "know his apples."

Now for the red Delicious. It is a high-priced apple, a good eating apple, it has been highly advertised and the consuming public is quite familiar with it. It is listed among the apples for commercial planting, it has an attractive appearance when well grown and some growers have made a success with it. On the other hand, it is often a very shy bearer.

Fruit Trees Respond to Any Good Fertile Soil

Fruit trees, like other crops, respond to a good fertile soil. The fertility that is applied artificially by most farm folks is largely barnyard manure. In too many cases, in their desire to treat trees properly, the planter is inclined to put fresh manure in the holes, immediately about the roots of the trees. This is about the worst practice that one can follow in the planting of the trees, for it will nearly always result in the death of the trees if any quantity of manure is used in this way at the time of planting. The fertilizer should be cultivated into the ground immediately about the surface of the ground, and not too far away from the tree, but by all means keep it away from the roots at time of planting.

****

Horticultural Hints

****

Cherry trees, more than almost any other fruit trees, should be planted early in the spring.

* * *

Community efforts in the eradication of orchard pests are as important as any other community movement.

* * *

While pruning is in fact one method of thinning it does not entirely take the place of hand thinning. The thinning of fruit as a means of relieving the trees of exhaustion has undoubtedly a direct bearing upon crop production.

* * *

Grapes can be pruned any time during the dormant season except when it is cold enough to freeze the wood, at which time the vines are very brittle and will easily snap off if they are handled.

* * *

The grape vine, as commonly grown, needs at least eight feet of space each way. The vines are set commercially eight feet apart in the row and the rows ten feet apart, so that wagons, sprayers and cultivating tools may pass between the rows without damage to the vines.

Trace the Source of Queen of Sheba's Gold

The ruins of Zimbabwe in Mashonaland, southern Rhodesia, are interesting and extensive and but little is known of them, although it is more than possible that they have some important bearing on the early history of man. Accordingly an English expedition is about to investigate the ruins from a scientific standpoint. It is thought to be possible that they will find some explanation of the source of the 120 talents of gold which the queen of Sheba presented to Solomon, and some of the other wealth of that time. The gold mines of Rhodesia were worked during an era corresponding to the reigns of those monarchs, and many relics found in the temples and other ruined buildings, are distinctly Asiatic.

Zimbabwe was the mythical "dead city" of Sir Rider Haggard's "She." It also figures in his other novels, "Allan Quatermain," and "King Solomon's Mines." The natives regard it with superstitious fear. These facts have helped make it a city of mystery and conjecture.

Hawk and Seagull Battle

Hundreds of passengers on a transatlantic liner recently saw a fierce battle in midair between a hawk and a seagull. As the birds neared the ship the hawk swooped down, but the gull dived and eluded its pursuer by "banking." Just as swiftly the hawk soared again, and the birds continued their life-and-death race. When immediately above the liner the hawk swooped once more, and this time gripped the gull in its talons. It then settled on top the mainmast, where it devoured its prey, scattering the gull's feathers and bones over the astonished passengers below.—Washington Star.

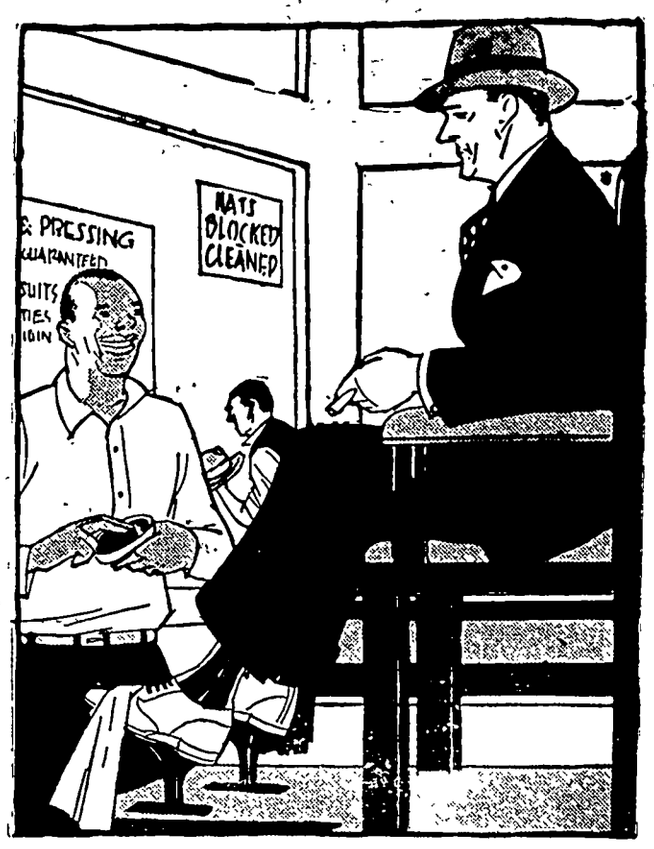
Sardinia May Grow Cotton

Cotton can be grown in Sardinia, the Italian ministry of national economy has just proved by experiments which it considers encouraging. The yield on arid land selected for the experiment was about three quintals of cotton per acre. As Italy is engaged in a program of raising everything possible within its borders in order to decrease the amount of imports from abroad, it is implied that further attention will be given to the raising of cotton, of which Italy is a heavy buyer. (A metric quintal is about 220 pounds).

The prices of cotton and linen have been doubled by the war. Lengthen their service by using Red Cross Ball Blue in the laundry. All grocers.—Adv.

A pleasant possession is useless without a comrade.—Seneca.

That Million-Dollar Feeling



"George, where do you get all that pep?"
"Boss, I give NR credit fo' that. Sure does make me feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

SCISSORETTES

Would you be agreeable? Feel that way first.

If a man is ignorant he soon publishes the fact.

Isn't most "intuition" of the derogatory sort?

Going to bed is usually an annoying preliminary to sleeping.

Nothing brings out the grease spots like a full-length mirror.

Don't discuss people's ages in their presence, unless they want to.

Whenever the millenium is pictured, nothing is said about money.

Many a man who claims to be looking for work looks the other way.

Parallel columns should be made of the citizen's rights and his duties.

Nature invented the sneeze in order to compel lazy people to take some exercise.

Some people never do a charitable act unless there is some one around to applaud.

One thing to be said in favor of the old magic lantern is that it never tried to talk.

The man who always says exactly what he means is more numerous than popular.

If all the statisticians were placed end to end they would reach another foolish conclusion.

Father Time was the original wheelman. From the beginning he has gone on by cycles.

The only true method of action in this world is to be in it, but not of it.—Madame Swetchine.

RUSTIC CABIN EASY TO PUT TOGETHER

"Jointing" the logs in a rustic cabin isn't "tricky"—if you know how, declared Frank E. Brimmer. To illustrate his remark he proceeds to tell how it's done, in an interesting article in Field and Stream.

All tree logs are not just perfect, he admits, but the trunks can be laid butt to top and make a fairly good wall. On handling them as the wall goes up, he says to use an incline and a chain. With a steel square, a sharp ax and a piece of chalk any man can cut the joints. Before sawing out the windows or doors he suggests that the logs be spiked with a transverse two-by-four to hold them in place. A plummet line helps to keep the wall in line, he finds.

Simple Radio Outfit

Maine can match the achievement of a California woman in receiving a radio concert from a saucepan on her electric range. A farmer living in Greenwood at the junction of two roads, with the telephone wires making a Y, a prong of the letter running each side of his house, gets free radio in that way. He has a hole about the size of a plate cut in the door of his cottage, covered with a wooden patch for use when not "receiving." Evenings he opens the door and through the aperture floats all sorts of entertainment. While he is denied the power of selection, he is never troubled with static.

To Walk Across Africa

Noel G. Clarke, a young Englishman, will walk across Africa. He will hike from London to Capetown, with "lifts" across the English channel and Mediterranean sea, and will traverse thousands of miles through jungle and desert. His object is to examine possibilities of commercial development in the virgin regions of Central Africa, wealth in minerals, fiber, timber and other raw materials.

Color Picture by Wire

Successful transmission of a colored picture by wire from New York to San Francisco is one of the latest developments of the wire-transmission process, says Popular Mechanics Magazine. The feat was accomplished by using three negatives, a red, a blue and a yellow, each being sent separately and then put together at the receiving end. The entire picture was transmitted in 30 minutes.

Great Power Aggregation

The total capacity of prime movers, that is, water wheels, steam engines and turbines and internal combustion engines in public utility plants, factories, mines and quarries in the United States on January 1 of this year was 56,500,000 horsepower. This total does not include railroad locomotives, motor vehicles or water craft.

Two Specie

What is described as a walking fish from Africa has been brought to Boston on a visiting ship. Humorists may now do their worst in comparing the peripatetic fish from overseas with the poor fish who already walk Boston streets.—Boston Transcript.

Capitol Press Gallery

At the session of the Forty-fifth congress, in 1877, there were only 112 newspaper men in the press galleries of the capitol. Today, half a century later, there are 306 men credited to the press galleries.

Home, Sweet Home

"Don't you ever put your foot down on things at home?" demanded the hard-boiled guy of Henry Peck.

"Only on the rugs," sighed Henry.—Cincinnati Enquirer.

Matrimonial

It used to be when a woman missed her husband it meant she loved him, now if she does it means she doesn't love him and isn't very expert with a gun.—Cincinnati Enquirer.

EARL JOSTEN GOES TO ESTHERVILLE TO TEACH NEXT FALL

Will Teach Instrumental And Vocal And Instruct Two Bands

Earl Josten has secured a real promotion in his profession of teaching. Mr. Josten has been contracted by the Estherville schools to teach instrumental and vocal music.

Mr. Josten will also instruct and direct the bands at Armstrong and Graettinger this season and coming year.

Earl Josten, Klemme young man, has made a fine record, and this year won many honors with his musical organizations of the Harris high school. At the present time he is directing an operetta, "Captain Crossbones," by Penn. There are nine leading characters and thirty-five in the various choruses.

Mr. Josten will receive a substantial increase in salary at the Estherville schools We congratulate him on his fine promotion

Dr. Zinn went to the hospital at Mason City again Modnay for further examination. He expects to have an operation this morinng at the Mercy hospital.

The Iowa Union Telephone Directories are being printed at the Times Print Shop this week and will be ready for delivery to patrons in a few days. There are quite a number of changes and many new telephones listed in the new directory.

Mr. and Mrs. Ed. Jacobs and son Elwyn, and Mr. and Mrs. Chris Jacobs of Garner celebrated their wedding anniversaries on the same date and so on Thursday evening, April 25th, they enjoyed a fine dinner at the Chris Jacobs home. We offer congratulations!

IOWA VALLEY NURSERY
Belmond, Iowa

We have a good stock of Scotch Pine Evergreens to sell this spring in sizes from 2 to 4 feet. The best grade sell at $30.00 per 100.

2nd grade, 18 to 24 inch, sell at $15.00 per 100.

They are all well rotted and good growing stock.

Have also Fruit Trees, Landscape Shrubs, Small Fruit, Grapes, Currants, Strawberries Plants.

JOHN F. CANTWELL

SIX MEN HAVE ASKED ME TO Marry Them," says Marion, "I will pay 500 for the best advice telling me which one to choose. Full details in next Sunday's Des Moines Sunday Register.

Honest John

—is a Black Mammoth Jack and will make the season of 1929 on the farm 1½ miles south and 5¼ miles east of Klemme, and will insure a colt to stand and suck. The fee is $15 and any mare that is bred to this Jack that is sold or traded or disposed of in any way, the fee will become due immediately.

"Sunny Spain" Country of the Imagination

We are always hearing of "sunny Spain." Southern coastal Spain is naturally sunny and semitropical, but a large part of Spain is a high tableland, flanked by lofty mountains, and the people know what it is to suffer from cold—especially since fuel is exceedingly scarce.

It is difficult to write of Spain in general terms because not all Spain is alike. There is scarcely a statement that can be made about southern Spain which would also hold true for northern Spain. The Spain of the mountains is one Spain and the Spain of the coasts another. The Spain of the stage and the movies is a wholly fictitious Spain. All Spain is rapidly changing—trying to snap out its old lethargy, trying to live down its reputation for laziness, etc.—Pathfinder Magazine.

Peaches Popular

The bureau of railway economics discloses that the American appetite for peaches has become much keener in recent years. In the five year period of 1923-27 the average annual production was 52,200,000 bushels, an increase of 51 per cent over the five-year period of 1903-7, compared to an increase in population of 37 per cent. The increase is due in a large part to the better transportation and distribution facilities. California and Georgia have become the most important producing states.

Easier for the P. O.

If tests being conducted in Leipzig, Germany, prove successful, an automatic mail box that weighs and stamps letters will come into general use in Germany. The sender drops in his missive and inserts coins to pay the postage. He pulls a lever and an inked stamp within prints on the letter a mark that shows that the postage has been paid.

Han Mothered Kitten

The mistress of a Hinsdale (Mass.) farm had a hen sitting. Going out to inquire as to the comfort of the expectant mother, she found the eggs uncovered, and, in the nest a tiny kitten. The hen took to the nest again after feeding, and covered eggs, kitten and all. She continued her care of the kitten after the eggs were hatched, says the Boston Globe.

Meow!

Ella—Gee! I feel light-headed!

Bella—With a heavy face and heavy head of hair like yours I don't see how that is possible!

No Home Cooking Then

Hewitt—I suppose you give your wife the idea that when she is out of town you miss her very much. I suppose you take on when she goes away.

Jewett—Yes, I take on flesh, I eat at a restaurant.

Then and Now

"I tell you times have changed."

"You bet. It used to be that when a man was run down he took a tonic, now he takes an ambulance."

WITH THE JESTERS

In the Wrong Place

"So the poker game ended in a fight?" "Yes every man had a chip on his shoulder."

Company's Hoodoo

"How long did that Shakespearean company stay out?" "Oh, they busted up on the twelfth night."

Path of Peace

"I have no luck with women."

"Lucky fellow!"—Nebelspalter (Zurich).

Desirable Error

Cloakroom Attendant—Did I give you the right coat and hat, sir?

"No, thanks!"

Not Too Much

Barber—Shall I clip the ends of your hair off, sir?

Customer—No thank you—one end only.

Titters in Court

English Magistrate—You say the plaintiff is a relative of yours?

Witness—Yes, by bigamy.

Doesn't Stick

Hewitt—"Love goes where it is sent." Jewett—"And sometimes makes a round trip."

Help!

"Did I hear something drop?" called mother. "Just a cough," replied the kid in the other room.

Sure

She—What does a man like best about a woman?

He—His arms—if she is pretty.

There's a Difference

Blinks—He thinks he is a big bug.

Jinks—Which proves he's simply bugs.

PLAN TO PRESERVE OLD YARN MARKET

For some time past the ancient yarn market at Dunster, West Somerset, England, has been in an extremely dilapidated and decayed condition. It has now been decided to renovate the building. Everything possible will be done to preserve the original features of the structure. An expert has already examined the building and materials in keeping with the period will be used in the renovation.

Standing in the middle of Dunster's historic main street, and facing the castle, the home of the Luttrell family, the yarn market dates from the Sixteenth century, and is now the sole remaining relic of the days when the village was famous as the mart for the noted Dunster homespuns and broadcloths. Here the West Somerset weavers once flocked to offer their wares to cloth merchants who came from all parts of Europe to purchase the finely woven cloths for which the district was famed.

Planes Without Pilots

Airplanes without pilots have been made to loop the loop by wireless control from the ground. Many other difficult performances have been made possible by a delicate new system within the plane, operated by wireless waves.

A receiving set in the plane, designed to interpret and act upon impulses transmitted from a ground control station, acts as the mechanical pilot's "brain." The controls are operated by compressed air motors actuated by the wireless set.

Wild Ride

A real bareback ride is riding a bear bareback. So says Joe Anderson, of Yosemite, Calif., for he rode a bear 25 yards before being thrown off. Anderson was about to enter his tent at Camp Curry for his night's repose. A large black bear dashed out, running between Anderson's legs. Anderson, both frightened and surprised, straddled the bear and hung on for dear life. After sprinting for several yards Bruin abruptly turned north and Anderson kept going straight south.

A Perpetual Motion Clock

Since 1914 a clock in Dayton, Ohio, has been running without being wound. It is equipped with a thermal motor, consisting of a gallon tank filled with alcohol, a one-half-inch cylinder and piston with a ten-inch stroke. A rise in the temperature expands the alcohol, pushing the piston up with a series of weights weighing sixty pounds. A fall in temperature allows the weights to descend, winding the springs in the clock movement —Popular Mechanics Magazine.

Jarring Colors

Young Husband—I managed to get a girl, but I'm afraid she's rather green.

Young Wife—But, darling, I can't have a green girl in my canary-yellow kitchen.—Boston Transcript.

Cause and Effect

Anne—You know, I think Sally has finally married Jack after all.

Janet—Why?

Anne—Well, she is running around with Bob all the time now.—Life.

Complete Washout

New Author—Could you use my story if I were to boil it down?

Hard-boiled Editor—No chance. Boil down a gallon of water to a pint and it would still be water, wouldn't it?

FIRST ALPHABET IS TRACED TO SAILORS

The Phoenicians are generally believed to have produced the first alphabet and from their group of sound symbols have grown all of the alphabets in existence today. The Greeks, it is known, composed their alphabet from the Phoenician as a result of their trade with the first sailors. The Romans took their alphabet from the Greek and the English alphabet comes directly from the Latin.

Only minor changes have come d... in the English alphabet from that ... the Romans. The English added the letter "j" for which "I" was used in the Latin and added "w" to the Latin "uv."

Probably the best explanation of the Phoenician alphabet's origin lies in the roving disposition of that people. Stopping at various ports along the Mediterranean they adopted certain characters of the cuneiform languages of all the countries and adapted them to their own usage.—Detroit News.

Photograph Whist

Photograph whist is a new parlor game that has recently been introduced by collectors and holders of old photographs. However, it can be played by all those who have a well-stocked family album, providing the pictures can be removed without damaging them. The old photographs are shuffled and dealt out like cards to four players who play one each time. The homeliest picture takes the trick, and the one taking the most tricks wins the game. So now you can make use of those hundreds of old family photographs if you do not regard them as too sacred a treasure to use for such a purpose.—Pathfinder Magazine.

Still Fighting On

President Butler of Columbia, apropos of the jibbing of France and other countries over Secretary Kellogg's anti-war pact, said at a reception:

"War would vanish if mankind really worked against it. If men only persevered in wise things as splendidly as they do in foolish ones the millennium would be here next week.

"'Jones is a man of remarkable perseverance,' a banker said to me.

"'Yes?' said I.

"'Yes. He's tried 238 cures for baldness in the last 19 years, and he's still fighting on as hard as ever.'"

British Army Veteran

Robert Newnham, a ninety-one-year-old veteran of the Crimean war, lives at Holland, Ohio. Mr. Newnham says that he is one of a very few survivors of that war who received the personal care of the famous nurse, Florence Nightingale. Mr. Newnham is active for a man of his age, and in addition to being able to read without the use of glasses he makes a daily trip to the post office to talk over the news of the day.—Indianapolis News.

Duck Scored Knockout

J. A. Randall was hunting near Jamestown, N. D., when he shot and killed two ducks from a flock which was winging overhead. As he was about to shoot a third time one of the falling ducks hit him on his head knocking him out. The three pound duck broke his nose and so seriously injured one eye that its sight may be lost. An unusual occurrence but not unlikely.

Crickets Kept Town Awake

Crickets invaded Bromley, England, in such numbers that they kept the residents awake. Thousands of the insects chirped in private houses and stores, where they settled down near food and sang. Health authorities supplied some of the people with a special syringe and a disinfectant free in order that they might fight the plague.

Falling to Pieces

The intractable Joseph was playing among his dilapidated toys after a joyous Christmas of introspection.

Mother, viewing the wreckage, said despairingly: "It makes me sorry, Joseph, to see your gifts go to pieces."

"Your new bird is falling apart, too, mother. His fur is all over the cage," replied the calculating four-year-old.

Knew His Trade

The Wholesaler—That hat is the most striking novelty of the season, but you've ordered nothing but boys' sizes.

The Retailer—Sure! Couldn't sell one to a man with a normal head.

Answer Was, Anyway!

Louise had just read her composition, and her teacher said: "That is good, Louise. Is it original?"

"No, I made it up."—Charleston News and Courier.

You Know His Type

"What kind of a fellow is this Burton?"

"He is the kind who always speaks of it as the influenzy, instead of flu."—Cincinnati Enquirer.

Big Circulation

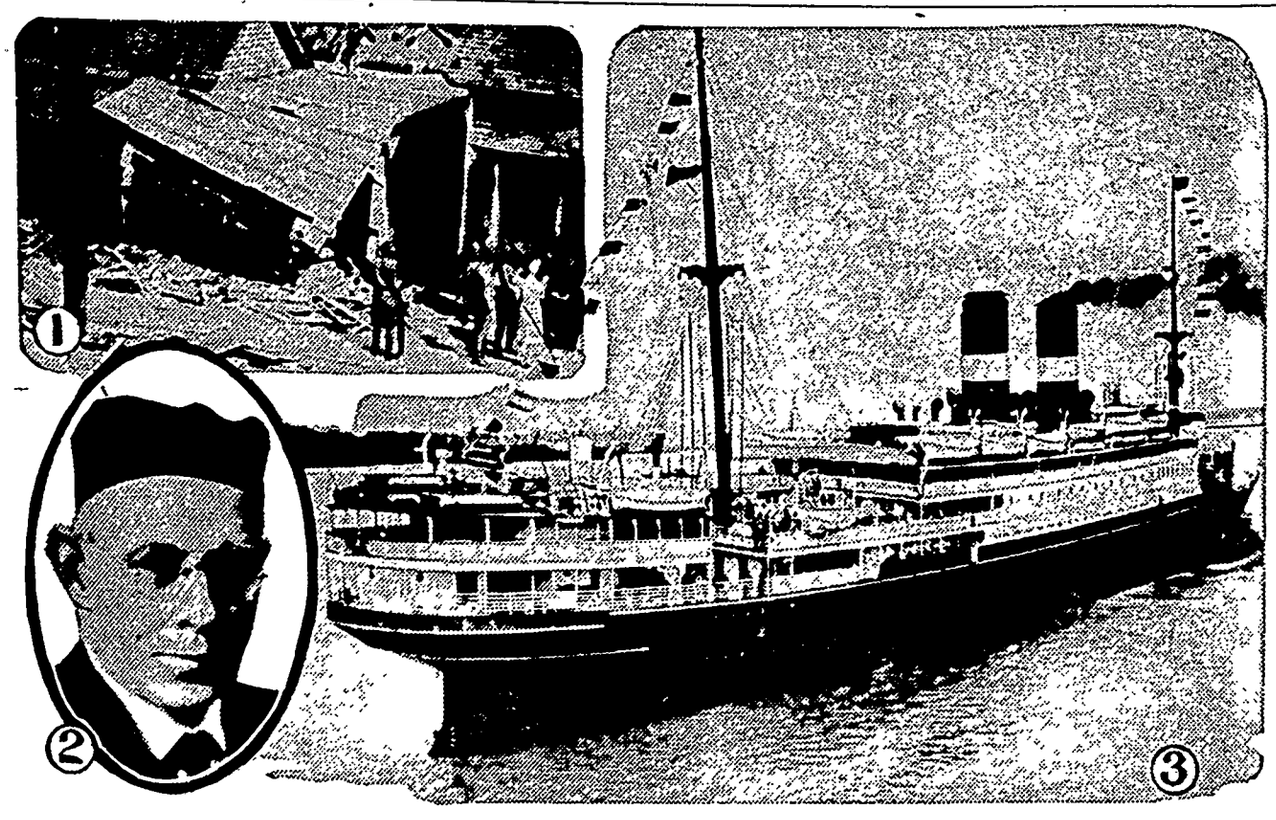
Friend—Are your poems widely read?

Poet—I'll say they are. More than twenty editors read the last one.

Watch Him!

"I hear that Jones is a triple-threat man."

"He is. He can quote from a scrapbook, play a saxophone, or do a conjuring trick at a moment's notice."



1—Headquarters of textile strikers at Gastonia, N. C., after building was wrecked by masked raiders. 2—Dr. Henry Meade Bland of San Jose, who has been made "poet laureate" of California by the state assembly to succeed the late Ina Coolbrith. 3—Steamship President Wilson sailing from Boston with over three hundred priests and laymen on a pilgrimage to Rome.

NEWS REVIEW OF CURRENT EVENTS

House Passes Administration Farm Relief Bill After Killing Amendments.

By EDWARD W. PICKARD

FARM relief legislation as drafted by the house committee on agriculture and approved by the President won out easily in the lower house of congress after several days of debate. Representative Cannon of Missouri tried to get through an equalization fee amendment, but it was ruled out on a point of order as not germane, and all other attempts to make changes in the Haugen bill were frustrated by the administration forces. Most of the amendments proposed were from Southern Democrats. Two attempts to inject prohibition into the measure were made by Representatives Black and La Guardia of New York, but they were squelched.

Senators took up the debate on their own farm bill, which as reported contained the export debenture feature. Senator McNary of Oregon, chairman of the senate committee on agriculture, told the senate that he had withdrawn his support from the debenture plan because he regarded it as a subsidy and also because he wished to support a bill which President Hoover is sure to sign.

"I feel there is no doubt whatever," said Senator McNary, "that if a bill carrying the debenture plan were sent to the White House it would be disapproved by President Hoover."

Senator McNary conceded that the debenture plan, which provides an export bounty on farm products through certificates redeemable in the payment of import duties, would be effective in boosting prices.

In a letter to Mr. McNary the President had given at length his reasons for opposing the export debenture scheme, concluding by saying: "It is my belief that the theoretical benefits would not be reflected to the American farmer; that it would create profiteering; that it contains elements which would bring American agriculture to disaster. The introduction of such a plan would also inevitably confuse and minimize the much more far-reaching plan of farm relief, upon the fundamental principles of which there has been general agreement."

RUNNING up to New York for a couple of hours, President Hoover made, before the Associated Press at its annual luncheon, his first public address since his inauguration. It was an urgent appeal to the people of the United States for law observance and law enforcement. Life and property, he declared, are relatively more unsafe in this country than in any other civilized land, and he pleaded with the editors and the citizens generally to aid the government in changing this deplorable condition. Reorganization of the law enforcing machinery, he said, is necessary. To get this he proposed to take his time in selecting "high-minded men, impartial in their judgment, skilled in the science of law and our judicial system" to "study and report upon the whole of our problems involved in criminal law enforcement."

At the outset Mr. Hoover declared that "while violations of laws have been increased by the inclusion of crimes under the Eighteenth amendment and by the vast sums that are poured into the hands of the criminal classes by the patronage of illicit liquor by otherwise responsible citizens, yet this is but one segment of our problem, for but a small percentage of these can be attributed to the Eighteenth amendment."

PROSPECTS for reduction of naval armaments were brightened immensely when Ambassador Gibson, American delegate on the League of Nations' preparatory disarmament commission, frankly laid before that body the Hoover administration's proposals. To the astonished representatives of the other nations he declared America was prepared to agree to any reductions, however drastic, of naval tonnage which leaves no type of war vessels unrestricted, and also was ready to abandon limitation of tonnage by categories and accept the French compromise proposal as a basis for discussion. He offered yet another concession, stating that America would consider estimating "equivalent naval values" on the basis of other factors than the displacement of tonnage alone, such as age, unit displacement and the caliber of guns. Any approach at the disarmament on purely technical grounds, he declared, was bound to be inconclusive.

French, Italian and Japanese delegates chorused their welcome of the American proposals, and though Lord Cushendun was mighty careful in his comment, the London press quite generally praised them. The British cabinet met to consider the Gibson plan, but it was believed nothing definite would be done about it before the English elections which are set for May 30. After that Austen Chamberlain may no longer be secretary for foreign affairs and W. C. Bridgeman will not be first lord of the admiralty.

The commission decided that a ban should be placed on the use of poison gas and bacteria in warfare. Encouraged by this action, Count von Bernstorff for Germany proposed that the dropping of bombs or incendiary gases from airplanes piloted either by human hands or by wireless be outlawed. Many delegates opposed this scheme as outside the jurisdiction of the commission and only the German, Russian, Dutch, Swedish and Chinese representatives voted for its adoption. Soviet Russia's plan for air force reduction also was rejected.

HALF-HEARTED efforts were made by the commission on German reparations to find a compromise that all might accept, but the new offer brought from Berlin by Doctor Schacht was not sufficient. The French and Belgians were firm in their determination to make no further reductions. The American experts tried earnestly to save the conference from utter failure, and there was a lingering hope that this might be accomplished if the Germans would again revise their offer.

ILLINOIS wets just barely won a victory in the state legislature when the bill calling for a referendum upon repeal of the state prohibition laws was passed by the house without a vote to spare. The measure was handed up to the senate, where the drys believed it would be defeated and the wets were none too optimistic of success.

Senator Cole Blease of South Carolina introduced in the senate a resolution proposing to prohibit the importation of liquor by foreign diplomats and providing for the expulsion of envoys who decline to accept our dry laws as binding upon themselves.

HEFLIN of Alabama broke loose again last week. In March he went to Brockton, Mass., to deliver a speech under the auspices of the Ku Klux klan, and a small riot resulted. He tried to induce the senate to adopt a resolution expressing its condemnation of the treatment he received in the Massachusetts town, but this was too much even for that "senatorial courtesy" that has covered a multitude of queer actions. Goaded by questions, Heflin admitted he was paid for his anti-Catholic speeches in Brockton and elsewhere. After he had annoyed his colleagues for two days and tried to interrupt the debate on the farm relief bill, the Alabaman was sharply called to time by Senator Borah, who asserted that the Heflin resolution would ally the senate with a campaign against the Roman Catholic people of the United States.

"If the senator really feels," cried Borah, "that that is the issue, we ought not to pass a futile resolution but we ought to appoint a bodyguard from the senate to accompany the senator on these trips. This resolution can have only a political or, what is worse, a religious effect."

Heflin attacked Watson of Indiana because, he said, the latter had gone back on a promise to support the resolution.

"Why, you're the finest old he-horse in the klan," he shouted, demanding to know what inspired the Indiana senator's change of heart.

"The senator knows I do not belong to the Ku Klux klan," retorted Watson heatedly.

"I do not," answered Heflin, and added that he intends to visit Indiana and let the people there know "what has gone on here today."

TORNADOES in the Middle Southern states and storms and blizzards in Nebraska and Wyoming cost about fifty lives last week and did vast damage to property. Heavy losses also were sustained from floods in Missouri and Kansas. The blizzard in Wyoming was described as the worst in the history of the state. Transportation was tied up, telegraph and telephone wires were down and thousands of automobiles marooned on highways. The loss of live stock on ranches was severe.

THE American commission in the Dominican republic headed by Charles G. Dawes has completed its work and recommends the passage of a budget law and the appointment of a budget director similar to the office in the United States. It advised improvements in the organization of the executive and interior departments and the accounting system, and urged stringent economy. The commission states that the general economic and financial condition of the country is inherently sound. The total indebtedness of the republic, foreign and domestic including $802,000 owed by 68 municipalities, is estimated at $22,650,000.

ELINOR SMITH, seventeen-year-old flyer, regained the woman's endurance flight record at Roosevelt field, New York, remaining aloft for 20 hours and 25 minutes. She is now planning a transatlantic flight to Rome.

One of the worst of recent aerial disasters occurred at San Diego, Calif., when Lieut. Howard Keefer in an army pursuit plane while stunting collided with a big passenger ship of the Maddux Air Lines, Inc., bound for Phoenix and both planes crashed to earth from a height of 2,000 feet. Keefer, the two pilots of the passenger plane and its three passengers, two of them women, were killed.

UNITED STATES Supreme court refused last week to rehear the appeal of Harry F. Sinclair, millionaire oil magnate, from the three months' jail sentence imposed upon him for contempt of the senate during the Teapot Dome oil scandal investigation five years ago. A mandate directing execution of the sentence will be issued on May 4, and Sinclair's only hope of avoiding the punishment is a Presidential pardon.

APPOINTMENTS submitted to the senate by President Hoover included those of Seth W. Richardson of Fargo, N. D., to succeed B. M. Parmenter as assistant attorney general; Julius Klein, chief of the bureau of foreign and domestic commerce, to be assistant secretary of commerce; Col. Harry L. Gilchrist to be chief of the chemical warfare service of the army with the rank of major general, and Col. S. O. Fuqua to be chief of infantry with the rank of major general.

EDWARD F. CARRY, president of the Pullman company, died in his sleep in his Chicago home at the age of sixty-one years. Besides his long eminence in the business world, Mr. Carry was known for his philanthropies and his scholarship, and during the war he was director of operations for the United States shipping board. He was the recipient of two papal dignitaries, being made a Knight of Malta at the eucharistic congress in Chicago in 1926 and a knight commander of the Order of St. Gregory the Great a few months later.

Prince Henry Hohenzollern, only brother of the ex-kaiser, died of pneumonia at his estate in Schleswig-Holstein. He was a great admiral in the German imperial navy but took no active part in the war, for he was exceedingly fond of his English relatives and of the czar of Russia, and his wife was Princess Irene of Great Britain. In 1902 Prince Henry toured the United States.

HIGHWAYS SAFER AND SPEEDIER

New Problems in Road Construction for Engineers to Solve.

(Prepared by the United States Department of Agriculture.)

Newer designs in motor cars, busses, and trucks, together with the more liberal speed laws in the majority of states have presented new problems in highway construction for highway engineers to solve, according to the bureau of public roads of the United States Department of Agriculture. The new vehicles demand that highways be designed for safer and speedier operation.

To meet this demand highway engineers today are planning roads with better grades and alignments than existed some ten years ago. The roads have wider and smoother pavements and easier curves. The curves are superelevated and widened. Roads are developed to afford greater sight distances on both horizontal and vertical curves. Guard rails are more substantial and better protection at railway crossings is provided.

Appreciate Natural Beauty.

Further demands are made upon the highway engineer today by the dawning appreciation of natural beauty on the part of the general public. Highways must not only be travelable, but they must also be pleasing to the eye. The engineer develops road locations so as to bring out the natural beauty of the locality. This is particularly noticeable in the new road locations developed by the engineers of the bureau of public roads in the national parks and national forests.

They are making use of short tunnels and half-tunnel sections under picturesque overhanging cliffs and along precipitous canyon walls. Formerly it was the custom to blast away these irreplaceable landmarks, destroying fine scenes and leaving ugly wounds which took years to heal.

Save Desirable Trees.

Much can be done during the construction of highways to preserve and enhance their natural beauty, says the bureau, by intelligent clearing of the right of way so as to save desirable trees, by development of vistas of outstanding magnificence, and in building bridges and culverts to harmonize with the general character of the landscape. After the road is built much can be done by intelligent planting, with due care to avoid obstruction to view of intersecting roads, unnecessary interference with the cultivation of adjacent farm land, and use of plantings foreign to the natural character of the locality.

Car Skidding Is Studied by Iowa State College

A brawny motor truck dragged a touring car sideways across a smooth hard-surfaced field near Des Moines, recently, to find out exactly how much force it takes to make a car skid. Knowledge disclosed by this test by experts of Iowa State college is to aid in the design of banked turns on important highways.

The pull of the truck was measured by a dynamometer, an instrument resembling a spring scale for weighing, that was inserted in a link in the towing chain. A pointer registered the pounds of force required to drag the car.

Motor Busses to Carry Young School Children

A growing tendency to use school busses to carry city children between home and school is noted in a recent survey of the motor coach.

School officials have seen the wisdom of using busses to keep children off the streets, avoiding traffic hazards and preventing loitering on the way to or from school. The survey also showed that busses offer speedier service than furnished by other transportation facilities. Six-cylinder school busses with four-speed transmissions and four-wheel hydraulic brakes are built by a reputable firm. Capacities range from 18 to 52 children.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q. Will a fully charged storage battery freeze at temperatures below zero?

Ans. No. Keep battery charged fully. Have generator rate increased to compensate for the greater use of lights during short days and less driving.

Q. What generally causes hard steering?

Ans. Under-inflation of tires, also lack of lubrication, particularly of king pins and the joints in the tie rod connecting the front wheels.

Q. Why is it necessary to renew the oil filter after 10,000 miles of driving?

Ans. Because it becomes filled with foreign matter taken from the oil and loses its efficiency after this mileage. Renewing the cartridge makes the oil filter as good as new again.

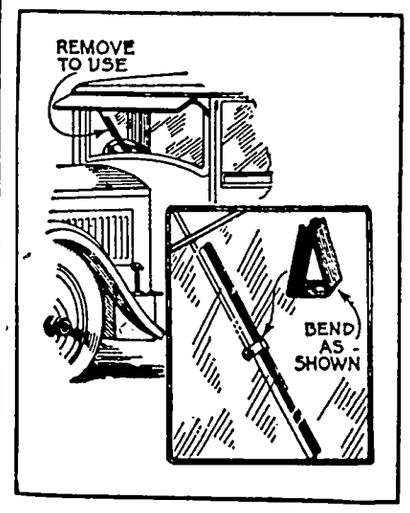
Q. What savings are effected in a year's driving with an oil filter equipped car?

Ans. It is estimated the oil filter effects a savings of between $20 and $29 a year in oil besides minimizing engine wear.

Windshield Wiper Goes Bad Before Worn Out

The average windshield wiper goes bad long before it is worn out. Constant contact with the surface of the glass puts a kink in the rubber edge so that it will not bend back and forth to clean the glass as it should. The picture below shows how to avoid this deterioration.

Take a small piece of sheet metal and bend it into a triangular shape.



Small Metal Guard Stops Warping of Rubber Windshield Wiper.

Then cut or file small notches in the upper edge. When the windshield wiper is not in use, the sheet metal piece is slipped over the wiper so that the hinge pin will rest in the notches and the rubber will be held away from contact with the glass. This will prevent the rubber from taking a permanent set.—Popular Science Monthly.

AUTOMOBILE HINTS

Some of the modern garages are being erected with hotels attached.

* * *

America is up and going. It spent more than $2,000,000,000 for gas last year.

* * *

It isn't enough for some people to skate on thin ice. They want to drive their automobiles on it.

* * *

Used tire casings are being made into soles for inexpensive shoes in France. The skidding must be terrible on a wet day.

* * *

A man paying for his car on the installment plan should remember he cannot pay attention to the road on the same plan.

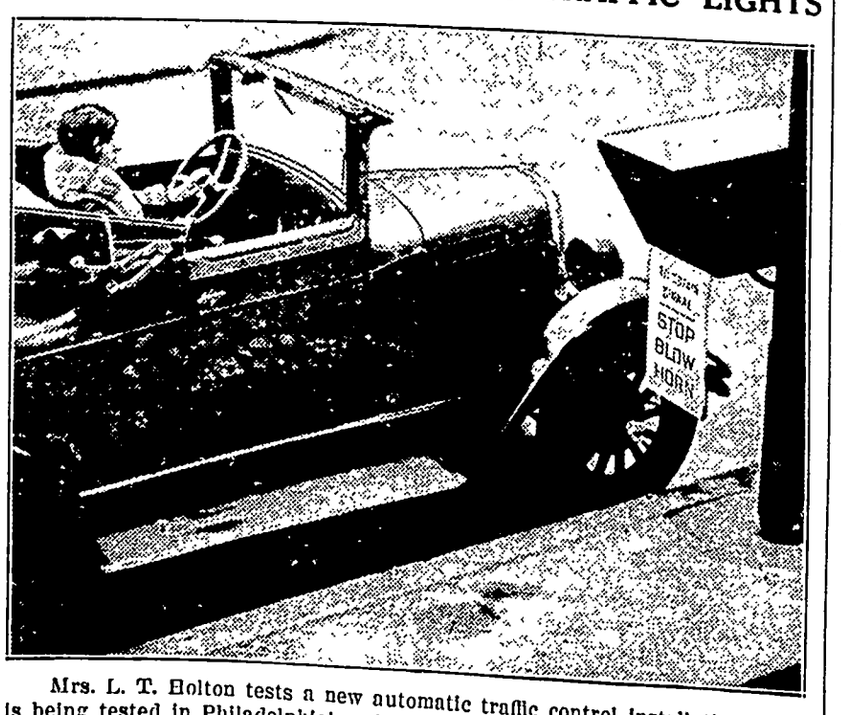
* * *

There is some consolation to the few pedestrians left. The tags tolks are buying for their cars only give them license—not liberty.

* * *

Nobody knows what the reckless, rushing type of motorist does with all the time he saves. Some people, however, think he ought to serve part of it.

SOUND OF HORN OPERATES TRAFFIC LIGHTS



Mrs. L. T. Holton tests a new automatic traffic control installation which is being tested in Philadelphia's suburbs. It is designed to allow a motorist to cut into a busy traffic artery from a side street. By sounding her horn Mrs. Holton is changing the lights through a device which gathers the sounds and uses them to motivate an electrical sequence.

NEVER wait to see if a head will "wear off." Why su when there's Bayer Aspirin? millions of men and women use it in increasing quantities ev year prove that it does relieve s pain. The medical profession nounces it without effect on heart, so use it as often as it spare you any pain. Monroe, 314 Third St., Hastings, Nebr.

LIVE STOCK

AKING PROGRESS WITH LIVE STOCK

irst Essential Is First-Class Clover Pasture.

To make progress in developing a anced system of farming where e stock is to have a rightful place, is necessary to have a sufficient e planted to first-class pasture. "Almost any land will produce some ture," says S. J. Kirby, pasture ecialist at the North Carolina State ollege. "But the more fertile the il, the better pasture it will pro- e. Cut-over land, idle cleared d or land too rough or too steep r cleanly cultivated crops may be fitably used. Where the soil has en well cultivated, it may be eas- y prepared by disking or breaking d disking. All crop residues should e plowed under and the seed-bed ft level. It is important to have good seed bed for grass and clo- er plantings."

Mr. Kirby says also that pasture sponds to good treatment. Lime d phosphate are beneficial to asses and clovers and are necessary r animals. These may be supplied the live stock through grazing. roughout the Piedmont section, Mr. irby advises the use of one ton of mestone and from 300 to 500 pounds a complete fertilizer such as a 23-3 or a 12-4-4. The application of table or barnyard manure as a top dresser the second or third year after he sod has been established is a ood practice.

It is also practical to improve old astures at low cost. Sometimes these reas may be reseeded; again top dressings with lime, fertilizer and anure may be necessary, but in any ase, these treatments should be giv- n so that the plant food materials ight be incorporated into the soil y the alternate thawing and freezing the ground.

Bloat Among Cattle or Sheep Can Be Avoided

Feeding cattle or sheep dry hay h morning and then turning them clover pasture after the dew is off one of the surest ways of prevent- bloat during the first month of turing. The practice of leaving the mals on the clover only a short is a sound one, especially so dur- the beginning of the pasture sea- Under no circumstances should ngry animals be permitted to gorge n clover, alfalfa, or sweet clover when the foliage is wet with dew or ain water. Generally prudence is lso required in watering them soon fter they have filled themselves with reen food.

When a serious case of bloat does ccur, tapping is by far the surest way f relieving the animal. The incision hould be made on the left side at a point an equal distance from the last rib, the hip bone, and the sideways projecting portions of the backbone in the region of the loin. A trocar is the instrument intended for this job. Ev- ery farmer should have one if he is pasturing clover. The gas should not be allowed to escape too rapidly from badly bloated animals.

Kill "Gad Flies" While Still in Grub Stage

"Gad flies" or "heel flies," which pester cattle in the springtime, may be killed while still in the grub stage, embedded in the backs of cattle, by placing an ointment consisting of one part iodoform and three parts vaseline on each warble hole.

This ointment should be placed on the hole of each warble, or large swelling on the animal's hide, with the finger.

The grubs can be removed from the backs of animals by pressure with the fingers, but this seems like a hopeless undertaking. Then, too, crushing or destroying the grubs in the backs of cattle is liable to bring on dangerous anaphylactic symptoms.

No Advantage in Mixed Ground Feed for Pigs

There is usually nothing to be gained by grinding corn for pigs. However, barley and oats both feed a little better to young pigs when they are ground. To simplify feeding, it would be all right to grind the corn along with the barley and oats. There is no particular advantage to be gained, however, by mixing this ground feed into a slop before feeding as it can just as well be fed dry so long as the pigs have water available most of the time.

Lambs Born Dead

Many lambs are born dead, prematurely because of crowding through doors and gates. Having once gained the confidence of your flock it is an easy matter to handle them efficiently, for if a ewe has lambed in the yard one can walk slowly out and pick up the lamb and the ewe will readily follow to the lambing pens. Take care that the ewe knows you have the lamb, holding him by the forelegs allowing the ewe to smell him at intervals en route.

Geraniums Poison Japanese Beetles

Found That Insects Are Attracted to Plant and Are Paralyzed.

(Prepared by the United States Department of Agriculture.)

An insect poison that seems to need the aid of the sun to develop its best effects has been observed in connection with the campaign against the destructive Japanese beetle, now being waged in New Jersey by the United States Department of Agriculture. It has been known for some time that geraniol, an oil which occurs in geraniums and some other plants, is very effective in attracting the beetles, and this bait or attrahent has been used to concentrate beetles on a single tree where they can be killed by a poison.

Feed on Geraniums.

It has also been known that the beetles feed on geraniums, and that such feeding is often followed by paralysis or death. Articles suggested that geraniums could be used for controlling beetles have frequently appeared in newspapers in the districts infested by the pest.

The effects of geraniums on the Japanese beetle were studied by Charles H. Ballou, of the bureau of entomology, during the past summer. He found that the insects are drawn to the plant and eat it, both flowers and foliage. Many of the beetles are paralyzed and fall beneath the geranium plants. In the ordinary course of events some of the beetles recover and others die. But in making observations of the effect of geranium poisoning, Mr. Ballou observed that if beetles fed on geraniums in the sun many more were paralyzed than when they fed on geraniums in the shade.

Flowers More Poisonous.

He also found that the flowers of the geranium were somewhat more poisonous than the foliage of the plant, although either would cause the death of a considerable proportion of the beetles feeding. One of the most interesting facts discovered was that 24 hours after death by geranium poisoning the entire digestive system of the beetle was destroyed.

Because of the poisonous effect of geraniums on the beetles Mr. Ballou suggests that a thorough study of the chemical nature of the plant might lead to the discovery of a new and better poison than any used for control of the beetles at present.

Preparing Ground for Crop of Horseradish

Soil for horseradish is right if not soggy and sour. It should be prepared the same as for a crop of potatoes. Plow furrows about 10 inches deep, 3 feet apart, place the cuttings about 10 inches apart in furrow and about 3 inches below level of soil. After filling in furrows with riding cultivator sow one ton of fertilizer per acre, running 7-10-6. Where the cuttings are planted, after sowing fertilizer on top of rows, harrow twice and level with plank. Keep weeder or harrow running once a week until shoots are an inch high, then use spike-tooth cultivator so as to run close to shoots without covering them with soil.

The roots are prepared for market by washing them in a tub, using a stubby broom. They are shipped in bags or barrels. The price has averaged about 6 cents per pound for the last few years; five tons per acre would give you about $600.

Profitable to Discard Misshapen Seed Tubers

Many potato growers are finding it profitable to throw out the long, slender, or badly misshapen tubers from their seed. These tubers carry the virus of the spindle tuber disease. The yield from them is practically nothing. When buying seed, avoid any lot of seed which carries a large number of these "run-out" potatoes. Remember, when buying seed potatoes, you are not buying a bushel of potatoes, but rather you are making an investment in a crop. It may be a profitable one or it may be unprofitable. Good seed is worth more money, for it yields a higher return on the investment.

Agricultural Hints

In 1900, 45 per cent of the acreage of tame hay was devoted to timothy; whereas in 1927 only 15 per cent was timothy.

* * *

Order them on time—these baby chicks—if you want the pullets to lay next fall, and the broilers to hit the early market.

* * *

From the standpoint of cleanliness and disease prevention, it is an excellent idea to whitewash the inside of a poultry house. Lime is a good disinfectant.

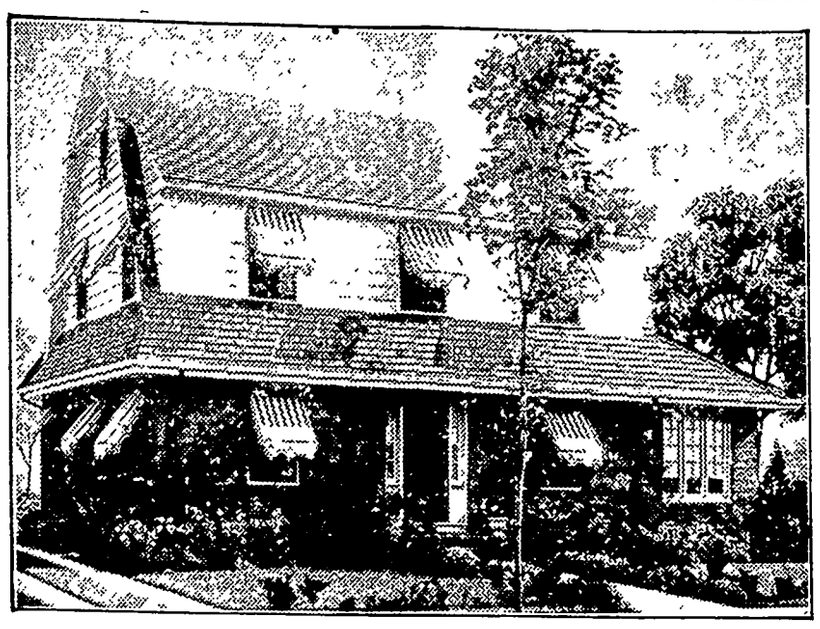
* * *

Barley is a cheap feed and is often included in the scratch feed because of its variety. It seems to contain more feed value than oats but less than corn.

* * *

Peach and other tender trees shouldn't be pruned until the buds start—or even till after the blossoms fall. Then the full damage done by Jack Frost can be seen and trimmed away—and maybe no pruning at all will be needed.

Combination Brick and Frame Makes an Attractive Residence



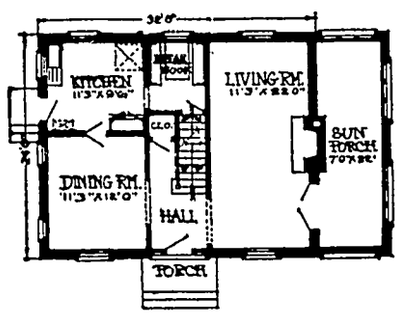
Here is a home radiating an atmosphere of comfort and solid worth. The combination of brick and shingles, laid wide to weather, is highly appropriate to the architectural style and the awnings add an effective touch of color.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Homes that are built entirely of brick and homes that are built entirely of wood are most common, but there is a way of combining both of these home building materials so that the resultant home will be most attractive. Brick gives an air of stability to a home; wood gives the idea of age for it was of lumber hewn from the forest that the original American homes were built.

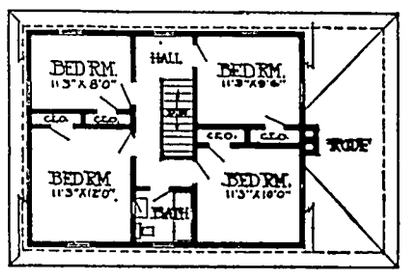
Shown in the accompanying illustration is an example of how these two building materials can be combined and a most attractive home



First Floor Plan.

made of them. Here is a home radiating an atmosphere of comfort and solid worth. The combination of the face brick wall up to the first floor sill and above that walls covered with wood shingles is highly appropriate to the architectural style, and the awnings add an effective touch of color. The dimensions of this house are 24 feet by 32 feet, exclusive of the sun parlor at one end. It contains three rooms and the sun porch on the first floor and four bedrooms and bath on the second floor.

The room arrangement is very similar to the colonial, as the entrance hall is in the center of the house with the living room on one side and the dining room and kitchen on the other. The living room extends the depth of the house, 22 feet, and is 11



Second Floor Plan.

feet 3 inches wide. It has an open fireplace in the center of the outside wall and at one side are double french doors opening into a sun porch which is 7 feet wide and 22 feet deep. To the left through a cased opening is the dining room, a front corner room, 11 feet 3 inches by 12 feet. At the back is a good sized kitchen and off it a breakfast nook.

The stairs to the second floor run out of the central entrance hall and end in a central hall on the second floor. Each of the bedrooms open off the hall and is a corner room. They all are of practically the same size. The bathroom is at the end of the hall at the front.

This is a very fine building design. It should have plenty of ground surrounding it as the lower portion of the home being of brick gives an air of size. Planted as shown in the illustration any owner may be proud of this home.

Use of Rust-Proof Metals Saves Trouble

Modern invention has played its part in making Americans a home-loving people. Better homes have been made possible by the development of better materials.

Before rust-proof metals came into general use in construction, home owners constantly faced the annoyance of leaks from corrodible water pipes, flashings, gutters and rain pipes. Frequently such leaks caused serious damage to interiors and furnishings.

In recent years the expansion of the great fabricating mills of the copper and brass industry has made it possible to use these enduring metals in home construction for but a little more than the cost of corrodible materials.

When building or buying a home insist on copper flashings, roof decks, gutters and rain-pipes, brass pipe fittings and solid brass or bronze hardware, lighting fixtures; bronze screens, weather strips and sash chains. These metals cannot rust.

Door knobs discolored by moisture deposited upon them by the hands and lighting fixtures that are tarnished and pitted with rust give rooms a shabby appearance that becomes steadily worse until the items are replaced.

Strong Flow of Water Cleans Stucco House

A stucco house requires vigorous cleaning. For stains, which sometimes are found below the windows, diluted sulphuric acid can be applied. The stucco must first be scrubbed well and then rinsed thoroughly.

To clean a stucco a strong flow of water through a hose with the nozzle set to throw a small stream will be found effective. Begin at the top of the wall under the roof and work down. Naturally the closer you can get to the stucco surface the more satisfactory will be the result.

Home With Central Hall Proves Popular Now

Probably the plan most frequently utilized for the house of moderate size is the central hall type, with living room on one side, dining room on the other. To the visitor entering the front door, be he friend or foe, 90 per cent of the first story is spread open before his eyes. And if he but take the logical next step forward, behold! he will be up the stairs and right into the sleeping quarters.

Demand Specifications for Your Protection

A complete set of specifications is an accurate written statement defining the quality of materials and workmanship to be employed in building, on the basis of which the contractor agrees to build for a definite price.

Complete specifications also contain the general conditions of the contract between owner and contractor respecting insurance, liability, foreman supervision, bonds, liens, delays, etc. They are thus a protection to the home builder, since they insure that he will get what he pays for.

They are also a protection to the contractor against any unreasonable demands that the home builder may make of him. High-grade contractors demand complete specifications. Home builders should do so.

Plumbing Should Conform to Rigorous Standards

A good system of plumbing with a supply of pure water has been said to be the most important single contribution of modern civilization to comfort, health and elimination of disagreeable housework.

Anyone who has had experience with leaking, stopped up, or overflowing drainage systems needs no warning that good standards should be rigorously carried out.

A committee of sanitary engineers and plumbing experts, associated with the Department of Commerce, has formulated a set of basic plumbing principles which have been widely accepted by sanitary engineers.

Loss of Heat Through Asbestos Paper Shown

The objection to common asbestos paper used as a heat insulator on hot-air pipes was worked out some years ago by investigators at the University of Illinois. They were able to show that more heat was lost through pipes thus covered than through pipes on which no insulation was used. However, where cellular asbestos was used, adequate insulation was obtained.

Bathroom and Kitchen

Too often, in planning a home, the bathroom and kitchen are neglected. Yet these rooms, almost more than other places, should possess an air of refinement and sanitation which will leave its impress upon everyone who enters them.

POULTRY

DEATH FLOATS IN AIR OF HATCHERY

Floor of Room Is Common Source of Dust and Dirt.

Death floats in the air for the newly hatched baby chick, but the hatchery manager can take precautions which will reduce the probability of disease germs, carried on minute, floating dust particles, from infecting baby chicks which emerge from their shells, free of the disease germs.

"The floor of the hatchery room is the most common source of dust and dirt. The floor should be kept clean," says a bulletin on "Sanitation in the Hatchery" just published by the agricultural extension service of the Ohio State university. "Less dust will be stirred up if the floor is flushed or scrubbed with water instead of being swept with a broom. When the use of water is impossible, sweeping compounds should be used. If possible the floor should be kept wet down. This prevents dust and by increasing the humidity of the air is an aid in hatching larger and better chicks.

"The practice of dropping or throwing egg shells, unhatched eggs, or dead chicks on the floor is bad. This refuse should be carefully handled and removed from the incubator at once.

"The hatchery room is not greatly unlike a hospital. Clean walls, clean floors, clean equipment and clean attendants are essential."

The new bulletin is written by Prof. E. L. Dakan, head of the poultry husbandry department of the university, and Dr. Fred Speer of the bacteriology department, who has been doing research work on the disinfection of incubators, under a poultry industrial research fellowship established at the university by commercial interests.

Poultry Houses Badly Infested With Vermin

When a poultry house becomes badly infested with mites, it is hard to control them with one application of any material. Mites may gather in the walls and around the ceiling and under the dropping boards or behind insulating material in the walls. They depend on the blood of the roosting bird as a means to live and if the perches are treated about once each week for a few weeks, all the mites in the house will eventually gather there and be killed. The nests often need considerable spraying, especially if they consist of boxes nailed on the side walls of the house.

By adding a little carbolineum to the kerosene oil or engine oil, the mixture will have greater powers for destroying mites. It may be best to paint the roosts, dropping boards, and nests with clear carbolineum. If the side walls are rough and infested with mites, it may be best to whitewash them to seal up a lot of crevices and make the surface as smooth as possible. When the roosts are protected with spray dope often enough to keep down mites, they are not so apt to become intrenched in other parts of the house.

Poultry Facts

Dirty poultry houses harbor disease.

* * *

Moldy feed or moldy litter may give the baby chicks pneumonia.

* * *

In order to secure top prices for eggs on the market, they must be of high quality.

* * *

One of the newer developments in chick raising is the use of electrically heated incubators and brooders.

* * *

Move the brooder houses to fresh ground two or three times during the season in order to keep the young birds healthy.

* * *

Feed hopper space, not too much and not too little, is a big factor in determining feed consumption and growth of chicks.

* * *

To hatch a desirable chick, hatching eggs should weigh between 24 and 26 ounces per dozen, and should be uniform in shape, size, and color.

* * *

Root vegetables, such as mangels, beets, carrots, etc., are good, but not as good for green feed as the plant that grows above the ground.

* * *

Keep things as sanitary as possible around the growing chicks. The worst enemy and best preventive of coccidiosis is clean ground, clean water, clean feed, and clean houses.

* * *

The practice of reproducing the flock with eggs laid by hens produces a better quality chick than breeding from pullets. The old hens have stopped laying and are storing reserve vigor to be converted into strong, vigorous chicks.

* * *

The incubator should be cleaned and carefully inspected for defective parts. Wafer thermostats should be removed and tested. Testing may be done by immersing alternately in hot and cold water. If the wafer reacts sluggishly, it should be discarded.

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

PHILLIPS Milk of Magnesia

Love's Cradle

All emotions have their beginning in the pituitary gland. It is in the middle of the head, at the base of the brain. Love, hate, jealousy, and so on are due to the excitation of that gland.

Watch Your Kidneys!

Scanty or Too Frequent Excretions Demand Prompt Attention.

KIDNEY disorders are too serious to ignore. It pays to heed the early signals. Scanty, burning or too frequent kidney excretions; a drowsy, listless feeling; lameness, stiffness and constant backache are timely warnings.

To promote normal kidney action and assist your kidneys in cleansing your blood of poisonous wastes, use *Doan's Pills*. Endorsed by users everywhere.

50,000 Users Endorse Doan's:

A. N. Russell, 712 W. 1st South St., Salt Lake City, Utah, says: "I felt stiff and sore all over. My back had a dull ache in it most of the time. I tired easily and was very irritable. After reading about Doan's Pills, I decided to try them. They did what I expected and now I feel fine."

JUNIOR AND SENIOR BANQUET FRIDAY

(By M. F. Penrod, Supt.)

SENIORS WILL BE HONORED BY JUNIOR CLASS FRIDAY EVE

Visitors nvited To View Banquet Room And Tables At 5:30 P. M.

Miss McGinnis and the Juniors are this week very busy during the moments that can be spared from regular class work getting ready the banquet for the Seniors and faculty. We have been requested to announce that those interested in seeing the decorations for the occasion may gratify their interest between 5:30 and 6:00 p. m. Friday evening as the doors of the Gym will be opened to them during this half hour.

Entertainment At Theatre

We are informed that the management of the Idle Hour, our local theatre, has been able to secure for the evening through the aid of Miss McGinnis, talent from Mason City. The school party will, after the banquet, attend the program at the Idle Hour which will consist of esthetic dancing and singing by some of the same little girls who were here for the same occasion last year.

Senior Play Very Successful

The Seniors and Miss Trumbell were very gratefully rewarded last week in the fine attendance at their Class Play. The door receipts from both nights amounted to $153.15. This, so far as we know, is a record for class plays in Klemme. They wish us to express in these columns their thank to thoe who came to see the play and to all those who assisted in any way in its production. We feel certain those who saw it will agree that it was far above the usual modern high school play, in its fine, wholesome home-like spirit, its fine portrayal of pure social ideals, and its chaste but meaningful English.

Ag Class Makes Trips

Our Agricultural Class has been making a few trips recently to observe live stock. They went on Monday to observe Mr. Ralph Ludeke's herd of Poland China Hogs, on to Mr. Lester Stille's Chester Whites and from there to Mr. John Larson's to see Duroc Jerseys. We hope to be able to get to Decker's Packing Plant at Mason City sometime before school closes.

Took In Algona Program

Those of our faculty and high school students who were able to attend the banquet and program at Algona on last Friday night feel they were amply repaid. The singer and the negro orator heard there were some of America's very best and well worth going that far to hear.

Tournament At Dows

We understand the state baseball tournament this year is to be held at Dows sometime this month. This is a high school tournament but as so many of our boys were needed this spring on the farms, Klemme High School has not attempted base ball.

Should Keep Up Attendance

We regret the number of cases of absence necessitated by work at home. When the end of the year approaches we feel a bit anxious for some of our students whose marks have been low throughout the year. We hope everyone responsible will aid them whenever possible.

LEGION AND AUXILIARY HOLD JOINT MEETING

Plans Being Made For Observance Of Memorial Day

(By Leona Lau, Sec. and Treas.)

At the May joint Legion and Auxiliary Meeting their were eighteen Auxiliary members and nine Legion men present.

Memorial Day plans were made; the time of program, 10:00 o'clock, Thursday, May 30, 1929. The speaker to be obtained by the Legion and Mrs. Paul Grange. Mrs. Walter Lau and Mrs. David Schwichtenberg to plan the balance of program.

Six hundred poppies have been ordered for Poppy Day.

One Auxiliary member donated $5 for the Poppy Film to be run at our local theatre, showing the purpose and how the poppies are made.

It was decided to buy a bronze marker for the unknown soldier, as those markers had been bought last year for all the soldier graves, both Civil and World War Veterans.

The "Iowa Legionaire" was ordered for the Auxiliary president for the coming year.

Flowers had been sent Alice Carolus, who is quite ill, and it was voted to send flowers to Godl Star Mothers for Mother's Day.

Miss McGinnis asked that the Auxiliary show a film for girls over 16 and their mothers,and this met with the approval of all members present. The date will be announced later.

Wayne Pavey and Kenneth Kluckhohn were appointed as janitors of the Theatre

The date of the County Legion meeting, May 10, at Crystal Lake. All Legion and Auxiliary members are invited. The County Auxiliary meeting this month will be at Garner. The date has not been set.

500 poppy stickers ordered to be sold.

Mrs. David Schwichtenberg was appointed Cradle Roll chairman for this year.

Three new members were sent in: Mrs Alden, Mrs. Albert Carolus and Mrs. Blanche Stille. Total membership, 39.

Lunch was served by Mrs. Arnold, Mrs. Griffen, Mrs. Bredbenner and Miss Leona Lau.

Editor's Note: We hope to make this a regular feature in the Times as the Auxiliary Ladies have promised to furnish us news of their meetings which we feel will be of great interest to our readers

Watch for the Auxiliary Notes in the Times and learn more of what a splendid community work is being done by the Auxiliary and the Legion in Klemme.

SENIOR CLASS PLAY SETS HIGH MARK IN RECEIPTS

Play Was Far Above The Average Amateur Or School Play

The Senior Class certainly set up a target for other classes to "shoot at" in years to come in total receipts taken in on a class play.

For the two nights, Thursday and Saturday that the Seniors put on their play, "The Quest," they took in a total of $153.15. This is the most any home talent or class play has totaled in Klemme.

The play, under the able direction of Miss Trumbell was far above the average school or home talent production The parts were well carried out by the various students and the story was good.

We congratulate the class on their success.

PROPOSALS FOR THE ERECTION OF SCHOOL HOUSE

Notice is hereby given that the proposals for the erection of a school house in District No. 5, Avery Township, in the County of Hancock, will be received by the undersigned, at his office in his home, (where plans and specifications may be seen) until 8:00 o'clock P. M, June 4, 1929, at which time the contract will be awarded to the lowest responsible bidder. The board reserves the right to reject any or all bids.

J. J. COOK, Secretary.

KLUCKHOHN STORE INSTALLS NEW ELECTRIC COUNTER

Large Double Unit System of Refrigeration Now Used In Store

G. W. Kluckhohn and Sons Store in Klemme now have as fine a system of electrical regrigeration as can be found anywhere in North Iowa.

They have just completed the installation of a ten foot all-display type, triple glass Herrick counter, which is chilled by a double unit Frigidaire Electric Refrigerating machine. Another unit is piped to their large refrigerator which keeps that automatically cooled to a low temperature.

With this new equipment the G. W. Kluckhohn & Sons store can render their customers the utmost service in choice articles of food that require storage in a chilled case.

They are to be congratulated on their fine improvement in store equipment.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC. Required by the Act of Congress of August 24, 1912. Of The Klemme Times

Published weekly at Klemme, Iowa for April 1, 1929.

Jorgenson, who, having been duly sworn acording to law, deposes and says that he is the Owner of The Klemme Times, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, etc. of the aforesaid publication for April 1, 1929:

1. That the names and addresses of the publisher, editor, managing editor, and business, managers are: R. A. Jorgenson, Klemme, Iowa.

2. That the owner is: R. A. Jorgenson, Klemme, Iowa.

3 That the known bondholders, mortagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, morgages, or other securities are: None.

R. A. JORGENSON, Owner.

Sworn to and subscribed before me this 1st day of April, 1929.

FRED A. ARNOLD
Notary Public.

MISS ROSA BLUMER FOUND DEAD IN BED MONDAY MORNING

Had Been Living With Her Sister, Mrs. Charles Kraus Near Klemme

Early Monday morning when Mrs Charles Kraus, who live southwest of Klemme about a mile, went to arouse her sister, Miss Rosa Blumer who lived with Mr. and Mrs. Kraus, she wa found in bed dead. Miss Blumer suffered a stroke over twenty years ago from which she never fully recovered, and her death was perhaps due to a second attack.

Following is the obituary as given at the funeral services:

Miss Rosa Blumer died early Monday morning at the home of her sister, Mrs. Carl Kraus, Sr., at the age of 62 years, 3 months and 23 days.

She was born on the 13th day of January, 1867 at Knittlingen, Wuertenberg, Germany. Her parents Mr. and Mrs. Jacob Blumer took her to baptism in the Evangelical Church. After completing the course of instruction in this same church she was confirmed at the age of 14.

In the year 1883 she came to America with her parents who made their home on a farm near Garner, Iowa. At the age of 20 she suffered a paralytic stroke rom which she never fully recovered. This happened while she was visiting at Minneapolis, Minn. From this time on she remained at the home of her parents and brothers and sisters.

Her mother died in 1914, and her father in 1922.

Two sisters, Mrs. Carl Kraus Sr., of Klemme, Mrs. August Katter, of Garner, and one brother, Christ Blumer, Klemme, survive her.

Funeral services were held at the Klemme Reformed Church Wednesday afternoon, at 2:00 p. m., in charge of Rev. Grosshuesch, assisted by Rev. C. Schmid of the Elltown Reformed Church.

Burial was made in the Elltown cemetery.

Miss Phyliss Root has signed up to teach at Holstein next year. Mr. Lewis will be the superintendent of schools at Fredeika. Mr. Heiden has a position in the Springfield, Illinois high school as manual arts instructor.

Dr. Zinn underwent a major operation at Mercy hospital last week Thursday morning. He is making a fine recovery.

LAW SAID THIRTEN INCHES TO BE LADIES WAIST MEASURE

Farm Bureau Women Have Study On Correct Posture

Why have good posture? There are four essential reasons why one should posses good poture: It insures Health and Beauty, as a social value the easy poise of correct posture gives a person confidence in himself, as a mental value it is inherent that an incorrect posture is apt to cause one to acquire the tendancy of slovenliness and inattentiveness of the mind, also good posture has a spiritual value that assures a person that they are capable of doing wonderful things and that beauty is everywhere.

These above values of good posture were discussed at the home of Mrs. Ralph Elder Monday, May 6th, during an all day meeting of the Farm Bureau Women of Ell Township.

How to acquire good posture was also discussed. The characteristics of good posture may be obtained only by correct standing, sitting, walking, lying and breathing. The several deaders present, with much enjoyment, took various posture exercises. It is said that a farily good posture can be made much better through the usuage of exercises.

Foundation patterns were also studied and discussed. Back in the regime of Catherine De Medici of France (1560) an edict was issued that a thick waist was an abomination and the standard measurement should be thirteen inches. Can we imagine the women of today adhering to such foolish fashions that are decidedly injurious to their health.

At the noon hour a delicious chicken dinner was served cafeteria style. The women present feel that their knowledge of correct posture has been richly increased.

FINE PROGRAM AT IDLE HOUR FRIDAY AND SATURDAY

Miss Louis Smith's Dancing Girls In Special Program Friday Eve

This week and next the management of the Idle Hour has something well worth while to offer the public in entertainment.

On Friday evening the Theatre has a special entertainment in honor of the Senior Class, to which the public is also invited.

Friday evening Miss Louise Smith and her little dancing girls of Mason City will appear in the following program:

1. "Dream Train," Jean Curtiss and Dorothy Daniels.
2. "Tin Pan Parade," Beth Carter.
3. "Don't Be Like That," Sarane Robinson and Ralph Lenenski.
4. "Daisy Days," Betty Edwards.
5. "Dancing Tambourine," Virginia Waller.
6. "Wobbaly Walk," Mary Gilbert
7. "St. Louis Blues," Catherine Curtiss.
8. "Wedding of the Dolls," Finale

A special feature picture with Betty Compson and Kenneth Harlan in "Cheating Cheaters," will be on the screen.

The feature picture will again be shown Saturday night, and in addition a comedy, Snookums in "The Newlyweds Imagination."

May 15th, a big Wednesday night feature program will be shown, a United Artists production "Tumble Weeds." In addition to this slides of local babies and childrne will be thrown on the screen. Don't miss this big May 15th program. Tell your friends. Come and see the pictures of children you know, on the screen.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Sunday is Mother's Day and our services Sunday will give special recognition to Motherhood, both in sermon and song. New members will also be received into the church at the morning service and baptism will be administered to such as desire it.

There will be regular preaching service at the evening hour with music by the Junior Choir and the local male quartet. You are cordially invited to attend both of the services.

HANCOCK COUNTY NOW LEADS STATE

AVERY TOWNSHIP GIRLS NOW HAVE 4-H CLUB ORGANIZED

Mrs. Howard Barger Is Leader Of Fourteen 4-H Girls In Club

Fourteen Avery Township girls became 4-H Club members Saturday. The meeting was held at the home of Mrs. C. A. Arnold. Mrs. Schneider, of Goodell, helped the Club Leader, Mrs. H. C. Barger with the organization of the new club.

Those who became members are: Barbara Gealow, Viola Koehler, Eva Stokesbary, Madeline Griffen, Avis Andreason, Gertie Trampel, Ruth Pals, Florence and Carrie Swalve, Anna Trampel, Wemkie Trample, Leona Prelipp, Margie Andreason, and Edna Koehler.

The officers elected for the year are: President, Barabara Gealow; Vice President, Wemkie Trampel; Secretary, Margie Andreason; Reported, Edna Koehler.

Refreshments were served by Mrs. Arnold at the close of the meeting.

Hancock County has the honor of being the first county in Iowa to have every township organized for the year's 4-H Club Work.

THE AMERICAN LEGION AUXILIARY PLAY A REAL HIT

$74.30 Taken In For The Two Entertainments Last Week

The mericam Legion Auxiliary home talent play, "The Strike of the Ladies' Aid," was well attended despite the unfavorable weather conditions, on last Wednesday and Thursday evenings, April 24 and 25. The tickets sold for both nights totaled $74.30.

The American Legion Auxiliary wishes to thank the ladies who are not members, but who took part and made the play possible and a success, also they wish to thank all who helped in any other way, and all of those who attended.

The Times wants to say that all of those who did not see this play certainly missed out on a hearty laugh, hundreds of them, in fact. The ladies certainly put this over big and kept the audience in an uproar. The costumes used were certainly a "scream" and were quite a curiosity.

Miss Marie Blank directed and coached the play and must be given a lot of credit for the success it attained.

KLEMME CREAMERY HAS NEW RECORD FOR APRIL

(By A. D. Gimer, Manager)

It may be of interest to our many patrons and friends to know that the Klemme Creamery is showing a good increase in business again this year over last year. Last April 755 tubs of butter were shipped out of the state. This year 815 tubs were shiped out of the state, and a total of 54,776 pounds butter made for April.

We will not feel satisfied with our business until we have the patronage of every cream producer in the Klemme Territory. The management have fitted up the Creamery to handle a very large volume of business at a minimum expense and best of all we do not owe anyone a dollar for equipment. Everything is paid for and we have an emergency surplus; also we have never drawn on this fund so far. Stockholedrs and non-stockholders are treated alike, namely, no charge to the non-stockholder for making butter.

We welcome new patrons and assure you of the very best of treatment and the very best prices paid that the market will afford.

We are selling our butter at a premium which assures the very best prices paid to our patrons. Let every one boost the Klemme Creamery and make this your Creamery—we are at your service.

Mother-My-Love-

O MOTHER-MY-LOVE, if you'll give me your hand,
And go where I ask you to wander,
I will lead you away to a beautiful land—
The Dreamland that's waiting out yonder.
We'll walk in a sweet-posie garden out there
Where moonlight and starlight are streaming,
And the flowers and birds are filling the air
With fragrance and music of dreaming.

There'll be no little tired-out boy to undress,
No questions or cares to perplex you;
There'll be no little bruises or bumps to caress,
Nor patching of stockings to vex you.
For I'll rock you away on a silver-dew stream,
And sing you asleep when you're weary,
And no one shall know of our beautiful dream,
But you and your own little dearie.

And when I am tired I'll nestle my head
In the bosom that's soothed me so often,
And the wide-awake stars shall sing in my stead
A song which our dreaming shall soften,
So Mother-My-Love, let me take your dear hand,
And away through the starlight we'll wander—
Away through the mist to the beautiful land—
The Dreamland that's waiting out yonder!

Mothers' Virtues Put on Record

Most Beautiful Description of Wife and Motherhood Ever Penned Found in Book of Proverbs.

By Right Rev. James E. Freeman, Bishop of Washington.

In her tongue is the law of kindness.—Proverbs 31:26.

No finer tribute to feminine graces is contained in the Bible than that recorded in the thirty-first chapter of the Book of Proverbs. It is a glowing tribute to wifehood and motherhood. "The heart of her husband doth safely trust in her; she will do him good and not evil all the days of her life." Of her unfailing devotion to her household the writer says: "Her candle goeth not out by night; she stretcheth out her hand to the poor; yea, she reacheth forth her hands to the needy." "She looketh well to the ways of her household and eateth not the bread of idleness." Little wonder is it that her children "arise up and call her blessed; her husband also, and he praiseth her." It is a lofty conception of the mother of the household. Nothing that is here written concerning her is more significant than the passage, "In her tongue is the law of kindness." There can be little higher in the way of the fulfillment of the graces and virtues of motherhood than this.

The Understanding Heart.

The law of kindness implies a gentle and understanding heart. It will not be hindered or distracted through misunderstandings nor will it yield to the petty annoyances that day by day cause friction and unhappiness. The law of kindness will not reckon with these. It recognizes with understanding sympathy temperamental inequalities and those elements that render members of a household dissimilar in thought and practice. The law of kindness resists and overcomes the unconsidered and thoughtless utterance and readily forgives the unwitting act of disobedience. The mother of the household, like Mary of old, penetrates beneath the surface of things, weighs with fine discrimination the differences in those who constitute the household and exercises a judgment that finds its inspiration in the law of kindness. It is safe to say that this supreme gift of mother love is one of the mightiest factors in the shaping of character, and that it contributes more to an orderly and peaceful home life than all else. It is the source of contentment and the inspiration to higher thinking and living. Subtract this from our home life and we impoverish it.

True Kindness.

We are not thinking, concerning this great virtue, of that kind of cheap sentimentality that discloses itself in undiscriminating kindness. Kindness without the loving word of counsel is futile. Kindness that reckons not with an ordered and orderly household whose discipline contributes to the strengthening and enrichment of character inevitably produces impairment of domestic felicity.

Mother's Sunday compels us to think more definitely of those fundamental things that constitute the strength and sanctity of home life. It is demonstrable that the homes of a nation have the power of making or unmaking it. They either exalt its standards or debase them. They either contribute to the wholesomeness of our social life or they gravely impair it. Indeed the home standards affect for good or ill every phase of our corporate life. No home liveth to itself. We are living in an age in which the duties and privileges of women have been infinitely broadened. They are equal sharers with the men of the nation in its large concerns and opportunities. They have to do with the making of policies and the shaping of national ideals. All this should make for greater refinement and wholesomeness in all that concerns our well-being.

Mother's Responsibilities.

If these new privileges and opportunities detract in any wise from the high claims and responsibilities that peculiarly belong to mother life and mother influence, they must ultimately work disaster. No social occupations, no indulgence in those things that concern the state and the nation, may be substituted for those holier responsibilities that have to do with home and family life. The greatest trust that God has committed to His children is that which is given to the mother of the household. She, more than all others, determines the moral worth and strength of our domestic and social life. To her hands is given the incomparable privilege of shaping the characters of her children. The moral and spiritual ideals of the nation, as a whole, are largely determined by its mothers.

The Savior's Mother.

Little as we know of that simple home in which the child Jesus was reared, sufficient is told us to indicate His mother's influence as well as her understanding sympathy. She, above all others, discerned the high and holy purpose of His ministry. With prophetic instinct she saw from His earliest days what no other eye could discern.

Poets and painters have exhausted their genius in portraying this sacred relationship. The modern mother may find in this lowly home at Nazareth an ideal of transcendent loveliness. We may change our customs and our ways of living, but we dare not lower those high and holy standards that give to the mother the sovereign place to which by divine sanction she was appointed. She must continue to be the guardian of a nation's character.

High and Holy Day

Mother's day, and its proper observance, means more than a mere gesture. It is legally required that every person shall associate the love of mother, whether living or passed, with the love of country. It is a day set aside for concentration upon the ideals of home and the ideals of our institutions of government. A good home stands for good citizenship, and the home is made by the mother.

Thought For the Day

WHAT would you think of a boy who would strike his mother? You hate to think of anything so unpleasant, don't you? Words cannot express your opinion of one who would intentionally injure his mother.

NOW stop a minute. Probably some time in your life you have had a bloody nose or a skinned knee. And probably some time in your life some one has made an unkind remark that hurt you dreadfully. Which really hurt the worst? The nose or the knee was better in a few hours or a few days, but your injured feelings bothered you for a long time after that unkind remark.

THE meaning of all this is clear: You have only contempt for a boy who would strike his mother, but do you realize that an unkind word to her may hurt her feelings more than a blow? Boys—and girls, too—are so much more careless with their tongues than with their fists. Don't you be one to let your tongue inflict pain.

THAT'S a good thing to think about on Mother's day.

NEWS REVIEW OF CURRENT EVENTS

Mexican Revolution Collapses, Leaders Taking Refuge in United States.

By EDWARD W. PICKARD

MEXICO'S latest revolutionary movement has finally collapsed after many premature announcements to that effect. By the end of the week the only rebel bands in arms were the troops of General Caraveo near Pulpito pass and some bands of guerrillas and "cristeros." An offer of amnesty had been sent to Caraveo and his men. Tuesday the rebels surrendered Nogales, where they had long held out against the federal attacks. Their leaders already had fled across the border and the soldiers agreed to quit after government officials had guaranteed them safety, food, clothing and shelter. Meanwhile General Almazan disposed his federal forces for a great attack on the rebel positions blocking his way to Agua Prieta, the last important stronghold of the revolutionists along the northern border. However, a conference held in the American customs house at Douglas, Ariz., resulted in arrangements like those at Nogales, and Agua Prieta was surrendered without a fight, the 1,500 rebel troops transferring their allegiance under guarantees. Francisco Elias was appointed provisional governor of the state of Sonora, which had now been nearly all brought under federal domination.

Whereabouts of General Escobar, military chief of the revolution, were unknown, but it was believed he and Gens. Roberto Cruz and Manrique were in the United States. Rebel leaders known to have come across the border included Gen. Ricardo Topete, Gen. Fausto Topete, Jesus Lizarraga, Gen. Ramon Iturbe, Deputy Ajredo Romo, and Tomas Balderrama, mayor of Nogales.

Capt. R. H. Polk and Patrick Murphy, American aviators flying for the rebel army, voluntarily crossed the international border into the United States and surrendered to Collector of Customs Fred E. Edwards. They were arrested by Department of Justice officials and charged with violation of the neutrality act.

NOTHING doing at present in the way of reduction of either land or naval armaments. Such is the admission of Nicholas Politis of Greece, chairman of the preparatory disarmament commission in session at Geneva. He said the commission would adjourn in a few days but would be reconvened before the session of the League of Nations assembly which has been set for September. "A number of declarations," he said, would be made concerning naval disarmament but there would be no discussion. General statements were made by the big naval powers in answer to Hugh Gibson's proposals on behalf of the United States withdrawing objections to naval limitation by categories and to the exclusion of trained reserves in considering land armament reductions. Earlier in the week the commission rejected Mr. Gibson's suggestion that "reduction" be substituted for "limitation" and the Chinese amendment proposing the abolition of conscription. Maxim Litvinov for Soviet Russia had offered an amendment calling for the alteration of the phrase in article A in the chapter on military effectives from "high contracting parties agree to limit the effectives in service" to "agree to reduce appreciably the effectives in service." After warm debate Litvinov agreed to change "reduce appreciably" to "limit and reduce," but most of the other delegates would not yield and the Soviet amendment went by the board.

In Washington it was stated the administration has no intention of seeking to bring about another naval disarmament conference in the near future, holding that the next move in that line is up to the League of Nations, and that such a conference would be futile until there had been an agreement in advance on a formula quite apart from that of tonnage upon which the chief naval powers were unable to agree in 1927.

LIVELY debates marked the consideration of farm relief legislation in the senate and various amendments to the McNary bill were introduced and discussed. Senators Watson of Indiana and Robinson of Arkansas, respectively majority and minority leaders, accused each other of inconsistency in their stand on the equalization fee and the debenture plan and kept the senate chamber in a turmoil for hours. An amendment to the debenture provision of the McNary measure offered by Senator Norris of Nebraska was accepted. It is designed to prevent overproduction by reducing debenture rates as production increases. Among other amendments introduced were: By McNary, exempting fruit and vegetables from the operation of the bill; by Capper, making the loan fund available to cooperative purchasing associations of farmers and permitting loans to cooperatives for the purpose of retiring existing obligations on marketing facilities; by Blaine, to provide that instead of a flat rate of 4 per cent, the interest rate on loans to be equal to the lowest rate on government obligations issued since 1917.

Horace Paul Bestor of St. Louis was nominated by President Hoover as a member of the federal farm loan board to succeed Eugene Meyer, resigned. Mr. Bestor has been president of the Federal Land bank of St. Louis since 1922 and of the Federal Intermediate Credit bank of St. Louis since 1923.

ATTORNEY GENERAL MITCHell's campaign for increased efficiency in the prosecuting attorneys' offices and his survey of conditions resulted last week in the summary dismissal from office of William A. Degroot of New York, United States attorney for the eastern New York district. Degroot had repeatedly refused to resign. William A. Gober, federal attorney for the southern district of Florida, and John Cook, for the southern district of Mississippi, already had resigned.

CHARLES EVANS HUGHES sailed from New York for The Hague to take up his duties as a member of the World court which is to convene on May 13. He will sit on the bench of that permanent court of international justice not as a representative of the United States but as a judge elected by the League of Nations; for the United States is not yet a member of the court.

By a vote of 26 to 19 the house of lords of Great Britain rejected Lord Cecil's motion inviting the house to express the opinion that the time had come when Britain should sign the optional clause of the World court statute. By this clause states recognize the compulsory jurisdiction of the court.

"EDITORIAL discourtesy" on the part of the Washington Post led Secretary of State Stimson to send a letter of apology and regret to Prince de Ligne, ambassador from Belgium. The newspaper, publishing reports that the recall of the ambassador was imminent, said it was understood that he "has not been seen frequently enough concluding statesmanlike negotiations for his government" and that he was regarded by some of the leaders of his government as what might be termed in America "high hat."

COMPLETELY dominated by Premier Mussolini—who incidentally now holds eight of the thirteen portfolios in his cabinet—the Italian Fascist council of 400 and the senate held their opening sessions and organized by electing Giovanni Giuriati, minister of public works, as president of the corporation chamber and Luigi Federzoni president of the senate.

Augusto Turati, secretary of the Fascist party, told the deputies that due to a drastic reform in the new chamber several changes in the rules and regulations governing its procedure had been decided upon by the grand council. The old rules, based on a chamber which had a majority and minority, were useless now, he explained, for the whole chamber was Fascist.

Sicily is now believed to be freed from the grip of the Mafia, for the trial of members of that maleficent society which has been going on for nine months, has ended in the conviction of 148 of the 161 defendants and the imposition of sentences running as high as 23 years' imprisonment. The jury was out for seven days. Italy has Mussolini to thank for this, as for innumerable other things.

PRINCE HENRY of Great Britain, third son of King George, went to Japan last week for the purpose of conferring the Order of the Garter on the emperor of that country. He was greeted at Tokio with a most extraordinary welcome, Emperor Hirohito himself meeting him at the railway station and accompanying him to the Kasumigaseki palace through gayly decked streets that were full of applauding citizens. At the palace the prince was greeted by the empire's hostess, Princess Chichibu, acting for the empress, who expects to become a mother for the third time.

MAY day, the traditional day for Communist demonstrations, was especially lively in Berlin. The Reds and the municipal authorities both were organized as for warfare and consequently the numerous clashes between the demonstrators and the police were bloody and desperate. All day and far into the night the rioting continued. The Reds barricaded streets and fought from the housetops and the police used their rifles, machine guns and armored cars freely. "Hose wagons," designed to drench mobs with torrents of cold water, also were employed effectively. Probably a score of persons were killed in the battles and the wounded numbered many hundreds.

In Paris the police completely squelched the Reds, arresting more than 4,000 and preventing all strikes except that of the taxicab drivers. There was rioting in several other European cities, but in Vienna and in England the day passed peacefully. Moscow's demonstration naturally was immense and impressive. The Soviet army was out in force, leading a tremendous parade of civilians. Reds in Mexico City congregated in front of the American consulate general carrying banners attacking the United States, but they were speedily dispersed by the police.

Demonstrations of workmen in the United States were in all instances quite orderly.

JOHN J. RASKOB, chairman of the Democratic national committee, refuses to resign as urged by certain prominent Democrats of the South, but he and his fellow leaders have created a new executive committee which is to establish permanent and adequate headquarters in Washington and devote its efforts to the rehabilitation of the party throughout the country. For chairman of this committee they selected Jouett Shouse of Kansas City, former member of congress, assistant secretary of the treasury during the Wilson administration, supporter of William G. McAdoo in two campaigns and known as a dry. He was a Smith worker, however, in last summer's campaign.

Shouse's task, it was explained, will be to represent the national committee in efforts to co-ordinate the activities of Democrats in both houses, state organizations, and Democratic women's groups, "in order to build a strong, country-wide Democratic organization that will be a virile, going institution."

In Washington it is believed Mr. Raskob and his associates think the Democrats can win the Presidential campaign of 1932 with Al Smith as their candidate and prohibition as the main issue.

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean Moody Bible Institute of Chicago.)
(©, 1929, Western Newspaper Union.)

Lesson for May 12

THE EARLY MINISTRY OF JEREMIAH

LESSON TEXT—Jeremiah 1:6-10; 1-24.

GOLDEN TEXT—We must obey God rather than men.

PRIMARY TOPIC—Doing Hard Things for God.

JUNIOR TOPIC—Doing Hard Things for God.

INTERMEDIATE AND SENIOR TOPIC—Taking a Stand for God.

YOUNG PEOPLE AND ADULT TOPIC—Fidelity in the Face of Difficulties.

I. Jeremiah's Call (1:1-10).

1. It was prenatal (vv. 4, 5).

Before Jeremiah was born, God ordained him a prophet.

2. His diffidence (v. 6).

This seems to have grown out of his youth and inexperience.

3. His hesitancy overcome (vv. 7, 8).

God graciously appeared unto him and made clear that he should (1) Go where sent. (2) Speak as commanded. (3) Be unafraid of their faces. The servant of God is called upon to face strong enemies. (4) Be assured of the divine presence.

4. The divine message given (v. 9).

Not merely the thoughts, but the proper words to express the thoughts were put into the prophet's mouth.

5. Nature of his ministry (v. 10).

It was to be wider than that of prophesying. Six words are given as descriptive thereof. The first four are destructive in their implication—"root out," "pull down," "destroy," and "throw down"; two constructive, "build," and "plant."

II. Jeremiah's Grief (9:1, cf. 6:10).

The unbelief of the people made him feel that his efforts were fruitless. Seeing so clearly the awful doom which awaited his people and nation, and their willful opposition, he wept sorely.

III. Jeremiah's Prophecy in the Temple Court (26:1-24).

1. Jeremiah's solemn warning to Judah (vv. 1-7).

The Lord commanded him to stand in a conspicuous place in the temple and proclaim the judgment which was about to fall upon them because of their sins. The object was to move them to repentance (v. 3). If they would not repent, God would make the temple as Shiloh (v.6). Just as Shiloh was once the dwelling place of the Lord and now fallen into decay and abandoned, so would it be with the temple.

2. Jeremiah on trial (vv. 8-11).

(1) Cause of arrest (v. 8). It was for faithfully speaking all that the Lord had commanded.

(2) The charge (vv. 8, 9). Thou shalt surely die. They charged him with a capital crime. According to this charge his guilt was twofold: a. Pretending to speak for God. b. Speaking against the temple and the city. According to this charge he was guilty of blasphemy and sacrilege. The one who prophesied without God's command was to be punished by death (Deut. 18:20). Blasphemy was also punishable by death. (Lev. 24:16).

(3) The princes sit in judgment (vv. 10, 11). Matters of state were not entirely in the hands of the priests and elders, but were in part controlled by members of the royal family.

3. Jeremiah's defense (vv. 12-15).

Threats of death did not deter him from preaching, but only made him repeat his message with clearness.

(1) Reiterates his divine commission (v. 12). He plainly told them that he was God's messenger and in opposing him they were opposing God.

(2) His exhortation (v. 13). He urged them to amend their ways and obey God and thus turn aside the divine judgment.

(3) He gave himself up (v. 14). He did not resist the powers of government (Rom. 13:1).

(4) Warns of fatal consequences (v. 15). He told them that God had sent him and that if they killed him they would be guilty of defying God.

4. Jeremiah saved (vv. 16-24).

(1) The judgment of the princes (v. 16). They found him "not guilty."

(2) The speech of the elders (vv. 17-23).

The elders pled for Jeremiah and adduced two cases in illustration: a. Micah (vv. 18, 19). Micah had prophesied against Jerusalem, but King Hezekiah instead of putting him to death, repented, and thus turned aside the punishment which was impending.

b. Urijah (vv. 20-23). Urijah prophesied against the city and the land and thus incurred the wrath of Jeholakim, who even brought him back from Egypt and slew him.

(3.) Rescued by Ahikam (v. 24). Ahikam must have been a man of influence, to be able to interfere.

Faith

Faith is not blind acceptance of absurdity. Faith is the completion of a transaction in which we commit ourselves to a personal relationship with an unseen and living Master. Faith in such an adventure as every sailor makes when he sets out for an unseen port. Faith is our response to our yearning for the God who has made us for fellowship with himself. Faith is the answer of the vibrant human spirit to the music of Eternal.

—Ozora S. Davis.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective anti-acid like Phillips Milk of Magnesia soon restores digestion to normal.

Phillips does away with all that sourness and gas right after meals. It prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike a burning dose of soda—which is but temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

Pride is the fog that surrounds insignificance.

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains no deadly poison. K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee.

Insist upon K-R-O, the original Squill exterminator. All druggists, 75c. Large size (four times as much) $2.00. Direct if dealer cannot supply you. K-R-O Co., Springfield, O.

K-R-O
KILLS-RATS-ONLY

Magnified

"Why is that fellow dropping peas on a drumhead?" "That's rifle fire in a sound picture."

DOCTORS quite approve the quick comfort of Bayer Aspirin. These perfectly harmless tablets ease an aching head without penalty. Their increasing use year after year is proof that they do help and can't harm. Take them for any ache; to avoid the pain peculiar to women; many have found them marvelous at such times. The proven directions with every package of Bayer Aspirin tell how to treat colds, sore throat, neuralgia, neuritis, etc. All druggists.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

You Must Wear Shoes . . . . .

BUT DO they hurt? Do your feet smart and burn, corns and bunions ache and nearly set you wild? They won't if you do as millions of others are doing. Shake Allen's Foot-Ease in your shoes, it takes the friction from the shoes and makes walking or dancing a real joy. Sold everywhere.

ORCHARD GLEANINGS

CULTIVATION IS BAD FOR APPLES

Growing Period in Orchard Is Extended to Autumn.

The red color on many apple varieties helps to obtain top prices. With increasing competition from other sections and with the general trend towards better quality, growers may well consider the production of better colored fruit, especially in cultivated orchards where natural conditions are unfavorable for color, says Prof. G. W. Peck of the pomology department of the state college of agriculture at Ithaca, N. Y.

Assuming that the orchard has been properly thinned and pruned to admit sunlight to all the fruiting wood in the trees; that it has been sprayed or dusted to control fungus and insect pests; that early working of the soil has promoted early growth and ample leaf surface; how can the grower then influence color in the maturing crop?

If the grower continues cultivations into early August or throughout the year to harvest, he extends the growing period in the orchard. Under such conditions fruit does not develop nearly so good a color as when cultivation is stopped during the latter part of June or early in July. At this time the moisture in the top soil encourages a natural growth of weeds, or some cover crop, which usually produces a good growth. This conserves much of the available plant food and checks growth in the orchard. Under these conditions, trees produce fruit with better color than that from orchards which are cultivated later.

Another advantage is that costs are reduced. By late fall plenty of humus material will have been produced as a source of nitrogen, and, if the trees have made good normal growth up to the latter part of June, they will mature the crop satisfactorily if cultivation is stopped at this time. Thinning is another way to increase size, quality, and color of fruit.

Nematode Will Attack Roots of Peach Trees

Roots of the peach tree are quite susceptible to attacks of nematode and damage from this parasite becomes very severe in light sandy soils. It should be the purpose of every grower, so far as it is feasible, to prevent his soil becoming infested with nematode, which is usually brought about by the introduction of plants with infested roots systems. Soil that is already infested presents the problem of growing resistant crops and holding down the infestation to a minimum. Small areas can be freed of the nematode by steam sterilization or by treating the soil with concentrated solutions of formaldehyde. One best known method of coping with the parasite in the open garden and orchard, however, is the selecting and growing of resistant plants. The Georgia experiment station became actively interested in this problem more than fifteen years ago. The first effort was to gather a number of peach seeds from different sources, hoping to find some resistant stock on which to bud our well-known varieties of peaches.

Root System of Premier Strawberry Found Best

The Premiers have the very best root system of any strawberry. They are a most excellent canning berry and please the ladies who take pride in putting up a nice pack of strawberries. The ones who have tried them know full well that the berries will look well in the cans and taste fine when they come out. As a market berry Premier has the quality that most all growers are looking for, the ability to deliver a bumper crop almost every year, but this bumper crop is not at the expense of the quality, as is sometimes the case with big yielders.

Suitable Distances for Placing All Fruit Trees

C. Woolsey, Extension Service, Arkansas College of Agriculture.

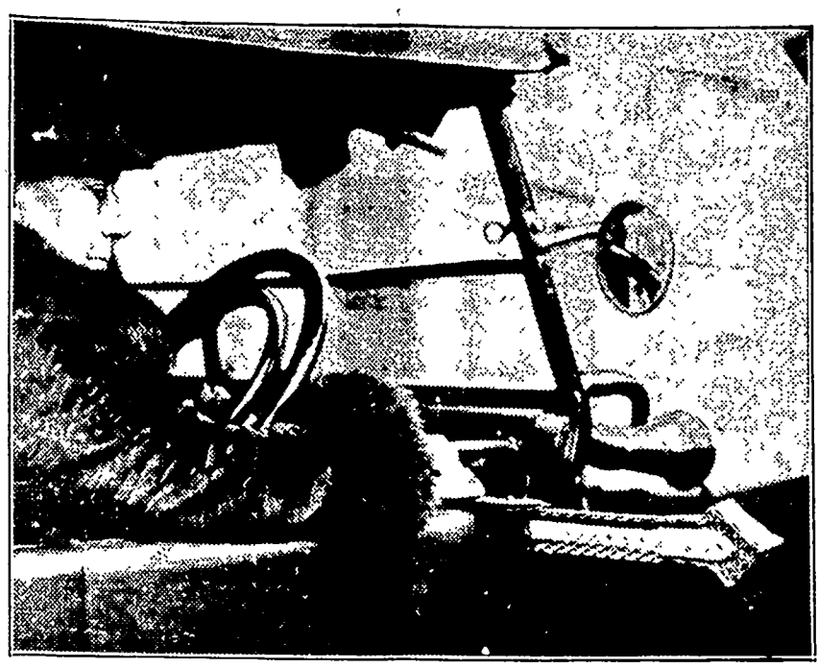
Many times fruit trees are placed too close together and growth is unsatisfactory. The common distances recommended are as follows:

Apples, 35 feet apart each way; peaches, 21 feet apart each way; cherries, 21 feet apart each way; plums, 21 feet apart each way; grapes, 8 feet apart in a row that is 15 feet from the last row of tree fruits; blackberries, 3 feet apart in rows 8 feet apart; raspberries, 3 feet apart in a row 8 feet apart; strawberries, 2½ to 3½ feet apart in rows 4 feet apart.

Timely Sprays

Just as soon as the blossoms shed, the apples, pears and quinces (if any are grown) may be sprayed with the bordeaux mixture combined with arsenate of lead. If the grower desires to make this at home, rather than buy it ready prepared, he can use 1 pound of bluestone, 2 pounds of hydrated lime and 2 ounces of arsenate of lead to 10 gallons of water. This same spray may be repeated about every two or three weeks until just before the fruit ripens.

NEW SIGNALING DEVICE HELPS DRIVING



Miss Emily Long, of Guildford, England, has perfected this device which, she declares, simplifies driving. At night the arrow is electrically illuminated.

MANY KILLED IN AUTO ACCIDENTS

Total of 27,500 Fatalities Reported in Various States of Union.

Approximately 27,500 persons were killed in motor vehicle accidents in the United States during 1928, it is indicated by a nation-wide survey which includes figures from all but three states.

This toll of life is more than 7 per cent greater than the number who met death in motor vehicle accidents in 1927. If a similar increase should be reported this year, it would mean the death of almost 30,000 persons.

With approximately 25,000,000 motor vehicles registered in the country at the close of last year, a fatality toll of approximately 27,500 means the death of one person for approximately every 900 cars. On an average, also, 75 persons were killed in motor vehicle accidents during each day of last year, or about 530 each week.

In 1927, according to the United States Department of Commerce, the total number of persons killed in motor vehicle accidents, including deaths caused by collision of motor vehicles with trains and street cars, was 25,533. Applying the 1928 increase of 7.36 per cent, as shown by the figures in 45 states and the District of Columbia, it is seen that the fatality record for 1928 is approximately 27,500.

The complete tabulation as reported follows:

State	1927	1928	Percentage of Change
Arizona	123	110	10.57
*Arkansas	166	162	2.41

Total	23,160	24,864	Inc.7.36

Footnotes.

* Excludes collision of all heavier vehicles, including trains and street cars.

(-) Excludes collision of motor vehicles with trains and street cars.

†Figures are provisional and subject to change.

In addition to the states where motorcycles are involved, all other figures, except where otherwise specified, include collision with all heavier vehicles.

Proper Care of Filter Results in Big Saving

Statistics show that the oil filter saves the motorist $29 a year in oil alone, besides reducing wear on the car, according to W. S. Isherwood of Flint, Mich., an authority on the subject.

In the old days before the oil filter he says, oil had to be changed every 500 miles. Now the manufacturers recommend changing oil from 1,000 to 3,000 miles. This recommendation is based upon the use of the oil filter and that it be renewed every 10,000 miles, because after this mileage the filtering unit becomes filled with the foreign matter taken from the oil and needs to be renewed.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q. What state in the Union has the greatest number of motor vehicles?

Ans. New York, with approximately 2,090,815. California is second with 1,806,224.

Q. Why should tires be properly inflated?

Ans. Too much air causes riding discomfort. Underinflation causes the tires to wear out quicker.

Q. Should the front wheels of a car be turned while it is not in motion?

Ans. This should be avoided when ever possible as it puts a severe strain on steering parts and is bad on tires.

Q. When spark plug gaps are too wide what happens?

Ans. When spark plug gaps are too wide it causes hard starting. The gap should be .025" in engines of ordinary compression and .020" for high compression engines. .025" is about equal to the thickness of a thin dime; .020" is slightly closer.

Automobile Advertising Feature on Closed Car

It is possible to use your pleasure car for business purposes, without marring its appearance, by the application of painted signs. Just paint the advertisement on ordinary window shades and substitute these for the shades of the car, the roller of the window shade being removed and the roller of the car shade being used in its place. Remove the ratchet from

Painted Window Curtains Used in the Closed Car for Advertising Purposes.

the roller and drive a screweye into the stick in the hem of the shade. The latter is slipped over a screwhook driven into the window sill, and the absence of the ratchet allows the spring to keep the curtain taut all the time. The stick in the hem should be a trifle longer than the width of the curtain so that it will be impossible for it to roll around the roller under the tension of the spring.—C. Neiper Bruce, New Castle, Pa.—Popular Mechanics Magazine.

AUTOMOBILE ITEMS

Foolish pride never sold a second-hand flivver.

* * *

When a woman signals that she is turning to the left does she waive her right?

* * *

A whoopee is a blowout but a blowout on a lonely road at night is far from a whoopee.

* * *

Overheard on the bus: "Yuh, I saw the gas was down to a gallon, so I let father take the car today."

* * *

Nothing looks colder on a cold morning than the young delivery gentleman who has just come in off the bicycle.

* * *

Some families are so prosperous that they can get behind in their deferred payments on two automobiles at the same time.

* * *

Things are not as bad as they seem. While only 386 were killed by gun and bomb in Chicago last year, 1,600 were killed by automobile.

* * *

A writer in Mr. Mencken's infallible "Mercury" says Detroit has abandoned the traffic lights system. Sure The horses didn't understand them.

FARM STOCK

INFANT MORTALITY AMONG BABY PIGS

Guard Rails on Pen Walls Will Save Many Porkers.

So high is the "infant mortality" among baby pigs that one out of every three farrowed dies, while on some farms as many as half the pigs are lost, according to Dr. W. E. Carroll of the University of Illinois. If the 140 pounds of feed required to farrow a pig were visualized as each dead one is disposed of during the farrowing season, the thought of such waste would be so startling to farmers that prompt measures would be taken to reduce it.

"More pigs are mashed by the sow than die from any other single cause. Guard rails on the pen walls will, of course, save many from this fate, but the sows themselves are frequently at fault. A sow may be deaf or blind or excessively heavy and lazy or even downright careless. Those with any of these defects should be replaced in the interest of saving pigs.

"Damp, drafty pens likewise take a heavy toll of pigs during a cold farrowing season.

"For warding off necrotic enteritis, bull nose and other filth-borne infections and preventing the rather large losses due to round worms there is nothing superior to the swine sanitation system which the college and country farm advisers have advocated throughout the state for a number of years.

"Another important factor in the well being of sucking pigs is the ration of the sow. A few days before each sow is expected to farrow she should be put in her pen in order that she may get acquainted with it before the pigs are born. At this time her ration should be reduced and made more laxative to correspond with her lessened activity. This can be done by substituting wheat bran for about one-third to one-half, by measure, of her customary ration. For 12 hours before and 12 hours after farrowing the sow needs no feed. Water should be allowed freely and in cold weather it should be warmed to remove the chill. If the sow gets restless and seems hungry she may be fed a double handful of bran in a thin, warm slop."

Set Federal Indemnity Limit for "TB" Cattle

(Prepared by the United States Department of Agriculture.)

Increases in the maximum indemnity that may be paid by the federal government for grade and pure-bred cattle condemned because of tuberculosis are announced by the bureau of animal industry, United States Department of Agriculture. The maximum federal share in indemnity payments for grade cattle is increased from $25 to $35, and the amount for purebred cattle has been raised from $50 to $75. The new scale became effective February 19, 1929, through the passage by congress of the agricultural appropriation bill for the fiscal year 1930.

The other provisions in connection with the payment of federal indemnity for tuberculous cattle are the same as heretofore, namely, that it shall not be more than one-third of the difference between the appraised value of the animal and the salvage value, and that the federal payment shall not exceed the amount to be paid by the co-operating state, county, or municipality.

Live Stock Hints

A good lamb should weigh about 80 pounds at the market.

* * *

Sheep furnish two salable crops annually—lambs and wool.

* * *

Give ewes plenty of legume hay and a small amount of grain.

* * *

Large gains per lamb are needed for most efficient production.

* * *

Poultry raised on clean ground can be kept free from tuberculosis infection.

* * *

Frequent changes in grazing ground will help combat stomach worm infection in sheep.

* * *

When it is known that hogs have tuberculosis steps should be taken to clean up the poultry flock.

* * *

Healthy lambs make rapid gains on good pasture. Parasites, if not under control, will prevent such gains.

* * *

Desirable market lambs can be produced on abundant palatable pasture without grain feeding. If pasture gets short, grain feeding is profitable.

* * *

Legume hay is a cheap and most desirable feed for breeding ewes, and should constitute at least 50 per cent of the roughage fed.

* * *

When care has been used, cooked and thoroughly mashed potatoes have been fed successfully to calves when potatoes in this form were mixed with the skim milk.

It May Be *Urgent*

When *your* Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done, for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctors' word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pains—or other suffering. Never be without it; some mothers keep an extra bottle, unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

Some people derive a lot of pleasure from affecting affection.

WORKS HARD IN THE FIELD

Relies Upon Lydia E. Pinkham's Vegetable Compound

Rankin, Illinois.—"I took Lydia E. Pinkham's Vegetable Compound as a tonic before and after my first child was born six years ago. Then when my second child came and I felt weak and rundown, I took it again. I am still taking it and I am feeling better. My mother used it for herself when I was small and always got good results. She still takes it. I do all kinds of heavy work, including my housework and I also help in the field. I recommend the Vegetable Compound and will gladly do so at any time. I am willing to answer any letters asking about this Medicine."—Mrs. Ben. Obenland, Route 2, Rankin, Ill.

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believed that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant-tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anybody's system. In a practice of 47 years he never saw any reason for their use when Syrup Pepsin will empty the bowels just as promptly.

Do not let a day go by without a bowel movement. Do not sit and hope, but go to the nearest druggist and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Moaticello, Illinois, for free trial bottle.

Raymond Wille Had Birthday Party Sunday

Raymond Wille, son of Mr. and Mrs. Cornelius Wille, celebrated his ighth birthday Sunday. All of his school-mates from District No. 8 were invited to spend the afternoon with him. Also a number of others were invited. All those present were: Mitchel Bock, Glenn Lewis, Edith and Ethel Swanson, Helena Albers, Mr. and Mrs. Henry Jahnke and family, Mr. and Mrs. John Bock, Mr and Mrs. Gottlieb Goll, and Emma and Louise Rosendahl.

Mr. and Mrs. E. C. Buentenbach and family visited with relatives at Dows, Sunday.

The 4-H Nutrition Club met at the Mr. C. A. Arnold home Saturday, May 4. There were about 20 present, visitors and all. The meeting was called to start a clug for the girls of Avery township. An election of officers constituted the main part of the business session and resulted as follows: Preident, Barbara Gealow; Vice Pres., Wenkie Trampel; Secretary, Margie Anderson; News Reporter, Edna Kahler. Mrs. Howard Barger is leader. At the close of the meeting light refreshments were served.

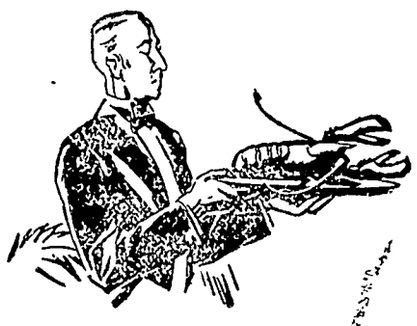
Henry Pals, Mrs. Watermiller's parents and sister and Mr. and Mrs. Peter Trampel and family were visitors at the John Watermiller home Sunday afternoon.

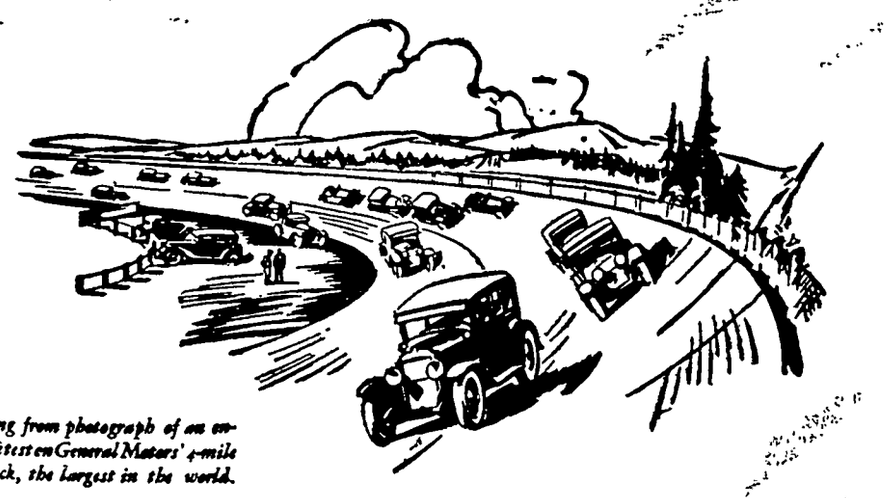


"Bring me *the winner!*"

THE story is told of a man dining in a restaurant, who was served a lobster with only one claw. Upon complaining he was told by the waiter that this happened occasionally because the live lobsters fought among themselves in the kitchen. "Bring me the winner!" said the diner.

At the General Motors Proving Ground, a fleet of specimen cars, built long in advance of factory production, fight a battle of hills, bumps, and every other sort of torture. These cars are torn down and rebuilt until they are able to beat every test. The tests involve speed, power, endurance, braking, riding comfort, handling ease; fuel, oil, and tire economy; body strength—every phase of car construction and performance.

Only the *winner* of all these tests is sent back to the factory to be used as a model for the construction of the car you buy. No matter what driving condition you face, your General Motors car is equal to it. You have the *winner*.



Drawing from photograph of an endurance test on General Motors' 4-mile test track, the largest in the world.

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$725. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful new Fisher Bodies. *Also* Light delivery chassis. Sedan delivery model. 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

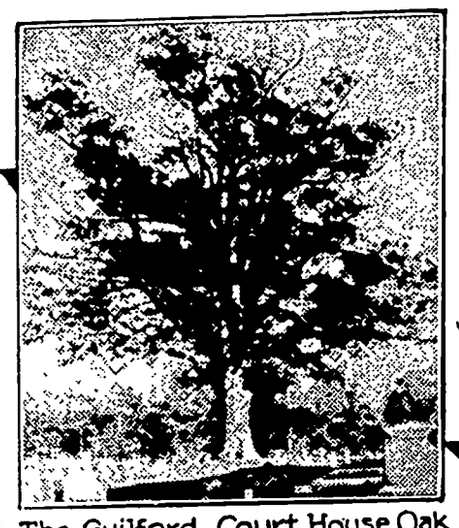
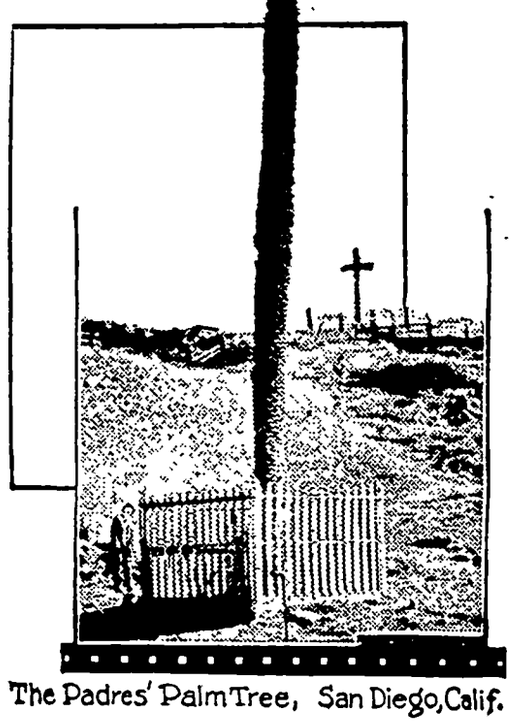
TREES THAT HELPED MAKE HISTORY

The Washington Elm, Cambridge, Mass.



The Guilford Court House Oak

Kentucky Coffee Tree — Fishkill-on-Hudson, N.Y.



The Padres' Palm Tree, San Diego, Calif.

By ELMO SCOTT WATSON

THE celebration of Arbor Day which takes place in many states during this month is a time for planting trees for the enjoyment for future generations. It is also a time for recalling the part played by trees in the lives of past generations and for remembering some of the famous trees which have stood or are still standing on the soil of the United States.

Probably the best known of all the "trees that helped make history" is the famous Washington elm in Cambridge, Mass., under which George Washington took command of the Continental army on July 3, 1775. Although the long and honored career of this tree came to an end in August, 1923, there are still standing two other trees closely associated with Revolutionary war events. At Fishkill-on-Hudson in New York is the Kentucky coffee tree which stood as a sentinel before the famous old Ver Planck mansion which Baron von Steuben occupied as his headquarters during the Revolution and under whose branches the first meeting of the Society of Cincinnati was held. Down in North Carolina stands the giant oak which saw the battle of Guilford Court House on March 15, 1781. This is also called the "Liberty Tree" since that battle a costly victory to Cornwallis, the British commander, led directly to his surrender at Yorktown. Out on the Pacific coast stands a tree which dates from Revolutionary war times although it saw none of the stirring events of that conflict. But it has seen history in the making, nevertheless, for it is California's oldest palm tree, planted at Old Town in San Diego by the Spanish padres more than 150 years ago.

In recognition of the part which trees have played in American history, the American Tree association several years ago established a "Hall of Fame for Trees" and invited citizens in all parts of the country to nominate historic trees in their communities for places in this gallery of honor. In a publication of the association "Trees as Good Citizens" by its president, Charles Lathrop Pack, the story of the "Hall of Fame for Trees" is told as follows:

It is fitting that trees should have their own Hall of Fame to give permanent record to their participation in history.

Through all the ages the trees have had important share in human progress. Under all conditions and in all climes they have proved themselves the best of good citizens. Their story is closely interwoven with the fabric of time. They have been a part of statecraft, war, art and literature, and they have stood as silent witnesses to man's achievements and solemn participants in his councils of destiny. To carry their message of the past to the generations of the future is an enterprise of vivid appeal to the imagination.

Since the creation of the idea of a Hall of Fame for Trees the spirit of recognition has spread to all parts of the United States. The study of the trees presented as candidates for admission to the Hall of Fame has been a study of American development. Trees now living and offered as nominees have been sentries of history written and unwritten. Research into the individual records of the candidates has been an intimate education in the progress of the New World of Columbus, Washington and Lincoln.

To cover the life span of the nominees the imagination must go back 4,000 years and more. In the Redwood forests of California stands a tree whose claims rest on the simple statement of age. The General Sherman Sequoia is declared to be the oldest thing now living. It was of giant growth at the time of the birth of Christ, almost 2,000 years ago. Today, at an age of more than 4,000 years, it has a diameter of 36½ feet and a height of 280 feet. This tree is located in Sequoia National Park, where it stands as a memorial to General William Tecumseh Sherman, as well as the undisputed monarch of the ages.

In sharp contrast to this woodland patriarch is the Naturalization Tree in Kentucky, a symbol of the American Spirit of today. For this tree no certificate of age is necessary. Both name and fame rest on its service in connection with Americanizing recruits at Camp Zachary Taylor during the recent war. Under its branches thousands of aliens took the oath of allegiance upon being mustered into the ranks of the United States Army. On a single day this tree witnessed the naturalization of 925 of these new Americans and saw their salute to the flag of their new citizenship.

In the grounds of the White House, at Washington, stands a tree which links the past and present in an unusual manner. This tree is the outgrowth of an acorn brought from Russia, and because of this and its unique lineage it is known as the Russo-American Oak. The tree from which the acorn was obtained stands in Petrograd. It grew from an acorn produced by a tree at the tomb of Washington, at Mt. Vernon. The Mt. Vernon acorn was sent to the Czar of Russia by Senator Charles Sumner, of Massachusetts, and planted in the grounds of the Imperial Palace by the Czar as a symbol of Russo-American friendship. In 1898, the tree which had grown from Senator Sumner's acorn was located by Ethan Allen Hitchcock, then American Ambassador to St. Petersburg. Gathering and planting some of the acorns from this tree, the Ambassador sent a sapling of the new generation to President Roosevelt for planting in the White House grounds. The planting took place on April 6, 1904, exactly thirteen years before the day on which the United States joined hands with Russia and other European countries in the greatest conflict the world has ever known—a conflict which led to the destruction of the old Russia and the assassination of the royal family. The young tree was planted by President Roosevelt himself, with the co-operation of Secretary Wilson of the Department of Agriculture, and Mr. Hitchcock, at that time Secretary of the Interior. With its registration in the Hall of Fame, this tree takes conspicuous place in the list of trees with a history.

In various spots in the District of Columbia may be found trees of individual celebrity. In the shadow of the Capitol, within the splendid park surrounding the seat of government, is a tree planted by George Washington and now treasured as a priceless memento of the first President's interest in the beautifying of the city named in his honor. On Connecticut Avenue hill stands a stately tree of majestic spread, known as the Treaty Oak, for the reason that under its branches an important treaty with the Indians was signed 150 years ago.

George Washington's interest in trees was of far-reaching influence. In many places trees are now growing which owe their existence to the Father of the Country. One of these is reported from the vicinity of Bath, Pennsylvania. It came from Mt. Vernon as a gift from President Washington to General Brown, a notable figure of the Revolution. General Brown planted this tree in front of his old home, and it is known today as the Washington Horse Chestnut. In the nomination of this tree for the Hall of Fame its present base circumference is given as 27 feet, 7 inches, with a girth of 17 feet at a point 6 feet from the ground. In the Friends' Graveyard at Salem, New Jersey, is an Oak under which soldiers of Washington's army drilled in the days of the Revolution. This tree is known to be more than 300 years old. Its branches cover almost a quarter of an acre. Of even greater spread than this is the Sir Joseph Hooker Oak, nominated from Chico, California, which has a single limb 102 feet in length, and of which General W. T. Sherman declared that at noon it would shade an army of 7,000 men. Six feet from the ground this Oak has a circumference of 28 feet, 4 inches.

In various parts of America are trees famous through association with the Marquis de Lafayette. One Lafayette tree on the battlefield of Brandywine derives its prestige from the circumstance that when the celebrated French general was wounded at Brandywine his injuries were given first aid under this tree. At Annapolis is a tree under which a reception to Lafayette was held with a distinguished company in attendance. In the form of trees planted by his own hand, General Lafayette left many mementoes of his travels in America. One of these is now standing at Concord, New Hampshire. Another is at Yorktown near a house in which are still to be seen cannon balls imbedded in the timbers during the notable battle of Yorktown.

There are many Lincoln trees which were planted in memory of the martyred president. These are reported from various sections of the United States. One of these is a Hackberry, planted by John Fish on April 27, 1865, at Decorah, Iowa. This tree now holds place as one of the finest growths in the state and it has won more than local reputation for its symmetrical beauty. Another tree of similar significance stands before the home of Mrs. Allen Partridge, in Augusta, Maine. With other Lincoln Trees these specimens have found their merited place in the Hall of Fame for trees with a history.

General Ulysses S. Grant had a keen appreciation of the worth of trees, and showed his interest by planting them on many occasions. During the famous journey around the world which followed his term in the White House, this celebrated American planted a tree in each large city in the Orient visited in his travels. Throughout his tour he was received with ceremony befitting his widespread renown, and in every city the crowning event of the day's program was the planting of a tree. As a result there are many "General Grant" trees in various parts of the world. Chicago takes due pride in one of these, an Elm planted by the soldier-statesman in Washington Park in 1879 during his first visit to the city after his tour of the world.

Indiana treasures with reverence the Constitutional Elm, with its spread of 124 feet. Under this tree, in 1816, was held the Constitutional Convention of Corydon, and as a result of this association with the making of the state, the tree holds firm place in the affections of the people of Indiana. In North Carolina stands the Battleground Oak, also known as the Cornwallis Oak and the Liberty Oak, because of its association with momentous events in the war of the Revolution. The tree witnessed the celebrated battle of Guilford Court House, in 1781. In the opinion of its sponsors it is entitled to a place in the Hall of Fame for its shade tree beauty as well as for its historical interest. The spread of its branches is more than 100 feet and its base circumference 21 feet.

The Wesley Oak has been nominated from St. Simon's Island, off the coast of Georgia. This tree brings its message of the early days of Georgia settlement, when British troops were quartered on the Island. One notable chapter in its history is linked with the American visit of John and Charles Wesley, whose memory is sacred to the followers of Methodism throughout the world. Both Wesleys are known to have preached Under the Wesley Oak, with British soldiers as their congregations.

In addition to the General Sherman Sequoia with its life span of forty centuries, California offers many other trees of historical and romantic interest. One of these is a tree of today, which tells a story of modern development in the Golden West—a story of the uncovering of agricultural riches surpassing the gold mines in their permanent value to the state. This tree, the Hilgard Chestnut, stands in front of Agricultural Hall, on the campus of the University of California, where it rears its stately crown as a living memorial to Professor Hilgard, first dean of the College of Agriculture. Professor Hilgard's work for the development of California's amazing agricultural resources had much to do with the creation of the State's almost fabulous wealth in farming; the tree is a grateful tribute to this distinguished man. The Chestnut was planted in 1885, and in the fall of 1922 its branches covered an area more than 50 feet in diameter.

America has many trees prized for their association with literature, as the Cambridge Elms, immortalized in story and poem, the Elms of New Haven and Princeton, made famous by intimate relationship with many of the nation's most gifted men of letters, and the trees of Boston Common which have sheltered generations of literary celebrities. A worthy addition to the list, serving to link the genius of the Old World with the spirit of the New, is the Shakespeare Memorial Oak, occupying a place of honor on the campus of the University of Rochester in the state of New York. This Oak was brought from Shakespeare's home in Stratford-on-Avon, and was planted at Rochester April 23, 1864, in connection with the celebration of the tercentennial of Shakespeare's birth.

Visiting royalty has made its contribution to the famous trees of America. In Central Park, New York, is an American Elm which was planted by the late King Edward VH, of Great Britain, during his visit to this country as the Prince of Wales. Not more than 100 feet away is an English Elm planted in 1919, by ths present Prince of Wales, the widely beloved grandson of the earlier visitor. The present prince also planted trees at Annapolis and at Mt. Vernon, and took part in the ceremonies at which Bishop Harding planted a tree, in St. Albans Cathedral in Washington. When the King and Queen of the Belgians visited this country, in 1919, the Queen planted a European Gray Beech in Central Park, as a token of Belgium's enduring affection for the people of America. These trees serve as fitting reminders of the royal visits and in ths years to come they will stand forth as living symbols of the bonds by which the civilization of the Old World is linked with the New Democracy of America.

Trees of history abound in all parts of the United States. Their Hall of Fame was conceived as an open book of memory for their life stories. On its pages will be found a record of events that erously epitomizing the development of American civilization. Because of the existence of this permanent record, generations yet unborn will have all the more intimate glimpse into the past and the clearer conception of the events of history. In its own particular field of service, the Hall of Fame for Trees is as necessary and important as the Hall of Fame in which is perpetuated the memory of the achievements of man.

SALUTE TO THE TREES

Many a tree is found in the wood,
And every tree for its use is good;
Some for the strength of the gnarled root,
Some for the sweetness of flower or fruit;
Some for shelter against the storm,
And some to keep the hearthstone warm.
Some for the roof, and some for the beam,
And some for the boat to breast the stream;
In the wealth of the wood since the world began
The trees have offered their gifts to man.

But the glory of trees is more than their gifts;
'Tis a beautiful wonder of life that lifts
From a wrinkled seed in an earth-bound clod,
A column, an arch in the temple of God,
A pillar of power, a dome of delight,
A shrine of song, and a joy of sight;
Their roots are the nurses of rivers in birth,
Their leaves are alive with the breath of the earth;
They shelter the dwellings of man; and they bend
O'er his grave with the look of a loving friend.

I have camped in the whispering forests of pines,
I have slept in the shadow of olives and vines;
In the knees of an oak, at the foot of a palm,
I have found good rest and slumbers balm.
And now, when the morning gilds the boughs
Of the vaulted elm at the door of my house,
I open the window and make salute:
"God bless thy branches and feed thy root!
Thou hast lived before, live after me,
Thou ancient, friendly, faithful tree."

—Henry Van Dyke.

FARM POULTRY

OCCIDIOSIS IS EASY TO CONTROL

uccess Depends to Large Extent on Recognition.

uccess in controlling coccidiosis deds to a large extent on immediate ognition of the affected chicks, ats out J. C. Taylor, associate poulspecialist at the New Jersey Col- of Agriculture, Rutgers university, w Brunswick.

t is possible for chicks to become cted with coccidiosis at any time ing the growing period, but the disse generally makes its appearance en the birds are between four and ht weeks old. Chicks that have cidiosis will stand around near the re or in the corner of the brooder se with their eyes closed and gs down. The beaks and legs of affected chicks will be white. To gnose coccidiosis definitely, it is a d plan to cut open one or two of affected chicks. The cece, or two d pouches of the intestines, of dised chicks will be greatly enlarged filled with a hard, cheesy mass. en such conditions are found, steps ld be taken to stop the spread the disease.

he disease is spread principally ugh the droppings of the affected cks, and for this reason the broodhouse should be cleaned every five s. Keep the chicks off the bare nd around the brooder house by ving the house to a new location. some cases where the house can- be moved it is a good practice to fine the chicks to the brooder se.

has been found that feeding nty of milk is a great help in conlling coccidiosis. The following ion composed of 40 per cent milk proved valuable for use at the e of the outbreak; 40 pounds dried milk or buttermilk, 30 pounds und yellow corn, 20 pounds ground ed oats, and 10 pounds wheat n. This mash should be given the cks as soon as the disease is recized and kept before them as long they appear affected. The scratch d should be greatly reduced so all chicks will be compelled to eat mash. Provide plenty of hopper e so the chicks can eat without rding. When all symptoms of the ase disappear, gradually change ration to the regular feed that the cks were given at the time of outbreak.

ravelly Soil Is Most Desirable for Sites

oultry yards and the sites for poulhouses should be selected with a to dryness and shelter. A sandy, velly soil is most desirable for this rose, while the lay of the ground uld be such as to provide a free ural drainage. If the topography f such a nature as to render the er difficult or impossible, recourse t be had to some artificial means ecuring dryness. Excessive moisof the environment is always obtionable from the standpoint of ltry production, while furthermore presence of surface water, which s are apt to drink, must be reed as a very serious source of ction. For this reason, pools and llies, filled wagon ruts or open ns should never be tolerated in s used for poultry.

king Plans Now for Improvement of Flock

the returns from the flock de- largely upon the number of eggs we must first get better stock. means stock with the ability to more eggs bred into them. In the of farm flocks, this may be ght about by improving the presflock or by the purchase of new dation stock. The method that als to the true poultryman is the er. Starting with what you have, ided it is of a standard breed, it ossible to see a marked change few years. This may be brought t without the use of the trapnest, ugh exact records will hasten the es of improvement.

Some Chicken Don'ts

n't use eggs for hatching from that have laid heavily all win-

n't start the hatching season with ld rooster.

n't use pullet eggs for hatching.

n't run away with the idea that ooster is good for more than fifto twenty hens.

n't feed too heavy with meat you are saving eggs for hatch-

n't keep eggs over ten days.

Best First Feed

r skim milk or buttermilk is the first feed for baby chicks, but should be given no feed until they from forty-eight to seventy-two old. To feed chicks too early cause common white diarrhea. the first feed of sour milk or milk give a chick grain consistequal parts of fine cracked corn racked wheat or rolled oats. An t of scratch feed should be fed mes a day which can be cleaned 15 minutes.

Home Grown Seed Make Good Crops

Best Insurance for Profitable Yield of Yams or Sweet Potatoes

Growing sweet potato plants at home is the best insurance for a good crop. For early potatoes, the seed roots may be bedded six weeks before danger of frost is past.

"A good general rule is to bed potatoes six weeks before plants are wanted for setting," recommends E. B. Morrow, extension horticulturist at the North Carolina State college. "Use disease-free, medium-sized roots for the seed stock and about eight bushels of such seed is required to set an acre of land from the first pulling. If it is not desired to have all the slips at one time, four bushels should produce enough for planting an acre."

Best Seed Bed Type.

Mr. Morrow says the kind of bed to use will depend on the time the crop is to be set and the acreage grown. Some kind of heated bed is needed for an early crop. The type best suited to the average farm is the manure-heated hotbed. Fresh stable manure, piled and repiled until it is heating uniformly, and then packed into a pit to a depth of 12 inches will give sufficient heat. Cover this with three or four inches of sand or sandy loam soil and bed the roots on this.

To prevent crowding of the slips, the roots should be placed nearly one inch apart, says Mr. Morrow. Spindly plants will be secured when the potatoes are crowded too close together. Liberal watering is necessary. A plank frame and some kind of covering is also needed. About 12 square feet of space will be needed to bed a bushel of average size potatoes.

Disease Free Seed.

It is important that the seed be free from disease and this may be guaranteed by treating the roots in a solution made of one ounce of bichloride of mercury to eight gallons of water. Soak the potatoes in this for 15 minutes and allow to dry before covering in the bed. It is not necessary to wash the potatoes after such treatment.

Increase Value of Farm Timber by Cutting Plan

A cutting of farm timber should take only the trees most profitable for lumber and those that should come out for improvement of the stand. It should leave standing, for cutting some years later, a well-thinned stand of rapidly-growing "poles" and saplings.

Not all of the profit from the farm woods comes from the care and protection bestowed upon it during the growth of the trees. A very appreciable share of the profit comes from the manner in which the crop of timber is cut.

The total value of the lumber in a 26-inch tree is 36 times that of the lumber in a 9-inch tree, although the volume is only 19 times as great.

Little Orchard Work

An orchard plot giving the names of the species and varieties and designating their location is needed as a permanent record of the orchard plantings. Heeled-in trees must be properly guarded against injury by field mice, rabbits and live stock. It may be even necessary to place around them an inclosure that will prevent the entrance of rabbits as well as live stock. The small, fibrous roots of transplanted fruit trees usually die, unless they can be dug and reset immediately with as much soil as possible.

Agricultural Notes

A dry, waterproof tractor shed is a good investment.

* * *

Soil preparation is one of the most important factors in successful tree growing.

* * *

An abundance of home-grown legume hay establishes a basis for an economical dairy ration.

* * *

It is advisable to have alfalfa or sweet clover in the crop rotation where potatoes are planted.

* * *

Sanitation as a means of disease prevention, is just as important on the farm as in the hospital.

* * *

Alsike clover and timothy are best on a ground that is sour or wet. Soy beans will also do fairly well on acid soil.

* * *

Flax for planting should be plump, clean, bright seed which has not been injured by heating in storage or in other ways.

* * *

Any land that will grow sweet clover will be satisfactory for potatoes. Sometimes, however, scab is very bad on such soils.

* * *

Many greens such as chard, kale and lettuce can be grown in the garden, the best to be used on the table and the rest fed to the chickens.

* * *

Invest some money in growing trees on your idle land. Each year they will be worth more to you. New buildings look like more at first but they are worth less each year.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

AN INVISIBLE ENEMY

THOSE who are in a position daily to check up on accident news clippings are shocked at the number of self-inflicted deaths that are a by-product of automobile ownership.

The situation is explained because of the great difficulty which all of us experience in appreciating reality if the evidences thereof do not make themselves felt through our senses. If we can taste, see, touch, or smell a thing, we will admit its actuality. On the other hand, if these things are lacking, we work on the false assumption that they do not exist.

For example, polluted water can look, taste and smell like the pure and sparkling kind, and more frequently than otherwise does so. Bad milk is just as white and often as palatable as is the safely pasturized or tuberculin tested raw product. Therein lies the hazard.

If the human eye had microscopic power that alone would save us from much harm. On the other hand, we would lose a tremendous amount of fun in the consciousness of all the ugly and death-dealing "bugs" with which we daily come in more or less contact. In fact such an arrangement would be decidedly unpleasant. Things, therefore, are better as they are.

To overcome the invisible enemies, nature has endowed people with common sense and the ability to exercise it by being careful. But that is exactly where we fall down.

Consider this automobile by-product, carbon monoxide. It possesses all the characteristics, and more, of a master criminal. It cannot be seen, it cannot be heard, it cannot be felt, it cannot be smelt, in fact its presence can in no way be noted by the ordinary human senses, yet its ability to slay is only exceeded by its cowardly character. If you give it a chance it creeps up like a thief in the night and promptly makes a funeral of you

During the cold season foolish people persist in starting their automobiles in closed garages. Not being satisfied with the chance of being killed by this practice others will insist upon tinkering with their running machines under the same conditions. And it is these practices that are daily responsible for the array of headlines which notify the world of the lethal power of carbon monoxide.

It may be a little chilly with a garage door open; indeed it may be cold. But what's a little weather compared to a few bunches of flowers that you will be unable to smell. Beware of carbon monoxide if you value your life.

* * *

FALSE OR TRUE?

ONLY forty-five million tooth brushes are sold in North America annually. And there are more than one hundred and fifteen million people to use them. So figure it out for yourself!

However, it is fair to assume that you are "sold" to the tooth brush habit. All right. But how much further do you go?

Formerly, the dentist was reluctantly visited only when something went wrong with the teeth. So long as everything felt all right it was improperly assumed that everything was all right. But we are educated now. We know better. Are we not informed that neglected teeth create disease and abbreviate life? Have we not repeatedly heard that gastric ulcers, kidney infections, rheumatism, neuritis and our ancient and powerful enemy, heart disease, can sometimes be traced directly to infected incisors, canines or molars? Certainly, we have. And there the matter ends for a good proportion of us. We immediately lapse into the Victorian style of "putting it off" until something hurts.

By all means clean your teeth with an approved tooth paste, but don't attempt to delegate to your favorite brand the functions and work of your dentist. It would be very nice to be able thus to slide out from under that little electric buzzer which plays such a shivering tune while one holds on to the arms of the dentist's chair waiting for a nerve to be jollied along. But the buzzer and the man behind it are essential. After all, the discomfort which is usually not so bad as anticipated, is a small price to pay for a good set of your own teeth and the health insurance for which they stand.

Twice a year, then, to your dentist. Put it up to him. It's his job. Your's is to see that you get there and that he is bending over you once every six months. If delayed a longer time than this things may happen to you which will be difficult to remedy. Taking chances does not pay.

An extra hint: "Store teeth" are poor substitutes for the real thing. Those who start in young enough to pay a semiannual visit to their dentist in all probability will never be compelled to "play false."

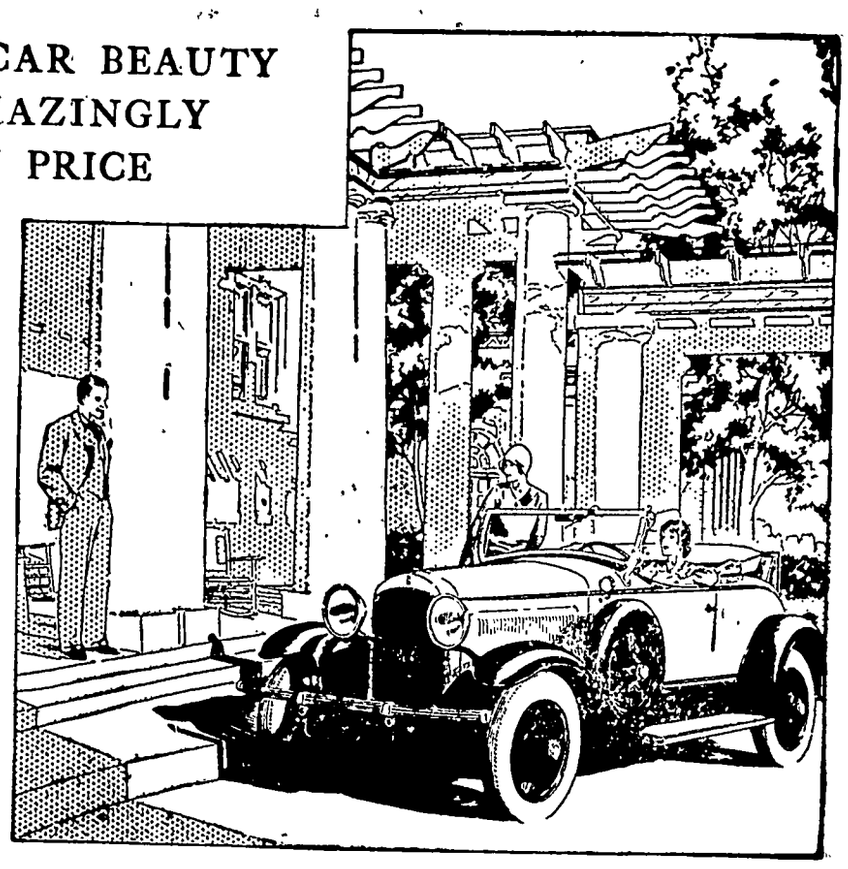
(©, 1929, Western Newspaper Union.)

Life a Struggle

Get as much variety into your life as possible. Travel if you can. If that is impossible, read books that tell about other people, how they think, act and feel. Keep the mind fresh, alert, active and interested if you would prevent boredom.

"THEY ALL SAY . . . it's the *smartest* car at the club"

COSTLY CAR BEAUTY AT AMAZINGLY LOW PRICE



THE entire line of new Superior Whippet Fours and Sixes is distinguished by such beauty of design and richness of color as have never before been associated with inexpensive cars.

And Whippet is a big car, too, with plenty of room for you to lean back, stretch out your legs and relax in absolute comfort.

Mechanically, no other low-priced car has so many important advantages.

Yourself and Your Neighbors
--Items of Personal Mention--

Dr. R. W. Specht, Dentist, Garner, Iowa. -adv

Donald Carson, of Blairsburg was a week end visitor in Klemme.

Jim Thomas and family spent Sunday at Alden.

Mr. Tebbins and son called on Dr. Zinn Sunday.

Gilbert Schaper was at Goodell on business Tuesday.

Roy Henderson, of Belmond was here on business Tuesday.

H. C. Nordskow, of Belmond was in Klemme on business Tuesday.

A. C. Carpenter of Goodell was a business caller here Tuesday.

Ed. Jacobs was at Colfax on business Thursday.

Mr. and Mrs. F. A. Arnold were at Mason City Saturday.

Miss Root spent the week end at Dows visiting her parents.

Sadie Turgasen was at Garner on Tuesday having dental work done.

Mr. and Mrs. L. O. Deal and son were at Mason City Sunday.

Elmer Schaefer and family spent Sunday at the Ed. Schaefer home.

Albert Schmidt is driving a new Ford Sedan.

Paul Grange was at Kanawha on business Tuesday morning.

Mrs. Will Lemke and baby spent Tuesday visiting with Mrs. Missman.

Hans Hanson was at Mason City Tuesday on busines.

Mrs. Harry Whyte left today for Estherville to attend a Missionary enovention.

Mr. and Mrs. John Larson were at Webster City on business Monday.

Mr. and Mrs. Elmer Bredlow of near Hayfield visited at the Clarence Bredlow home Sunday.

District No. 3, Avery, of which Esther Harberts is teacher, closed Wednesday with a big school picnic.

Mr. and Mrs. Harlan Tris and Duane visited at the home of Mrs. H. Church Wednesday.

Donald Gibbs of Sioux City was a visitor over the week end with his mother.

Frank Gruetzmacher is having his store building repaired and will next have it re-painted.

The Boy Scouts had a weiner roast in Smid's pasture Tuesday evening.

Mr. and Mrs. Emil Patet entertained the Sampson children for dinner Tuesday evening.

Mr. and Mrs. Leonard Sampson are at Traer for a visit with hre sister.

Mr. J. W. Hight, of Mason City, was in Klemme Monday on business.

Mr. J. M Shea, an official of the Iowa Union Telephone Co. was in Klemme on business Monday.

"Shorty" Busch has been out of school for some time as he had the mumps.

Rev. and Mrs. Whyte and Mr. and Mrs John Josten were at Algona Friday.

Mr. and Mrs. A. D. Gimer and children and Mr. Penrod were at Algona Friday evening.

Dr. J. S. Wesson and family of Garner visited at the Dr. D. P. Anderson home Sunday.

Harold Leitzinger and family and Mr. and Mrs. Pete Moulton were at Dows Sunday.

Carl Whitker and Raymond Barry of Belmond were in Klemme Tuesday on business.

Mrs. Lena Schroeder and Mrs. Henry Schroeder called on Dr. Zinn today at the Mercy hospital.

Walter Kunster, of Chicago, a commission firm man, has been in Klemme the past week.

Mrs. C. A. Arnold, Mrs. George Stokesbary and Miss Minnie Lenz visited at Mason City Tuesday.

Mrs. C. A. Arnold, Miss Minnie Lenz and Mrs. George Stokesbary were at Goodell Wednesday.

Lloyd Wistey, of Clear Lake, is again working at the Jacobs store during the spring rush.

Jim Thomas had his barber shop redecorated Tuesday night. Geo. Lawhorn did the work. Jim also had a new plate glass door installed in his shop.

SALLING SETS NEW CREAM HAULING RECORD TUESDAY

Brought In Largest Amount Cream From Route In Single Day

Eniar Sailing, cream route truck driver for the local creamery has set up another high mark.

Tuesday Mr. Salling brought in the banner load of cream from a single route in the Meservey District when he had from this rotue 51 cans of cream. Earl Finn was drafted to help Saling with the big run and drove one of the trucks to town.

mencement May 30th

here are but two weeks of yet, some will be interested in when our Commencement will be held. It has been decided to hold it on Memorial Day, May 30, Thursday evening at 8:00 p. m. Dr. F. W. Ingvolstad of Lansing Mich., has agreed to come for the address. Dr. Ingvolstad was once an Iowa pastor. He has since leaving Iowa been making rapid progress in his profession, and only recently left a pastorate in Illinois of nearly three thousand membership. He did his college work at Simpson, Indianola, Iowa, and has done his seminary work at Garrett Biblical Institute, Evanston, Ill. He is a man of fine appearance, and excellent platofrm ability. We are fortunate in being able to secure him for memorial day address on the same day as our commencement.

Baccalaureate, May 26th

Rev. H. E. Whyte of our local Methodist Church, will deliver the Baccalaureate Sermon this year. This will be on Sunday evening, May 26th. Rev. Grosshuesch has very generously offered his church for this service and since it will seat quite a few more than will the eMthodist church of our town, we are more than glad to accept. The Baccalaureate services will therefore be held at the Klemme Reformed Church as it was last year.

The Senior Class this year is composed of twelve members, seven boys and five girls.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

There will be preaching service at the regular worship hour next Sunday morning, both in town and at Liberty, but since we are starting the two weeks Evangelistic Services at Liberty, the evening preaching service will be there instead of in town.

Prof. Moon, of Omaha, is a well known song leader and worker with young folks. He will be here to begin his work Sunday. Come and get acquainted with him.

The Epworth League will meet at Liberty Church also next Sunday evening at the regular meeting hour —Let's all go Leaguers!

MR. AND MRS. F KLUCKHOHN CELEBRATE 15th ANNIVERSARY

Relatives And Friends Had Surprise Dinner For Them Sunday Eve

Mr. and Mrs. Frank Kluckhohn were pleasantly reminded of their 15th wedding Anniversary when a number of friends and relatives had a surprise dinner for them Sunday evening.

Those who were present to help Mr. and Mrs. Kluckhohn celebrate were Fred Kluckhohn and family; Mr. and Mrs. Wm. Keraus and son Verle, of Traer, Art Kudje and family, C G Waterman and family, R A. Jorgenson and family and Mr. and Mrs. C. F. Keraus. All enjoyed the fine dinner which the ladies brought and served Mr. and Mrs. Kluckhohn were presented with a linen luncheon set and napkins as a wedding anniversary gift.

One At A Time

"When is the next train out of this burg?"

"Twelve o'clock sir"

"What? Isn't there one before that?"

"No, sir; we never run one before the next."

PROPOSALS FOR THE ERECTION OF SCHOOL HOUSE

Notice is hereby given that the proposals for the erection of a school house in District No. 5, Avery Township, in the County of Hancock, will be received by the undersigned, at his office in his home, (where plans and specifications may be seen) until 8:00 o'clock P. M., June 4, 1929, at which time the contract will be awarded to the lowest responsible bidder. The board reserves the right to reject any or all bids.

J. J. COOK, Secretary.

May 4, 1929.

(Publish May 9-16-23, 1929)

IN FLANDERS FIELD

In Flanders fields, the poppies blow
Between the crosses, row on row.
That mark our place; and in the
sky
The larks, still bravely singing,
fly,
Scarce heard amid the guns below.
We are the dead. Short days ago,
We lived, felt dawn, saw sunset's
glow,
Loved and were loved and now we
lie
In Flanders Fields.

Take up our quarrel with the foe;
To you from failing hands we
throw,
The Torch; Be yours to hold it high.
If ye break faith with us who die,
We shall not sleep, though poppies
grow
In Flanders Fields.

—John McCrae.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. Pentecost Sunday— English and German Service. Celebration of the Lord's Supper. Offering for Missions.

11:00 a. m. Sunday school

7:30 p. m. Reunion of the Confirmation Classes. All who were confirmed in our Klemme church are invited to this service. In answer to the roll call each is requested to respond with his or her memory vorse.

The Bible Class will meet Tuesday evening. The Choirs will meet on Saturday evening.

AUXILIARY LADIES OBSERVED MOTHER'S DAY

Distributed Potted Plants To Gold Star Mothers And Veterans

The ladies of the Klemme Auxiliary observed Mother's Day in a most worthy manner when on Saturday they gave potted plants to Gold Star Mothers, Mrs. Jas. Kurtz, Mrs. Henry Wille, and Mrs. Ed. Schaefer, to Mrs. Asa Gibbs, wife of a Civil war veteran and to Civil War Veterans Mr. Lew Lewis and Mr. Sam Eckman.

A special honor was emphasized when the ladies placed a beautiful bouquet of white carnations on the grave of a Gold Star Mother, Mrs. Charles Bredlow.

91 YEAR OLD GRANDFATHER OF MRS. KLUCKHOHN DEAD

B. H. Kinden, 91, grandfather of Mrs. Frank Kluckhohn, of Klemme, died at his home at Thompson Saturday noon. Mr. Kinden had fallen and fractured his hip early last December and since that time he had been confined to his bed.

The funeral services were held at the Bethany Lutheran church at 2 o'clock Monday afternoon, with the Rev. J. J. Skarpness officiating.

FROST THIS MORNING

This part of the rtate was visited by a rather heavy frost this morning. Mr. John Bock observed his thermometer this morning and at 5:00 o'clock it registered 24 degrees.

FREDERICK AX DIED TUESDAY AT HIS HOME

Funeral Services Will Be Held On Friday Afternoon At Elltown

Mr. Frederick Ax, aged 81 years, passed away at his home north of Klemme early Tuesday morning. He had been steadily failing for the past year and a half or two and the past few months became much weaker.

Mr. Ax was a pioneer of this county, having resided there for over fifty years. He was born in Germany, April 15, 1848 and came to the United States in 1872 and resided in Ohio for four years and where he was married on September 24, 1874 to Miss Christina Weirwille at New Knoxville. They came to Hancock County in 1876 and located on the old Jacob Blumer place.

To this union were born eight children, one died in infancy. They are: Mrs. Henry J. Stromer (Elizabeth), Mrs. Fred Walker (Anna), William, Charles, Herman, Mrs. Carl Sanderfelt (Minnie), and Emma, at home. Sixteen grandchildren and two great grnadchildren, together with his wife are left to mourn him.

Funeral services will be held Friday afternoon at 1:00 o'clock at the home and at Elltown Church at 2:00 o'clock in charge of the pastor, Rev. Schmid.

Mr. and Mrs. Henry Glave entertained the following at their home in Britt Sunday afternoon: Mr. and Mrs. George Buseman and son Wayne and daughter Arlene; Mr. and Mrs. Tom Needham and son Walter of Mason City; Mr. and Mrs. Henry Buseman and sons Francis and Franklyn; Mrs Frank Roths; Mr. and Mrs. Fred Neuhring of Kanawha and Henry Brandt.

H. F. Jost and Herman Best were at Fort Dodge last Friday where they attended a meeting of the managers of the North Iowa Grain Company. There were fourteen managers present and a number of the company officials. A fine banquet was enjoyed. Attorney Price, of Fort Dodge was one of the principal speakers on the program.

The John Larsen family have annexed a new Ford Tudor to their fleet of pleasure cars. We haven't learned which of the boys will pilot the new machine.

Henry "Butch" Schroeder and son, Albert, drove in from Chicago Wednesday afternoon for a visit at the home of Grandma Schroeder. Albert and his mother who has visited here for two or three weeks, will return to Chicago Sunday. Mr. Schroeder, who is in the live stock commission business will remain in this vicinity for some time to work the territory.

Mr. and Mrs. H. L. Lamkins, of Woodbine have moved to Klemme to make this their future home They reside in the C. F. Keraus residence. Mr. Lamkins is an experienced telephone man and is here to assist Manager Deal re-build the rural telephone lines.

Wednesday was the official opening day for game fishing in orth Iowa. The day was rather cold and rainy and we did not learn of any of the local boys catching any big whales. The "Printer's Devil" has not yet been baptized this spring, but just keep your ear to the earth and you will yet haar some fish stories.

P. M. Wilson was at Garner on business Monday afternoon.

TRAINING CAMPS TO OPEN SOON

YOUNG MEN OF KLEMME HAVE A REAL OPPORTUNITY

Citizen's Military Training Camps Will Soon Open; Register Now

....The Times believes that a number of young men of Klemme and vicinity should take advantage this year of the splendid opportunity, and the vacation offered in the Citizen's Military Training Camps that will soon open.

Dr. D. P. Anderson and Mr. L. H. Osborne have been appointed as recruiting officers for this community and they will glady explain to any young men interested in the advantages of spending a summer vacation with all expenses paid in a summer training camp.

Purpose of Camp

The object of these camps is to bring together young men of high type from all sections of the country on a common basis of equality and under the most favorable conditions of outdoor life; to stimulate and promote citizenship, patriotism, and Americanism; and through expert physical direction, athletic coaching and military training, to benefit the young men individually.

All Necessary Expenses Paid

The Government will provide without cost to young men attending these camps: uniforms, food, lodging, and medical and dental attendance while at camp. He will be refunded railroad fare.

Who May Attend

The Basic Course—Age limits, 17 to 24. Applicants must possess average intelligence, be able to read and write English, and be of good moral character. The course provides elementary military training, physical development and athletics.

Other courses are the Red Course —age 17 to 25, and a graduate of the basic course; The White Course —age 18 to 28, with requirements slightly higher than Red Course; The Blue Course—age 19 to 31, requirements higher than the White Course.

On this plan after a young man once begins the course he has a fine chance of advancement and can work his way into the Reserve Corps, and a training school officer.

Wholesome Recreation

Provisions will be made at all the camps for the wholesome and interesting employment of all leisure time. There will be lectures, moving pictures, amateur and professional musical and dramatic entertainments with full use of the Post Exchange facilities, mail service, and club room.

Any young men who may be interested in attending a camp should get in touch at once with Dr. Anderson of Mr. Osborne for further and full particulars.

Mr. and Mrs. Paul Grange and Miss Leona Lau drove to Mason City Friady and called on Klemme patients at Mercy hospital, Dr. George Zinn and Mr. Albert Kurtz. The latter is a son of James Kurtz, is a married man and a member of the local Legion Post. He underwent a mastoid operation.

Some of the Troop Committeemen of Troop 56 Klemme, visited the Scout Troop at Crystal Lake Monday evening where they found taht organization at the lake enjoying an outdoor meeting and cooking hunter's stew. The Klemme men were well fed and enjoyed the meeting. They were also shown through the new church at Crystal Lake.

Mrs. Sadie Turgasen has been on the sick list the past few days from the effects of having an ulcerated tooth removed.

1—Balloons starting from Pittsburgh in elimination race that was won by the navy bag No. 1. 2—Col. Walter C. Cole of Detroit elected president of the National Iteserve Officers' association. 3—Twenty thousand Chicago Poles celebrating Kosciusko day before the statue of the Polish-American hero in Humboldt park.

NEWS REVIEW OF CURRENT EVENTS

Senate Coalition Deals a Rebuff to President in Farm Legislation.

By EDWARD W. PICKARD

DEMOCRATIC and radical Republicans in the senate combined last week to deal a rebuff to the farm relief plans of President Hoover and his administration. The McNary bill was under consideration in the upper house and the elements named succeeded in inserting into that measure the export debenture scheme to which the President had declared his opposition. The senate committee on agriculture already had declared itself in favor of the plan, which the house had rejected when it passed the Haugen bill. The motion of Senator Watson of Indiana to eliminate the debenture provision from the McNary measure was beaten by a vote of 44 to 47.

Consideration of the line-up in this vote leads the unprejudiced observer to the conclusion that the supporters of the debenture plan were not necessarily sincere. Their number included all but two of the Democratic senators (Ransdell of Louisiana and Wagner of New York) and thirteen Republicans, nearly all of whom are classed as radicals. The Democrats had decided to make a party issue of the matter, and the radicals have a habit of opposing the "regular" Republicans. Senator Johnson of California was among those who spoke for the debenture scheme, and he could not refrain from giving Mr. Hoover some slaps.

There was no doubt that the McNary bill would be passed after consideration of some suggested amendments, and it was equally certain that when it went to conference the house conferees would insist on the elimination of the export debenture provision. It was understood in Washington that President Hoover would veto the farm bill rather than permit it to become law with that plan included.

As approved by the senate the debenture provision authorizes the farm board to provide an export bounty on any or all farm products. The bounty would be equal to one-half of the existing tariff rates on the same commodity. Debentures equivalent to these rates would be issued by the Treasury department to exporters who could realize cash by selling them to importers. The debentures would be redeemable in the payment of customs duties on all kinds of imports.

PROMISING even a sharper conflict than the farm legislation, the new tariff bill was introduced in the house with the backing of the Republican majority of the ways and means committee and the united opposition of the Democratic members. The formulators of the measure, seeking to conform with the President's wish to avoid, as far as possible, ill feeling and retaliatory action by Canada and other countries, did not raise the tariff duties on agricultural products nearly as high as the farm organizations had desired; and, according to the Democratic spokesmen, they did increase the duties on many articles which the farmer buys. Republican congressmen of the Central and Far Western states also were dissatisfied with the agricultural features of the bill. Meat duties are about doubled, and this pleases the farm groups, but their request for a tariff on hides was rejected. The rates on sugar are considerably increased, sugar importations from the Philippines being excepted. This brought loud wails from Cuba sugar producers and importers of Cuban sugar and from bottlers of carbonated beverages and other groups, and the farmers, as users of sugar, also objected. The bill is more inclusive than Mr. Hoover desired.

Space is lacking for even a summary of the bill as offered in the house. In its entirety it pleased scarcely anyone, some of its clauses being distasteful to administration congressmen as well as to the Democrats. So it was certain that there would be a great battle over the measure in both the house and the senate.

HARRY F. SINCLAIR, oil magnate, is in the Washington jail serving out his sentence of 90 days for contempt of the senate. But still his foes are not satisfied. Maj. William Peake, superintendent of the jail, declared his noted prisoner would be given no special privileges; but Dr. Morris Hyman, the jail physician, needed a pharmacist, and as Sinclair is the holder of a degree in pharmacy he was assigned to the job. This saved him from being put in the "bull gang" at the Occoquan workhouse brick factory. Then suddenly an order was issued by George S. Wilson, director of the local board of public welfare, barring newspaper men from the jail while Sinclair is a prisoner there. Naturally this created something of a rumpus and Senator Heflin of Alabama took the occasion to make a speech denouncing what he called "official truckling to a millionaire criminal." Other senators admitted they were making inquiries into rumors that the oil man was receiving undue consideration, some of these rumors coming by "grapevine" from his fellow prisoners.

CONGRESSMAN M. ALFRED MICHAELSON of Chicago is "not guilty" of importing liquor into the United States from Havana. So declared the jury which heard the case against Michaelson in Key West, Fla. The government proved that the congressman and his party brought six trunks labeled with his name, that one of them leaked at Jacksonville and that two of them were found to contain liquor. But Walter Gramm of Chicago, brother-in-law of Michaelson, came to the rescue and swore that those two trunks were his and that the legislator didn't know what was in them, and Michaelson testified to the same effect. Therefore the jury brought in a verdict of acquittal. Gramm, standing on his constitutional rights, refused to tell what he had put in the trunks. Federal officials very promptly arrested the complaisant brother-in-law on nearly the same charges brought against the congressman.

HOPE for an agreement on German reparations based on a plan offered by Owen D. Young, one of the American experts, is not abandoned but seems rather slim. The details of the plan have not been made public, but protests are made by England, France and Belgium, each of which fears it would suffer by the proposed revised schedule of payments. None of them is willing to have its receipts from Germany cut down, especially if the United States makes no further concessions in the allied debts due it. The British government was trying to stall off any parliamentary discussion of the matter because of the pending elections, but Chancellor of the Exchequer Churchill told the house of commons that the proposals in question would be inacceptable to the Baldwin cabinet.

CLEAR weather was vouchsafed to most of the scientists who went to the East Indies to observe the total eclipse of the sun, but the British party at Patani, Siam, saw nothing for the phenomenon was entirely obscured by clouds. At Iloilo, Philippine islands, where several American groups were stationed, and on the Island of Cebu, where there were others from this country, the weather conditions were excellent. The eclipse was seen for about five hours, though its totality lasted only four minutes. What the astronomers and physicists learned will be made known to the world later.

THOUGH the preparatory disarmament commission in Geneva adjourned until an indefinite date later in the summer without apparently having accomplished anything definite, President Hoover expressed gratification over the "promising character" of the results obtained by the naval powers represented. Said he: "All of the principal naval powers have expressed adherence to the principles suggested by the American delegation, which include the conception of reduction instead of limitation of naval strength. They have expressed their desire for full and frank discussion and the development of the American formula into a practical step. The manner by which these discussions are to be initiated has not yet been determined, but the question will be followed up promptly."

TRAVELING about 900 miles, from Pittsburgh to Prince Edward Island, the navy balloon No. 1, piloted by Lieut. Thomas Settle and Ensign Wilfred Bushnell, won the national elimination race and will represent America in the international contest. The navy bag was in the air about forty-four hours. For a time it was feared that the Detroit Times balloon, with E. J. Hill and Arthur G. Schlosser aboard, was lost. But after hours of travel in rain and mists it came down in a desolate region of the Adirondacks.

THERE were three pieces of news last week of especial interest to the movie fans. First, Constance Talmadge, long one of the most popular of the screen stars, became the wife of Townsend Netcher, Chicago millionaire, and announced that she had retired to private life. Then Ina Claire and John Gilbert, both prominent motion picture actors, were married in Las Vegas, Nev.; but there was no intimation that either of them would quit the screen. Thirdly, Tom Mix, hero of scores of "Westerns," was indicted by a federal grand jury in Los Angeles on charges of withholding $100,000 in income taxes and conspiring to defraud the government out of about $75,000 in income taxes for the years 1025, 1926 and 1927. The conspiracy charge is also made against E. J. Forde, brother-in-law of Mix, and J. Marjorie Berger, Hollywood income tax counselor.

In announcing Mix's indictment federal officials intimated that similar action would follow against other prominent film performers. It was said that the government's losses from income tax frauds in the film colony have been approximately $10,000,000 in the last few years.

WASHINGTON social circles are upset again by a revival of the Mrs. Gann controversy brought about by the action of Mrs. Alice Roosevelt Longworth. The speaker's wife declined to conform to the decision of the foreign diplomats giving the Vice President's sister the ranking place, and for the time being those two ladies are not to be seen at the same dinners. Mrs. Gann has plenty of friends and supporters, but the wives of most of the senators and Supreme court justices are in the opposite camp. Of course, when Mrs. Gann stays away from a function, Vice President Curtis also is absent. In December President and Mrs. Hoover will entertain the cabinet members and their wives for the first time, and Mrs. Hoover's method of solving the troublesome problem will be viewed with greatest interest.

BERLIN'S bloody May day riots, that lasted through nearly a week, were finally ended by the vigorous efforts of the government. The Reds threatened a general strike on the day the 24 victims of the demonstration were buried, but the workers failed to heed the plea of the Communists and funeral ceremonies were not marked by further serious disorders. The government in Berlin asserts it has proof that the riots were deliberately staged by agents from Moscow and the minister of the interior read to the reichstag telegrams substantiating the charge. On the other hand the Communist leaders accuse the Nationalists and Monarchists of provoking the battles with the police as a means of forcing the authorities to disband the powerful Red organization. The Communist fighters were dissolved throughout Prussian and Bavaria and in the free city of Hamburg and all their funds were confiscated.

THE University of Porto Rico sustained a severe loss in the sudden death of Dr. Albert B. Hale, professor of economic geography there for the last three years. Doctor Hale in former years was commercial attache of the state government at Buenos Aires and later was connected with the Pan-American Union. He was an authority on Latin-America.

Col. Max Bauer, chief adviser to General Ludendorff during the World war and afterward the organizer of the Chinese Nationalist armies, died in Shanghai of smallpox.

REGGIE'S CORDUROY RIDE

(© by D. J. Walsh.)

"HIRAM!" shrilled Aunt Nancy, peering over her spectacles at Uncle Hiram from the letter she was reading. "Mandy Payson wants us to board her son Reginald fer a spell fer his health.

"Wh-a-a-t?" yawned Uncle Hiram, gradually emerging from a temporary nap. "Who's outer health?"

"For goodness sake, nobody! Why don't you doze all the time, Hiram Perkins, and be done with it?" exclaimed Aunt Nancy, captiously.

"Cause you won't let me, Nancy," chuckled Uncle Hiram with a broad grin.

"You do beat all," sputtered Aunt Nancy. "Now listen," and she repeated her information concerning Mandy Payson's son.

"Humph!" grunted Uncle Hiram, "a cigarette-waster, skim-milk dude, I s'pose? Wal, it's healthy enough here, I guess; air ter squander. Tell Mandy ter send him along."

One night a week later Uncle Hiram hitched up Kittie and drove down to the station for his boarder.

"Aw, weally, Mr. Perkins, I believe?" simpered Reginald Payson, proffering a slim white hand.

"Guessed right the fust time, young man. Hiram fer short," succinctly stated Uncle Hiram critically eyeing the proffered hand. "Gues I hadn't better shake—might break the blamed thing."

"Aw, pretty good joke, Mr. Perkins, but weally I'm not so delicate as I look, don't cher know. It's quite the thing to look delicate. Weally, I'm quite strong, only temporarily out of health. I hope to recuperate here."

"Yas," drawled Uncle Hiram disgustedly, "I guess you will. Hoeing taters is what you need."

"Won't you have a cigarette, Mr. Perkins?" cordially invited Reggie as they drove toward the farm.

"What! Me smoke one of them coffin nails! Say, Raggy, or what's your name, I'd ruther walk ten miles in a snowstorm to see a cat fight than ter smoke one of them stink-pins."

Reggie laughed weakly and changed the subject by remarking: "Your horse is rawther slow, isn't he, Mr. Perkins? You ought to be down to Boston and take a spin in our touring car. Weally they are great."

"Humph!" grunted Uncle Hiram, "I never hankered ter go so blamed fast I couldn't git my breath but once a minute. Kitty is purty slow, but I got a pair of colts up ter ther barn I'll gin ye a ride arter some day."

"Aw, I should imagine they would be pretty slow beside an auto. Then there is the element of danger. Horses are too tame for me."

"Humph!" grunted Uncle Hiram as they drove into the farmyard. "I've known folks ter change their minds 'fore now."

"How?" interrogated Reggie, who did not catch the subdued remark.

"Oh, I was remarking that I guessed the northern lights woun't shine tonight; all outer gasoline, I reckon."

Reggie showed his contempt of farm ways, farm life and farm people in every conceivable way. Uncle Hiram simmered under the skin, but contented himself with frequent caustic remarks and bided his time.

"Wanter take a ride?" suggested Uncle Hiram one afternoon.

"Weally, I don't know but what I will; it's so beastly dull I need a little excitement."

"Wal, if we have good luck yew'll git it all right," grimly replied Uncle Hiram. The colts were feeling fine curveting and sidestepping in fine style as they drove off.

"You ought to have a runabout, Mr. Perkins. Horses are too slow for these times."

"Wal, if nothin' happens we'll have a runabout afore we git hum."

About two miles from Perkins' farm was a corduroy lumber road a mile and a half long, made entirely of small trees packed closely together across the road. It was built over a swamp for logging purposes, and while an excellent road in winter it was rough as a hatchet in summer.

Uncle Hiram often took this road, a short cut to Holden, but at a walk. He had purposely hitched into a strong Concord express wagon today. Just before they reached the corduroy Uncle Hiram loosened the reins and yelled "Gid ap!" Quick as a flash the high-spirited animals sprang into a run. Loosening up a yell like a Sioux Indian, Uncle Hiram shouted: "Here's where we git our runabout and excitement thrown in fer sass."

When the wheels struck the corduroy Reggie went into the air, then back to be tossed up again like a rubber ball. Uncle Hiram, hanging to the reins with feet braced against the dasher, seemed a part of the wagon. But poor Reggie, hanging on for dear life with no anchorage, was being thumped, bumped and banged all over the seat.

"Hold on, Mr. Perkins," he implored, punctuating each word by a trip into the air. "This is awful."

"Tis ruther exciting, ain't it? Almost has a gas wagon trimmed."

"Are they running away, Mr. Perkins?" quavered Reggie, his face pale and drawn.

"Jerusalem crickets! I guess they be. Somehow they alus want ter run this road."

"Is it long?"

"Bout two miles."

Reggie groaned. Every time he hit the seat on his return trip he registered a groan. As this was once a second the groans came pretty often. "Uncomfortable, ain't ye?" solicitously inquired Uncle Hiram. "Tis middling rough, but considerable exciting, don't you think so? Almost as fast as a stink wagon and there's alus a chance of gitting yer neck broke."

Reggie's only reply was a hollow, despairing groan.

"Well, make yourself comfortable; we'll be out bimeby."

Before they got off the corduroy Reggie had collapsed into a wretched heap on the bottom of the wagon, his head under the seat.

"Wal, how'd ye like it?" grinned Uncle Hiram as they struck the level road and Reggie emerged from under the seat, his hat acting as a collar and his coat trying to climb the back of his neck. "Some exciting, wan't it?"

"Mr. Perkins, you have insulted me," frigidly stated the injured Mr. Payson.

"You've made a mistake, Raggy. It can't be did. You said it was beastly dull and you needed a little excitement. Now, if you're still feeling the need of more excitement we'll turn round and try it over again."

"Oh, for goodness' sake, don't, Mr. Perkins!" implored poor Reggie, forgetting his dignity and wounded pride. "I'd rather walk twenty miles than ride over that road again."

"Wal, it's jest a matter of opinion," chuckled Uncle Hiram as they jogged along toward home. "It's wuth somethin' ter know when yer got enough."

Quaint Old Customs at Magyar Wedding Feast

Marriage is a serious affair for boy and girl of the Magyar people, writes a correspondent in the London Telegraph. It is the most important event in the peasants' life. For the girl it is the beginning of her home and family, a comparatively independent status, to the boy the initiation into the council of the men of the clan.

Quaint customs mark courtship and marriage. No rings are given or exchanged on betrothal, but generally handkerchiefs. In some parts of the country the boy proudly wears the betrothal handkerchief on the sleeve, while the girl places a sugar-loaf in the window of her house to tell every passer-by of the event. The wedding day is a village feast provided by the father of the bride, but the best men issue the invitations personally, the first person invited being, strangely enough, the bride's father. Perhaps a game of stealing the bride will be enacted, or the best men will lead the groom bearing the banner presented to him by the bride, and call on her father to deliver his daughter, who is referred to in flowery language, to this "good Christian young man."

After the ceremony comes the feast, and then dancing, for no Magyar festival would be complete without the czardas, and it is the last dance of the bride. As a married woman it will not be good form to go out to dances, so she now trips her fill, and she must not refuse a dance to any young man who approaches her. It is fatiguing—sometimes too much—so when the bride is tired chairs are placed in the middle of the floor for her and her "maids."

Purchase of Alaska

The United States paid Russia $7,200,000 for Alaska. There have been rumors for years that part of this money was intended as reimbursement for a naval demonstration by Russia in behalf of the United States during the Civil war at a time when France and Great Britain were showing friendliness to the Confederacy. The State department informs us that an exhaustive search through the department archives by several students reveals no evidence to that effect. The transaction was regular in every way. That the United States may have been more generous because of Russia's friendliness during the Civil war is not improbable, because Russia attached little importance to Alaska and the United States was hard up for money at the time.—Pathfinder Magazine.

Backward Ideas

The late William E. Griffis, traveler and author, was talking one day in Miami about the Latins.

"They are backward nations," he said, "and to a traveler the worst sign of their backwardness is their duplicity. They haven't learned—they never will learn—that honesty is the best policy.

"Yes, they cheat you everywhere.

"In a post office one day a handsome, dignified, gray-bearded Latin postmaster cheated me out of a dollar. I detected the cheat as I was leaving the building, but I hadn't the heart to humiliate the old chap, and I remembered the words of a Uraguayan horsethief to an Englishman:

"'In the Banda Oriental, sir, you are not looked upon as an honest man unless you steal.'"

Cheerfulness

What, indeed, does not that word cheerfulness imply? It means a contented spirit, it means a pure heart, it means a kind and loving disposition, it means humility and charity, it means a generous appreciation of others, and a modest opinion of self.—William Makepeace Thackeray.

Early Endowment

The bequeathing of 250 acres of land, an adjacent salt marsh and eight milk cows comprised the first educational endowment in America. It was left by Benjamin Symmes to found a free school in Elizabeth county, Virginia. Mr. Symmes died in 1634.

Uncle Sam Builds World's Biggest Zep

FROM PONY BLIMP TO "SUPER-ZEP" (A COMPOSITE PICTURE)

ZEP DOCK UNDER CONSTRUCTION

ARCHITECT'S DRAWING OF NEW ZEP DOCK

By ELMO SCOTT WATSON

THE United States gave to the world the first successful airplane and since the Wrights made their historic flight a quarter of a century ago, Uncle Sam has been the leader in the development of heavier-than-air craft. Now he is going out after new laurels in flying, and following the lead of a European country he is preparing to excel that country in lighter-than-air craft. For the world's Zeppelin—two of them in fact—are now built in Akron, Ohio, as a part of the air-building program recommended by the naval of aeronautics.

airship building program undertaken by Sam represents the accumulation of years earch and flying experience in both Europe merica, and the expansion of America's -than-air program came only after the mat- been exhaustively discussed by three ses- f congress. Emphasis was laid on the fact merica, having possession of vast resources noninflammable gas, helium, had oppor- for construction of airships that no other had. The most important airship im- ent in recent years is the use of helium During the World war all of the airships ntained hydrogen gas which is inflammable der certain conditions explosive.

onnection with the announcement that Sam is to have the world's biggest Zep it esting to note that, although this type of was the invention of a German, it really ed in this country. Count Ferdinand n, for whom it is named, conceived the building a rigid ship while he was serv- a volunteer officer in the Union army dur- Civil war. During his service he had the nity of making ascensions in captive bal- Ft. Snelling, Minn., and in Virginia. Later olonel of cavalry during the Franco-Prus- r, Zeppelin observed the use of free bal- hich flew over Paris during the siege of nch capital. From that time on he spent his leisure time studying and designing and in 1896 he retired from the army to the rest of his life to that work.

lin built his first ship in 1900 but it was il 1910, after he had built and lost four hat the world accepted his invention as ble. During the next four years Zeppe- re used extensively for passenger service ried more than 35,000 passengers without accident. The outbreak of the World wever, prevented him from carrying out m of a regular schedule of airship travel Europe and America and he died in 1917. time the Zeppelin corporation had grown e of the greatest companies in Germany type of airship was extensively used for purposes throughout the World war. One eppelin experts was Dr. Karl Arnstein, gineer and constructor of 70 airships. In en the Zeppelin rights for North America d to an American company, Arnstein came country as vice president and chief engi- the Goodyear Zeppelin corporation. In competition of 1926 Arnstein's designs arded first place and on them was based ract which was let last October for build- superdirigibles which are now under con- in Akron.

o new super-Zeps will be known as the d ZRS-6. To give you an idea of what eviathans of the air will look like take a composite picture shown above. If the Los Angeles during its tour across y or if you saw the Graf Zeppelin and at these monsters of the sky, consider these facts: The ZRS-5 and the ZRS-6 will be about two and a half times as large as the Los Angeles and nearly twice as large as the Graf Zeppelin. They will have a gas capacity of 6,500,000 cubic feet each as compared to the 2,500,000 of the Los Angeles and the 3,700,000 of the Graf Zeppelin. England will shortly launch two giant dirigibles, the R-100 and the R-101 which will for a short time enjoy the distinction of being the world's largest Zeppelins. But they will have a capacity of 5,000,000 cubic feet each so that they soon will have to hand over the laurels to Uncle Sam's giants.

Now, if you are unable to visualize these airships in the cubic feet terms given above, consider them in terms of the specially designed building which will be constructed for them. Imagine a great hollow half-egg shell of a building, big enough to clap down over the National Capitol at Washington. It will be 1,200 feet long (that's 400 yards, or nearly a quarter of a mile), 325 feet wide, and 200 feet high. This building, constructed for a unique purpose, is itself unique in that it will be the biggest structure in the world without interior supports.

Many novel engineering and construction problems are involved in planning this dock (for that is what its builders call it). It must be big enough to house the ship and its shape must be such as to reduce the likelihood of gusts forming about the entrance, thus enabling the Zeppelin to enter and leave the dock without dangerous cross-winds—this problem being one of the most important in the handling of the airships. Engineers who are in charge of construction decided that the best way to accomplish this was to shape the building like an egg cut in two the long way.

It will be placed on rollers to allow the entire mammoth structure to "stretch" and contract. Being entirely of steel, both frame and roofing, the building will gradually change its dimensions as temperatures vary. It will expand as the air becomes warmer and contract as it gets cooler. The rollers allow it to breathe.

Another unusual problem was that of operating the doors, which will be placed at each end of the dock. They will not be the usual straight doors but will conform to the general plan of the building and will resemble in shape that of a quarter of an orange; thus their designation as "Orange-Peel" doors.

They will be opened and closed by electricity, four 125-horse power motors furnishing the necessary current, and will be carried upon heavy trucks, resembling those used on railroad freight cars.

Through the length of the building extending far out into the field at each end will run a mile of docking rails, upon which small trucks will ride. The ship will be anchored to these as it moves in or out of the hangar, further steadying it against cross hangar winds and reducing the number of the ground crew which otherwise would be required.

A tunnel has been built under the floor of the building carrying the various service lines and pipes for fuel, water, ballast and electric power, with connections made by holes in the floor. The steel arches overhead provide numerous catwalks for workmen and trolley beams for the handling of materials in building the airships. Work on one unit of this unusual manufacturing building is expected to be completed by midsummer. Assembly work on one bay of the first ship will be started as soon as this unit is under roof.

This is possible because a rigid airship, such as the navy craft will be, is not one integral gas bag, such as all early ships were and the non-rigid blimps still are, but consists of a series of great gas cells, fitted into duraluminum compartments. In case of an accident to three or four gas cells the ship will still fly.

These two ships will be built for service with the navy's battle fleet. It is pointed out that, by reason of its greater speed, the airships can cover several times the area in reconnoissance work than a surface ship can and so permit more money, men and metal to be diverted to strictly fighting units.

This advantage will be heightened by the fact that the airships will carry several airplanes in a "garage" within the ship's hull; these planes to be released as needed and picked up afterwards while in flight. Such a fleet of ships and planes could patrol the entire Atlantic seaboard and prevent any concentrated movement against the coast remaining unobserved and unchallenged. And the military airships will be of great value to airplane itself in largely increasing its radius of action.

Another advantage of this type of airship, as has already been pointed out, lies in the fact that the puncture of a single gas cell will not send it to the ground. There are many such cells and, even if riddled with bullet holes, diffusion of gas would be slow and the cells could easily be repaired during flights. Military experts also point to the fact that its speed, altitude and its convoy of fighting airplanes carried inside its body would make it highly invulnerable to attack.

It is probable that one of the new ships will be stationed at Lakehurst, where the navy's present air station is located, and that the other will go to the west coast, where a second major airship base may be located.

Airship adherents declare also that ships similar to these being built for the navy will be used extensively before long in long-distance transportation, both transcontinental and transoceanic. These ships can fly at 86 miles per hour and have a cruising radius of 6,000 miles at full speed and 8,000 miles at cruising speed.

With a transatlantic airship line in operation a passenger could leave New York on a Saturday morning, arrive two days later, on Monday morning at London or Paris, spend four days on his business affairs, leave Europe on Friday morning, taking three days on the return trip against the prevailing westerly winds, arriving in New York again Monday morning.

In recommending the building of two ships the naval bureau of aeronautics cited some of the noteworthy flights by Zeppelin ships as indicating the usefulness in long range reconnoissance.

One of the most famous of these was the trip of the L-69 during the World war, shortly before Count Zeppelin's death. A colonial force had been surrounded in a town in German East Africa and a Zeppelin ship was outfitted at Jamboli, Bulgaria, to go to its relief, carrying munitions, machine guns and medicine. The ship was to be dismantled on arrival—the metal structure to be used for strengthening the defenses and the fabrics as tents for the soldiers.

The ship had flown 2,000 miles down the Nile valley and across the desert when it got news by wireless that the besieged force had surrendered. Without stopping for refueling it retraced its course back to Bulgaria. The flight was 4,220 miles, lasting better than four days.

The first craft to cross the Atlantic from east to west against the prevailing winds was the British R-34 which, in 1919, made a round trip from England to Mitchel Field, L. I.

The navy airship Los Angeles, built at Friedrichsbafen, in centra Europe, was delivered to the navy at Lakehurst, N. J., in a flight of 5,100 miles, consuming 81 hours. The Los Angeles since has flown to Cuba, West Indies and the Canal Zone and recently completed a trip to San Antonio, Texas, where it refueled and returned to its station.

The longest trip made by any airship was that of the Shenandoah, in a flight of approximately 8,000 miles, in October, 1924, around the rim of the American continent, stopping only for refueling at San Antonio, San Diego and Seattle.

The last memorable flight was that of the Graf-Zeppelin, named for the old count, which last October flew 1,000 miles off course in order to avoid a midatlantic storm, arriving at Lakehurst after 6,000-mile journey with 65 hours' fuel reserve. The return flight to Friedrichshafen was made in 71 hours.

Horticultural News

SOD CULTURE IS NOW INCREASING

Better Than Tillage With Cheap Fertilizer.

Sod culture is increasing in orchards because of the expensive labor and equipment necessary to maintain clean cultivation and the gradually declining price of nitrogenous fertilizers, according to the New York State College of Agriculture. When fertilizer reaches a certain price it is more economical than tillage under certain conditions.

Sod and fertilizer have important advantages. Fertilization is more likely to be done on time than is cultivation. Sod reduces the amount of labor necessary at a busy season and leaves more time for better spraying. It is easier to haul a spray rig through a sod orchard than through a cultivated one. Where color decides the choice of a system sod and nitrogen is probably the better.

On the other hand sod orchards suffer more from mice unless a consistent program of poisoning is carried out. Such a program should be started before the mice become troublesome so that they may be kept permanently in check. Since young trees are more seriously affected, a young orchard probably should be cultivated unless there are strong reasons to the contrary.

Fire is serious at any time. In orchards adjacent to railroads or where trespassers are likely to spread fire, it may be helpful to plow fire lines at strategic points. Where the orchard is unduly exposed to fire the sensible course is cultivation. Nothing will so devitalize a tree as a good scorching of the trunk and under sides of the main limbs.

All American Plumes Are in Need of Pollination

Practically all varieties of American plums appear to be self-sterile, but since none of the varieties of this particular type are of any great commercial importance, the question of pollination is of little importance as far as the commercial fruit grower is concerned.

Most varieties of Japanese plums are also self-sterile and, therefore, require cross-pollination, preferably by a variety of the same species or type. That is, two varieties of the Japanese type, such as Abundance and Burbank, will pollinate each other, but neither one can be depended upon to pollinate a variety of the European type, such as Green Gage or Lombard.

Several of the European varieties of plums appear to be partially self-fertile. Among the varieties usually placed in this class are Italian Prune, Reine Claude and Yellow Egg. Most varieties of this type are inter-fertile among themselves, but inter-sterile when crossed with varieties of the American or Japanese type.

Light Soil Is Preferred for Early Strawberries

Strawberries are by far the most popular small fruit crop and will succeed on a variety of soils. Where early fruit is desired a light soil is to be preferred. Later crops and heavy main crops can be grown on heavier clay soils, but such soils are most difficult to prepare and are often poorly drained. A light clay loam or a sandy loam will best suit the strawberry and the finest crops are produced on soils of these types. Any ground set to strawberries should contain plenty of humus, but sods are not desirable because of the danger from white grubs. A very light clay soil or a sandy soil where soy beans have grown or where a crop of beans has been turned under is most desirable and almost the ideal soil for strawberries provided, of course, that it is drained.

Horticultural Notes

Can all you can and preserve as much as you can.

* * *

"Let us spray" as this is the most important single practice in fruit growing.

* * *

Manure is very valuable in the vineyard where it can be obtained and 12 to 15 tons per acre would be useful in a vineyard that is low in vitality.

* * *

A little judicious and corrective pruning every year will bring fruit trees up in the profitable way, and they are not likely to depart therefrom.

* * *

Strawberries are grown in every state of the Union, and this goes for both everbearing strawberries and the standard varieties.

* * *

Excepting strawberries which may need phosphorus, the one element or plant food most often required by fruits is nitrogen.

* * *

The farm on which strawberries cannot be grown is an exceptional place. Some of the other small fruits are more particular as to their requirements.

Are You Ready

When your Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you can be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. Yet you have eased your child without use of a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the crueler pangs of colic, or constipation or diarrhea; effective, too, for older children. Twenty-five millions bottles were bought last year.

Dick Swalve left Tuesday of last week for Ackley where he repaired fences and buildings on their farm He returned home Saturday evening.

KLEMME LOCALS

Mr. and Mrs. W. C. Keraus and son Verle returned to Traer Monday, morning after an over Sunday visit in Klemme.

Mrs. Joe Johnson celebrated her birtiday Wednesday, and to make the event a happier one Mrs. Art Kudje made her a nice birthday cake.

Mr. and Mrs. Ed. Jacobs and son Elwyn and Lloyd Wistey drove to Clear Lake Sunday to spend Mothers day with Mrs. Wistey and family.

Some of the Kaduce children came down with scarlet fever the latter part of the week. They live on the former Walt Lauden farm north of Klemme.

Mr. and Mrs. Arthur Kudje entertained for dinner Sunday, Mr. and Mrs. Frank Kopacek and family and Mr. and Mrs. Frank Jacoubek and family, of ner Britt.

Marlin Croner came last Thursday evening from Hammond, Ind., for a visit with his family here and with other relatives and friends. He made the trip by auto the same day.

Mr. and Mrs. Charles Fritzel went to Wellsburg Sunday to see her mother who has been quite ill, and also to see her sister's new baby boy.

Mrs. H. Schroeder, Sr. and Mr. and Mrs. Henry Schroeder and son, Albert, of Chicago, and Mr Croner and daughter, Dorothy, all drove to Mason City on business today.

Mr. and Mrs. C. F. Keraus entertained Mr. and Mrs. W. C Keraus and son, Verle, of Traer, and Mr. and Mrs. C. G. Waterman and Marian for dinner Sunday.

Mr. and Mrs. Chris Gram and Mr. and Mrs. Harry Gram and daughter drove to Cedar Falls Saturday evening for a visit with relatives. They returned to Klemme Sunday evening.

Mr. and Mrs. Frank Kluckhohn and Donald Turgase drove to Thompson Monday morning to attend the funeral of Mrs. Kluckhohn's grandfather, B. H. Kinden, who was 91 years old.

Mrs. Orr, who was visiting with her daughter, Mrs. Frank Kluckhohn and family, was called to her home at Thompson by the death of her father, B. H. Kinden, who was 91 years old, who died Saturday.

Mr. and Mrs. Geo. Stokesbary entertained for dinner Sunday, Mr. and Mrs. E. J. Stokesbary and family, Mr and Mrs. V. L. Banning and son Kenneth, of Mason City, and Mr. and Mrs. E. J. Widen and family of Corwith.

Last Sunday Miss Phyllis Root entertained the following at the home of her parents, who reside near Dows: Mr. and Mrs. P. W. Johnson and daughters, Mr. Carl Heiden, and the Misses Lenora and Mildred Wheatman, all of Klemme.

PROMISES TO GET POWER FROM SEA

Newest source of power is a motor that derives its energy from the difference in temperature of sea water at the surface and deep down. It does not require very great depth to produce a difference of 35 to 40 degrees and such a variation is as valuable for power purposes as water falling 300 feet, explains the French inventor, Claude, who is developing this new form of hydraulic power. Near Havana he will build a 12,000-kilowatt plant to demonstrate to scientists it can be done. He says his invention is capable of completely transforming living conditions in the tropics, a boon especially to islands and seacoasts where coal and falling water are not available for power purposes. All this sounds like a fair-fetched scheme but it isn't safe to laugh at anybody these quick-changing days.—Capper's Weekly.

Homing Pigeon Still Factor in Warfare

Judging from a remark of Capt. John K. Shawvan, the army carrier pigeon has a war advantage over radio, and so, despite modern scientific communication developments, is still doing business at the old stand.

"When an army takes the field against the enemy, quite naturally the greatest possible effort is made by that enemy to destroy communications," Captain Shawvan said. "In the heat of battle telephone lines become destroyed, radio and visual often fail. Concentrated artillery and machine gun fire make it humanly impossible for runners to get through with their messages. It is in this most intense stage of combat and at this vital time that the homing pigeon comes into his own as the peerless and unfailing messenger."

The Eternal Feminine

Mrs. William Walker, aged ninety, of Wainfleet, England, is planning a dress with short skirts for her eightieth wedding anniversary. She says she approves abbreviated skirts for those who have good legs, and that she has not seen any legs in Wainfleet recently that are prettier than hers. She and her husband, aged ninety-one, recently celebrated their seventy-first wedding anniversary. Walker said he enjoyed reading accounts of sprightly young people celebrating their golden weddings, and of middle-aged couples holding diamond weddings.

Scandinavian Color

Other states may have their Browns, their Joneses and their Smiths, but Minnesota has its Andersons, Johnsons and Petersons. Taking St. Paul, the capital of the state, as a representative Minnesota city, it is learned there are 2,870 Johnsons, as compared to 1,050 Browns; 2,350 Petersons, compared to 630 Smiths, and 1,570 Andersons, compared to 280 Joneses. Other Scandinavian names predominate in St. Paul, as is shown from the following figures obtained from the city directory: Carlsons, 770; Ericksons, 880; Jensens, 400. The population of St. Paul is about 250,000.

Put Badgers to Work

E. S. Sholin, of Elko, Nev., fox ranch proprietor, not caring to do the work himself and deciding that his foxes were subject to too much wear and tear digging dens in the frozen ground, educated several badgers to do the work. He penned the badgers, and the animals began to dig themselves out by digging in. As soon as they had dug deep enough they were hauled out and the foxes were introduced to their new winter quarters.

Not Included

Mother was telling of some place she had taken the older boy when he was quite small. Three-year-old Billy piped up, "Was I there, too, mother?" He was told that he was not, as he wasn't even born.

His little eyes filled with tears, and his lips puckered as he said: "That's just it, you never take me any place."

Not Exactly

Blinks—I always count ten before I speak when I am angry.

Jinks—That's commendable—

Blinks—No, hardly; you see, I use the time it takes it think up meaner things to say than I could if I spoke right out.—Cincinnati Enquirer.

In Ancient Rome

Publius Superbus, the Commuter—Are you sure that suburban villa is but a stone's throw from the Appian way?

Cassius Agricola, the Agent—Absolutely. I surveyed it myself with one of Caesar's catapults.

Never Thought of That

"Man, your hair is all gray, yet I don't see a single gray hair in your beard."

"Well, you must remember that my hair is somewhat older than my whiskers."

Disappointment Ahead

Minister (christening child)—We will hope to see this child grow to fine, brave manhood—name this child.

Mother—Muriel, sir.

The Bright Side

Youth—Why do you believe in long engagements?

Henpeck—The longer the engagement the shorter the marriage.

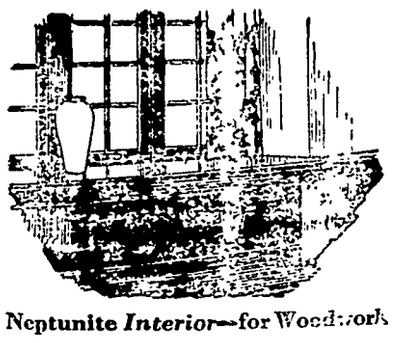
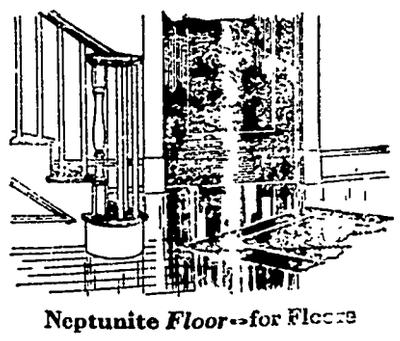
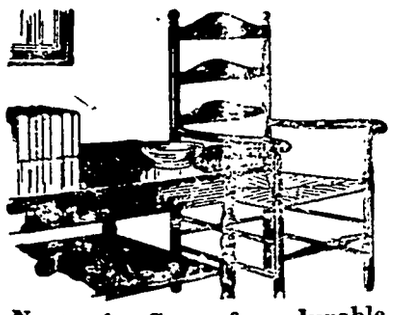
When you refinish floors, woodwork and furniture, choose the right varnish!



Neptunite *Interior*—for Woodwork



Neptunite *Floor*—for Floors



Neptunite *Seat*—for a durable, practical finish on seats and furniture. For a subdued, dull finish, when the work is to be rubbed, use Neptunite *Rubbing*

When you finish anything be sure to get the kind of varnish best suited for the job in hand. Different surfaces—furniture, floors, woodwork and the like—are subjected to different kinds of use and exposure, and each requires a special type of varnish. Then, too, the kind of finish you want—glossy or dull—plays an important part in your selection.

We carry a complete line of LOWE BROTHERS NEPTUNITE VARNISHES. There are five kinds—*Floor* for floors; *Interior* for a gloss finish on standing woodwork; *Seat* for use on pews, seats, and other furniture; *Spar* for exterior use; and *Rubbing* for use when the work is to be rubbed to the dull finish that is popular on all period furniture.

You can't find a better varnish than Neptunite. It is heatproof, marproof, and waterproof. Never turns white—won't even scratch white! Before you re-finish anything, be sure to pay us a visit.

Before you paint, see us

LIVE STOCK NEWS

VERY DESIRABLE RATION FOR EWES

Whole Oats and Wheat Bran, Two to One, Starts Milk.

Two or three weeks previous to lambing, begin giving the ewes grain at the rate of about one-half pound per head per day. A very desirable ration is whole oats and wheat bran, two to one. That will start the milk flow and ewes are not apt to disown their lambs.

As soon as a ewe shows symptoms of lambing she should be placed in a pen by herself so that she may not be disturbed. In case of twins, the first lamb dropped cannot wander away and perhaps perish before the shepherd can get there to set things right. After a day or two, when the lamb gets strong and becomes well accustomed to its mother, the ewe and lamb should be put with the part of the flock that has lambed.

It will not be necessary very often for the attendant to help delivery, but he should assist before much strength is exhausted in laboring. Faulty presentations and dead lambs within the ewe occur occasionally. In case of the former there are no set rules to be followed, but the shepherd should always aim to get the lamb in its natural position before attempting to take it out by force. A dead lamb within a ewe should be removed and the womb flushed out with a warm solution of carbolic acid and water, 1 to 100.

If the ewe is too weak to attend her lamb when born, the shepherd should remove the mucous from its nostrils, rub it dry and try to get it to nurse. A little warm milk will work wonders in the way of supplying warmth and strength to the new-born lamb.

When the lamb is weak and chilled at birth a handy device to have at hand is a half barrel with a jug of hot water placed in it. The lamb can be readily warmed by curling it around the jug and covering the barrel with a blanket. In case of twins one can be kept warm in this way until the other is delivered. When a lamb becomes severely chilled more energetic measures are necessary. Immerse the lamb in water as hot as the bare hand can stand, keeping the nose above the surface and adding more hot water when necessary to maintain the regained temperature. When the body heat is restored rub it dry and allow the lamb to suckle. A teaspoonful of cream with a little hot water may be helpful. Sometimes constipation follows this treatment and an injection of warm soap suds is recommended.

Preventing Thumps Will Insure Little Porkers

Many cases of thumps in pigs are due to the presence in the young stage of the Ascaris worm in the lungs. These worms mature in the intestines. The young are taken in with water and feed in infected hog pens, lots, etc.; then they pass by blood vessels to the lungs and there irritate and sometimes infect the lungs, producing some type of inflammation. The young worm is coughed up into the throat; then it passes (by swallowing) down the esophagus to the stomach and intestines, where this Ascaris matures and thus completes the life cycle.

To prevent Ascaris infestation in pigs, wash and disinfect the brood sow just a few days before she is to farrow, and remove her to a place where no hogs have been or to a clean and disinfected farrowing pen. After the pigs are born keep them out of and away from all old pens and places where old hogs have been until the pigs are four months old. Then they will be safe for growing into pork hogs at eight to twelve months of age.

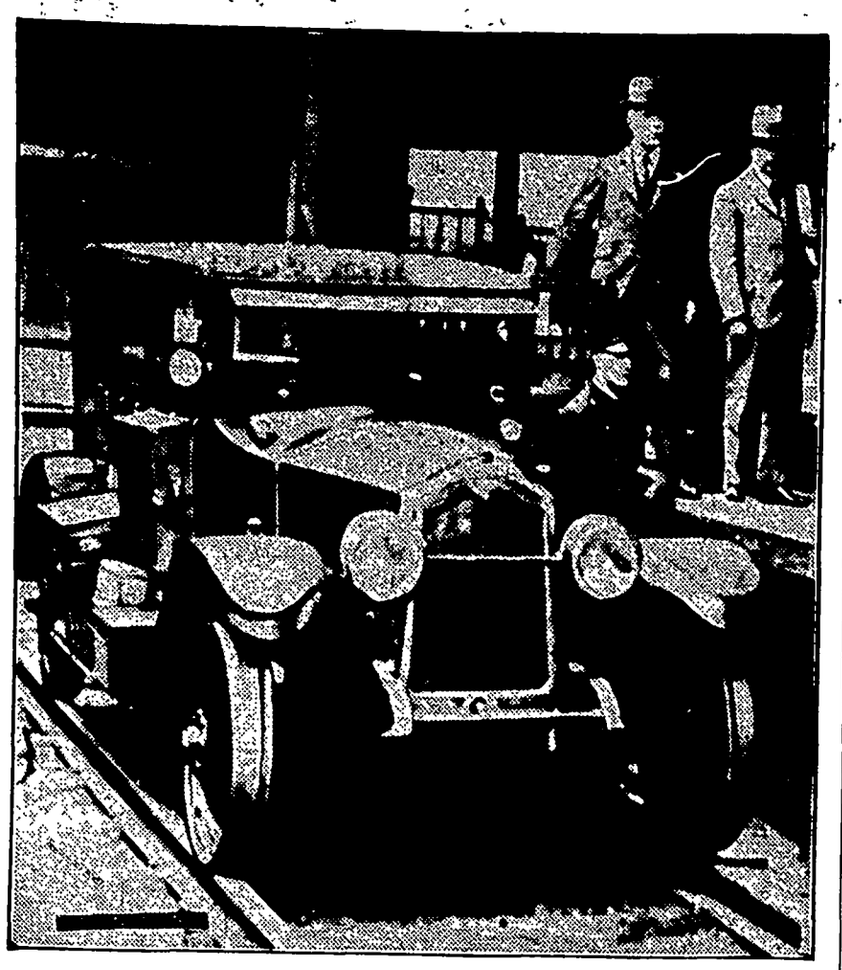
Live Stock Farming Is Sure to Pay Dividends

Diversified stock farming is conducive to regular dividends and better methods of operation, which include machine methods and proper labor distribution as well as remuneration. There is no doubt as to the frequent lack of working capital among farmers, but Shorthorns can be used by many as the nucleus of a live stock farming system that will attract assistance from financial circles at reasonable rates until they can accumulate surpluses from their earnings adequate to met their normal requirements. Much of the labor in stock farming is provided by the animals themselves in that they gather the crop by grazing and fertilize the soil, thereby eliminating two handling charges.

Foot Rot in Sheep

Sore feet in sheep is an old disease and found in all countries. It is caused by a germ that usually gains entrance to the soft tissues of the foot. The skin and deeper tissues at the top border of the hoof and between the toes are most commonly involved. At first the skin around the coronary band is hot, swollen, red and sensitive. Sometimes there is a distinct abrasion, but vesicles and pustules may develop and erupt and leave raw ulcers.

SEEING AUSTRALIA BY AID OF RAIL MOTOR



Doctor Kuraz, general consul of Czechoslovakia, is shown about to leave for tour of Victoria and its environs by the railroad commissioner's sedan rail motor. In group on platform are, left to right, E. R. Peabody, consul for Czechoslovakia in Victoria and Doctor Kuraz, consul general.

CARE OF TIRES NOT EASY TASK

Driver Wastes Much Money by Not Observing Simple Motor Rules.

If American motorists gave their motor car tires as much care as they give their own shoes they would save hundreds of millions of dollars they now waste through carelessness. Experts say almost every driver wears out the equivalent of a tire a year because he does not observe simple rules which not only prolong the life of his casings but make for easier riding.

The main causes of premature tire ruin are: driving with wheels out of alignment, needless high speed, faulty use of brakes and improper inflation.

Brakes Wear Tires.

Paradoxically, the more the automobile is improved the harder it becomes on tires. Four-wheel brakes will stop a car almost as short as a stone wall, but they wear down tires at an appalling rate if they are habitually slapped on at high speed. Unevenly adjusted brakes scuff out tires as a small boy scuffs out shoes.

Increased speed also is hard on tires, yet the more cars in use the faster traffic must be kept moving, and the greater the wear on tires in slowing down and stopping. Recent tests have shown that a car driven at 35 miles an hour and stopped every quarter mile wore the tread design on a standard tire entirely away in a little more than 100 miles. Stopped only every mile, the tread lasted 3,000 miles.

Inflation Is Important.

The one important factor in tire wear that is completely under the control of the man at the wheel is inflation. Experiments made with identical tires on identical cars, one set properly inflated and the other only six pounds under-inflated, showed that firm tires lasted one-quarter longer.

Kicking a tire to test its pressure is about as sensible as taking strychnine tonic by drinking it out of the bottle. There is only one way to test tire pressure, and that is with a gauge. Four minutes once a week, spent on testing tire pressure may save at least the price of one new casing a year.

Find Misuse of Signals Growing in Many Cities

The misuse of traffic signals is increasing disregard for their meaning, says a recent report of the American Engineering council, which has just concluded a traffic survey in 104 American cities.

Two fundamental errors have been observed in a majority of the cities, the council finds. The most important is the placing of the signals without first having an adequate survey of conditions to be handled, or without a thought of what may result at other intersections. The other fault is the placing of signals at corners not justified under the circumstances.

"The result of such error," says the report, "is that the public will recognize their error and have a consequent disregard of all traffic signs and devices."

Grease Cups Left

Grease cups have not entirely disappeared before the newer varieties of lubrication systems. On many cars, the rear wheel bearings and fan bearing, at least, still are lubricated by the rather primitive cup. These are very vital parts doing a great deal of hard work, but because they require more time for lubrication than those parts which may quickly be reached with the gun, they often are ignored. It is a case of grease or wear.

MOTOR QUIZ

(How Many Can You Answer?)

Q.—When was the first transcontinental auto trip made?

Ans.—In 1903 from the Pacific coast to Boston. Actual running time was 47½ days.

Q.—What is the "breaking in" period for a new car?

Ans.—Usually the first 500 miles.

Q.—What care should be exercised with a new car?

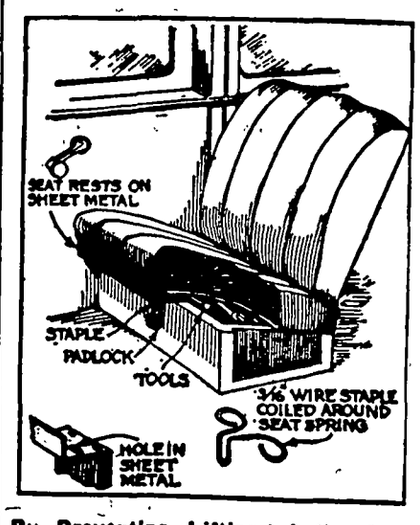
Ans.—The maximum speed should be 20 to 25 miles per hour. Up to 1,000 and 1,500 miles a new automobile should be driven at a reasonable rate of speed. After the first 500 miles when the engine is warm, accelerate up to 40 miles occasionally, but as soon as the speedometer registers 40 or 45 miles, slow down to 30 or 35. This will cause the oil to circulate freely among the working parts. It is advisable to have the dealer check up the car after the first 1,000 miles.

Q.—Why are air cleaners used on so many cars?

Ans.—It removes dust and dirt from the carburetor intake air, thereby eliminating abnormal engine wear. Road dust, mixing with oil film on cylinder walls and other parts, would form a grinding compound and cause excessive wear.

Compartment Lock Will Hold Car Tools Safely

A common location for the tool compartment in the sedan or coach is under the front seat. Usually it is necessary to raise the front of the seat cushion and pull it forward in order to lift it out to get at the tools.



By Preventing Lifting of the Seat, This Lock Safeguards the Contents of Your Tool Compartment.

You can fit a lock, as shown, that will prevent lifting the front edge of the seat cushion and thus prevent the theft or unauthorized use of your tools when the car is stored in a public garage.—Popular Science Monthly.

AUTOMOBILE HINTS

The best-kept automobile is the best automobile.

* * *

There ought to be a limit to busses on the highwsy.

* * *

An optimist is a man who attaches one of the so-called gas savers to his car.

* * *

Four of the 48 states voted $240,000,000 in highway bonds at the last election.

* * *

A woman is some one who wonders why all the cars are coming south on the one-way street while she is driving north.

POULTRY

SANITARY RUNWAY QUITE VALUABLE

Brooding Platform May Be Used With Fair Success.

(By G. T. Klein, Extension Poultryman, K. S. A.)

By making use of the "sanitary runway," the permanent brooder house that has for years been the menace of the poultry industry may be used with a fair degree of success.

The runway is merely a brooding platform that is placed in front of the brooder house. It has a floor of one-half inch hall screen or hardware cloth. The wire floor, which is about 15 inches from the ground, allows all droppings and filth to fall through. Wire sides and top of one inch poultry netting confines the chicks to the runway and protects them from enemies.

The sanitary runway accomplishes everything that turning the chicks outside will accomplish, giving them exercise and sunlight and keeping them from contaminated soil. Diseases are less likely to spread when chicks are running on the wire floor, for they have less opportunity of infection.

The runway may be ten feet wide and the entire length of the brooder house. The framework may be constructed of 1 by 4 inch material. These boards are placed on edge to support the floor. Boards may be spaced two feet apart. The wire may be either 24 or 48 inch widths. The 48-inch material makes a slightly stronger floor. Sides should be two feet high. Sections of the top should be hinged for ease in filling the feeders and care for the chicks.

Sufficient Number of Nests Properly Placed

The number of nests in relation to the size of the laying flock during the heavy laying season is important. With a sufficient number of nests properly placed there is less danger of eggs being deposited in the litter and becoming lost, stepped on, or otherwise broken.

Nests should be darkened; they should be so constructed that it is easy for one to see and remove the eggs. If nests are too large eggs may be broken by two of more hens crowding into them. Twelve by fourteen inches is suggested for the larger breed and ten by twelve inches for the smaller breeds. Nests should be easy to remove to facilitate cleaning.

Turkey's Natural Food Lines Often Overlooked

Then there are a good many persons working with turkeys in a small way who do not recognize one of the turkey's natural food lines; they fail to remember, if they ever knew, that the turkey's food in its wild state consisted chiefly of insects, beechnuts, acorns, berries, and so forth, with but little corn. The average poultry raiser who has not studied Mr. Turkey's former habits of life feeds too much corn and corn-meal, the latter especially. So much corn-meal for small turkeys tends to pack the crop and cause indigestion and liver trouble.

Poultry Notes

Clean ground enables poultrymen to carry more pullets to maturity.

* * *

Sanitation and breeding are both essential in eliminating poultry diseases.

* * *

Any flock that will average better than 120 eggs per bird is a profitable flock.

* * *

More moisture is required for turkey eggs used for hatching purposes than for chicken eggs.

* * *

Gluten feed is a by-product obtained in the manufacture of glucose and cornstarch. It is used in the mash as a source of protein.

* * *

Remember, a start in turkeys costs no more than a start of any good breed of chickens; there is always a good market for your turkeys.

* * *

Early hatching of chickens this spring and proper handling of the pullets will bring them into laying condition next fall during the months of high-priced eggs.

* * *

Market premium for high-quality eggs has aroused an interest in larger egg size. There are inherited tendencies toward large and small eggs. Careful selection at time of placing eggs in the incubator should contribute to the improvement of the size of the eggs of a flock.

* * *

Freedom from disease is essential to growing a large percentage of the chicks hatched. Choose eggs from disease-free parents, or if you buy back chicks get them from flocks known to be free from bacillary white diarrhea.

* * *

Wheat is another valuable poultry feed, being very palatable. It is generally always included in the scratch feed, and its by-products, wheat bran and wheat meddlings, are used in the mash. Red-dog flour and wheat shorts are also mash feeds.

So *good to eat* and such an effective regulator

—that millions eat it as their favorite bran cereal

That Kind of Fellow Altogether Too Slow

"Too much promiscuous kissing is bad for young people," declares Judge Ben Lindsey. "It robs juvenile life and gayety of its wholesomeness and is a grave threat to high moral standards.

"Things that would have been shocking a few years ago are now regarded as virtues and lack of them is liable to make one a social outcast.

"Some college co-eds were decorating their frat house for Christmas when one of the girls asked the head of the decorating committee:

"'Aren't we going to have any mistletoe this year?'

"'No,' replied the other, 'I've found that the fellows who need it aren't worth a hang.'"

Looks

Senator Edwards is the subject of a story that they are telling in Trenton.

It seems that the senator made an anti-prohibition speech at a Trenton banquet, and was congratulated on his eloquence by a politician who had been changing from wet to dry and dry to wet every month or so for the last seven years.

"Splendid, senator!" said the politician. "I never heard a more brilliant and moving speech. And yet you don't look like an orator, either."

"Maybe not," said Senator Edwards. "And no more do you look like a weathercock."

Horrible Thought

"There comes that spring poet."

"Heavens, come on! He might spring one on us."

Red Cross Ball Blue is the finest product of its kind in the world. Every woman who has used it knows this statement to be true.—Adv.

Husbands are not made to order—but some wives seem to think they are.

Least at thine own things laugh.—George Herbert.

Very Much So

"Is she addicted to a lipstick?"

"I should say so. Sticks her lip in every chance she gets."

Makes Life Sweeter

Too much to eat—too rich a diet—or too much smoking. Lots of things cause sour stomach, but one thing can correct it quickly. Phillips Milk of Magnesia will alkalinize the acid. Take a spoonful of this pleasant preparation, and the system is soon sweetened.

Phillips is always ready to relieve distress from over-eating; to check all acidity; or neutralize nicotine. Remember this for your own comfort; for the sake of those around you. Endorsed by physicians, but they always say *Phillips*. Don't buy something else and expect the same results!

PHILLIPS Milk of Magnesia

It's a waste of time to tell a woman that it is a waste of time to worry.

400,000 Women Report Benefit

by actual record

"*Have you received benefit from taking Lydia E. Pinkham's Vegetable Compound?*"

A questionnaire enclosed with every bottle of medicine has brought, to date, over 400,000 replies. The overwhelming majority—in fact, ninety-eight out of a hundred—says, "*Yes.*" If this dependable medicine has helped so many women, isn't it reasonable to suppose that it will help you too? Get a bottle from your druggist today.

quare Type Farm Home Will Appeal to Many Prospective Home Builders

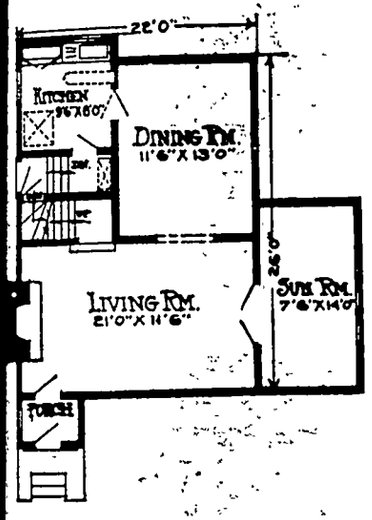
Life is only what we make it. With a pleasant home of this kind with a beautiful setting of flowers and shrubs, life could be enjoyed to its fullest extent.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

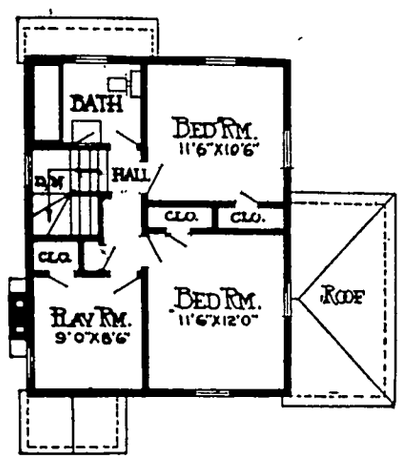
Modern architectural design has done much to make attractive the old-fashioned square hip roof farm home. By the addition of a sun parlor at one side and an old colonial entrance door and entry at the corner, the square type home shown in the accompanying illustration is a wide one that is out of the ordinary and one which will appeal to a great many prospective home builders.

This is not an expensive home to



First Floor Plan.

build as its foundation walls are nearly square and there are no angles in them. The size of the house is 22 feet by 26 feet. The living room reached directly through the entrance door is 21 feet long and 11 feet 6 inches wide. At one end is an open fireplace and at the other are double French doors leading into a sun parlor which is 7 feet 6 inches wide by 14 feet deep. At both ends and at the side of the sun parlor are sets of three double-hung windows making the sun parlor a sunny and airy room. At the back of the living room reached through a double cased opening is the dining room 11 feet 6 inches by 13 feet. A double run of



Second Floor Plan.

stairs opening out of the rear of the living room go to the second floor and end in a central hall at one end of which is the bathroom and opening off of which are the three bedrooms. One of these rooms, 9 feet by 8 feet 6 inches, is designated on the accompanying plans as a play room but it is large enough for a single bedroom should the needs of the family require it for that use. The other two bedrooms are corner rooms, one being 11 feet 6 inches by 12 feet and the other 11 feet 6 inches by 10 feet 6 inches.

The basement of the same dimensions as the house supplies adequate rooms for a heating plant and for storage.

Prospective home builders will find in this design or one similar to it an opportunity to build a very attractive and comfortable home at a minimum of cost.

Housewife in Favor of Concrete Floors

The fact that concrete floors are fire resistive is a strong argument in favor of introducing them into the building of houses and residences. They have been found to be dry and healthful, and when these floors are immediately above basement rooms that are heated will be found to be actually much warmer than ordinary construction. The fact, too, that they are nonabsorbent and consequently easily kept clean makes them popular with many housewives. They do not squeak or vibrate and are soundproof. Such floors can be stained and then waxed. They can also be given an enamel finish. Sometimes, when the surface has just been placed and is still soft, Dutch tile can be laid, which gives the floor a vivid appearance. Frequently colored concrete tile are used to harmonize with the rest of the room and the walls.

Flat Roof Success Depends on Location

The flat roof, which is so desirable in the West and Southwest, where there is little dew and no troublesome insects, would not always fit into a northern location. Though some have heard the idea expressed that such a roof proves economical in fuel consumption in the northern climate as a deep layer of snow forms a protective covering for the house. Terraced roofs, flat roofs, low-pitched and steep-pitched roofs, gable and hip, entrances, details of windows, doorways, porches, terraces, vases and garden furniture all aid in producing architectural variation.

Mahogany Is Favored Wood for Furniture

Since the early part of the Eighteenth century mahogany has been one of the most favored woods in the manufacture of furniture. However, it was first noticed by a carpenter on board Sir Walter Raleigh's ship in 1595 for its great beauty, hardness and durability. Cabinet makers were delighted with the new wood because it lent itself so well to delicate carvings; it was found to be more workable than oak and walnut. Mahogany is found in Africa, but most of it used in the United States comes from Cuba, Mexico and Central America.

Plants Add Cheer to Kitchen Window Sill

A geranium or other plant will add cheer to the kitchen window sill when chintz and floral decorations on furniture are not used. Instead of common white muslin curtains which get so limp and require more frequent laundering, plaid or checked ginghams edged with the pointed dress braids meant for gingham dresses, colored Japanese crepes, hand-dyed unbleached muslin, calico and percales, now called "grandmother." or American prints, tiny sprigged and conventionalized patterns, have character. Other color notes may be pan-holders of plain color, towels bordered with color and glass towels of lintless Japanese cross-barred orange and white crepe and cut-outs of colored oilcloth applied on a clock shelf or on roller shades.

Bedrooms Should Be of Ample Proportions

Bedrooms need not be very large, but should have plenty of light and air, and should allow beds, dressers, chests of drawers and chairs to be placed without interfering with doors, windows or heating outlets. Cross ventilation is most desired. It is not best to have bedrooms opening directly into the living room. If possible, entrance should be from a passage or hallway. Ample clothes closets are most necessary, particularly in small houses where there is little room for storage.

Good Ventilation Is Essential in Home

Ventilating units are just as essential in the home as in factories, laundries, theaters, etc. Unit has a powerful and positive suction, and when placed in the attic or upstairs window of a dwelling, it creates a noticeable movement of air throughout the entire house. By running the ventilator 15 or 20 minutes before retiring, the house can be entirely cooled on the warmest night.

White Ceilings

Contrasting white ceilings are harsh, and many decorators have gone so far as to advocate design on them, too, claiming that they are part of the room, and should be treated as such.

Reliable Houses Best for Seeds

Gardener Should Know Something of Trade and Various Methods.

Vegetable gardeners should be careful to purchase their seed from widely known, reliable seed dealers only. This precaution is urged by A. M. Binkley, associate professor of horticulture at the Colorado Agricultural college.

To buy seed intelligently, the gardener should know something of the seed trade and of the methods and conditions under which it operates. This business, like many others, Mr. Binkley says, is somewhat dependent upon the character of the men in it, and it is therefore necessary to know the reputation of the concern with which one proposes to do business.

Know Seed Dealer.

Not all seed is produced under careful methods and no seed house handling a general line of vegetable seed can grow all of its supplies. A few grow a large proportion, and some buy it all. The buyer should know or become personally acquainted with local seed dealers and ascertain their standards of business.

The best companies are extremely careful in buying and handling, and are earnestly seeking to satisfy reasonable expectations. It costs more money to produce high grade seed, and as long as the planters are willing to buy seed from the lowest bidder, there is no inducement for the seed producer to exercise a high degree of care in the selection of better seed stocks.

Pay for Quality.

While high priced seed is not always a guarantee of quality, it is not often that carefully selected stocks can be sold at the price of cull stock. The vegetable grower should be willing to pay for quality in seeds.

Inquiries concerning the origin of the seed to be purchased should be made. One should also learn to judge whether statements made in seed catalogs are based on facts or mere opinions.

Feeding Brood Sow to Keep Her in Condition

In feeding the brood sow, it should be borne in mind that there are some factors to be considered that do not arise in feeding hogs for market. Not only must the sow be properly nourished to keep her in good condition, but provision must be made for the unborn pigs by providing feeds of muscle and bone-building character. Such feeds as shorts, middlings, oilmeal, tankage, ground oats, alfalfa meal, and skimmilk fed in connection with corn will usually give good results. Barley may be substituted for all or part of the corn, particularly if there is a tendency on the part of the sow to become too fat. It is impossible to say definitely what feeds are best and in what proportions they should be used, as the feeder must be guided by the condition of his sows. Young sows will require relatively more protein than older sows.

Early Pullets for Eggs Are Quite Satisfactory

A more satisfactory winter egg production will be obtained from early hatched, vigorous, and well-grown pullets that carry a surplus of flesh. Late hatched, slow-maturing pullets should be culled from the laying flock and only the well-grown birds of desirable type should be kept. The culling out of the late hatched pullets removes one of the most common sources of roup infection and may tend to prevent the disease from gaining a foothold in the flock.

Agricultural Squibs

Sweet clover should be sown in the spring.

* * *

Another agricultural surplus which hurts the farmer is the surplus of low quality produce.

* * *

Leaving machinery standing outdoors increases farm expenses and cuts down profits.

* * *

Good seed potatoes are one of the most important factors in securing maximum yields of tubers.

* * *

Don't plant onions two years in the same place if you are growing them for the bulbs. With young onions it makes no difference.

* * *

A planter can handle good seed as well or better than poor seed; it takes just as long to plant either kind. But, oh, the difference at harvest.

* * *

Flax is not likely to prove satisfactory on fields which are weedy. New breaking is, therefore, a particularly good place to grow this crop.

* * *

Success in co-operative marketing associations depends primarily on sufficient volume, efficient management, and loyalty of members, says North Dakota bulletin.

* * *

Oats and rye will furnish pasture for the early part of the season. The sweet clover starts rather slowly and will not make its best growth if the hogs are allowed to pasture it down closely.

Phil May's Humorous Suggestion to Artist

The death of old Lord Iveagh, head of the Guinness family of Guinness stout fame—on the Iveagh estate of $55,000,000 no less than $22,000,000 goes to the government—led a prohibition officer to say:

"I'll tell you a story. You've heard of Phil May, the great black-and-white artist? Well, May had a red and bulbous nose; and Shannon once did portraits of him and of Lord Iveagh for the Royal academy.

"As May's red-nosed portrait was being finished he happened to see the great stout brewer's on an easel.

"'I say, Shannon,' he said, 'you ought to hang Lord Iveagh and me side by side. Call him 'Cause' and me 'Effect.'"

Why He Succeeded

Honored politically and professionally, during his lifetime, Dr. R. V. Pierce, whose picture appears here, made a success few have equalled. His pure herbal remedies which have stood the test for many years are still among the "best sellers." Dr. Pierce's Golden Medical Discovery is a stomach alterative which makes the blood richer. It clears the skin, beautifies it; pimples and eruptions vanish quickly. This Discovery, or "G M D", of Dr. Pierce's puts you in fine condition. All dealers have it in liquid or tablets.

Send 10 cents for trial pkg. of tablets to Dr. Pierce's Clinic, Buffalo, N. Y., and write for free medical advice.

Nation's Paint Bill

The paint bill of the United States during 1927 reached the tremendous total of $519,009,842, according to a census of manufacture taken by the Department of Commerce. More than 1,000 establishments were engaged in the manufacture of paints and varnishes, and a total of 28,061 wage earners, other than salaried employees, were engaged in turning out the product. New York state led, with 102 plants engaged in the business, and Illinois ran second with 109.

Meow!

Mr. and Mrs. Eddie Schroeder, well-known film folks, were trying to explain to their infant hopeful the wonders of talking pictures.

"I think!" exclaimed Eddie, "we will be able to hear Rin Tin Tin bark, right on the screen."

"Yes, I'll like that," admitted the child, "but first I want to hear Felix, the cat, purr."

Rather Worse

"I understand your wife locked you out of the house the other night."

"No such luck," answered Mr. Meekton. "She locked me in."

Einstein Might Fix It

A man could save himself a lot of trouble by marrying his second wife first.—Judge.

That Million-Dollar Feeling

"Bill, you're playing like a champion."
"Always do, the day after I take NR. Makes a fellow feel like a million."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

NR TO-NIGHT TOMORROW ALRIGHT

MAKE THE TEST TONIGHT

BE WELL AND HAPPY

Get Relief. Drive Out the Poisons

Auto-intoxication, Constipation, Biliousness, are caused by defective elimination. For over thirty years Nature's Remedy (NR Tablets) has proven the safe, dependable relief for these conditions.

Commencement On Thursday

Commencement services will be held on Thursday evening. Doctor Ingvolstad of the Central M. E. Church of Lansing, Mich., will give the address and we predict he will do well. He was a splendid speaker eight years ago and has had a lot of rich experience since then. He is very popular both as a man and a speaker. We feel fortunate in being able to secure him for two addresses. He has agreed to give the Memorial Day address in the morning of the same day.

PROGRAM—BACCALAUREATE
Klemme Reformed Church
May 20, 8:00 P. M.

Processional March
Invocation, Rev. Calvin Grosshuesch
Hymn Congregation
Scripture Reading Rev. Grosshuesch
Anthem H. S. Girls Glee Club
Mr. D. M. Leiws, Director
Sermon Rev. H. E. Whyte
Benediction Rev Grosshuesch

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Sunday is a day of special services. The morning service in Klemme will be of a patriotic character, and a special invitation is extended to the American Legion Post, the Auxiliary, and to any other Ex-Service men of the Civil War, Spanish-American War or the World War who happen to be in the community. The sermon will carry out the Memorial Day theme.

In view of the fact that we are in the midst of a series of Evangelistic Services at the Liberty Church the morning sermon here will be on the theme "Life's Indispensible Guide."

The entire community is invited to attend the Baccalaureate service Sunday evening which will be held at the Reformed Church

The evangelistic services are going along in fine shape at Liberty and are being well attended. They will continue thru out next week and you are cordially invited to attend.

MISS STELLA BOCK HAS TAUGHT THREE YEARS AT SCHOOL

Will Attend College Next Year To Complete Her Course

Miss Stella Bock has just finished up her third successful year as a rural chool teacher. Prior to that time her brother, Edwin, taught the school for two years. Miss Bock will enter college next fall to complete her course of study. The average enrollment in her school was 27 and even during the bad weather the past winter 22 were in daily attendance. Three wrote the 8th grade examinations, they are Lynford Back, Harold Tebben and Marie Albers.

The pupils take a great pride in their school and on Arbor Day set out a number of shrubs, rose bushes, flowers, etc. along the front of the school yard next to the highway. Later they expect to set out a number of trees. The nursery stock was all given by the parents and the pupils take a great pride in their plan of beautifying the school grounds.

Miss Bock attended the Klemme Schools and took three years in our high school and then a year at Garner where she graduated. Later she took special work at college.

Allie White was a Goodell caller Monday.

PROPOSALS FOR THE ERECTION OF SCHOOL HOUSE

Notice is hereby given that the proposals for the erection of a school house in District No. 5, Avery Township, in the County of Hancock, will be received by the undersigned, at his office in his home, (where plans and specifications may be seen) until 8:00 o'clock P. M., June 4, 1929, at which time the contract will be awarded to the lowest responsible bidder. The board reserves the right to reject any or all bids.

J. J. COOK, Secretary.

May 4, 1929.
(Publish May 9-16-23, 1929)

MEMORIAL DAY PROGRAM

To Be Given At The Klemme City Park
Beginning at 10:00 A. M.
THURSDAY MORNING, MAY 30th, 1929

—PROGRAM—

MUSIC FURNISHED BY THE DUNCAN BAND
SONG, "AMERICA" ..... Audience
INVOCATION ..... Rev. H. E. Whyte
—Patriotic Readings—
(a) "Flanders' Field" ..... Oral Gibson
(b) "Answer To Flanders Field" .... Mrs. P. W. Johnson
(c) "America's Answer" ..... Valeria Koerner
MUSIC ..... Duncan Band
MEMORIAL ADDRESS ..... Dr. F. W. Ingvolstad
(Central M. E. Church, Lansing, Michigan)
MUSIC ..... Duncan Band
SONG ..... Male Quartet
SONG ..... Mixed Quartet
SONG, "Star Spangled Banner ..... Audience
(Led By Mr. D. M. Lewis)

Parade Formation

1. Colors and Guards
2. Duncan Band
3. Firing Squad
4. Civil War Veterans and Wives
5. Spanish War Veterans and wives
6. American Legion
7. Boy Scouts, Troop 56
8. Flower Girls
9. Klemme Auxiliary
10. Camp Fire Girls
11. School Cihldren
12. Other Organizations

Services At Cemetery

DECORATION OF GRAVES
BENEDICTION SALUTE TAPS

ANNUAL POPPY SALE ON HERE SATURDAY

WERE MADE BY DISBLED WAR VETERANS IN HOSPITALS

Poppy Sale Will Be Conducted At Goodell On Thursday

Ten years ago popples were pushing up about 50,000 fresh American graves in France and Flanders, nature's floral tribute to our battle dead Today many hundreds of the little red flowers are ready at the headquarters of No. 625 Klemme Unit of the American Legion Auxiliary, to be worn by the people of Klemme and vicinity in honor of these heroic dead. The women of the Unit will distribute them here Saturday, May 25th on the downtown streets, and at Goodell on Thursday.

"Every poppy has a story behind it" said Miss Leona Lau, Chairman of the poppy sale, as she and her helpers arranged the poppies in baskets for distribution to the workers. "Every one has been made by some disabled comrade of the men whom they honor and has helped some disabled man in the long struggle to regain health and happiness.

"The poppies which the Auxiliary is selling this year have been made in thirty different government hospitals and convalescent workshops throughout the country. The Auxiliary has paid one cent each to the disabled veterans for every flower they have shaped, distributing approximately $100,000 among the disabled poppy makers. For many of the men this money has been the first they have been able to earn in months and years. It has enabled them to support their families thru the winter and has given them new courage and confidence.

'Many stories came from the poppy making centers which almost bring tears to the eyes. One of the most energetic workers this year was a veteran in the Speedway hospital near Chicago who had been confined to his bed for five years confined to the lower part of his body supiwth the lower part of his body supported in a sling. He was able to move his hands and arms enough to shape the flowers and has worked constantly, drawing immeasurable happiness from the fact that he again could do useful work. Another man in the same hospital was facing a serious operation and worked until late at night to finish his poppies so that if the operation resulted unfavorably his wife and children receive the wages of his last table hours.

"Often men working on the poppies are so badly disabled that they cannot make a complete flower. These men form what they call 'poppy corporations,' several working on the same flowers. Perhaps a man with shattered nerves will start the flowers and will pass them on to a man with a paralized side when he has completed first operations. The second man will do all that he can and pass them on to a third man, differently disabled, to be completed. Even the blind veterans can make poppies under this arrangement."

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German service.
11:00 a. m. Sunday school.

Sunday evening the Baccalaureate Service of the High School will be held at our church. Rev. Whyte will be the speaker. All who are interested in our school and churches are invited to attend.

The Bible Class will meet Saturday evening.

The Junior choir at 7:30 and the Senior choir at 8:15.

A complaint has come to the Mayor's oyice that some boys have been shooting robins. Robins, as well as many other birds are protected by Government Laws. To shoot protected birds is a serious offense. Anyone caught in the act of killing protected birds will be severely punished. The Times advises that this practice be stopped at once or the boys committing this crime may do so to their orrow. Parent will do well to warn their children of the seriousness of killing or harming protected birds.

Mr. Tideback and his men of Belmond are getting the former Will Rhodes house in the old town ready to move down to the Adolph Schlichting farm. They intend to move it as soon as the roads get good.

REVA ELDER WILL ATTEND 4-H CONVENTION AT AMES

"Crafty Canners" Of Ell Township Held Meeting May 11th

May 11th the Crafty Canners of Ell Township met with Miss Emma Goll. During the business part of the meeting the girls decided to send a Club member to the 4-H convention to be held at Ames from June 10 to June 14th. Girls who had been there before were not elgible.

Candidates wer nominatd and Winnifred Hampel and Reva Elder received an equal number of votes and by drawing lots Reva will represent the Club at Ames.

Girls Study Food Question

"What should a Club Girl's menu consist of?" was a question asked by their leader, Mrs. Griffen. Few girls knew. To maintain good health a girl should eat each day at least two vegetables, one fresh; two fruits, one fresh; one egg; two whole cereals; some meat; drink a quart of milk and six glasses of water.

New Way To Can Apples

The program consisted of a talk of various types of food, good forms of exercise and a demonstration. Mrs. Griffen demonstrated the canning of appels. Each apple was wiped to assure of cleanliness, then they were cored and the sides of each apple was pricked to prevent breaking. The centers were filled with sugar and the apples were placed in a pan containing a little water. They were allowed to bake until soft. Then they were placed into a jar and processed for twenty minutes. This method of canning apples is a very satisfactory one. The apples retain their color.

Refreshments Were Served

Guests of the Club were Adzela Mullen, Viola Thieman and Clarice Wellemeyer. Delicious refreshments were served at the close of the meeting.

The next meeting will b June 1st at the home of Reva Elder.

BAYSIDE PARK WILL OPEN ON NEXT SUNDAY

Several Thousand Dollars Spent To Improve Popular Park

The Bayside Amusement Park at Clear Lake, Iowa, will be opneed on next Sunday, May 26th, for the 1929 season. For several weeks, a crew of men has been working in the Park getting things ready for the opening date; buildings have been repaired, remodeled, painted and decorated, and many changes and improvements have been made since last season. Several thousand dollars have been spent to put the Park in a finer condition tha never before. Next Sunday the entertainment concessions including the merry-go-round, roller coaster, little train, fun house and aeroplane, will amuse the visitors for the first time this season. A number of new entertainment concessions have been added to the Park since last year.

The skating rink which was opened two weeks ago, will no doubt draw many enthusiasts all day of the opening. The roller skating rink has recently been improved and good music is provided for those who enjoy this sport. It is open every afternoon and evening.

The Ritz Hotel will open Sunday and will be managed this season by a party from Hampton.

The Park grounds, tables, and children's play grounds, which are free to everybody, have been fixed up recently and are now ready for the opening day at Bayside Sunday.

There will be no charge for entering Bayside Park on the opening date, Mr. Ritz has announced.

AUXILIARY, NOTICE!

Auxiliary Members are asked to wear white dresses for the Memorial Day Parade. All who can sell Poppies on Memorial Day meet at the Theatre.

Bennie Beek is the owner of a Chevrolet coupe which he purchased Friday at Belmond. Hamo Beek bought a Star Sedan and Adolph Schlichting is the owner of a new Ford coach which he purchased of the Garner Auto Co., of Klemme.

MEMORIAL SERVICE THURSDAY MORNING

SERVICES WILL BE HELD IN THE KLEMME PARK

Memorial Day Services Will Be Held In The Morning This Year

The Klemme Legion and Auxiliary are working hand in hand to plan an appropriate Memorial Day Program, which will be given at the Klemme Park, Thursday morning, May 30th, beginning at 10:00 a m.

An excellent program has been formulated and a fine speaker has been secured, Dr. Ingvolstad, of Lansing, Mich., who will also deliver the Commencement address.

The full program at the Park is published elsewhere in this issue.

Following the services at the city Park, the procession will form and march in a body to the Cemetery where tribute will be paid to our Soldier Dead of all past wars.

Special music has been provided for the day. The Duncan Band has been secured and a male quartet, and a mixed quartet will also furnish special numbers on the program

The merchants of Klemme have signified their intention of opening their stores Thursday morning and will remain open only long enough to accomodate customers and will close in time for the program. They will then remain closed for the balance of the day.

Klemme extends a welcome to all to come and observe Memorial Day here.

COUNTY AUXILIARY MEETING HELD AT GARNER

Klemme Auxiliary Has Largest Attendance Of Any Unit

Whenver there are any Auxiliary affairs held in the county you can bank on the Klemme Unit being out in full force. Such was again the case at the county meeting held at Garner Wednesday, when thirteen Klemme Auxiliary ladies were in attendance. Kanawha was represented by seven, and Crystal Lake had a good attendance. Other towns were not so well represented.

Those from Klemme who attended were: Mrs. Paul Grange; Mrs. Benn Coobs; Mrs. P. W Johnson and daughter, Barbara Lou; Mrs. Walter Lau; Mrs W. F. Pavey; Mrs. David Schwichtenberg; Miss Berdice Schwichtenberg; Mrs. Elmer Arnold; Mrs. Alden; Miss Leona Lau; Mrs. E. F. Jacobs; and Mrs Lester Stille.

MRS. BUENTENBACH VICTIM OF BIRTHDAY SURPRISE

Several Familes Gathered Sunday Evening And Had Supper

Sunday being the birthday of Mrs. Edd Buentenbach her friends planned a very pleasant surprise for her. About 7:00 o'clock Sunday evening the merrymakers arrived at the Buentenbach home. They brot well filled baskets and everyone enjoyed the delicious supper with the many good things to eat along with liberal helpings of brick ice cream. Those present were. the following families: Henry Lewis family; Fred, Frank and Clarence Kluckhohn families; Martin Janse family; August Baack family; Erwin Rosendahl family; Walter Anderson family and Mrs. Chris Anderson. Mrs. Buentenbach received many beautiful gifts and everyone wished her many more happy birthdays.

The School at No. 9, with Miss Delia Stromer teacher, enjoyed a social time Friday evening. All of the families of the district were present and did their share in helping the good things in the form of refreshments dissappear. They always hold an evening picnic at No. 9 each year instead of in the day time as all of the parents can attend. Miss Stromer's services have been secured for next year at this same school.

Where Sleeps the Unknown Soldier

THE PRESIDENT AND THE FIRST LADY OF THE LAND

FIELD MARSHAL ALLENBY'S TRIBUTE—Viscount Allenby, hero of the British campaign in the Holy Land during the World war and now Great Britain's only living field marshal, is one of the notables from abroad who have placed a wreath on the tomb of America's Unknown Soldier.

"TAPS"—Staff Sergeant Frank Witchey, Third United States cavalry of Fort Myer, Va., and the famous bugle he has used in sounding taps at the burial of America's Unknown Soldier and at the funerals of the late President Wilson, Lieutenant Generals Nelson A. Miles and S. M. B. Young, Major General Leonard Wood, and William Jennings Bryan. Sergeant Witchey haa seen 20 years of continuous service with the Third cavalry.

THE PRESIDENT AND THE FIRST LADY OF THE LAND—Following tho custom of other years, President and Mrs. Coolidge led the nation in 1927 in paying tribute to the country's dead heroes at Arlington National cemetery. Mrs. Coolidge is shown placing a flower on the tomb of the Unknown Soldier while President Coolidge looks on.

ENEMIES ONCE; COMRADES NOW—Although they were enemies during the World war, members of the European Automotive commission who toured the United States in 1928 are comrades in commerce. While in Washington they journeyed to Arlington National cemetery where they placed a wreath on the tomb of America's Unknown Soldier. In the photograph, left to right: Capt. A. L. Westbrook of Alexandria, Egypt; Holger Dau of Copenhagen, Denmark; J. F. Smet of Antwerp, Belgium, and recipient of five war decorations; Johannes Stahlberg of Berlin and member of the kaiser's staff; Emmanuel Ricardo of France; and Harlan Wood, departmental commander of the American Legion.

By ELMO SCOTT WATSON

THIS is the eternal mystery.

No one knows where he was born. It may have been among the rocky hills of New England or somewhere in sunny California. During his boyhood he may have played in the pine woods of Michigan or paddled a dugout on some Louisiana bayou. But the name of the state which gave him birth doesn't matter, after all. For he was an American.

No one knows in what branch of the service he enlisted. He may have been a cavalryman or an engineer. Or he may have been a doughboy, slogging through the mud of France or one of those "cannoneers" who have "hairy ears." And then again, he may have worn the silver wings of the aviator. But the name of his outfit doesn't matter. For he was a soldier, a fighting man.

No one knows where or how he died. It may have been in that fierce little fight at Cantigny. Or it may have been in the gloomy fastnesses of Belleau Wood or somewhere on the historic Somme that death found him in a burst of shrapnel, a spray of machine gun fire or a bayonet thrust. But that doesn't matter, either. The thing that does count is that "he died fighting," under the Stars and Stripes.

No one knows his name. It may have been just plain Smith. Then again, it may have been Murphy or MacDonald or Cjarnowski or Muller or Isaacs. And then again it's possible that somewhere on a western Indian reservation his copper-skinned mother looked proudly upon her lusty first born and said "His name shall be Big Brave." But his name and the nationality of his parents are not so important now. His fellow-Americans call him by the proudest name that any man can bear.

He is "The Unknown Soldier."

Seven years ago they brought his body back across the Atlantic and placed it in a white marble tomb in a famous cemetery near the nation's capitol—a soldier home from the wars. Since that November day in 1922 men and women of every station in life have bowed their heads reverently before his last resting place. To it have come the great of other countries—the queen of a European royal house, princes, field marshals, lord admirals, statesmen. None has been too great to pay him homage.

But all of this homage is as naught compared to that which is offered up in the hearts of all Americans on May 30, 1929. For the tomb of the Unknown Soldier in Arlington cemetery, near Washington, D. C., is a national shrine to which the thoughts of all Americans turn on Memorial day each year and the ceremonies which will take place there—ceremonies in which President Hoover, commander in chief of all American soldiers will take part—will symbolize America's tribute to her soldier dead, her defenders in all of the wars which the United States has been called upon to wage.

It is doubtful if any other symbol in all American tradition has so gripped the imagination of the nation as has this white marble tomb and the body which it shelters. Perhaps it is the tantalising mystery of his identity, the thought that ha may have been a man whom any one of us once knew. But whatever may be the reason why the symbolism of the Unknown Soldier has such a powerful hold on us, the fact remains that few Americans who visit the capital of their country fail to make a pilgrimage to this hallowed spot. There they find that Uncle Sam pays a tribute to this son of his, not alone on special occasions such as Memorial day and Armistice day, but upon every day in the year. For, standing guard over this spot, is a khaki-clad figure, a soldier in the United States army. The story of this vigil is one of the interesting parts of the romantic story of the Unknown Soldier. It was told in a recent dispatch from Washington as follows:

"The soldiers who stand guard ten hours every day at the tomb of the Unknown Soldier at Arlington regard their selection as one of the most cherished military honors.

"One who visits this hallowed spot in Arlington cemetery and watches the sentinel pace back and forth more than likely has thought: 'He must be tired of that—it must be monotonous.'

"But to the soldier it is a different story. He is proud of his lot. He gets a tremendous kick in walking those 31 steps up and 31 steps back. And if a crowd is around the minutes fairly rush by. 'Eyes to the front, shoulders back, chin in, rifle on shoulder in precise position, he paces back and forth, hardly aware of the strain.

"The guard detail at the Unknown's tomb is supplied for 45 days at a time from the engineers at Ft. Humphreys, the infantry at Ft. Washington and the cavalry at Ft. Myer. Eight men are chosen from each of these posts. They are selected in competition for neatness in dress, drill, manners and discipline. Each detail guards the tomb for 15 days, and the sentinel walks up and down in front of the tomb three hours and twenty minutes each day. The remainder of the day he is free.

"Aside from the fact that selection for duty at the tomb is an honor, other factors make the assignment a popular one with the soldiers. During the 15 days they are free from all other duties.

"The primary purpose of having an honor guard is to make certain that nothing shall be done that will constitute disrespect to the Unknown Soldier. Formerly, visitors were in the habit of sitting on the tomb, eating lunch there and scattering litter about the grave. Attempts were even made to chip off bits of granite for souvenirs.

"The presence of military authority, of course, makes every one behave in a dignified manner. No one is permitted to touch the tomb now, and those who make the pilgrimage to Arlington pay their tribute in an atmosphere most impressive and one which should inspire reverence in the hearts of all true Americans.

"The presence of this military authority also serves another purpose. The visitor instinctively feels that he is on sacred ground. The impressive solemnity is entirely in accord with the whole idea of honoring an unknown hero.

"People of all classes daily visit the tomb. The first bus loads are there as soon as the gates of Arlington open at sunrise, and they continue to come until the cannon at Ft. Myer booms at sunset. While no count is kept, officials believe that more people come to Arlington every year than to any other point of historic interest in the national capital."

Unknown?

I have come back to my mother's land—
I was long, too long, away.
She shades her eyes with a blue-veined hand
In the sunlit upland day
And looks at my saddle, my horse, my gun—
For my haunts were not the strown.
My western mother has murmured: "Son!"
So why am I called Unknown?

I have come back to my mother's land,
Where the yellow pine glades are;
The cypress flutters, by warm breeze fanned,
And the rose scent floats afar;
There's a flash of ears on quiet streams
And a bright-hued bird has flown
Like those that colored my youthful dreams
Ere they called me the Great Unknown.

I have come back to my mother's land,
Where the surf's like distant drums,
And the fishing craft make bright the strand
And a kindly neighbor comes—
For such is the way of the village folk
When a woman is left alone.
It's of me they talk, when she doffs her cloak,
So why am I called Unknown?

For I belong to them—mothers all—
From the seas to the plains of sage,
From the hills that rock to the snowslide's fall
To the desert gray-lined with age.
And my tomb shall vibrate with messages
All couched in that mother tone
Which stirs the heart. Ah, then, who says
That I have returned Unknown?

—Arthur Chapman, in the New York Herald Tribune.

Warn Farmers on Seed for Forage

Argentine Product Is Susceptible to Disease and Winterkills Easily.

A warning to farmers against the purchase of Argentine alfalfa seed because it is not hardy, winterkills easily and is very susceptible to disease, is issued by Waldo Kidder, agronomist for the extension service of the Colorado Agricultural college.

Colorado-grown Grimm or Cossack varieties of alfalfa seed are types most highly recommended.

Distinguish Argentine Seed.

Argentine seed may be distinguished easily because 10 per cent of it is stained orange red, by order of the United States Department of Agriculture, as a warning to prospective purchasers that it is imported Argentine seed and unhardy.

Quite a supply of this Argentine seed has been received on the Colorado market, and is being offered for sale by certain seed dealers. It is being offered at lower prices than our home-grown or northern seed.

Prospective purchasers are warned that it is undesirable for planting in Colorado and the Rock Mountain region generally.

There is an unusual demand for alfalfa seed at this time, because 20 per cent of the alfalfa acreage in Colorado was lost through winter killing and disease during the winter of 1927-28. Farmers in the northern part of the United States suffered the same misfortune, with a loss of between 15 and 20 per cent. Part of this acreage was reseeded last year and much will be reseeded this spring.

Fair Supply of Seed.

Although Grimm and Cossack varieties are high and rather scarce there seems to be a fair supply of Colorado-grown and northern-grown common alfalfa seed at reasonable prices. This common seed is much preferable to the Argentine.

Keeping Flies Away by Screens on Milk House

While experience has shown that it is not practicable to screen the cow stable, this cannot be used as an excuse for not screening the milk house.

The best type of screen for the milk house windows is that which swings out, for, says the New Jersey agricultural experiment station, New Brunswick, this readily enables one to clear the room of flies during the day. The door should be double-screened if possible. Farmers who have electricity available claim that a fan blowing directly on the strainer and cooler is a most effective way of keeping flies away.

The treatment of manure heaps with commercial disinfectants will rid the barn and milk house environs of fly-breeding places. The common practice in keeping flies off the cows at milking time is to spray them with the common commercial fly preparations as soon as the cows are brought into the stables.

Modern Feeding Calling for More Mineral Matter

Poultry has a high mineral requirement. This is also true of dairy cows and hogs. Modern feeding practice is calling more and more for the addition of mineral matter to the ration. Hog feeders today are using thousands of tons of mineral mixtures annually. In the poultry feed the use of grit, oyster shell, bone meal and the mineral mixtures is rapidly expanding. The value of such material is apparent. If a farm flock of hens cannot get anything better than the mortar in the old chimney of a tumble down house, it will increase their egg production. If you could actually eliminate all of the mineral content of a dairy cow's ration, her heart would stop beating and she would die more quickly than though you took away all her drinking water and provided no more.

Agricultural Notes

It is far better to do much soil improvement before setting out the peach orchard.

* * *

Low milk yields and low profits from dairy cows are very frequently the result of poor feeding.

* * *

Not all plants need a "sweet" soil; some do better at a fairly high degree of acidity. It pays to know your plants.

* * *

Nature grows both good and poor trees, and the final crop will be composed of both kinds unless the poor ones are removed.

* * *

There is little trouble in opening the silo, but many farmers have no silos to open, and this is really their principal trouble and loss.

* * *

Buy only alfalfa seed which is known to be adapted to your locality is the warning recently issued by the United States Department of Agriculture.

* * *

To secure the greatest returns, the woodlot must be protected from fire and grazing animals, and a sound system of improvement cutting adopted. Cutting is the only practical method for the stimulation of growth of this type of crop.

ORCHARD GLEANINGS

FEED TREES FOR EXCELLENT FRUI

Average Orchard Too Muc Neglected by Farmers.

High-grade fruit, either of peache or apples, cannot be produced satisfactorily, unless the trees are fertilized. The average farm orchard is too much neglected in this one feature.

"We often see men who think nothing of using from 500 to 1,000 pounds of fertilizer per acre on cotton, tobacco or other crops, permit the fruit trees to shift for themselves without food of any kind," says E. B. Morrow, extension horticulturist at the North Carolina state college. "As a result the trees are low in vigor, the fruit is undersized and often a good yield is secured only occasionally. However, fertilizing the orchard is related to other good practices such as cultivation, cover-cropping and pruning. Trees in sodded land will require more fertilizer than those in cultivated land, heavily pruned trees will need less fertilizer than lightly pruned, and trees bearing large crops of fruit will need more plant food or a removal of part of the fruit."

Growers of peach trees should try to get a general growth of from 8 to 12 inches all over the tree and to keep the orchard in a healthy, vigorous condition. Mr. Morrow says the average peach tree should have two to three pounds of nitrate of soda or 6 to 10 pounds of a complete fertilizer during the season, depending on the fertility of the soil and the amount of fruit on the tree.

A good practice is to apply half the fertilizer about two or three weeks before the trees bloom and the remainder after the fruit has been set. Many growers, finds Mr. Morrow, apply about 100 pounds per acre of a readily available nitrogen fertilizer, such as nitrate of soda, and then follow this with 400 to 500 pounds per acre of a complete fertilizer as soon as the crop has passed all danger from frost injury.

Methods of fertilizing apples are about the same as for peaches. However, the amount per tree is greater since the trees are further apart.

Find Way to Help Check "Running Out" of Berries

We are on the upgrade in the fight to control raspberry mosaics and leaf curl.

These two diseases, which do not seem to infect any other of the small fruits like currants, gooseberries, or strawberries, are, without doubt, largely responsible for the "running out" of raspberries.

R. E. Vaughan, plant pathologist at the Wisconsin College of Agriculture, says that although scientists do not yet know what causes the diseases, they do know that mosaics can be controlled. They have found that setting out only the plants that come from certified nurseries and removing diseased plants as soon as any symptoms of the diseases appear is a good way to keep the diseases out of the area.

The state department of agriculture provides nursery inspection and certification and as a result of this service, 80 acres are now listed where certified plants can be bought.

Spraying has not proved to be of any value in controlling mosaics, according to Vaughan, and although many scientists believe that these diseases are spread by certain aphids, spraying to control them has been of no appreciable value. So far spraying has proved most valuable in the control of stem spot, a disease common on "black caps."

Nitrogen Is Useful to Increase Peach Yields

The New Hampshire station reports that in the heaviest crop which has ever been harvested at the station, the increase over the check plots due to the application of two pounds of nitrate of soda a tree was 24 pounds of fruit. This is an increase of 30 per cent over the trees that received no nitrogen. For the first time the plots that received no potash produced equally as much as those given it.

Strawberry plots which have for eight years received manure applications at the rate of 20 tons to the acre showed practically no response when the amount was increased to 40 tons. About 30 per cent more runner plants were produced but a decrease in the number of flowers per plant also occurred. A slightly increased size brought the total size of the crop only slightly above that of the plots given other treatments.

Bordeaux Paste

Ready prepared bordeaux paste, containing arsenate of lead, can be purchased in any quantity from one pound up, can be mixed with water and serves well for keeping down insects and diseases on apples, tomatoes and Irish potatoes. Directions for mixing the paste with water are found on the package. As a rule, however, one pound of paste will make about eight gallons of spray. This should be enough to spray four or five medium-sized apple trees.

FARM STOCK

RAISE AND BREAK A PAIR OF OXEN

Boys Find It Pleasant, Fascinating and Profitable.

(By H. L. GARRIGUS, Connecticut Agricultural College.)

Replying to the inquiry of a reader at Oxford, N. Y., I would say that it would be entirely possible to raise and break a pair of oxen, starting with bull calves. I would suggest that the earlier they are trained the easier it will be.

First, the calves should be trained to lead with a halter; then they can be tied together and driven as a pair. A small yoke can be made and fitted to them at an early age if desired, and if handled carefully they can be hitched to a small sled or cart and taught to do all of the things that a pair of oxen would be used for.

Many a boy throughout the eastern part of our country has trained one or more pairs of steers as he grew up on the farm, and found it a pleasant, fascinating and profitable pastime.

It is rather difficult to fit a harness to a steer or ox, although it has been done. I know of one owned by C. S. Miller of Waterbury, Conn., that has been kept several years and used as a single hitch. He has been used for making paths for the whole neighborhood, drawing fuel and manure, cultivating gardens and making himself generally useful. A horse collar can be used on a steer or ox and the necessary harness, including bridle, bit and lines, can be fitted, but for all double work I should strongly recommend the yoke. In fact, a single yoke is sometimes used.

The younger the calves are castrated the better, as a rule, although it is a common practice to castrate calves for steers at any time from two to six weeks of age. The principal objection to deferring the operation longer is a somewhat greater risk and the fact that the steers become somewhat staggy in appearance, detracting from their trim, clean-cut lines, principally about the head and neck, and their attractive horns, often an important part in the beauty of a well-matched ox team.

Increasing Demand for Good Horses on Farms

(Prepared by the United States Department of Agriculture.)

Since 1918 and 1919, when the number of horses on farms in the United States reached the highest total ever recorded, a sharp decline has been in evidence. Last year the number of horses on farms was no greater than in 1890, and the reduction does not yet show any signs of ceasing. Some significance may be attached to the fact that the farm price of horses has turned slightly up since 1926 and 1927. Horse prices in 1925, in comparison with the average prices of all commodities, were at the lowest point since 1868. It is therefore possible that the corner has been turned, and that the recent slight upward trend indicates an increasing demand. The average age of all horses on farms has steadily increased within the last few years. It is therefore practically certain, says the United States Department of Agriculture, that colts and young stock will shortly be in greater demand. The outlook is for an increase in the prices of all good horses.

Live Stock Hints

Pigs should be castrated before they are weaned.

* * *

Frequent changes of pasture help to keep lambs healthy.

* * *

Corn alone is not a good ration for hogs. It lacks protein as well as minerals.

* * *

The remedy for diseased animals which promises to cure all ills usually ends by curing none of them.

* * *

If ewes are too thin as lambing time approaches, start a daily feeding of one-third pound of oats per head a month before lambing.

* * *

To develop a very large-sized hog it is essential that the hog be of the right conformation and breeding and then that he be fed a good ration.

* * *

The large part of the tuberculosis in accredited county hogs is found in the glands of the throat and intestines and generally comes from diseased poultry.

* * *

Carrying over a year's supply of roughage eliminates the possibility of interruption of feeding plans by a poor crop season.

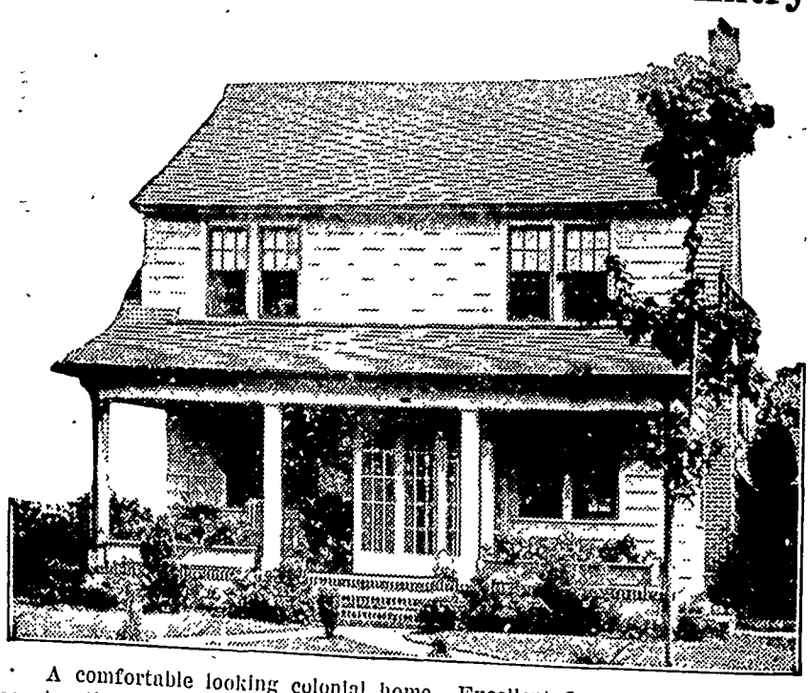
* * *

Lowered vitality, from any cause, makes live stock subject to infections which animals of normal vigor might readily resist.

* * *

The problem of efficiently eradicating the "gad fly" is one of the most important and most difficult problems relating to the cattle industry which now facing the government.

Colonial Home Made Attractive by Wide Porch With Glazed Entry



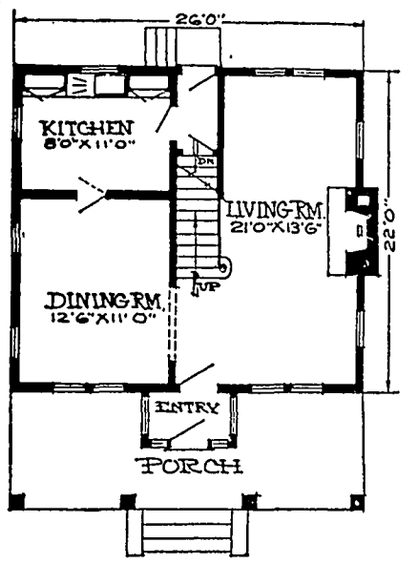
A comfortable looking colonial home. Excellent floor plans, economical construction and an inviting open front porch, distinguish this home.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill. and only inclose two-cent stamp for reply.

Here is the type of home which will appeal to a great many prospective home builders, especially those who want a modern dwelling, require only a limited number of rooms and have not a large amount of money to build with. It is a simple colonial home made attractive by a wide porch with a glassed-in entry.

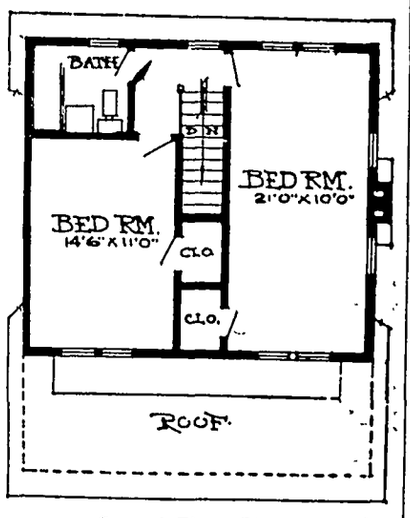
This house is of frame construction and is only 22 feet by 26 feet.



First Floor Plan.

The interior arrangement is such, however, that there is an unusually large living room, 13 feet 6 inches by 21 feet, extending the depth of the house at one end. In the center of the outside wall of this room is an open fireplace while two windows at the front, two at the side, one at either side of the fireplace, and two at the back, provide it with an unusually large amount of light and excellent ventilation.

As will be seen by the floor plans, the dining room is also a front corner room and is connected with the living



Second Floor Plan.

room by a cased double opening. This room is 11 feet by 12 feet 6 inches. The kitchen, 8 feet by 11 feet, is directly back of the dining room.

Open stairs run out of one side of the living room directly opposite the entrance door and lead to a central hall on the second floor. Here are found the bedrooms, one directly above the living room and practically the same size, and the other 11 feet by 14 feet 6 inches. At the head of the stairs is the bathroom. Should the family be willing to have smaller bedrooms or should the occasion arise the large, bedroom can be partitioned into two, each one being 10 feet by 10½ feet.

The wide porch with the brick steps and the overhang of the porch roof take from this home the plainness which is sometimes a drawback in the true colonial design.

Iron Bases for Porch Columns Prevent Rotting

An iron base for porch columns and newels that raises the column from slightly less than two inches to six inches off the floor, allowing air to circulate between the column and the floor, so preventing rot, is available for round and square columns. Prices are reasonable.

Permitting water to run off the floor without wetting the bottom of the column, these supports, it is claimed, will add years to the life of the columns, saving many dollars in replacement costs and improve the appearance of the porch. Water that clings about the base of columns and causes rot and decay is, through the use of these bases, passed off without causing injury. Water also is prevented from backing under and in between the turned wood base.

As it is necessary for the turned wood base to have an open center a trifle smaller than the opening in the column to ventilate the column shaft, there are no outside fastenings. Holes are provided in the center bearing for fastening the beam to the floor.

The turned wood base is first fastened to the iron base, this is then fastened in position to the floor and the column is fitted into the wood base. Before fastening the column the end should be painted, as well as the wood block upon which the column rests.

Simple Color Is Best for Room of Small Size

If one is not able to have the services of an interior decorator in completing the home, but must rely on one's own unguided knowledge in color and design, it is a good plan to choose the wall paper first.

From the hues used in it, the general color scheme may be selected, as well as harmonizing materials for drapery and upholstering uses.

Using the wall paper as a basis for the rest of the room is made possible by the care and artistic knowledge which is employed in the planning and designing of wall paper in the modern factory.

Each manufacturer has his artists, expert in their line, to design and plan the colors of his article. His paper is a work of art, and, as such, may confidently be taken as a guide by the inexperienced.

Tudor Beauty Found in New Style Roofing

For many years comparatively few persons recognized the interesting qualities to be found in Tudor architecture, but recently there has grown in this country a widespread appreciation of the graciousness and charm of this old English style.

When the art and design of one country are transplanted to another certain modifications and changes are likely to take place. The English roof was made of natural stone, and the first thought of the American architect was to use only that material. But American inventiveness is not satisfied to follow along the old lines, when some new product can be developed that will add superior qualities. Consequently there has been produced a new and fascinating roofing, tapered asbestos shingles, made in random widths and graduated thicknesses, in a wide range of rich but subdued colors.

The shingles are composed solely of portland cement, pure asbestos fiber and mineral oxides for coloring. They combine the beauty of a natural product with features achieved only by composition material. Instead of possible deterioration, age improves them. They possess a remarkable insulating value and may be had in various types to suit the type of building on which they are to be used.

Water, Sewer and Gas Cost $25 a Front Foot

The cost of utilities, such as sewer, water and gas mains, the necessary service pipes inside of curb line, cement walks, curbing and paving is about $25 per front foot.

As to the increase in values that these improvements have upon land, this depends greatly upon local conditions.

The usual size subdivision lot, whether urban or suburban, is of little, if not practically of no value, without utilities.

A subdivision lot is increased in value one to two times the cost of utilities—in other words, the cost of all utilities being $25 per foot, a subdivision lot is increased in value up to double that amount, or $50 per front foot, and in some cases it may even be more because with these utilities you have a piece of useful property—and without them a piece of useless property.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

A BIG BUGABOO

A MIDDLE-aged man the other day went to see his doctor. He was sick. There was no question about it. He couldn't eat, he couldn't sleep, indeed, he admitted that it kept him busy to think in a straight line. In his own words he was "all shot to pieces."

Here was a man who had been splendidly protected against disease by modern scientific methods. His town boasted of one of the best filtration systems and consequently a pure water supply. The community was also the proud possessor of a modern sewage treatment works. He lived in a fine street and a fine house; he had good and safe food to eat; he exercised daily by taking a brisk two-mile walk. He slept with his window open all night, he had been immunized against diphtheria, scarlet fever, typhoid and paratyphoid, he had been vaccinated against smallpox, but with it all he was a wreck.

No, he was not a fanatic. Health preservation hadn't gone to his head. But worry had! In this respect he was something like the rich man of biblical fame who hadn't as much chance of getting to heaven as a camel had in passing through the needle's eye. He had everything in the world to maintain health. But worry kept him out of it!

Worry is a bugaboo. It is usually based on the flimsy foundation of a disordered imagination. Worry is the dark cloud of life. Worry, in fact, is one of nature's very meanest tricks.

Take your own worries, for example. Be honest with yourself. Check back on them. Tabulate the things that have kept you awake at night; that have disturbed your digestion; that have at one time or another shaken you. And what do you find? Nothing. That's what!

And "nothing" isn't much to worry about, much less lose sleep over, is it? Then why persist in doing it?

If a chap is in a trance awaiting the command to go "over the top," that's something to worry about. If one has been caught stealing and sentenced to five years in the pen, that also justifies worry. But the everyday fears about this and that which are going to happen and never do—isn't it simon pure foolish to get sick for such little reason as that?

Don't let worry make a fool of you. Kick it out the first time it shows its nasty, cowardly head. Tramp it down, step on it and kill it. Don't forget, if worry stays long, life goes. Take your choice!

* * *

THE DEATH FLOWER

THERE is a beautiful flower that belies its looks. Its power to create human misery is unbelievable. The rack and ruin for which this bit of horticulture is responsible is perhaps the greatest single instance of unhappiness, pain and suffering in the world today.

China and India grow it commercially. The whole world is its market. Its slaves are numbered in the millions, and its despotism is definitely cruel. Such is the poppy, the producer of the drug known as opium.

In the pharmacopeia, this narcotic has a perfectly legitimate standing Used ethically, and administered by a physician only when extreme conditions of a disease demand it, it is a beneficent instrument. In the hands of conscienceless individuals it becomes a wicked tyrant; and in this role can, and does, sink humanity into abysmal depths.

The drug habit is a fact to be reckoned with in America. America has money and narcotics follow gold. Consequently, it is not surprising that the number of addicts in the North American continent have increased to an alarming degree within recent years.

Less than 1 per cent of the hundreds of tons of narcotics annually produced are actually required for medicinal purposes. The remainder is deliberately used to demoralize as much of the human race as can be brought under its influence.

It is not a pretty subject. But it does not pay to remain silent. When one's friend bands out a habit forming headache powder and a peddler reaches high school students, the problem has assumed sufficient importance to justify an open discussion even if these instances are exceptional.

Opium and its derivative, heroin, are becoming entirely too popular. They invade the homes of the rich and the poor, the good and the bad, but they usually make hopeless wrecks of everyone.

Here are the "don'ts" on the drug evil: 1. Never take any medicine offered you by any person, friend or foe. Your physician is the only one to trust on this important question, narcotic or no narcotic. 2. Teach your children never to accept any powder or pill from strangers or friends. These rules are plain and easy ones. Fight shy of "dope" as you would of death itself.

(©, 1929 Western Newspaper Union.)

Or Any Other Place

A writer says that the dog fills an empty place in man's life. And hot dog kennels fill many an empty place in roadside scenery.—Cincinnati Enquirer.

Conceal scuffs this easy way

A touch or two of the dauber conceals scuffs like magic. Color is restored uniformly to faded shoes. More than 50 long-life shines—50 cents. Colors for black, brown, tan and white shoes—a neutral polish for others.

BARTON'S DYANSHINE SHOE POLISH

Author's Faith in His Book Brought Results

Aspiring to be an author, Jonathan Leonard wrote a story of Cape Cod life and submitted it to a publisher, who promptly returned it, and thereupon he sent it to several other publishers one after the other with the same result, and finally becoming discouraged, at the age of fifty he set about to print the book through his own endeavors and by his own hands. He purchased a small printing press and set the type himself, printing two pages at a time until the work was completed. Then he went out and learned something about bookbinding and bound 100 volumes, mainly for the purpose of observing the formalities of the copyright laws. The accumulation of volumes was distributed among his friends and finally a copy fell into the hands of one of the publishers who had passed upon it before and he saw the merits of the work and immediately arranged for another edition. In the meantime Mr. Leonard had written another book and the same publisher has contracted to handle it also.—Exchange.

Cultivating Greenland

There comes a death-knell for the term "Greenland's Icy Mountains." News has been sent out that Danish farmers have started to cultivate the lands of that far Arctic possession, and with the prowess of the Danes in agriculture, in their own land, and elsewhere, success should come from the venture.

The northland of Canada has shown its fertility and possible wealth in latitudes long thought a waste. The redemption of Greenland will interest the world and be of special significance to this country with its vast undeveloped areas lying much farther south than the "icy" mountains of Greenland.

Mad Arguments

Will H. Hays said on disembarking from the Berengaria:

"The movie fight I have just returned from convinces me that the world needs a pact outlawing war.

"The only arguments I have ever heard against this pact remind me in their madness of Bismarck's words when he wanted a war there was no real need of.

"'Well, after all,' said Bismarck, "the lives this war will cost are the lives of men who will be dead anyhow 40 years hence.'"—Detroit Free Press.

Lindy Cheese

A grocer living near a grade school had a very small customer.

"I want a nickel's worth of Lindy cheese," said the lad.

"I have no cheese by that name," said the grocer.

"Yes, you got Lindbergh cheese. You know, the kind that makes the girls hold their noses."

If

The excitement of an impending house-moving gripped Elizabeth.

"Yes," she confided to an eight-year-old friend, "we've got moving wagons and everything up to our house, hauling our furniture away."

"Well," replied the other girl, "we're going to move, too—if our house burns down."

Expert Testimony

From Montreal we are reminded of this one:

Attorney—Can you tell me if the lady was expensively garbed?

Lucius—'Deed she was. And ah know expensive garbage when ah sees it.—Boston Transcript.

Moneyless

"My dear, Charley was perfectly priceless last night."

"In what way?"

"Oh, broke again."

If you use Red Cross Ball Blue in your laundry you will not be troubled by those tiny rust spots, often caused by inferior bluing. Try it and see.—Adv.

The self-seeker seldom finds that he is sought after.

A Perfect Day

IS NOT one that leaves you with tired, aching feet. They will spoil any day, but if you shake Allen's Foot-Ease into your shoes in the morning you will walk all day or dance all night in perfect ease. It takes the sting out of corns, bunions and calluses. Sold everywhere.

WHY

Welding of Steel Girders Is Liked by Builders

The welding process as applied to the construction of buildings has many advantages. It not only eliminates the noisy rat-tat-tat of the riveter, always a source of disturbance to the surrounding district, but is said to be cheaper, quicker and more reliable. One electric welding outfit can do the work of four men using the riveting-gun method.

Fewer tools are required and no rivets are used in the welding process, both items representing another saving.

The only tool used in the process is a welding machine.

Before actually welding together two girders they are first bolted together in order to fix them, in a secure and accurate position. This is done usually by means of angle iron supports and clamping plates.

With the girders in position, the welder is started. Steel is fused with steel and becomes a solid mass which hardens almost instantly, after which the bolts and angle irons are removed. Careful tests have shown that welded girders will stand up better than those riveted together.

Why Paint Clings to the Surface of Wood

Laboratory authorities claim there is good reason for believing paint does not really adhere to wood, at least after the paint has dried out thoroughly, but that it hangs on chiefly by gaining mechanical grips in minute openings in the surface of the wood.

The degree of "paintability" of certain woods depends upon whether the openings are few or numerous, small or large. The effect of wood grain on paint tenacity is noticeable on wood having wide annual growth rings and in which there is a sharp contrast between spring wood and summer wood. The summer wood is much denser than the spring wood, so that paint scales off the former more quickly. The laboratory report states that if some way were found to make paint adhere better to wood, the durability of paint on all woods would likely be improved and that the differences in their painting characteristics would largely disappear.

Why Wood Petrifies

Petrification of wood through the replacement of the wood tissues by silica or other minerals occurs only after long burial under favorable conditions. Water charged with dissolved minerals infiltrates through the wood and particle by particle takes the place of the organic matter. This does not occur within a short period, nor does it occur while the wood is exposed to the atmosphere. The belief that standing fence posts sometimes petrify evidently arose from the fact that fossil or petrified wood is often used for posts. Many persons who see these posts of petrified wood mistakenly suppose that they petrify after being set. Slabs of limestone are used for fence posts in many states. In Kansas there is a layer of limestone so well adapted to such use that it is locally known as "fence post limestone."

Why the Dollar Mark

Authorities differ as to the origin of the dollar mark In Notes and Queries it is stated that the Spanish real was formerly current in the Southern states, and that accounts in that part of North America was kept in dollars and reals. As a distinguishing mark in the books, a cancelled figure 8 was used, or sometimes the 8 was put between two slanting lines, thus—/8/. When the United States adopted the dollar as the money unit, it was found convenient to continue the old mark. Another origin traces the dollar mark to the Mexican pillar dollar, on the reverse of which is the representation of two pillars or columns connected by a scroll. Another theory is that the sign is the union of the two capital letters U. S., meaning United States.

Why Brighter Bindings

Library workers have found that little-read books often become more popular when dull-colored or soiled covers are replaced with brighter bindings, says Popular Mechanics Magazine. A special cover, coated with a material similar to a chemical finish used on automobiles, has been introduced. It is waterproof, finger-marks and stains may easily be washed off, and it can be obtained in a wide variety of colors and designs.

Why We Say "O. K."

It is impossible to state definitely how or by whom the expression "O. K." was originated. Some authorities ascribe it to Aux Cayes (pronounced o-kay) in Haiti, from which the best tobacco and rum were imported to this country in Colonial days. The name of that port was often written as O. K. and this came to signify quality in other goods besides tobacco and rum.

Why "8" Is Lucky

According to the Pythagorean philosophers, "8" was the number of justice because it divides evenly. As the first cube it was believed to be representative of the corner stone and hence plenty.

Why to "Unknown God"

Several altars to "an unknown god" were built in Athens. They were erected during a plague, since the Athenians did not know what god was offended and needed propitiation.

HOW

THE TWO KINDS OF WATERSPOUTS ARE FORMED.—Waterspouts at sea are composed chiefly of fresh water, not salt water, as commonly supposed. That is the conclusion of those who have investigated the subject in recent years. According to the weather bureau, there are at least two different kinds of waterspouts.

One kind starts at the surface of the water, somewhat like dust whirls start on hot, dry plains. It may rotate either clockwise or counterclockwise. The other kind, the typical waterspout, starts at a cloud level and burrows down. It is essentially a tornado over water, although it is usually less violent than the average tornado over land.

Such a waterspout appears as a rapidly whirling, funnel-shaped column of air, extending from a storm cloud to a water surface. The axis is visible as a column of water or water vapor. A strong upward indraft beneath the base of the cloud produces the formation and the air supplying the indraft acquires a rapid rotary motion as it ascends. This produces a decided low pressure in the central axis of the eddy, and the rising air flowing into the column expands as it passes into places of low pressure. This in turn causes the air to cool and become visible by condensation of part of the moisture.

How Danes Originated the Drinking Pledge

The phrase, "I'll pledge you," in drinking is said to have first been used shortly after the Danes came into England about the year 800. Doctor Harrison, in his "History of Great Britain," says:

"If an Englishman presumed to drink in the presence of a Dane without his express permission it was deemed a mark of disrespect that nothing but his instant death could expiate. Nay, the English were so intimidated that they would not venture to drink even when they were invited until the Danes had pledged their honor for the Englishman's safety; which introduced the custom of pledging each other in drinking, of which some vestiges still remain among the common people of the north of England, where the Danes were most predominant.

"These people, the Danes, at that time, had the unpleasant habit of waiting until a person was drinking and then either stabbing or cutting the drinker's throat."

How Senate Stops Debate

Until the senate rules were amended on March 8, 1917, there was no limit of debate. On that date the rules were amended so that: "If at any time a motion, signed by 16 senators, to bring to a close the debate upon any pending measure is presented to the senate, the presiding officer shall at once state the motion to the senate, and one hour after the senate meets on the following calendar day but one, he shall lay the motion before the senate and direct that the secretary call the roll, and, upon the ascertainment that a quorum is present, the presiding officer shall, without debate, submit to the senate by an aye and nay vote the question: 'Is it the sense of the senate that the debate shall be brought to a close?' And if that question shall be decided in the affirmative by a two-thirds vote of those voting, then said measure shall be the unfinished business to the exclusion of all other business until disposed of. Thereafter no senator shall be entitled to speak in all more than one hour on the pending measure, the amendments thereto, and motions affecting the same, and it shall be the duty of the presiding officer to keep the time of each senator who speaks."

How Pearls Should Be Kept

It is a popular belief that pearls deteriorate readily, yet the observance of a few rules is sufficient to care for them properly. They should be kept in as even a temperature as possible, for they expand and contract on exposure to heat or cold. The composition of the pearl is 92 per cent carbonate of lime, 6 per cent organic matter and 2 per cent water. It is essential that this water be retained in the pearl. In order that this may be accomplished pearls should be kept in a container lined with a fine quality of oil silk rather than in a receptacle lined with absorbent material.

How Sharks Catch Fish

The shark known as the thresher shark has a method of catching its prey differently to its relations. This shark is endowed with a long curved tail, which it uses as an oar to lash the water when it is swimming along. This "lashing" frightens any smaller fish that are in the neighborhood and in the usual manner of fish they flock together in a mass. This is just what the shark is waiting for, and directly the fish have congregated together he turns rapidly, opens wide his large, vicious mouth, and gathers in the whole appetizing meal.

How Cinnamon Grows

Cinnamon is the pale, yellowish-brown inner bark of the cinnamon tree. It is dried in the sun, and is strongly aromatic.

A man should devote one day a week to doing the things he "put off until tomorrow."

Some people seem to live in the air and every time they touch earth they get into trouble.

Idle Hour Theatre

FRIDAY AND SATURDAY

May 24 and 25

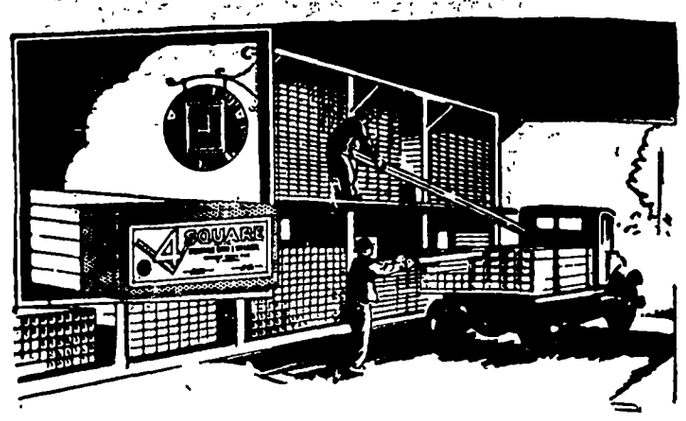
"We Americans"

A Universal production. A fine drama of our immigrants. The struggles, loyalty and problems of these new Americans will make you more tolerant an dsympathetic. A fine study in patriotism and splendidly acted. You should not fail to see this special picture. Bring your famly.

A BUSTER BROWN COMEDY

with George Sidney, George Leonard and Patsy Ruth Miller

Admission 35c, 25c, 15c



4 SQUARE lumber is ready for you at our yards

4-SQUARE Lumber is the new kind of lumber—the packaged lumber of *guaranteed quality*.

You know exactly what you are really getting when you buy it—the *species* and *grade* are plainly marked on the label.

4-Square Lumber is wonderful lumber. It is thoroughly seasoned—finely dressed—cut to *exact* lengths—and *trimmed square* at both ends.

When you need lumber come in and look at our 4-Square stock.

Northern Lbr. Co.

4 SQUARE LUMBER DEALER

You might call this "putting the car over the bumps." Drawing made from a photograph of a car driven over a road scientifically made bad at the Proving Ground.

Here's where a car leads a tough life

NO General Motors car is turned out of the factory until a fleet of exact duplicates of that model has been found good by the engineers at General Motors' Proving Ground.

Such an advance model must *prove* itself from stem to stern. The tests involve speed, power, endurance, braking, riding comfort, handling ease; fuel, oil, and tire economy; body strength—every phase of car construction and performance. It's a *tough life*.

Such testing would be beyond the means or resources of an individual. 1268 acres of land at Milford, Michigan, are devoted to this outdoor laboratory where hills are steep and roads are vicious. Men who are among the world's best automotive engineers conduct the tests.

This tested performance is as much a part of a General Motors car as the chassis. You can't see it. You don't pay extra for it. But you *know it* as you give the car long use on the road.

TUNE IN—General Motors Family Party, every Monday, 8:30 P. M. (Eastern Standard Time) WEAF and 37 associated radio stations

CLIP THE COUPON

General Motors (Dept. A), Detroit, Mich.

Please send me, without obligation, information on the *new models* of the products I have checked—together with your new illustrated book *"The Open Mind."*

GENERAL MOTORS

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$725 A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful new Fisher Bodies. *Also* Light delivery chassis. Sedan delivery model, 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

PONTIAC. 7 models. $745—$895 Now offers "big six" motoring luxury at low cost. Larger L-head engine; larger Bodies by Fisher. New attractive colors and stylish line.

OLDSMOBILE. 7 models $873—$1035 The Fine Car at Low Price. New models offer further refinements, mechanically and in the Fisher Bodies—yet at reduced prices. Also new special De Luxe models.

OAKLAND. 8 models. $1145—$1375. New Oakland All American Six. Distinctively original appearance Splendid performance. Luxurious appointments. Attractive colors. Bodies by Fisher.

VIKING. 3 models. $1595. General Motors' new "eight" at medium price. 90-degree V-type engine. Striking bodies by Fisher Unusual appointments. Three years spent in its development and test.

BUICK. 19 models $1195—$2145. The Silver Anniversary Buick Three wheel-bases from 115 to 128 inches. Masterpiece bodies by Fisher. More powerful, vibrationless motor. Comfort and luxury in every mile.

LASALLE. 14 models. $2295—$1875. Companion car to Cadillac. Continental lines. Distinctive appearance 90-degree V-type 8-cylinder engine. Striking color combinations in beautiful bodies by Fisher.

CADILLAC. 25 models. $3295—$7000. The Standard of the world. Famous efficient 8-cylinder 90-degree V-type engine. Luxurious bodies by Fisher and Fleetwood. Extensive range of color and upholstery combinations.

(All Prices f. o. b. Factories)

ALSO

FRIGIDAIRE Automatic Refrigerator. New silent models with cold-control device. Tu-tone cabinets. Price and model range to suit every family.

DELCO-LIGHT Electric Plants — Water Systems Provide all electrical conveniences and labor-saving devices for the farm.

All General Motors products may be bought on the low-cost GMAC Time Payment Plan.

FOR 9 YEARS GAS RUINED HER SLEEP

"Due to stomach gas I was restless and nervous for 9 years. Adlerika has helped me so that now I eat and sleep good." Mrs. E. Touchstone

Just ONE spoonful Adlerika relieves gas and that bloated feeling so that you can eat and sleep well. Acts on BOTH upper and lower bowel and removes old waste matter you never thought was there. No matter what you have tried for your stomach and bowels, Adlerika will surprise you. Wilson's Pharmacy.

HOW

FIRST TEDDY BEAR WAS MADE BY GERMAN GIRL.—About 1888 Margarete Steiff, a crippled dressmaker living in a little village in Germany, used some left-over material to make a toy bear for a child. The bear was popular and other children in the community immediately wanted rag bears. Margarete's brother, Richard Steiff, later saw the commercial possibilities of these toys and put them on the market. George Borgfeldt & Co. of New York imported some in 1902. At that time, of course, they were not called teddy bears and nobody thought of associating them with Roosevelt. It so happened, however, that President Roosevelt went on a hunting trip to Mississippi that same fall. The public was very amused when a news dispatch from Smedes, Miss., stated that "Teddy" had refused to shoot a small bear brought into camp for him to kill. This inspired Clifford K. Berryman, the cartoonist, to draw a cartoon picturing Colonel Roosevelt in his hunting outfit with his back to a man who is dragging in a small cub with a rope around its neck. Roosevelt, with his gun in his right hand, has his left hand raised after the fashion of a traffic cop to indicate his objection to the procedure. The cartoon is labeled "Drawing the Line in Mississippi." It was a popular hit and Berryman adopted the bear as his cartoon mascot.

How Speech by Humans First Came Into Being

Sir Richard Paget described, in a lecture at the Royal Institution of Great Britain, how insects and animals convey their emotions to each other, and how human speech first came into being. He said that the emotional state is very commonly expressed by sound, as, for example, in the love songs of the crickets and birds, and the howls, purrings, grunts and growls, the joyful barks and whinnies with which we are all familiar in the animal world.

Sir Richard, dealing with the origin of human speech, said: "Primitive man's rudimentary ideas and intentions were expressed by simple pantomime, mostly by his hands, but with the co-operation of his body. But all this time man was also developing his arts and crafts. His hands became more and more occupied, and he found it increasingly difficult to 'talk with his hands full.'

"Quite unconsciously he began to use his tongue and lips instead of his hands. In Europe the more southern races, leading easier lives with more hand-leisure, have retained many of their hand gestures. The northern races, living under more rigorous conditions, have had their hands too full. The northerners, therefore, were led to gesticulate almost entirely with their tongues and lips."

How Obelisk Was Brought

The tall Egyptian obelisk now in Central park, New York, was originally reared 3,500 years ago at the Temple of Heliopolis, six miles from modern Cairo, by order of Thotmes III, king of Egypt. It is more than 67 feet in height. According to the National Geographic society, it was presented to the United States by the Egyptian government about 40 years ago and its removal to New York presented a novel problem because of its excessive weight. The obelisk was lowered to a wooden caisson in which it was floated to the dock and was placed in the steamship which carried it to America by opening a port in her bow. On its arrival it was transported by rail to Ceutral park where towers and trunnions were used in raising it. A similar obelisk, also called Cleopatra's needle, was transported to London in 1880.

How to Re-Silver Mirror

To satisfactorily renew a mirror which has been damaged by wet or other causes is the work of an expert. One method of re-silvering requires tinfoil and quicksilver. First remove all grease and soil from portions of mirror to be mended. Then pour some quicksilver upon a piece of tinfoil a little larger than the patch to be repaired. Rub well with a piece of leather until the foil becomes brilliant. Lay the glass, face downwards, upon a table and place the foil treated side down, upon the damaged portion. Lay a sheet of paper over the foil and place a heavy flat block or weight upon it. Let it remain for a few hours, when the foil should adhere to the glass.

How Pain Is of Benefit

Maeterlinck, in one of his essays, shows how there is a kind of instinct driving us at times to seek for reality in the only place where we shall probably find it—on the sharp peaks of pain. All those legends about the nightingale pressing its breast against a thorn in order to be able to pour its deathless music forth into the night, of the pelican feeding its young with drops of blood from its own breast, bear evidence to the fact that mankind has always had an instinctive feeling that the world of sentient things would never come to its highest expression apart from some revelation of sorrow or suffering.—Rev. Hubert L. Simpson.

NEWS REVIEW OF CURRENT EVENTS

Explosions, Poison Gas and Fire Kill Scores in a Cleveland Hospital.

By EDWARD W. PICKARD

ONE of the most terrible and distressing disasters of recent times occurred in Cleveland, Ohio, resulting in the deaths of at least 124 persons and the injury of many others. Fire of undetermined origin broke out in the Cleveland Clinic and soon reached a great quantity of X-ray films stored in the basement. These, exploding, gave off deadly gases that spread through the four-story building. Patients, doctors and nurses were nearly all unable to make their way to the doors and windows, so swiftly did the fumes render them unconscious; and for a time no rescuers could enter the building unless equipped with gas masks. Even outside the structure pedestrians passing at the time of the blasts fell to the ground overcome by the gas and could not be dragged to safety until it had lifted.

Most of the victims were killed by the gas fumes, according to the authorities. Among them were many well-known citizens of Cleveland and vicinity, and a number of nationally known physicians who were in attendance on patients. Members of the clinic staff were credited with the utmost valor in their efforts to save the patients, and many of them gave their lives. The police and firemen and numerous chance passersby were no less valorous. Dr. George W. Crile, noted surgeon, founder and chief owner of the clinic, was foremost in the relief work. Fire Chief James P. Flynn was an outstanding hero. He had his men lower him time after time through the skylight on the roof and he brought out 10 living or dead.

Experts in Cleveland said the poisonous gases were due to the burning of X-ray film in large quantities. The photographic films, which has much the same composition as gun cotton, in addition to exploding with terrific force, threw off three kinds of compounds. These were camphor, carbon monoxide, and the gas of nitric oxide or other nitrogen compounds. Inhalation of the carbon monoxide resulted in death similar to the breathing of exhaust gas from an automobile in a closed garage.

THE senate passed the McNary farm relief bill, including the export debenture feature, by a vote of 54 to 33. Only two Democrats—Wagner of New York and Walsh of Massachusetts—were recorded in the negative. Twenty-one Republicans voted for the bill and 31 against it. The action of many of the latter was in protest against the debenture provision which President Hoover opposed. Leaders of the house at first were disposed to refuse to accept the senate measure on the ground that the debenture clause was revenue legislation, which must originate in the lower house. Then it was decided to send the bill to conference and kill the objectionable feature there. A special rule was adopted, however, setting forth that the house stood on its rights and that its action in this particular case should not be considered a precedent. The rule carried a rebuke to the senate for invading the prerogatives of the house. All the house conferees and three of the five senate conferees were on record as opposed to the export debenture plan.

DEBATE on the tariff bill continued in the house and the expressions of dissatisfaction with its provisions were numerous. Many requests for further increases in duties on farm products were submitted to the ways and means committee. President Hoover showed his good will toward agriculture by signing executive orders, under the operation of the flexible tariff, increasing the rates on milk, cream and flaxseed; he also approved an increase in the duties on window glass as asked by Pennsylvania manufacturers. The increased rates on milk and cream, not as high as provided in the Hawley bill, are aimed against Canadian importation: the higher rate on flaxseed, the same as in the Hawley measure, is directed against imports from Argentina.

Speaker Longworth said last week the house, after disposing of the farm relief and tariff bills, might recess for six weeks or two months. The senate probably will recess for three weeks or a month while its finance committee struggles with the tariff measure.

DESPITE the earnest fight put up by Southern Democrats and some drys, Senator Vandenberg's bill for the 1930 census and redistricting was made the unfinished business in the senate and given right of way over other measures until disposed of. Its passage was considered certain. Favorable action by the house is a matter of course, for that body passed the reapportionment bill which was killed by a filibuster in the closing days of the last congress. Under the provisions 17 states will lose 23 members of congress and 11 states will gain the same number.

GEN. CHARLES G. DAWES, our new ambassador to Great Britain, spent a few days in Washington last week conferring with President Hoover and Secretary of State Stimson. Reporters swarmed about him asking his views on all sorts of current topics, and he evaded the queries politely until one wanted to know whether he would wear silk knee breeches at the court of St. James.

"Do you want a diplomatic answer," responded Ambassador Dawes, "or the answer that question deserves?"

"Shoot," his interrogator replied.

"You can go plumb to hell," General Dawes retorted; "that's my business."

IT WAS announced at the White House that President Hoover had offered the post of governor-general of the Philippines to Dwight F. Davis of St. Louis, former secretary of war, and that his early acceptance was expected unless he decided that Mrs. Davis' health precluded it. This appointment was a surprise as Mr. Davis had been prominently mentioned for an ambassadorial position, probably in Paris. However, the Philippines post would be especially acceptable to him because of its good salary—$25,000 a year—and because he has long been deeply interested in the affairs of the islands and desired to visit them. In Washington it is now understood that the place of ambassador to France will be given to Senator Walter Edge of New Jersey after the close of the special session of congress.

THE Washington Post, having recently printed an article predicting the recall of the Belgian ambassador, Prince De Ligne, which brought an apology from the secretary of state, the Philadelphia Record came out with a story of the alleged conduct of Edward McLean, publisher of the Post, during a function at the Belgian embassy, stating he was asked to leave by Prince De Ligne, and implying that this supposed occurrence was the real reason for the attack on the ambassador in the Post. Now Mr. McLean, who is prominent in Washington society, has brought suit against the Record for $1,000,000 damages, denying that paper's story in toto and asserting that as a result of the story he "has been and is greatly injured in his said good name, fame, reputation and credit . . . and is brought into public scandal, scorn, infamy, shame, and disgrace, . . . has suffered and endured great mental pain and anguish. . . . and is subjected to great humiliation and endured great injury in his feelings, and has otherwise been permanently damnified."

FLEETING notoriety has been acquired by the otherwise rather obscure Des Moines university, a fundamentalist institution conducted by the Baptist Bible Union of North America. Dr. T. T. Shields, chairman of its board of trustees, and Miss Edith Rebman, secretary of the board, didn't seem to be satisfied with the fundamentalism of some of the faculty members, and besides they had been the objects of an attack concerning moral behavior. The students, or a majority of them, sided with the faculty, so Shields dismissed the entire teaching staff, including President H. C. Wayman, and ordered the university closed. Meanwhile the students indulged in some rioting and drove from their midst a few Canadians whom they blamed as spies, and then the university was reopened under a court injunction. Shields and Miss Rebman carried the case to the annual convention of the Baptist Bible Union which had just opened in Buffalo, and the delegates sought a way to settle the trouble through arbitration.

COMPLAINT comes from Senator Robert M. La Follette of Wisconsin that President Hoover is not enforcing the seamen's act which bears the name of the senior La Follette. Administration of the law is committed mainly to the Department of Commerce and under Mr. Hoover's administration of that department enforcement of the law was relaxed on the plea that strict compliance with it, especially in regard to manning of ships, would make it impossible for American vessels to compete with those of foreign registry.

"I know this is the excuse for non-enforcement of the law," said Senator La Follette. "But it will not hold water. It might be that ships manned with the prescribed crews would make a little less profit, but they would still make plenty and they would be far safer for passengers and crews. If the President means what he says about law enforcement, I do not see how he can refuse to enforce the seamen's act."

POLICE of Vienna and Budapest have uncovered a plot for another communist revolt in Hungary, and have arrested a number of men on charges of forging passports and promoting political conspiracies. Documents were taken revealing that the prisoners were acting under orders from Moscow; also that Bela Kun, leader of the communist revolution in Hungary during 1919, and who was expelled from Austria last September after spending three months in prison for having entered without permission, has been visiting Vienna since his expulsion in order personally to direct preparations for the Hungarian revolt.

COMPLETELY recovered from his illness, King George of England returned last week to Windsor castle from Bognor, his place of convalescence. All along his route he was greeted by cheering thousands of his affectionate subjects, and at Windsor his motor car was showered with rose petals. The joy of the people was so genuine and sincere that the king and Queen Mary were deeply affected.

It was announced that the king would personally attend to all business connected with the calling of the new parliament and the constitution of the new government after the election. These duties may be fairly heavy if, as seems likely, no party obtains a clear majority and the king is forced to intervene to break a parliamentary deadlock.

GRAF ZEPPELIN, the big German dirigible, started on a trip to the United States last week carrying passengers and freight; but off the east coast of Spain two motors were disabled by broken crank shafts and the airship turned back to Friedrichshafen.

REPEATED earthquake shocks in Khorasan province, Persia, killed more than three thousand persons, wrecked Bujnurd and other towns and laid a great expanse of territory in waste. The governor of the province called on the government for relief for thousands of injured and sick inhabitants, and supplies were sent by airplanes to regions difficult of access otherwise.

EUGENE GILMORE, acting governor general of the Philippines, has been informed in an official report that graft which may involve several millions of dollars has been uncovered in the bureau of commerce and industry, and he is asked for complete reorganization of the bureau. The director and vice director and maybe a dozen others are mixed up in the matter.

NATIONAL PARKS QUITE POPULAR

Big Increase Seen in Construction of Better Forest Roads.

National forests of the United States, located in various parts of the country, are becoming increasingly popular as touring grounds for motorists, and each succeeding year sees a greater number of motor vehicles passing through these beautiful preserves.

This is pointed out by Charles M. Bayes, president of the Chicago Motor club, who says that with this increase in motor touring in the national forests there is to be noted a corresponding increase in the total of improved roads located within them.

Works on Better Roads.

"Figures forwarded to us from national headquarters of the American Automobile association with which we are affiliated, show that recent work on forest roads has brought the total of improved highways there up to 3,775, while the total of all forest roads is 13,911.

"Each year witnesses a gain in the number of motorists who are attracted by the unsurpassed beauties of our national forests, and each year also witnesses additional miles added to the chain of improved roads which is making these delightful areas available to all motor car owners.

More Vacationists in Parks.

"But statistics alone do not tell the whole story of the rising popularity of the national forests as objectives of countless motor tours. A check-up of our own local touring bureau reveals that we directed more vacationists to the national parks during the last year than in any other similar period.

"The increased mileage of improved roads, of course, has had a markedly stimulating effect, and with the policy of constantly advancing that total of mileage strongly in effect we can look forward to a greater flow of cars to the forests next year."

Splashed Oil Is Due to Carelessness of Owner

Much that passes for oil leakage around the engine is the result of carelessness in adding oil to the crankcase. Just a little oil, spilled over the outside of the filler pipe, will splatter around the engine and give the appearance of trouble.

Since most filler pipes are located toward the front end of the engine the oil that is spilled is nearer the fan and is more easily picked up and scattered.

In some arrangements any oil that is spilled will run down over the front of the timing gear case and drip on the lower fan pulley. This may cause slippage of the belt and overheating of the engine.

At the high speeds cars now travel oil is apt to be blown back to the rear of the engine, where it may be mistaken for leakage from the oil lead to the pressure gauge on the instrument board.

Value of Oil Filter Is Demonstrated in Tests

That engine wear is directly proportionate to the amount of abrasives in the lubricating oil was demonstrated recently in a series of interesting oil filter tests made by research engineers.

The test showed that there is practically no wear with clean oil, but that with the abrasives the wear increases rapidly.

The oil filter keeps the abrasive content down to an average of .025 per cent. When it is known that the crankcase oil in an average car after 500 miles running will have 10 per cent abrasives, the important work accomplished by the oil filter can readily be appreciated.

After 10,000 miles the oil filter's filtering unit becomes filled with foreign matter taken from the oil. When this takes place the filter ceases to function properly and it is important that the motorist have it serviced.

MOTOR QUIZ

(How Many Can You Answer?)

Q.—What is the average daily run of a tourist now as compared with ten years ago? What are the contributing factors for this increase?

Ans.—The average daily run of a tourist has increased from 100 miles ten years ago to 234 miles today. Better highways, motor car improvements, more adequate sign-posting, improved motor facilities and the raising of speed limits have helped increase this average.

Q.—What devices save oil and minimize wear on cars?

Ans.—The air cleaner eliminates dirt from the intake air; the crank-case ventilator removes water vapor; the oil filter removes sludge and other foreign matter from the oil and the thermostat keeps the engine and oil at the proper temperature. Except in the case of the oil-wetted type of air cleaner, the only unit that requires attention is the oil filter, which should be renewed every 10,000 miles.

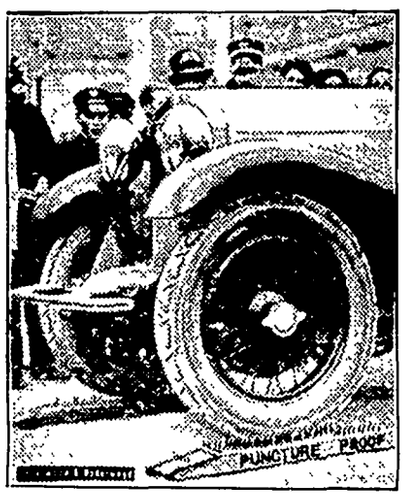
Q.—What results when the storage battery fails completely?

Ans.—The engine will be rendered as useless as if the gas tank were empty.

Q.—What care should the battery receive?

Ans.—The battery should be kept at its maximum charge at all times, and never permitted to stand in a discharged state. Fast charging should be avoided. Before unscrewing the filler caps it is a good plan to wash the top of the battery with a solution of ammonia water. The electrolyte level should always be kept above the plates.

American Tires Found to Be Puncture Proof



A usual test which a newly sold car must go through in Rome—that of driving the loaded car over boards filled with nails to show the skeptical Italians that the tires—American made—are really puncture-proof.

CREAM OF THE NON-FRAT MEN

(© by D. J. Walsh.)

A LITTLE old lady in homespun clothing entered the great reception hall and looked nervously around. She seemed fully out of place with her loose-ng dress, her frightened smile and the knitted bag hung from her t arm. She appeared to be lost.

he passed the receiving line as if daze and begun to scan the dance with eager eyes. She was the person at the president's recep- not in evening dress.

Worthington Adams saw the little lady and took pity on her. He ed to where she stood.

Looking for some one?" he asked rteously.

The old woman looked up at him smiled in a motherly way. She ched him lightly on the arm.

Sammy. I'm looking for my Sam-" she said. "He wrote he was com- here tonight."

dams was president of the junior and one of the campus leaders. eyes of the entire party were on as he stood talking to the little an.

I'm sure I don't know who you n by Sammy," he said. "If you'll me his last name perhaps I can him for you."

ams gasped as he heard the name s own fraternity. But he caught composure in time to reply before little old lady noticed anything g.

es, Mrs. Smothers. It is a very fraternity." The little old wom- lled broadly at that, and pulled at Adams' sleeve.

mmy didn't expect me here to- " she said. "He told me in his that he was a going to be here, came as soon as I got off the I got three extra washings last so I thought I'd come and sur- him. Won't Sammy be glad, h?" The little old woman ed.

ms turned his face away. "Yes, Smothers. He should be very In his heart Adams knew that would not.

The little old woman was fumbling in her knitted bag. Presently she pulled out a crumpled piece of paper and began spreading it out.

"Here's a wonderful poem that Sammy wrote about me and our home at the Bend," she whispered.

"You mustn't tell him I let you see it, cause he'd rave. Said in his letter I shouldn't show it to a soul, as he didn't want them to know how good he could write until he was famous."

Adams picked up the paper and began to read aloud:

"She lives in a house by the side of the road,
Where the race of men go by.
The men who are good and the men who are bad,
As good and as bad as I—"

Adams read no further. The form of a boy in loose-fitting evening dress hurtled through the door and tore the paper from his hand. The pimpled face and wiry blonde hair Adams remembered as belonging to some one called before the council for cheating some weeks before.

The boy stood before his mother and refused to receive her proffered caresses. He raged at her:

"Mother! What has this sap been saying to you? Tell me!" He pointed threateningly at Adams.

"Why, Sammy. Mr. Adams has just been telling me about the college and how good you have been getting along. I told him about how I'd come here to surprise you and I showed him your wonderful poem. Why, Sammy—"

"You ought to be shot," Adams muttered to the lad so that his mother could not hear. "I haven't told her anything."

The pimple-faced sophomore gazed dolefully at the door. His mother put her arms around him and kissed him tenderly. "What's the matter, Sammy?" she asked, "what's the matter?"

"Nothing, mother, I just thought—"

"He thought I had been telling you that he was not here, Mrs. Smothers. He was afraid he would not get to see you," interrupted Adams, lying. "Let's show your mother the campus, Smothers. Come on, my car is outside."

Smothers looked at Adams in amazement. Would this fellow who was the campus leader socially, scholastically, politically let his country jake mother ride in his car when even her own son would be ashamed to walk down the street with her?

"What?" exclaimed the pimple-faced boy, unable to understand the situation.

"I say, get your coat and let's show your mother the campus. I'll get Gertrude."

In a daze Smothers led his little old mother to the big car standing in front of the building, and waited for Adams and Gertrude Stein, reputed to be the most beautiful girl on the campus. To his still greater amazement, Adams insisted upon riding with Mrs. Smothers, while Gertrude climbed into the rear seat with the son. Graciously the young lady accepted the situation. She understood Adams.

They showed the little old woman the college buildings. They told her of the century-old traditions. They rode far into the night and at last stopped in front of Gertrude Stein's sorority house. The coed leader insisted that the little old woman share her quarters for the night. Smothers could not speak. He failed to understand these people.

"Good-night, Mrs. Smothers," said Adams warmly. "Sammy and I will call for you tomorrow. We will have dinner at the fraternity."

Adams took Smothers to the Sigma Delta house. During the ride not a word was spoken. The pimpled-faced lad was living in a daze. Not until they were within the great chapter building was the silence broken.

"With a mother like that, you ought to conquer the world, Smothers," said Adams. "But d—n you, you ought to be shot."

The eyes of the lad were filled with tears. Brokenly his voice attempted to express his feelings.

"Until tonight I did not understand," he wavered. "I could only please her by lying to her. She seemed so common in spite of all she does for me."

Adams introduced the pimpled-faced boy to his brothers. He met them all with a new determination. Adams noticed that he did not attempt to appear other than he really was. Somehow he had changed.

"It was following the midterm examinations that the Sigma Delta chapter began discussing rushes.

"There is Smothers," some one said. "I hear nearly all the houses are rushing h—ll out of him. He's the cream of the nonfrat men now. If we could only rate him."

"I hear he has sold a book of poems. Oughta be good for a editorship of the mag next year," added another.

"Say, boy, you should know how hard he worked on those poems. Why, Professor Bentley said that he couldn't write at all this fall, but that he worked day and night with a determination such as Bentley had never seen before."

"He has a good scholastic record this semester," said a member of the rushing committee. "And he's so close to Adams that he'd d—n near give old Worthington his shoes and walk barefooted down the midway. Adams is the man to bid him."

Adams smiled and thought of a little old woman that had taken dinner at the house several months before.

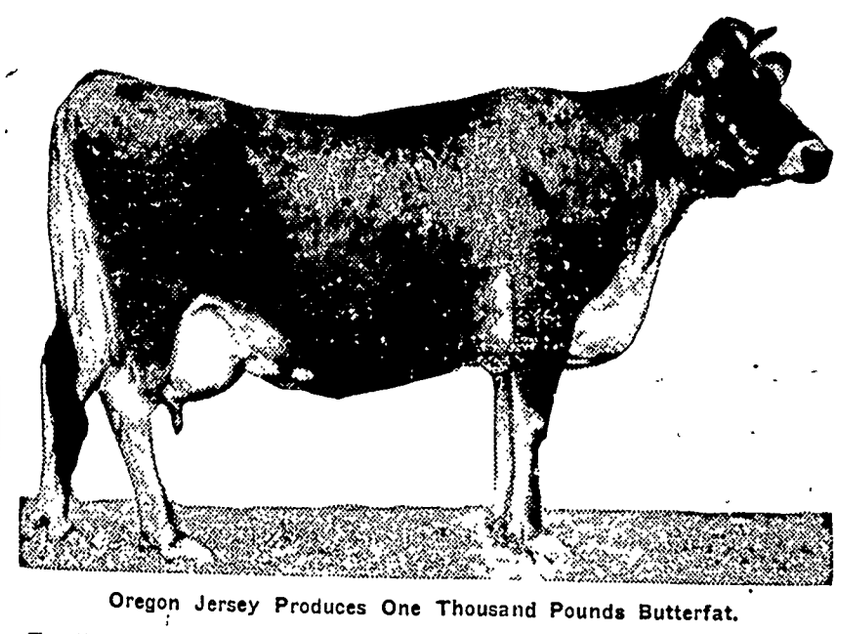
Put Him on Short Time

"Doesn't Jack call pretty often?"

"He's called every night since I met him a fortnight ago, but what can I do?"

"I suppose you could at least put him on a five-day week."

Jersey Sets Butterfat Record



Oregon Jersey Produces One Thousand Pounds Butterfat.

For the first time in history an imported Jersey cow has completed an official test record of more than 1,000 pounds of butterfat. The new record maker, Imported Xenia's Oxford Lilac, 574105, is owned and was tested by Harry D. Iliff, of Sunny Lea farm, Independence, Ore. She has just finished a 365-day official test with a production record of 1,022.37 pounds of butterfat and 17,666 pounds of milk. This cow was bred on the Island of Jersey, the island near the coast of France where the Jersey breed originated. She was purchased and placed on test in 1923 by Mr. Iliff immediately after she made the 7,000-mile journey across the Atlantic and the United States. In that test she produced 821 pounds of butterfat, 13,122 pounds of milk in 365 days, with calf.

Xenia's Oxford Lilac is not only the highest record imported cow, but she is also the twenty-second Jersey in the United States to produce over 1,000 pounds of butterfat, or 1,176 pounds of butter in one year.

Her daughter, the Lion's Lilac, 671092, also owned by Mr. Iliff, is now on official test and is making such a high production record that it is probable that she, too, will produce more than a 1,000 pounds of butterfat in 365 days. In this event, Xenia's Oxford Lilac and her daughter will be the only dam and daughter in the Jersey breed to both exceed 1,000 pounds of butterfat on official test. The Lion's Lilac in a previous test of 305 days started when she was one year and nine months of age, established a new world's record for cows of all breeds for that age class. With her yield of 742 pounds of butterfat and 10,752 pounds of milk, she won the first Medal of Merit ever presented to a yearling cow by the American Jersey Cattle club.

Mr. Iliff owns two Jersey cows that have produced more than 1,000 pounds of butterfat in an official test. These two cows and the new 1,000-pound producer, Imp. Xenia's Oxford Lilac, by their records, give Mr. Iliff the honor of being the only breeder with three Jersey cows in the 1,000-pound class in his herd. Mr. Iliff's Jersey herd rarely numbers more than a dozen cows, but these cows are such high producers that they hold both national and state championships in several age classes as well as many other notable honors.

Garlic Flavor Is Quickly Detected

Best Way to Control Bad Tastes in Milk From Cows Is to Prevent Them.

(Prepared by the United States Department of Agriculture.)

Milk containing objectionable flavors probably causes as serious losses to the American dairy industry as the production of milk that sours, according to C. J. Babcock, of the United States Department of Agriculture. Dairymen, he says, are giving considerable attention to keeping their products sweet, but are not paying as much attention to the flavor and odor. Yet a pleasing flavor will have a tendency to extend their market through increased consumption.

Work Very Quickly.

Two weeds—garlic, or wild onion, and bitterweed—are of considerable economic importance in affecting milk flavor in many dairy regions. Garlic, or wild onion, has almost instantaneous effect. Experiments carried on by the bureau of dairy industry show that garlic flavor can be detected in milk drawn from a cow one minute after she has consumed one-half pound of garlic tops, and in milk drawn two minutes after she has inhaled garlic odor for ten minutes. It is necessary to remove cows from garlic-infested pastures from four to seven hours before milking to prevent the garlic flavor in the milk. Bitterweed, found particularly in the South, makes the milk bitter, and, unlike most feeds, the effect of eating bitterweed does not pass away between milkings.

"The only method of preventing bitter milk in sections where this weed is abundant," says Mr. Babcock, "is to keep cows off infested pasture until the weeds can be exterminated."

Best Way to Control.

"The best way to control off flavors in milk is to prevent them," says Mr. Babcock. "In the production of palatable milk preventive measures are always best. Therefore dairymen should (1) feed milk-tainting feeds just after milking, (2) keep cows and barns clean, (3) properly ventilate cow stables, and (4) aerate milk in order to decrease the intensity of feed and barn taints. Finally, prompt cooling and storing of milk at a low temperature will retard the development of flavors and odors from biological action."

Give Grain Supplement to Animals on Pasture

Should grain be fed to dairy cows on pasture? Since spring and summer grass is relatively low in nutrients, a cow producing 25 to 30 pounds of milk per day must eat about 150 to 300 pounds of grass in order to get enough feed for her daily requirements. Since this is practically impossible, a grain supplement must be given. For cows producing 20 to 35 pounds of milk per day, a mixture of the ordinary farm grains such as oats, corn, wheat bran, and barley fed at the rate of 1 pound of grain to 4 to 6 pounds of milk produced per day will be sufficient. For cows producing more than 35 pounds of milk per day, the ration should contain one high protein concentrate such as cotton seed meal or linseed oil meal.

Frost-Proof Corn Is Grown in Illinois

Tests Indicate New Variety Will Yield Largely.

Frost-proof corn which will withstand a temperature of 27 degrees, has been successfully produced in McLean county, Illinois, by Dr. James R. Holbert, expert in charge of the Funk experimental farms.

In addition to being highly resistant to cold weather, the new strain has shown itself to be less susceptible to the corn borer and flourishes during drought when other strains die. Preliminary tests indicate that the new kind of corn will yield an average of 18 bushels to the acre more than ordinarily good corn. While the new seed has not yet been produced in sufficient quantities to be marketable, Doctor Holbert told an interviewer from the Farm and Fireside that he is making every effort to perfect it. He recommends that when sufficient seed is available that a whole township be planted so that there can be no cross pollenization from inferior fields.

The cold-resisting corn was grown only after years of experiments in which more than $250,000 was spent. To hasten the experiments, Holbert invented a refrigeration machine which can be lowered over four hills of corn at one time and the desired temperature secured. Cold tests are made both at the beginning of the seed's growth and at ripening time.

Doctor Holbert declared that corn does not necessarily have to be frosted to be stopped from ripening or killed. Some corn crops, he added, were found to be unable to resist a temperature of 42 degrees.

...icultural Hints

A cow must have three quarts of water for every quart of milk she produces.

* * *

Farmers who have had the most experience are frank to say they never had too much silage.

* * *

Good breeding and good feeding go hand in hand. Success depends upon combination of the two.

* * *

Soft corn may often be due directly to lack of fertility in the soil, according to crop specialists of Iowa State college.

* * *

Too rapid drying of ordinary concrete removes water that is needed in the process of setting and weakens the concrete.

* * *

Raising good crops is no longer the only job of the farmer. These days he must figure also on making some money on what he has raised.

* * *

Andrew Boss of the Minnesota experiment station says Minsoy soy beans are the best for grain and the Chestnut variety the best for hay.

* * *

Dewberries are much like blackberries except that the canes trail on the ground, and they form new plants by rooting at the tips. After the first season, some support should be provided for the canes.

POULTRY

SELECTING EGGS FOR HATCHING

Quality of Chickens Hatched Depends on Care Used.

Considerable care should be taken in the selection of eggs for hatching, for the quality of eggs used will determine to a large extent the quality of the chickens hatched from them.

This caution is urged by O. C. Ufford, poultry specialist for the extension service of the Colorado Agricultural college.

Eggs used for hatching should never be over ten to fourteen days old, and the fresher the better, the poultry specialist declares.

The size, shape and color of an egg is an inherited quality, and if one uses small or mis-shaped eggs for hatching, the pullets that hatch from such eggs are liable to be undersized and have a tendency to lay the kind of eggs from which they are hatched.

The standard weight of an egg is two ounces. It is best to set eggs as near this weight as possible. A hatching egg should not be long and narrow or illformed in any way. Eggs that are ridged, rough-shelled or thin-shelled in spots are undesirable for hatching purposes.

White eggs should be uniformly chalk white in color; a tint of brown is objectionable. There are many shades of brown, but if one will select for a certain shade one may build up a strain of birds that will lay very uniform colored eggs. This is particularly desirable when one is marketing a particularly high-quality egg.

When one is saving eggs for hatching one should keep them in a cool place, with a temperature of between 45 and 65 degrees. When saving eggs longer than three or four days they should be turned daily.

Turkey Raising Given Earnest Consideration

Turkey raising has attracted considerable attention in late years due to the possibility of raising the turkey in confinement. A majority are of the opinion that turkeys must be given the entire range of the farm, and where this is done is is impossible to keep them away from infected grounds.

The confinement plan which is being successfully used confines the turkeys to areas which are not infested with blackhead, and keeps the turkeys away from chickens. So far as care of turkeys is concerned they may be brooded and fed the same way as baby chicks. All feeds should be hopper fed.

Devastating Diseases Contracted in Yards

It should always be kept in mind that usually the most devastating poultry diseases such as tuberculosis, typhoid, cholera, blackhead and coccidiosis are but rarely contracted in the houses. The yards, that is the place where the birds find their food and water, are just as important in connection with disease transmission as the houses.

The soil of the poultry yards presents a hygienic aspect of a tremendous importance because on it are deposited the body wastes of the fowls and those constitute for the diseases mentioned the most common, if not the usual vehicle for their transmission.

Small Shriveled Combs Indicate Poor Layers

Some poultry breeders have the impression that the larger the comb the better breeder the bird will prove. It is true that small shriveled combs of females indicate that they are either temporarily out of production or poor layers. The same kind of a comb on a male would lead one to expect him to be a poor breeder. The opposite is not necessarily true, that the larger combed birds are any better breeders than those with combs of average size. Exceptionally large combs on breeds normally having large combs disfigure and handicap the individual.

Grains for Chicks

A comparison of common grains as the sole source of feed for day-old chicks showed that wheat gave slightly better results in connection with weight than those obtained from corn, kafir, or oats, according to the 1920 Kansas experiment station report. The use of cabbage gives fairly good results as a vitamine source, ranking in this regard above carrots. The user of commercial chick feeds made up partly of weed seeds was found undesirable.

Care for Chicks

Sitting hens should be confined to the slightly darkened nests at hatching time and not disturbed unless they step on or pick their chickens when hatching, in which case the chickens should be removed as soon as dry, in a basket lined with flannel or some other warm material and kept near a fire until all the eggs are hatched; or the eggs may be removed and placed under a quieter hen whose eggs are hatching at the same time. Do not chill the chicks.

What Will you do

When your Children Cry for It

There is hardly a household that hasn't heard of Castoria! At least five million homes are never without it. If there are children in your family, there's almost daily need of its comfort. And any night may find you very thankful there's a bottle in the house. Just a few drops, and that colic or constipation is relieved; or diarrhea checked. A vegetable product; a baby remedy meant for young folks. Castoria is about the only thing you have ever heard doctors advise giving to infants. Stronger medicines are dangerous to a tiny baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless, anxious night. It is always ready, always safe to use; in emergencies, or for everyday ailments. Any hour of the day or night that Baby becomes fretful, or restless. Castoria was never more popular with mothers than it is today. Every druggist has it.

GREAT DISCOVERY KILLS RATS AND MICE, BUT NOTHING ELSE

Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O (Kills Rats Only) is a new exterminator that can be used about the home, barn or poultry yard with safety as it contains **no deadly poison.** K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee.

Insist upon K-R-O (Kills Rats Only), the original Squill exterminator. All druggists 75c, or direct if not yet stocked. Large size (four times as much) $2.00. K-R-O Co., Springfield, O.

So Whole Town Moved

When the railroad came along, Waterhole, Alberta, found itself five miles away. Following a conference of the town council, it was decided to bundle up the whole town and move it over to the railroad. Every one of the numerous buildings in the town, including two hotels, was trundled across the country over to the new location. Having a railroad, the town took on a new name. Waterhole is now Fairview.—Capper's Weekly.

A dominant personality is that which wishes to win—and refuses to be a martyr.

MOST people depend on Bayer Aspirin to make short work of headaches, but did you know it's just as effective in the worse pains from neuralgia or neuritis? Rheumatic pains, too. Don't suffer when Bayer Aspirin can bring complete comfort without delay, and without harm; it does not affect the heart. In every package of genuine Bayer Aspirin are proven directions with which everyone should be familiar, for they can spare much needless suffering.

ASPIRIN

The Class Of 1929

To the graduates of our High School, we offer our sincere congratulations, and with them goes a large measure of envy—envy for the opportunities that stretch out before the young men and young women going out into the business of life.

—And if we may offer one word of advice, it is that you prepare for your opportunities and the inevitable hardships by starting to save now, for saving is in itself a character-bulder, and a substantial reserve account will go far toward enabling you to grasp your opportunities and overcome the hardships.

We will welcome your account.

Wear a Poppy Memorial Day!

A. J. Kudje and family spent Sunday with Britt relatives.

Frank Kluckhohn was at Belmond on business Tuesday.

Orville Stokesbary was a Belmond visitor Sunday.

Mr. and Mrs. Earl Finn spent Sunday at Galt.

Mrs. Pat Champlin of Belmond was a Klemme shopper Saturday.

Saturday is Poppy Day in Klemme. Buy a Poppy for Memorial.

Iris Sherwood, of Ames, spent the week end at home.

It is reported that Walter Johnson has been ill again lately.

Miss Mae Griggs' school at Iowa Falls will be out this week. She will teach there again next fall.

A cousin of U. G. Smid arrived in Klemme Thursday from Germany He is a fine appearing young man.

Miss Elvira Stille who is teaching at Mason City, was an over Sunday visitor at home.

Clarence Elder and Vernom Turgasen, of Ames, came Friday to visit over the week end.

J. Jorgenson, of Garner spent Saturday at the R. A. Jorgenson home, helping with some remodeling.

Miss Geneva Hanam of Garner spent Thursday evening visiting with Norma Stromer.

E. C. Ford, of Iowa Falls is a business visitor in Klemme for several days.

Mrs. Ed. Jacobs and son Elwyn visited with Garner relatives Friday evening and Saturday.

Dr. George Zinn came home Monday and is feeling fine since his recent operation.

Miss Fern Stille is at home and is helping her mother with house work and spring cleaning.

Mrs. C. A. Arnold, Miss Minnie Lenz and Mrs Geo. Stokesbary were at Mason City Tuesday.

Luther Tanner has been hired by the Galt baseball team to catch for them this summer.

Mrs. Earl Finn and children visited at Goodell several days last week.

"Lefty" Wilson, deputy sheriff of Wright County was in Klemme on business Tuesday.

Roy Bachman of Goodell was in Klemme Wednesday afternoon on business.

Avis Barz entertained a large number of her friends at a birthday party Monday.

Alvin Bachman had a birthday party Tuesday to which he invited a large number of his friends.

Miss Mamie White of Goodell entered Hampton hospital Friday. She has not been in good health since last fall.

Several from Klemme and vicinity took in the Eastern Star work and iniation at Garner Friday evening.

John Ward, of Algona, came last week Tuesday and visited with his brother, Frank and family until Friday.

Don't forget to see "We Americans," at the Idle Hour theatre on Friday and Saturday nights this week. Admission, 35c, 25c, 15c.

Mr. Busse, father of Henry Busse who reside southeast of Klemme about six miles, died Tuesday evening. He had been ill for some time.

Mr. Phillip Ell of Mason City, came for an over Sunday visit at the home of his sister, Mrs. G. W. Kluckhohn.

Mr. and Mrs. Harry Gram's little daughter, Coleen, underwent a mastoid operation at Mason City Tuesday morning.

Mr. and Mrs. J. C. Thomas and son, James Lindley, Irene Harms, and Mrs. Paul Grange were at Des Moines Tuesday.

Will Back, brother of Herman Back, and Leo Kern, brother-in-law of Blairstown, came Saturday and remained over Sunday visiting with the Back brothers and families.

going considerable remodelling. When the work is finished the store will be much larger and will have more display room. It is a fine improvement.

Miss della Schroeder came home last week from Keswick, Iowa where she taught Domestic Science for the past two years. She will teach at Alexander next year.

Mrs. J. J. Cook who was ill this spring and underwent an operation, is home and feeling fine and is again able to do much of her house work.

Mrs. J. N. Day went to the store Saturday evening and helped wait on trade. This was her first time in ten weeks as she was ill this spring.

Mrs. Henry Schroeder and son, Albert, left for their home in Chicago Sunday morning, after visiting in Klemme at Grandma Schroeder's home.

Mr. Ben Swalve and Mr. and Mrs. Gilbert Schaefer left early Wednesday morning for Sehboygan, Wis-, to attend the funeral services of the ten months old son of Mr. and Mrs. Ben Swalve, Jr.

Mrs. Stooldryer has rented the Baack house on Main street, recently occupied by Mr. and Mrs. Will Kinkwood. The building will be remodeled; a new front installed and otherwise fitted up for a restaurant.

Bert Mathews came back from California last week and is now at his old job in the Wellemeyer store where he will work until Jack Wellemeyer comes home this summer. Bert says he enjoyed his California trip very much.

Quite a number from this vciinity and Troop 56, B. S. A. took in the Court of Honor at Mason City last Friday evening. Byrnes Missman received his Star Scout certificate. There were 352 Scouts from this Area up for advancement and honors.

A. D. Gimer, E. J. Arnold, Wes Lenz and Peter Josten attended a District Meeting of Creamery Men at Garner, Wednesday afternoon. Two men from Ames were the speakers and the men say they handled their subjects very well and that the talks were well worth going to hear.

Mrs. W. F. Pavey and Mrs. C. A. Arnold were hostesses to the Ladies' Aid Society of the Methodist church last Friday afternoon. The ladies enjoyed a real treat of home made ice cream as part of the delicious lunch served. The next regular meeting of the Aid will be held on Thursday, June 20th with Mrs. R. W. Elder and Mrs. Fred Kluckhohn hostesses.

FRESH AND CURED MEATS

Also a full line of Cold Meats for Lunches, Sandwiches—kept fresh for you by our new Electrical Refrigerating System.

G. W. Kluckhohn & Sons

Johnson
Lawn Mowers--

You are not buying a lawn mower every day—but when you do buy one you want one that will give you many years of satisfactory service. That's what you buy in a JOHNSON Pressed Steel LAWN MOWER.

JOHNSON MOWERS have pressed-steel gears, special steel reel and cutting knives. Years of service is built into each part of the Johnson. Try them out against any mower and judge for yourself their excellent cutting qualities, their ease of running—in fact a six year old child can push them easily in tough cutting grass.

Johnsons are no higher than any other good mower—in fact they are much cheaper in the long run. Practically never need to be adjusted or sharpened.

me promising candidates are g considered for grdaes 3 and t none as yet has been engaged. ill he filled very soon we feel . Only those of two years of ge or Normal Training above school are being considered, se already employed, we feel ain are young people of ability leadership.

We Had Very Good Teachers

e are losing some fine teachers will miss them. We have sear- long for others to succeed n. So much depends upon the racter and ability of teachers we do not wish to make any takes. Both Board and Super- ndent must be satisfied and we their judgment as to suitable bers of our faculty may prove e wise and that the children of mme may be well taken care of school year, which begins on tember 2nd.

Tests Have All Been Given

ur teachers have been acquiring wledge of our pupils' ability for etime through short tests, oral written quizzes in class work feel that a regular final sem- r examination is not necessary. are therefroe, as a sort of ex- ment, dispensing with such this . There may be a few, however, we must fail. Some must e- but we hope not many.

Eighth Grade Will Graduate

ur Eighth Grade Class will be rded diplomas as usul on Com- cement night. They are as fol- : Raymond Drake, Henry Smid, ence Kluckhohn, Cecil Bridges, nce Day, Margaret Gates, Doris son, Irene Harms, La Vohn Lar- Louise Rosendahl, Leon Lemke. re are eleven of them and 12 school Seniors to be awarded omas.

Where Our Teachers Go

ur teachers leaving Klemme are rently well placed for next and we beleive deserve to be. r. Lewis goes to Frederika, as Superintendent.

Mr. Heiden goes to Springfield, Illinois as manual arts instructor.

Miss Root goes to Holstein, Iowa, to teach in the grades.

Miss Mildred Wheatman goes to Iowa Falls as grade teacher.

Miss Lenora Wheatman returns to the Teachers College at Cedar Falls, where she will spend a year. We predict an attractive position will be awaiting her next spring. Her record here for three years has been a splendid one.

We hope both students and teachers have an enjoyable summer vacation.

THREE HUNDRED ATTENDED BACCALAUREATE SERVICE

Address Delivered By Rev. Whyte Of Methodist Church

Over three hundred people of our community attended the Baccalaureate Services for the Senior Class at the Klemme Reformed Church last Sunday evening. A splendid spirit of co-operation was manifested between our churches in this joint service.

The high school girls glee culb under the direction of Mr. Lewis gave two numbers. The girls have shown a marked improvement in their quality of tone and harmony and their singing was greatly enjoyed by all. They made a fine appearance in their new white costumes which they recently adopted. Miss McGinnis acompanied on the piano

Miss Lenora Wheatman played the processional and recessional numbers.

Our twelve Seniors, seven boys and five girls made a fine appearance in their caps and gowns as they filed into the auditorium, ushered by Raymond Barz, and took their seats in front of the congregation. Rev. Whyte delivered a remarkable address and his advice contained many fine points. Rev. Grosshuesch in his Invocation expressed the fine spirit of co-operation which now exists between the churches of Klemme.

The entire program was well carried out and those who attended expressed that it was one of the best programs enjoyed for years.

CAMP FIRE NEWS

(Too Late For Last Week)

The Ta-Ta-Pochon Camp held a Ceremonial meeting May 20th in the Legion rooms.

They planned putting a play on in June.

Memorial Day they are going to march and give bouquets away.

The following members were taken into Camp:

Miss LaVohn Larsen.
Miss Novella Bredbenner.
Miss Ruth Wellemeyer.

Miss Hilda Keeper took the rank of Woodgatherer.

The Ta-Ta-Pochon Camp now has thirteen members.

FARM BUREAU PICNIC WILL BE HELD JUNE 12 THIS YEAR

Eagle Lake State Park Will Be The Scene Of Happy Gathering

Plans are being made for the annual Farm Bureau picnic to be held at Eagle Lake State Park on Wednesday, June 12. The picnic will be held in conjunction with the 8th grade graduation exercises again this year and the forenoon program will be turned over entirely to Supt. Baggs. Mr. Baggs has secured Governor John Hammill to address the meeting in the forenoon.

The afternoon program will consist of an address by Joe Jones, vice president of the owa Farm Bureau federation. Mr. Jones is a farmer from Mt. Ayr and has been active in Farm Bureau work for a number of years. There will be other entertaining numbers on the program.

The Farm Bureau will conduct a refreshment stand again this year where refreshments can be purchased. Special features have been arranged this year. A Township kitten ball contest will be conducted; and a Red Top Steel Post driving contest will be put on by that company and a team pulling contest will be conducted.

Don't forget the date, June 12th.

Class of 1929

F. A. Arnold, Treas.

REACHED GOAL IN SALE OF POPPIES

AUXILIAY 'GOES OVER THE TOP' IN ANNUAL POPPY SALE

Six Hundred Memorial Poppies Distributed In Klemme Saturday

(By Leona Lau, Chairman)

The Klemme Unit sold 600 poppies this year. Of these about 100 were sold in Goodell Thursday by Mrs. W. F. Lau, Mrs. Paul Grange, Mrs. Benn Coobs and Miss Leona Lau. Ten dollars exactly was the amount taken in at Goodell.

Mrs. Paul Grange and Leona Lau sold in the business district and went to most of the homes in Klemme Saturday afternoon, taking in about $21 in the afternoon.

Saturday evening Mrs. Johnson, Mrs. Grange and Leona Lau sold until about 10:30 o'clock when the entire 600 poppies had been sold. The sale in all amounting to $62.

Last week we told you that the boys who made these poppies got 1 cent for each poppy. But with other costs these poppies cost our Unit $2.50 per hundred. After the sale this amount is deducted from the amount taken in and a fourth of what is left is sent in to the Iowa Headquarters of the Legion for their work in caring for disabled Veterans and the amount left is kept n Klemme and used by us for our work for these boys, as every month we send $2 to a crippled boy at Knoxville for spending money. Tho these boys are cared for free of charge by doctors, they haven't any money for such things as shaves, candy, fruit, etc. Also the Klemme Unit sends $2 every month for Child Welfare Work, to help care for children whose fathers were killed n the War or are so crippled as to be unable to care for their family.

And in buying poppies you have helped us in this great work and we thank you. Most sincerely.

Leona Lau, Chairman.

NOTICE OF PROBATE OF WILL

STATE OF IOWA,
Hancock County, ss.

You Are Hereby Notified, That an instrument of writing purporting to be the last Will and Testament of Harm Busse deceased, dated December 11, 1925, having been this day filed, opened and read, Monday the 24 day of June, 1929 is fixed for hearing proof of same at the Court House in Garner, owa, before the District Court of said County or the Clerk of said Court; and at 2:00 o'clock P. M. of the day above mentioned, all persons interested are hereby notified and required to appear, and show cause, if any they have, why said instrument should not be probated and allowed as and for the last Will and Testament of said deceased.

Dated at Garner, Iowa, May 25, 1929.

Chris J. Johansen,
Clerk of District Court.
(Publish May 30- June 6-13, '29)

NOTICE

Having sold my territory in the Watkins Line, I will not call again but any customers desiring Watkins Products immediately shall receive them by writing—

THE WATKINS MAN,
Joseph Urich, Jr.
Garner, Iowa.

OBITUARY OF HARM BUSSE

Harm Busse, son of Mr. and Mrs. Oscar Busee, was born on June 11, 1850, at Stoppelmoar, Ostfriesland, Germany. In infancy he was given to the Lord in Holy Baptism. He renewed his baptismal vow through confirmation at about the age of 18. He was a member of the German Army for 3 years. In June 1875 he was united in marriage to Miss Aka Berk. This union was blessed with seven children, two dying in infancy.

In the year 1889 the family left the old country and came to Belmond, Iowa. Two years thereafter the home was saddened by the death of his wife, leaving the care of the children to Mr. Busse. Since in this country the family lived on various farms in this vicinity.

At the time of his death he was with his son, Henry. The deceased was ill about three weeks with flu and other complications. He obeyed the last summons on Tuesday, May 21st at 7:55 p. m., reaching the age of 78 years, 11 months and 11 days. He leaves to mourn his death 4 sons and 1 daughter: Oscar of Kimball, Minn., Ralph and Fred of St. Cloud, Minn., Henry and Mrs. Sandry of Goodell; also 17 grandchildren and many other relatives and friends. The funeral was held May 24 with a short service at the home and the main service at the Immanuel Church east of Belmond Rev. Arthur G. Langlitz of the St. John's Lutheran Church of Belmond was in charge. Appropriate hymns were sung by a Ladies Sextet.

Interment was in the Immanuel Reformed Cemetery.

Card Of Thanks

We, the undersigned, do hereby express our thanks and appreciation to our friends and neighbors for their kind help and sympathy during the illness and death of our dear father, Harm Busse, and also for the beautiful floral offerings.

Mr. and Mrs. Oscar Busse
Mr. and Mrs. Fred Busse
Mr. and Mrs. Ralph Busse
Mr. and Mrs. Henry Busse
Mr. and Mrs. Frank Sandry.

FORMER KLEMME GIRL WILL BE MARRIED JUNE 27th

Candy Announces Cullinan-Hofgren Engagement Plans

(Daily Iowan, May 26, Iowa City.)

The engagement of Mabel Cullinan of Evanston, Ill., to Axel Hofgren of Chicago was announced by a five pound box of candy at the Alpha Xi Delta house last night. Mrs. Cullinan graduated from the University in 1928 and since that time has been doing social work in Chicago, six months with the United Charities and since November has been a medical social worker in the Evanston Hospital. She was a guest in Iowa City this week-end.

Mr. Hofgren is a patent attorney with the firm Chindahl, Parker and Carlson in Chicago and is a member of Theta Xi, Tau Beta Pi, Phi Delta Phi and past national president of Eta Kappa Nu, honary electrical.

The marriage will take place on June 27 at St. James' Cathedral in Chicago. On their honey moon the couple will motor through New England, will take a boat trip up the St. Lawrence and return to Chicago by way of Quebec and Montreal. They will be at home at Evanston after Aug. 1.

(Mrs. Cullinan is a daughter of Mrs. Mary Waterman, of Iowa City, and a sister of C. G. Waterman of Klemme.)

NOTICE TO LANDOWNERS

Landowners are urgently requested to have their claims for refund on open ditches, filed with the County Auditor before July 1, 1929 to avoid confusion on 1929 tax list.

CHRIS JACOBS,
County Auditor. 2tc.

The Idle Hour theatre has a very good program for Saturday night when the feature picture "The Wild West Romance," be be on the screen and also Fox News and Fox Vanities.

MANUAL ARTS WAS DISPLAY FEATURE

MANUAL ARTS EXHIBIT BEST EVER SHOWN HERE

All Pieces On Exhibit Were Turned Out In K. H. S. Work Shop

Mr. Carl Heiden, manual arts instructor and his boys are to be congratulated on their fine exhibit of manual arts which they had on display the past week in store windows. The exhibit attracted more than usual attention.

The exhibit included a wide variety of cabinet work ,carpentry and handicraft. The feature which attracted attention is that every piece was turned out from raw material right in our high school work shop. There was not a single piece which had been finished from so called "ready-cut" material. Mr. Heiden is to congratulated on the fine work his class of Freshman boys have turned out. All work was carefully done and finished in a workmanship like manner. Many pieces on exhibit were difficult and could not have been turned out better by a veteran cabinet maker.

Without a doubt the manual arts exhibit this year is far superior to any ever shown and is also a much larger exhibit than has ever been turned out before.

We are sory to lose Mr. Heiden but we are glad to learn that he is advancing. He will instruct in the Springfield, Ill. chools next fall where he will devote his entire time toward teaching manual arts and handicrafts in both wood and metal.

LIST OF PUPILS WHO HAVE NOT BEEN ABSENT OR TARDY

Quite A Number Of Pupils Have A Perfect Record This Year

Following is a list of the pupils of the Klemme Schools who have been neither absent or tardy for the entire year; also a list of those who have been tardy but once, but not absent:

First Grade

Neither Absent or Tardy:
Charles Bock
Elsie Drake.

Second Grade

Neither Absent or Tardy:
Reuben Grosshuesch.
Tardy Once, But Not Absent:
Chester Ward
Arlene Blickensderfer.

Third Grade

Neither Absent or Tardy:
Thelma Gimer
Buster Jorgenson
Juanita Pavey.
Tardy Once, But Not Absent:
Eldo Knoke.

Fourth Grade

Absent one-half day only:
Carmen Kluckhohn
Nora Wellemeyer.

Fifth Grade

Neither Absent or Tardy:
Milvern Barz
Cecelia Heginger.
Tardy Once, But Not Absent:
Franklin Kluckhohn.

Sixth Grade

Tardy Once, But Not Absent:
Bessie Larson.
Absent one-half day only:
Ruth Wellemeyer.

Seventh Grade

Neither Absent or Tardy:
Novella Bredbenner
Marie Stille.

Eighth Grade

Neither Absent or Tardy:
Cecil Bridges
Dorance Day.

Ninth Grade

Neither Absent or Tardy:
Blanche Gimer
Kenneth Kluckhohn.
Absent one-half day only:
Byrnes Missmam.

Eleventh Grade

Tardy Once, But Not Absent:
Valeria Koerner.

1—Class of 1879 at Annapolis naval academy marching to the mess hall as they did fifty years ago. 2—View of North Haven harbor, entrance to little Maine town where Lindbergh and Miss Morrow may be married. 3—George W. Wickersham, chairman of President Hoover's law enforcement commission.

NEWS REVIEW OF CURRENT EVENTS

President's Law Enforcement Commission Begins Its Great Investigation.

By EDWARD W. PICKARD

PRESIDENT HOOVER'S commission on law enforcement has been appointed and is about to begin its momentous task of investigating the evils and failures of federal judicial procedure. The President's selections for membership on this important body have met with warm approval. Its chairman is George W. Wickersham, attorney general of the United States during the Taft administration. The others are Frank J. Loesch, assistant state's attorney of Chicago; William S. Kenyon of Iowa, United States circuit judge; Newton D. Baker of Cleveland, secretary of war under Wilson; Roscoe Pound, dean of the Harvard law school; William A. Grubb of Alabama, United States district judge; Paul J. McCormick of California, United States district judge; Kenneth R. Mackintosh of Seattle, former chief justice of the Washington state Supreme court; Monte M. Lemann, president of the Louisiana Bar association; Henry W. Anderson of Richmond Va., United States member of Mexican claims commission, and Miss Ada L. Comstock, president of Radcliffe college, Boston.

With the exception of Miss Comstock, every one of these is an eminent lawyer, and three of them, Loesch, Baker and Pound, have had special experience in crime investigation. The one woman on the commission is also the sole representative of the laity, and some regret has been expressed that there is no one to share with her this great responsibility. Not one of the members has been actively identified with either the wets or the drys, although Judge Kenyon is generally regarded as the champion of the prohibitionists. Three of the commissioners, Baker, Grubb and Lemann, are Democrats.

Though the scope of the commission's activities is by no means limited to inquiry into enforcement of the prohibition laws, this phase of the investigation is looked upon as the most important and it is certain to be the most interesting to the people of America. Already the dry and wet organizations are marshaling their forces and preparing to present before the commission all the facts and arguments at their command. Mr. Hoover invited the members of the commission to eat luncheon at the White House and listen to his outline of the scope and purposes of their inquiry.

RAILROADS of the country won a great victory when the Supreme court of the United States handed down its decision in the famous St. Louis & O'Fallon railroad case which on behalf of that obscure little coal road had been fought through all the courts. The immediate object was to have set aside an order issued by the interstate commerce commission calling for a refund of a part of its earnings, coming under what is known as the recapture clause of the transportation act, permitting railroads to retain one-half of their earnings in excess of 6 per cent, and requiring them to pay over to the government the other half.

Reversing a lower court decision and annulling the order, the Supreme court decided that the interstate commerce commission must revise its whole method of valuing railroads to reach a basis for rate making. Years of work by the commission must be done over again in full or in part. Present values and the cost of replacements must be considered by the commission in setting the basis of railroad compensation, the court ruled. This replaces the 1919 valuation now used by the commission. Justices Brandeis, Holmes and Stone dissented.

At first it was believed this decision would bring about higher passenger and freight rates, but later this was denied. The immediate effect on the New York Stock exchange was startling. Prices of rail stock soared with a rush of buying orders, but the advances were cut in half by liquidation in industrial stocks.

FORMER SENATOR IRVINE L. LENROOT'S appointment to a federal judgeship was finally confirmed by the senate despite the determined opposition of a number of radicals. Soon thereafter a newspaper published what purported to be the roll call by which this action was taken in executive session, and this stirred up a row that has resulted in the barring of news service reporters from the floor of the senate. This step was taken by the rules committee and reported to the senate with a resolution censuring the unnamed senator or senate employee who had disclosed the roll call. After considerable discussion, Vice President Curtis announced that while news service reporters have been accorded the privilege of the floor "by courtesy for half a century or more," the rule specifying the persons entitled to admission will be rigidly enforced in the future.

FOLLOWING Colonel Lindbergh's flight in his amphibian plane to North Haven, Maine, carrying his fiancee, Anne Morrow; her mother and two sisters, the news developed that the youngest of the girls, Constance, had received extortion letters threatening her life if $50,000 were not paid to the writer. Constance got two of these notes at Milton academy, Westwood, Mass., where she is a sophomore. Attempts to catch the extortioner by a decoy package failed, and at this writing his or her identity has not been discovered. For several days the Morrow family, heavily guarded by special officers, remained on their North Haven estate, and then Colonel Lindbergh took them all to New York in his plane.

GOVERNOR'S ISLAND and part of the financial district of New York were theoretically devastated by bombs dropped by the army's huge Keystone bomber which made a nonstop flight of 600 miles from the headquarters of the army air maneuvers at Fairfield, Ohio. Next day the bomber returned to the metropolis accompanied by a smaller biplane from which it was successfully refueled while in flight.

ONE HUNDRED AND EIGHTY-SIX clergymen, educators and leaders of religious thought in Great Britain and American have issued what is entitled "A British-American Message to the Churches and to All People of Good Will." It is an appeal for better understanding between the American and British peoples, and expresses the hope that all war may soon be abolished. The signers pledge themselves to accept in spirit and in fact the words of the Kellogg treaty; to "discountenance any and all expressions or acts which contemplate as possible the use of any but pacific means for the settlement of disputes or conflicts; and to do our utmost to rally all men and women of good will to unite with us in this same determination."

WHILE the senate and house conferees continued in deadlock over the export debenture scheme in the senate's farm relief measure, the Republican members of the house tried to fix up their tariff bill so it would be assured of passage. There was a lot of log rolling and various trades were engineered. It was said duties would be placed on hides, leather and shoes and those on a number of farm products increased. Every effort was being made by the leaders to prevent a vote on the floor of the house on amendments for a reduction in the proposed duty on sugar or for the restoration of cement, brick, shingles and lumber to the free list. The Michigan automobile industry together with other industries using alcohol, such as manufacturers of drugs and paints, were reported to have triumphed over Illinois and Iowa corn growers who have been seeking a duty on blackstrap molasses high enough to stimulate the use of corn in the manufacture of alcohol.

In the matter of the farm relief measure, the house conferees were insistent that there be no vote in the house on the debenture plan, while the senators argued earnestly that such a vote would make easier their task in persuading the senate to accept the bill with that feature omitted.

RECENT disclosures of the activities of the International Paper and Power company in financing newspapers, made during the investigation by the federal trade commission, inspired Senator George Norris of Nebraska to deliver in the senate a long address in which he urged legislation to prevent the acquisition of newspapers by public utilities concerns and to curb the expansion of such corporations. The Nebraskan scored President Hoover for putting Lenroot on the federal customs appeals bench, and bitterly denounced Samuel Insull, the Chicago public utility magnate.

Mr. Norris said he believed every newspaper in the country has had the opportunity to sell out to the "power trust," the existence of which he has been declaring for years, and passionately pleaded with publishers to reject the offers of the power magnates so that the country might have a free press.

CHILE and Peru are immensely relieved by the settlement of the old Tacna-Arica dispute, which was formally announced in Washington. The agreement reached was that proposed by President Hoover. Under its terms Tacna is awarded to Peru and Arica to Chile. The city of Arica, the only port of call for steamers on the Tacna-Arica coastline, is awarded to Chile, but Peru is to have the rights of a free port there. Chile has agreed to erect a railroad station, a custom house, and a wharf at Arica for the use of Peru. Chile also agrees to pay Peru $6,000,000.

Bolivia, which had hoped for an outlet to the sea through the port of Arica, alone is dissatisfied with the settlement.

POOR old China seems to be on the verge of another great civil war. Gen. Chiang Kai-shek, head of the Nationalist government, and Gen. Feng Yu-hsiang, the "Christian general," have reached the parting of the ways and at last reports were about ready for armed operations against each other. At present the trouble is centered about Canton. Just what it is all about is difficult to understand at this distance, but Feng accuses Chiang of a desire to dominate the country, asserts his government is "illegal" and warns foreign consuls against lending him assistance.

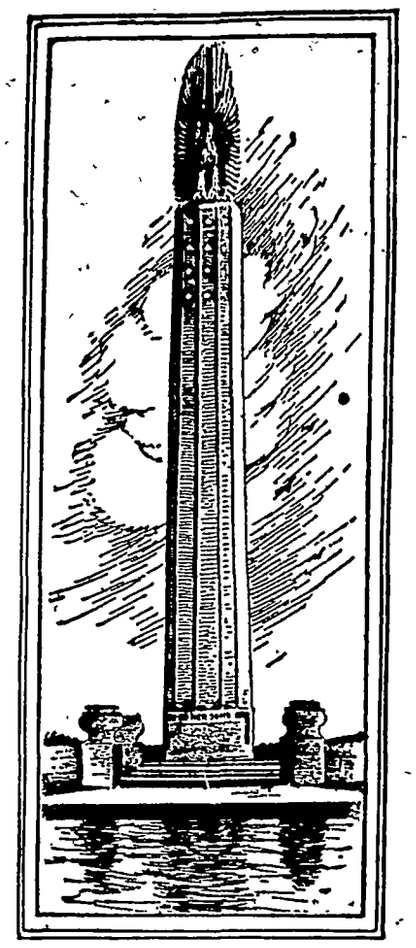
DR. ALBERT VOEGLER, secretary of the German Federation of Industries, has resigned from the German committee of the conference of reparations experts and departed from Paris, which led to fears that the conference would be a complete failure. In any event it seemed certain the negotiations, if not broken off, would be greatly prolonged. Germany had accepted the American compromise plan with certain conditions, and the allied nations bad practically accepted these conditions, but with reservations. The Germans indicated four of the reservations of the allies were almost totally inacceptable and that they would yield no further, and the allies stated that their limit had been reached.

FOREIGN ministers of the little entente held a conference in Belgrade in which, according to official announcement, a complete accord was reached on all questions. A treaty of arbitration was signed and the other treaties among the nations were prolonged. The nations all entered protest against any reduction of reparations amounts.

DEATHS of the week included those of Earl Roseberry, veteran statesman and former prime minister of Great Britain; Eliza Hensler, ninety-three, the American-born morganatic wife of Ferdinand of Saxe-Coburg, king consort of Portugal half a century ago; and Rebecca Ewing Watterson, widow of Henry Watterson, the famous Kentucky journalist.

THE society of the League of Nations at The Hague has awarded Grotius medals to Frank B. Kellogg, former secretary of state, and Sir Eric Drummond. The Grotius medal was instituted in 1925, to be granted each year thereafter to ten persons for work done in the promotion of peace.

TO THE WAR DEAD



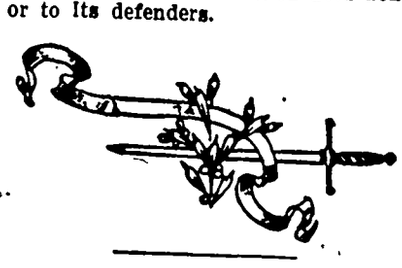
This monument was dedicated a short time ago to those of New Britain, Conn., who died in the World war. The monument is 90 feet high and can be seen from a distance of 10 miles. It is called the War memorial.

Relentless Time Thins Ranks of Grand Army

Those who have observed the ever-thinning ranks of the G. A. R. veterans on Memorial day have realized how rapidly the boys in blue are passing from the scene. Under the liberal pension system of the government, the widows of Civil war veterans have been cared for as well as the veterans themselves, and they, too, are keeping pace, in accordance with the relentless passing of time, with "the funeral marches to the grave."

The greatest number on the Civil war pension rolls was in 1902, when there were 999,446 soldiers and widows. As these pensioners are now all aged, the ratio of loss will be greater and greater within the next few years, until shortly they will be but a memory. While not all of the veterans on the roll fought or bled for their country, they all served in some capacity, and they will be held in grateful memory, whether they distinguished themselves in battle or performed merely the routine tasks which contributed to the victory.

With the passing of the last of the veterans the country will miss one of its most picturesque and inspiring sights on the day the nation does honor to its defenders.



All Bitterness Forgotten

In the South the Confederate veterans—a thin, lean line now—join with tender love that other thin, lean line of Union veterans, to properly commemorate together the day of remembrance, and to pledge anew a united fealty to the flag of a cohesive people. In the North and West the marching survivors of the blue draw the survivors of the gray into their lines. It is fitting that this spirit of a veteran brotherhood should prevail, so beautifully and so impressively, among the fathers and the grandfathers of the boys who fought side by side at San Juan hill and at Flanders and in the Argonne and wherever Old Glory has floated above the battle lines since 1865.—Atlanta Constitution.

Coronation of the Dead

Some one has said that a nation is known by the character of the men it crowns. Measured by this standard our nation may claim the highest honor because of the coronation observance on the annual memorial occasions. The crowns it brings to the graves of its patriotic dead are not such as adorn the brows of kings—not rich with jewels and precious stones, but crowns diademed with tears and emotions from loving hearts, gems from the pure essence of the eternal—crowns that will shine on and on with unfading splendor.

Gratitude for Peace

We are, in the proper sense, all for peace, the peace that our people have fought for and to maintain which they will fight again if necessary. In the meantime we pay tribute to those who gave everything for the peace and prosperity that we enjoy and that we owe to those who gave us this inheritance to preserve and defend.—Indianapolis News.

Arlington

Vast sepulcher of our heroic dead
Who sleep in glory, thou'rt a hallowed place!
America beholds thy solemn face
With beating heart and lowly-bended head!
Sweet service, this, o'er those who fought and bled
To save her honor; but thy tombstones grace
Her quenchless spirit in our living race
To emulate their valor o'er us shed.

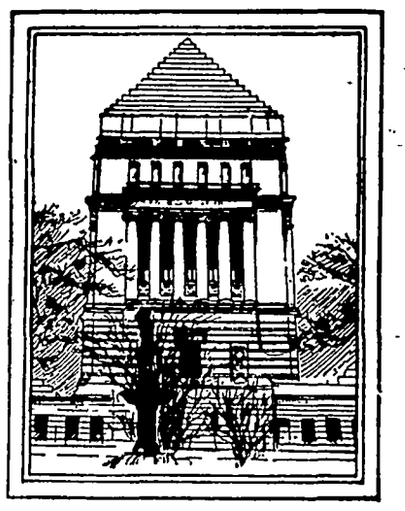
Proud, in thy shades, as sacrifice speaks out
Majestically in silence, deeds are done
Within our breast; dire battle's flush and shout
We feel and utter; awful fields are won
For Liberty, till deep in souls devout
Emotion overwhelms, O Arlington!

—Washington Post.

Day Should Be Lesson to Younger Generation

Memorial day becomes more significant with the passing of the remnant of that mighty host which once wore the blue, combined with the younger army which won imperishable glory for American ideals on foreign fields. It is 60 years since May 30 of each year was set aside by Gen. John A. Logan, commander of the G. A. R., "to inaugurate this observance with the hope that it will be kept up from year to year to honor the memory of departed comrades. If other eyes grow dull, other hands slack and other hearts cold and indifferent to this solemn trust, ours shall keep it well as long as the light and warmth of life remains in us."

The trust has been well kept by the comrades of those distant campfires, but it soon must be passed on to younger generations. In Indianapolis appropriate exercises are held at Crown hill, where the long, even rows of crosses mark the last resting place



Central section of Indiana's $10,000,000 war memorial being erected in Indianapolis.

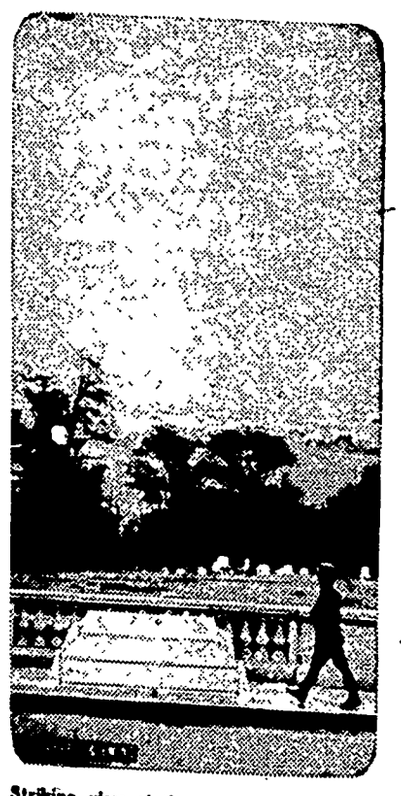
of soldiers. Flags deck the graves and flowers testify to the reverence which will always be felt for the country's defenders. It is an occasion when the citizen should gain a deeper appreciation of the stately monument which was erected in their memory and for the flag they followed into stern battle and final victory.—Indianapolis Star.

The G. A. R. Forever

The Grand Army of the Republic through its commander in chief has announced that the historic organization will be continued until taps sound for the last veteran. There will be no combination with any other group of veterans or patriotic societies. The wearers of the little bronze button, like a certain other famous soldier group will die but not surrender. The G. A. R. still lives!

This decision is eminently right and fitting. It will be approved by the country in general. The silver-haired immortals who linger in the gloaming and presently will pass from human vision deserve the perpetuation of their Army until upon "fame's eternal camping ground their silent tents are spread."

TRIBUTE OF HONOR



Striking view of the tomb of the Unknown Soldier at Arlington National cemetery, Va., showing the guard passing.

Faith reaches up into the unknown, but it starts from a solid foundation.

To Grand Army Belongs the Place of Honor

A touch of pathos has hung over Memorial day lately, and it becomes more noticeable with each succeeding year. There was a time when it was an outing for stalwart men who wore their blue uniforms in the manner of soldiers and tramped to the cemeteries briskly and easily. But that time has passed. Those stalwart men have become bent and white and must be carried to the cemeteries in automobiles lest the ordeal prove too much for them. They become fewer every year. In many localities there are only a handful left, in many others none at all. It will not be long before they all will have passed, their places to be taken by a new generation. While they are with us they should be given the place of honor, should be honored as to the flags that are to be carried and the music that is to be played should be made to feel that they never will be forgotten.—Chicago Tribune.

DR. CALDWELL'S THREE RULES

Dr. Caldwell watched the result of constipation for 47 years, and believes that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation is a mild vegetable compound. It can not harm the most delicate system and is not habit forming.

The Doctor never did approve of drastic physics and purges. He did not believe they were good for human beings to put into their system. Use Syrup Pepsin yourself and members of the family for constipation, biliousness, sour and crying stomach, bad breath, no appetite, headaches, and to break up fevers and colds. Get a bottle today, at any druggists, and observe these three rules of health: Keep the head cool, the feet warm, the bowels open. For a free trial bottle, just write "Syrup Pepsin," Dept. BB, Monticello, Illinois.

Instead of Six—or Seven

Weak After Operation

"About five months ago following an operation for appendicitis I did not have strength enough to be up and about. My mother and sister advised me to take Lydia E. Pinkham's Vegetable Compound. I have taken five bottles and it has helped me to get strong so I can do my own housework now. I have recommended it to several friends who have been weak and run down."—Mrs. Oscar Otto, Box 474, Thief River Falls, Minn.

Lydia E. Pinkham's Vegetable Compound

All Good Americans Should Know the Flag Code.

By ELMO SCOTT WATSON.

JUNE 14 is Flag day, a day for honoring the Stars and Stripes, the symbol of our national unity. It is a day for displaying Old Glory, but how many Americans know the proper use of the flag on this and on other ceremonial occasions? That is to say, how many of us are familiar with the "code" which is the official guide in such matters?

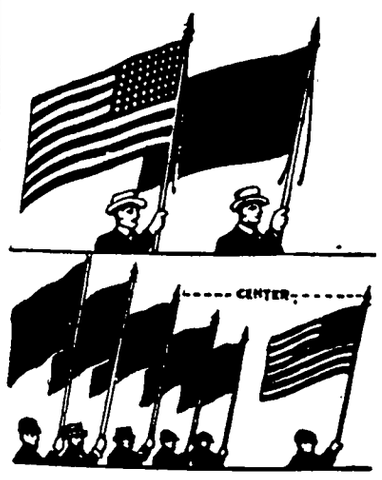
The flag code was adopted at a national flag conference which convened at the call of the American Legion in Memorial Continental hall, Washington, D. C., on Flag day in 1923. This conference was attended by delegates from the principal national patriotic, fraternal, educational and civic organizations. It was revised and indorsed at a second national flag conference held in Washington the following year and the principal rules by which all Americans are urged to be governed in the use and care of our national emblem are as follows:

The flag of the United States of America has 13 horizontal strips—7 red and 6 white—the red and white stripes alternating, and a union which consists of white stars of five points on a blue field placed in the upper quarter next the staff and extending to the lower edge of the fourth red stripe from the top. The number of stars is the same as the number of states in the union. The canton or union now contains 48 stars arranged in six horizontal and eight vertical rows, each star with one point upward. On the admission of a state into the union a star will be added to the union of the flag, and such addition will take effect on the fourth day of July next succeeding such admission.

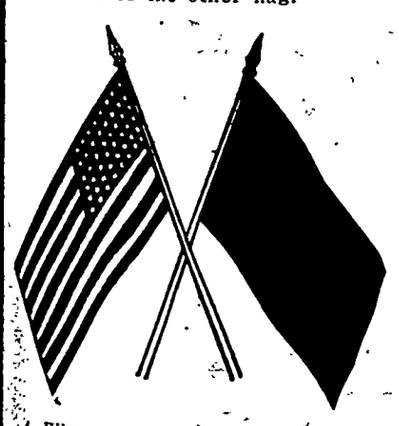
The shield of the United States of America has 13 vertical stripes, 7 white and 6 red, with a blue chief without stars.

1. The flag should be displayed only from sunrise to sunset, or between such hours as may be designated by proper authority. It should be displayed on national and state holidays, and historic and special occasions. The flag should always be hoisted briskly and lowered slowly and ceremoniously.

2. When carried in a procession with another flag or flags, the flag of the United States of America should be either on the marching right, i. e., the flag's own right, or when there is a line of other flags, the flag of the United States of America may be in front of the center of that line.



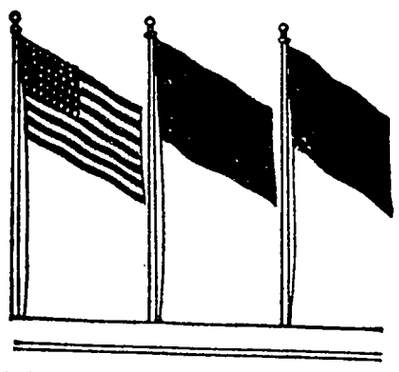
3. When displayed with another flag against a wall from cross staffs, the flag of the United States of America should be on the right, the flag's own right, and its staff should be in front of the staff of the other flag.



4. When a number of flags of states or cities or pennants of societies are grouped and displayed from staffs with the flag of the United States of America the latter should be at the center or at the highest point of the group.

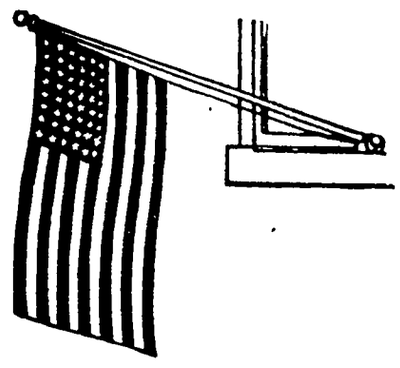
5. When flags of states or cities or pennants of societies are flown on the same halyard with the flag of the United States of America, the latter should always be at the peak. When flown from adjacent staffs the flag of the United States of America should be hoisted first and lowered last. No such flag or pennant flown in the former position should be placed above, or in the latter position to the right of the flag of the United States of America, i. e., to the observer's left.

6. When flags of two or more nations are displayed they should be flown from separate staffs of the same

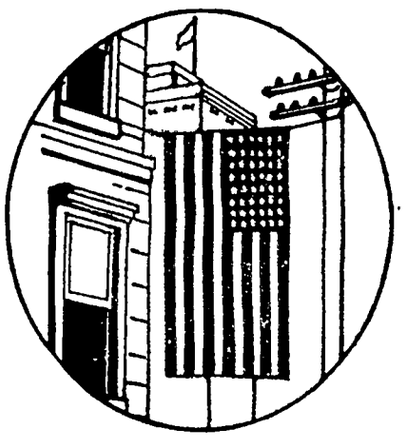


height and the flags should be of approximately equal size. (International usage forbids the display of the flag of one nation above that of another nation in time of peace.)

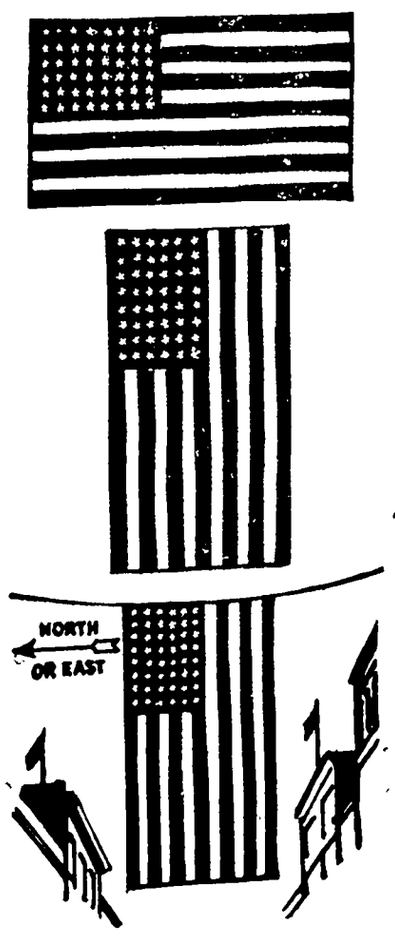
7. When the flag is displayed from a staff projecting horizontally or at an angle from the window sill, balcony or front of building, the union of the flag should go clear to the peak of the staff unless the flag is at half-staff. (When the flag is suspended over a sidewalk from a rope, extending from a house to a pole at the edge of the sidewalk, the flag should be hoisted out from the building towards the pole, union first.)



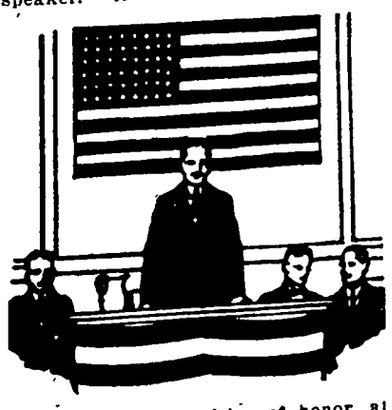
8. When the flag is displayed in a manner other than by being flown from a staff, it should be displayed flat, whether indoors or out. When displayed either horizontally or vertically against a wall, the union should be uppermost and to the flag's own right, i. e., to the observer's left. When displayed in a window it should be displayed the same way, that is, with the union or blue field to the left of the observer in the street. When festoons, rosettes or drapings of blue, white and red are desired, bunting should be used, but never the flag.



9. When the flag is displayed over the middle of the street as between buildings, the flag should be suspended vertically with the union to the north in an east and west street or to the east in a north and south street.



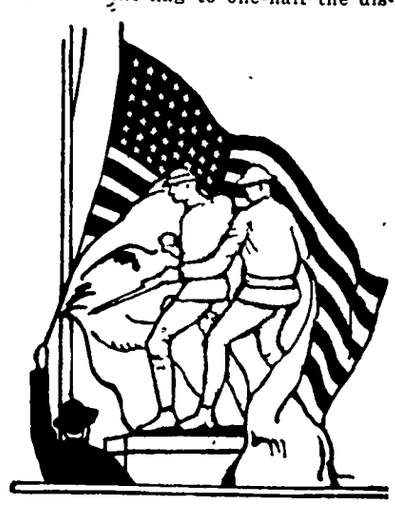
10. When used on a speaker's platform the flag, if displayed flat, should be displayed above and behind the speaker. If flown from a staff it



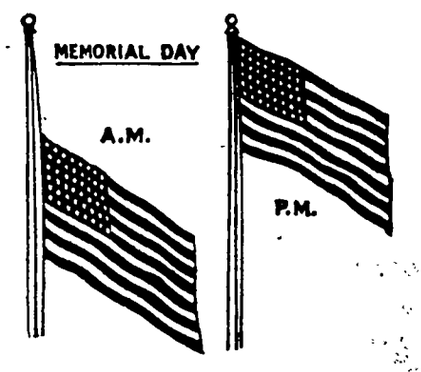
should be in the position of honor, at the speaker's right. It should never be used to cover the speaker's desk, or to drape over the front of the platform.

11. When used in connection with the unveiling of a statue or monument, the flag should form a distinctive feature during the ceremony, but the flag itself should never be used as the covering for the statue.

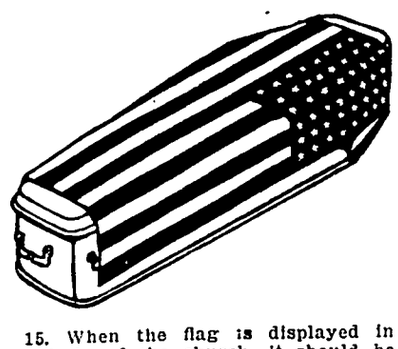
12. When flown at half-staff, the flag should be hoisted to the peak for an instant, then lowered to the half-staff position; but before lowering the flag for the day it is raised again to the peak. By half-staff is meant hauling down the flag to one-half the distance between the top and the bottom of the staff. If local conditions require, divergence from this position is permissible. On Memorial day, May 30, the flag is displayed at half-staff from sunrise until noon and at full staff from noon until sunset; for the nation lives and the flag is the symbol of the living nation.



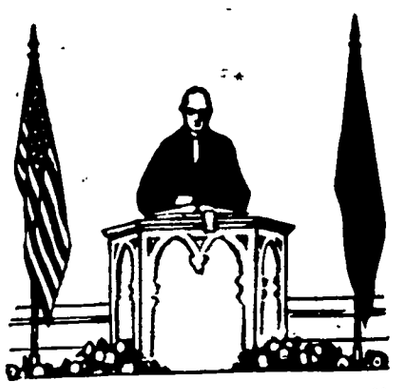
13. Flags flown from fixed staffs are placed at half-staff to indicate mourning. When the flag is displayed on a small staff, as when carried in parade, mourning is indicated by attaching two streamers of black crepe to the spear head, allowing the streamers to fall naturally. Crepe is used on the flag staff only by order of the President.



14. When used to cover a casket, the flag should be placed so that the union is at the head and over the left shoulder. The flag should not be lowered into the grave nor allowed to touch the ground. The casket should be carried foot first.



15. When the flag is displayed in the body of the church, it should be from a staff placed in the position of honor at the congregation's right as they face the clergyman. If in the chancel or on the platform, the flag of the United States of America should be placed on the clergyman's right as he faces the congregation and the other flags at his left.



16. When the flag is in such condition that it is no longer a fitting emblem for display, it should not be cast aside or used in any way that might be viewed as disrespectful to the national colors, but should be destroyed as a whole, privately, preferably by burning or by some other method in harmony with the reverence and respect we owe to the emblem representing our country.

CAUTIONS

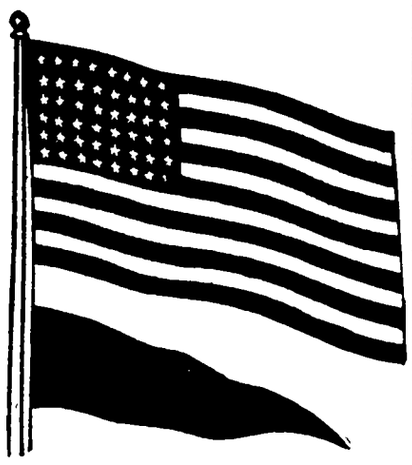
1. Do not permit disrespect to be shown to the flag of the United States of America.

2. Do not dip the flag of the United States of America to any person or any thing. The regimental color, state flag, organization or institutional flag will render this honor.

3. Do not display the flag with the union down except as a signal of distress.

4. Do not place any other flag or pennant above or, if on the same level, to the right of the flag of the United States of America.

5. Do not let the flag touch the ground or the floor, or trail in the water.



6. Do not place any object or emblem of any kind on or above the flag of the United States of America.

7. Do not use the flag as drapery in any form whatever. Use bunting of blue, white and red.

8. Do not fasten the flag in such manner as will permit it to be easily torn.

9. Do not drape the flag over the hood, top, sides or back of a vehicle, or of a railroad train or boat. When the flag is displayed on a motor car, the staff should be affixed firmly to the chassis, or clamped to the radiator cap.

10. Do not display the flag on a float in a parade except from a staff.

During the ceremony of hoisting or lowering the flag or when the flag is passing in parade or in a review, all persons present should face the flag, stand at attention and salute. Those present in uniform should render the right-hand salute. When not in uniform, men should remove the headdress with the right hand and hold it at the left shoulder. Women should salute by placing the right hand over the heart. The salute to the flag in the moving column is rendered at the moment the flag passes.

The federal statutes which have been passed for the protection of the flag are the following:

(1) The act of congress of February 20, 1905, providing that a trademark cannot be registered which consists of or comprises, among other things, "the flag, coat of arms, or other insignia of the United States, or any simulation thereof."

(2) A joint resolution of congress approved May 8, 1914, authorizing the display of the flag on Mother's day.

(3) The act of February 8, 1917, providing certain penalties for the desecration, mutilation, or improper use of the flag within the District of Columbia.

(4) The act of May 16, 1918, providing, when the United States is at war, for the dismissal from the service of any employee or official of the United States government who criticizes in an abusive violent manner the flag of the United States.

(5) The act of March 19, 1928, which reads as follows:

Be it enacted, etc., That any person or persons, firm or firms, corporation or corporations, or other organization or organizations, who, in any manner, for exhibition or display, place or cause to be placed under the flag, color, design, standard, coat of arms, or other insignia of the United States, or upon any intended representation thereof, any inscription, picture, design, device, symbol, name, advertisement, words, marks, notice, or token, or who shall possess, distribute, display, or exhibit, or cause to be distributed, displayed, or exhibited any flag, color, design, standard, coat of arms, or other insignia of the United States, upon which shall in any manner be placed, attached, annexed, affixed, associated, or made a part thereof, any inscription, picture, design, device, symbol, name, advertisements, words, marks, notice, or token whatever, or who willfully and publicly show open or hostile contempt for, trample upon, or otherwise deface or defile any such flag, color, ensign, standard, coat of arms, or other insignia of the United States, shall upon conviction be fined not less than $100, or imprisoned for not more than six months, or both, for each such offense: Provided, that flags, colors, ensigns, standards, coat of arms, or other insignia the property of or used in the service of the United States, or any state or territory, or the District of Columbia, may have placed thereon such inscription, names of actions, words, figures, marks, or symbols as are authorized by law or by the rules and regulations of the United States government or any department or division thereof.

Sec. 2. That the words "flag," "colors," "coat of arms," or "insignia" used herein include also any picture or representation or simulation of the same.

Sec. 3. That this act shall not apply to the use, wholly disconnected from trade advertising, of the flag, colors, coat of arms, or other insignia of the United States on newspapers, books, cards, certificates, commissions, decorations, banners, pictures, stationery for correspondence, or in or on any article or in any position where its use is purely and obviously for ornamental or patriotic purposes.

Sec. 4. That this act shall go into effect upon its passage and publication, except as to goods which shall have been made and marked and in stock at that time, and as to such goods it shall be in force six months after its passage and publication.

More High-Grade Alfalfa Wanted

Desirable Type of Legume Forage Is Always in Demand by Dairymen.

(Prepared by the United States Department of Agriculture.)

High-grade alfalfa hay could be profitably produced and marketed in much greater quantities than at present, according to the United States Department of Agriculture. Dealers in all big alfalfa-hay-distributing markets annually receive thousands of orders from dairymen for high-grade alfalfa hay which they cannot fill because an insufficient quantity of such hay is produced. Many dairymen who do not now utilize much alfalfa hay would become buyers if supplies of high-grade hay were available at all times, says the department.

Study Market Demands.

Farmers who grow alfalfa for a cash crop are urged to study market demands and then make their production and loading practices conform to the market requirements. Methods of producing, baling, and loading high-grade alfalfa hay for market are discussed in Farmers' Bulletin 1539-F, entitled "High-Grade Alfalfa Hay," just issued by the department.

Among the causes for low-grade alfalfa listed and discussed in the bulletin are thin stands containing weeds and grasses, foreign material such as decayed rakings from previous cuttings, weather damage, over-ripeness at time of cutting, overdrying, baling and stacking undercured hay, baling during weather conditions which cause loss of leaves and causes stemmy-appearing bales.

Characteristics of high-grade alfalfa hay, on the other hand, are purity, a high percentage of leaves, clinging foliage, green color, and pliable stems. Leafy alfalfa hay having one or more of these desirable characters is the type of legume forage that is always in demand with the dairy-cattle feeders because of its well-recognized effect on milk flow.

The foundation of the business of producing alfalfa hay for market is a good, pure, stand. Seed of varieties known to have local adaptation, free from foul weeds, and sown in sufficient quantity to produce a thick stand is of greatest importance.

Classifying Alfalfa.

In the official United States hay standards, alfalfa hay is classified according to its purity. The class named "Alfalfa" cannot contain over 5 per cent of grasses nor over 10 per cent of other legumes. If the grass content is over 5 per cent but not over 20 per cent the class is designated as "Alfalfa Light Grass Mixed." The grading factors in the United States standards are leafiness, color, and foreign material, anyone of which may lower the grade of a lot of hay.

The most important item of all in loading is to load cars with hay of uniform class and grade. Uniform loads unvariably sell for better prices than nonuniform loads, and sometimes the difference in price is substantial. Nonuniform loads often sell on the basis of the lowest grade found in the car lot.

A copy of the bulletin may be obtained by writing to the United States Department of Agriculture, Washington, D. C.

Poisoned Bait Controls Cutworm Appearing Early

Poisoned bait has been used with success in the control of cutworms on corn land. The formula for the poison mash is as follows: Wheat bran, 50 pounds; paris green or crude arsenic, two pounds; black-strap molasses, two quarts; water, one gallon, or more as needed. The mash should be mixed thoroughly together in a dry state and then the molasses should be added and stirred in. This poison mash should be broadcast over the field, taking care to sprinkle it sparingly around the hills. The poison for the cutworms should be put out as soon as the corn begins to appear above the ground so that the worms may be killed as quickly as possible.

Around the Farm

Commercial dusts for treating seed corn are still on trial.

* * *

Grapes should receive the same thorough cultivation that is given other cultivated crops.

* * *

Silage is ordinarily considered worth from four to five dollars per ton, depending on the amount of corn in it.

* * *

Sudan grass is very often pastured throughout the entire summer with very good results. It is a prolific producer of green feed.

* * *

Sweet clover improves the soil so much that it runs itself out of a home by making the ground more suitable to other plants which can then crowd it off the ground.

* * *

On farms where alfalfa and grain crops are grown, it is seldom that sufficient manure is produced to meet the demands of both. When the amount of manure is limited, it is usually more profitable to use it on the grain crops and to apply superphosphate to the alfalfa

Spread of Bindweed Can Be Controlled

Most of New Patches of Pest Are Started From Seed.

Control of bindweed by prevention of its spread is the next best thing to complete eradication for checking the ravages of this weed pest.

"Since the killing of bindweed with sodium chlorate as a spray should be practiced only under the supervision of the county agent or some leader who has received special training in handling the chemical, it is advisable to handle bindweed patches by preventing spread," suggests E. H. Teagarden, bindweed specialist, extension service, Kansas State Agricultural college. "It is possible that more new patches of bindweed start from seed than from all other sources. For this reason, every effort should be expended to prevent the bindweed plants from producing seed."

Plowing of bindweed patches at the time the first blooms appear is recommended by the specialist. Subsequent surface cultivations may be made at any time after growth is resumed. When the plants start to bloom, plow again and prevent the plants from producing seed.

Teagarden cautions farmers having trouble with bindweed against the long life of the seed. It may live in the soil eight or ten years or even more before growth starts. For this reason any seed prevented from forming will lessen the eradication problem to a great extent.

Guard Plants and Trees Against Japanese Bugs

By C. H. Zimmer, Supervisor Japanese Beetle Control, New York State.

The Department of Agriculture finds that plants and trees can be sprayed with an arsenical poison and be successfully protected against the attacks of the Japanese beetle. From the standpoint of the production of fruit or protection of shade trees, this insect does not offer a menace which cannot be prevented or controlled. To prevent injury by Japanese beetles or other leaf eaters, the foliage should be sprayed with a mixture of 3 pounds of powdered arsenate of lead and 2 pounds of flour to 50 gallons of water. Mix the arsenate of lead and flour dry, then add water to make a paste, dilute and strain into the spray tank. In order to protect the foliage and fruit from the attacks of the Japanese beetle, it is necessary to have the spray applied before the plants become infested. The exact time for doing this varies somewhat with the season.

If the tender foliage of peach trees is to be sprayed, the poisons should be applied one-half the strength above mentioned.

Use Only Pure Chemicals in Treating Grain Seeds

Good grades of formaldehyde and copper carbonate must be used in treating seed or the smuts of grain will not be cured. Careful treating is necessary but it is also essential to use good chemicals. Plant disease specialists at university farm say that formaldehyde should be 40 per cent commercially pure. It should be a clear colorless liquid. If it is cloudy or contains a white flakey substance or has been frozen it should not be used for treating seed. It evaporates rapidly and if left exposed to the air becomes so weak that it is noneffective. Copper carbonate dust must contain a sufficient amount of copper in a form that is sufficiently active to kill smut spores, but not so strong that it will kill the wheat sprouts. Reliable firms manufacture a dust that will serve this purpose. Copper carbonate is mixed with a "base" that is fluffy and loose to facilitate proper mixing. Gritty, heavy copper carbonate dust should not be used.

Requeen to Strengthen Infirm Swarm of Bees

Experienced bee keepers have found that it rarely pays to keep a queen over two years old, some advocate requeening every year. One thing is certain, the queen is about all there is to a swarm of bees. A prolific queen means a large swarm by the time the honey flow comes on; while a weak queen means a moderate or a weak swarm at just the time when the opportunity is offered to make a surplus and if it cannot be taken advantage of, there is little or no honey for the season. Swarms must be strong at the time of the main honey flow and old or weak queens do not make strong swarms. It costs but little to requeen but one must plan for it and be ready.

Practical Method for Setting Out Any Tree

When you set out an apple tree, or any other kind of fruit tree, dig the hole big enough so you can spread the roots out on all sides; also deep enough so that the roots will be a few inches deeper than they were in the nursery row. Another important thing to remember is: Keep the roots of any tree you expect to grow covered so the sun can't shine on them at any time while setting out. Keep your trees in a barrel pulled around on a stone boat, with enough water in the barrel to cover the roots, or if you have only a few, keep them wrapped in a damp blanket or old piece of burlap, and never, never carry them around in the sun and wind with nothing over the roots.

HOW

VAUDEVILLE "STRONG MAN" GETS AWAY WITH TRICK.—Strong men on the music hall stage are fond of lying on their backs and having placed on the chest an anvil, which is subjected to blows from a heavy sledge hammer. As a "turn" it invariably creates astonishment. but any man could do it, provided he were strong enough in the first place to support the heavy anvil. The blows inflicted by the sledge hammer are negative.

Scientists explain this by what is known as action and reaction, which are always equal The anvil strikes the hammer as forcibly as the hammer strikes the anvil, and should the anvil be heavier than the hammer, it will not be moved Suppose the hammer weighs 10 pounds and moves with a velocity of 16 feet per second. it will strike the anvil with a force of 160 pounds; but the anvil, perhaps, weighs 220 pounds, and in consequence will not be moved. Thus the "strong" man is able to receive the weight of the blows without discomfort.

How Phrase "To Walk Spanish" Is Explained

"To walk Spanish" refers to an old sport among boys in which one boy seizes another by the collar or the scruff of the neck and the seat of the trousers and forces him along on tiptoe. "To walk turkey" is used in the same sense. Apparently the former expression originated in New England. At any rate, the earliest known uses of "to walk Spanish" occur in writings from that section. The application of "Spanish" in the phrase is obscure. It may, as some suppose, allude to the manner in which the old Spanish pirates are reputed to have handled their prisoners when starting them out on the plank. "To walk Spanish" has acquired a large variety of meanings in popular parlance. We make another walk Spanish when we discharge him from his job, when we make him step along gingerly, or when we compel him to do anything against his will. Likewise a person is said to walk Spanish when he struts, and also when he walks with an unsteady gait. More often the term is equivalent to "toe the line" or "come up to the mark."—Exchange

How Snowflakes Form.

Snow forms over an ascending air current in which there are solidified cloud particles for nuclei. But whatever the nuclei may be, as soon as the initial crystals are formed further condensation takes place, the vapor condensing directly into the solid state without first going through the liquid state. The crystals of water are hexagonal prisms, explains the Scientific American, and water in the crystalline state in the atmosphere shows all the wonderful shapes that this form of crystalization can take. Having once started, the crystals may grow either along their central axis, giving rise to long thin prisms, or along their six axes to form hexagonial plates. Sometimes a growth is uniform, so that the result is a perfect hexagonal plate; at others the growth along the axes is more rapid than in the space between. This gives rise to star-shaped crystals.

How Emeralds Are Mined.

A great many of the emeralds on the market today are obtained from the republic of Colombia. The Muzo emeralds of that country occur in calcite veins. The bank may prove worthless after months of work, for no one can estimate the probable value of any particular section of a deposit. In this way emerald mining is different from most other branches of the industry. The tools used are steel bars about five feet long, weighing 30 pounds, and shovels. The bars are forged to a point at one end and made wedge-shaped on the other. Great care must be exercised in mining emeralds owing to the risk of breaking them. Skilled natives are generally employed to do this work.

How to Clean Grass Rug.

Wash the rug with water in which bran has been boiled, or in weak salt and water. Dry it well with a cloth. To remove grease from the rug wet a nailbrush in slightly salted water, rub on soap and scrub the place hard. Have the water boiling. Continue to scrub with soap until the spot disappears. Wash with clean cloth and rub dry. Always rub lengthwise of the grain.

How to Remove Rust.

To remove rust spots from nickel-plated surfaces, apply petrolatum (vaseline) and after several days wipe with a cloth dipped in ammonia. In case the spots are particularly stubborn, add a few drops of hydrochloric acid to the ammonia, but be sure to dry the metal quickly; then rinse it with water and polish thoroughly.—Popular Science Monthly.

How Money Makes Money.

New York's oldest savings account was opened with $10 in 1810; $5 were added the following year, and no further deposit has ever been made.

The original bank book, held by the descendant of the depositor, recently showed approximately $2,500 in accumulated interest.

WHY

Colds Often "Run in the Family."

When colds "run in the family" it is no sign that the family is constitutionally subject to colds. It may be that some member of the family is acting as a carrier, just as some people are typhoid carriers, suggests Dr. P. Watson-Williams in a report to the practitioner of observations made on ninety consecutive patients. Sometimes one child is known for starting colds among his brothers and sisters. This same child may become immune to colds himself, but still harbor cold germs and be able to pass them on to others. If he grows up and has a family he may still be starting colds in the family, although they are no longer traced to him.

The reason for this may be an unsuspected infection of his nasal sinuses, the honeycomb structures back of the nose and eyes. This same infection may be the reason for some children growing a second set of adenoids when the first ones have been removed with the tonsils, Doctor Watson-Williams thinks.

Doctor Watson-Williams also reports a tendency for families that are prone to colds to have infections in the abdomen, for instance in appendix and gall bladder. The body cells that fight disease germs are weakened by resisting the germs always present in nose and throat and become an easy prey to those germs that find their way to the abdomen.—Kansas City Star's Science Service.

Why Paint Sometimes Refuses to "Stay Put"

Experiments and observations of the behavior of paint under varying conditions and circumstances indicate that paint does not really adhere to wood at least after the paint has dried out thoroughly, but hangs on chiefly by gaining mechanical grips in minute openings in the surface of the wood Where there are plenty of openings the paint hangs on, but where the openings are too few, or too small, as in very dense wood, the paint does not hang on so well.

To understand how the grain of wood may affect paint retention it is only necessary to observe paint failure on woods having wide annual growth rings and in which there is a sharp contrast between spring wood and summer wood. In such woods the summer wood is much denser than the spring wood. Paint scales off more quickly than it does off the bands of spring wood.

Why Earth Is Changing.

Just as the tidal movement of the ocean is affected by the position of the sun and moon, so is the earth's surface influenced and there is constantly going on a heavy pronounced change in the contour of our globe. It is constantly rising and falling and while this movement is imperceptible except to scientific observers it is nevertheless quite pronounced and in the course of time is responsible for some very great changes. The pressure exerted on spots of the earth's crust by the rising tide of the ocean is another thing that makes it heave and fall. Atlantic tides have caused an observed earth bulge 800 miles away. and it is thought probable that this influence girdles the world.

Why Known as "Dumbbells."

Why do we call the wooden exercises we swing dumbbells? Why dumb? Because centuries ago a favorite exercise was in the pattern of the apparatus by which the heavy bells of a church are swung—a task which calls for considerable energy on the part of the ringers. This apparatus was used sometimes for the purpose of training bell-ringers, and it is probable that its use as an exerciser was first suggested in this way. Later on, less cumbersome means of taking exercise were evolved, but "dumbbell" was still kept as the name.

Why Baptize Babies.

It is held by those churches which believe in the baptism of infants that the Old Testament covenant was applicable to all members of the family. from the youngest infant to the oldest man. They believe the New Testament covenant is equally to be applied and that baptism is the sign and seal of participation in this covenant. It is for this reason that most Christian churches baptize infants, at the same time requiring their parents to obligate themselves to bring the children up in the Christian faith.

Why Ermine Is "Royal."

The beauty of ermine caused it to be worn by royalty and King Edward III made it a punishable offense for any persons except those of royal birth to wear it. This restriction has long been removed, but the fur still enjoys royal favor.

Why Bodies Were Embalmed.

In ancient Egypt bodies were embalmed because it was believed that they would some day be restored to life.

Why "Capital" Punishment.

Hanging is called "capital" punishment from the Latin, caput, the head. Beheading was once the usual death penalty.

Mythological Term.

In Norse mythology the expression "twilight of the gods" refers to the final destruction of the world and the regeneration of gods and men.

HOW

STUDY OF SOAP BUBBLES HELPS THE SCIENTISTS.—Blowing bubbles, once an exclusively childish pastime, now is a research activity of vast scientific significance. The lowly soap bubble has already demonstrated its usefulness as a replica of the internal combustion engine, as a miner of gold and other precious metals; as an object in studying the properties of light, and, for the first time, defines the rates at which gases explode.

Formerly regarded as an extremely simple thing, science has disclosed that the soap bubble represents a complicated process. This is true to such an extent that the heat division of the bureau of standards is consulting this flimsy mixture of soap and water to determine the exact behavior of our motor car and airplane engines. In fact. when the bubble is filled with a charge of explosive gases, Uncle Sam accepts it as a perfect internal combustion engine—operating without bearings, cylinder or piston.

The gaseous bubble is fired by a spark from the center. The extreme delicacy and transparency of the soap film permit a continuous photographic record to be made of the progress of the explosive reaction, from the instant the ignition spark passes to the moment the reaction is completed. The photographic records, ordinarily obtained by virtue of the light from an electric spark, indicate that the behavior of the bubble is not haphazard and erratic but is in conformity with a well-ordered scientific process. —Popular Mechanics.

How Maggots Get Into Meat Left Uncovered

It was once universally believed that maggots are produced on dead flesh by ablogenesis or spontaneous generation, namely, nonliving matter produced living maggots. Aristotle taught spontaneous generation and stated as an observed fact that some animals spring from putrid matter. This belief persisted through the Middle ages and was not disproved until 1668, when an Italian named Francesco Redi established the fact that every living thing comes from a pre-existing living thing. Redi exposed meat to the air during hot weather. It soon began to putrify and was covered with maggots. He then placed similar meat in a jar covered with fine gauze and exposed it in the same manner. The meat began to putrify as before, but no maggots appeared on it. Blowfiles, however, swarmed over the wire screen on the jar and in a few days the gauze was covered with maggots. This proved that the maggots were not generated by the corruption of the meat, but were hatched from eggs laid by the flies, and that the putrefaction of the meat was caused by smaller bodies which passed through the screen from the air.

How Paper Is Fireproofed

The bureau of standards says that a measure of fireproofing for papers can be obtained by spraying them before passing through the presses with ammonium chloride, ammonium phosphate, ammonium sulphate, or sodium borate, whichever is best adapted for the particular product. Paper so treated should not be considered as incombustible or greatly fire-retardant. since it will char and burn at the high temperatures incident with fires in buildings, although it will not ignite or support combustion as readily as the untreated paper. The more fire resistive papers are usually made from asbestos fibers with a small admixture of ordinary paper, and a binding composition, such as glue and borax. They are rendered suitable for writing upon by calendaring. Special inks are prepared for use with such papers, both paper and ink standing up well under protracted exposure at temperatures that would completely consume the ordinary combustible papers.

How Salt Lake Was Formed

Scientists say that the physiography of the surrounding country shows clearly that the basin occupied by Great Salt lake is one of many left by the drying up of a large Pleistocene lake, which has been called Lake Bonneville. Well defined wave-cut cliffs and terraces show two distinct shore lines of this early lake, one the "Bonneville shore line," about 1,000 feet above the present lake, and the other, the "Provo shore line," about 625 feet higher than the present lake.

How to Tell Platinum

One of the most important properties of platinum is the fact that it is not easily attacked by acids. Pewter, on the other hand, is composed of tin and lead, with sometimes an addition of copper and antimony. All other metals are easily attacked by nitric acid or hydrochloric acid. The metal could be simply tested with one of these acids.

How Much Is a Micron

One micron represents one one-millionth part of the usual atmospheric pressure, which is 14½ pounds per square inch. The interior of the usual incandescent lamp represents a vacuum down to about 150 microns.

WHY

Death Certificates Should Be Reported

Certificates of death are important factors in the keeping of accurate vital statistics. The bureau of the census of the Department of Commerce at Washington has arranged standard methods of reporting and the states that conform to its requirements are grouped into what is known as the United States registration area.

The bureau sets forth the following reasons why reporting of death certificates is important:

1. Certificates of death or certified copies of them are constantly required in courts and elsewhere to establish necessary facts.
2. Pensions or life insurance may depend on proper evidence of the fact and cause of death.
3. Titles and rights to inheritance may be jeopardized by the failure of records.
4. Deaths should be registered that public health agencies may know the causes of death and act promptly to prevent epidemics.
5. Deaths should be registered promptly that the success or failure of all measures attempted in the prevention of disease may be accurately determined.
6. Deaths should be registered that individual cities and localities may learn their health conditions by comparison with conditions in other communities and determine thereby the wise course of public health activity.
7. Deaths should be recorded that home-seekers and immigrants may be guided in the selection of safe and healthful places to live.

Why the New Metal, "Carboloy," Is Hard

Even if the new hard metal, variously known as "carboloy" or "widia" or by other names, does not manage in actual use to be quite so revolutionary of engineering methods as its most optimistic promoters hope, it already provides opportunity for a travelogue into the microscopic world of metallic interiors. The new material consists of tiny crystals of tungsten carbide, one of the hardest chemical compounds known, embedded in and intimately attached to a matrix of metallic cobalt. Cobalt is not by itself a particularly hard metal, but it can be made unusually tough. With the tiny grains of crystalline carbide scattered through its substance, the reinforced cobalt adds a cutting edge to its toughness and even becomes able, tests have shown, to cut a screw thread on a rod of porcelain or of glass. Thus comes to its latest step, although doubtless not its last one, a process of invention and discovery which began at least with the first bronze.

Why London Has Fogs

The weather bureau says that the London fogs are caused, as are most inland fogs, by the cooling of humid surface air to a relatively low temperature. This occurs only on clear nights and when there is practically no wind. The city smoke, remaining in place for the most part and not being blown away, adds greatly to the darkness and density of the fog—a mixture of smoke and fog. The smoke, of course, does not evaporate, and some have insisted that the smoke furnishes an oily film to the fog particles which keeps them from evaporating; but, according to the weather bureau, the existence of this film has not been definitely established.—The Pathfinder.

Why Called "Naval Stores"

The origin of the term "naval stores," which commercially is applied to the great turpentine and rosin industry of the southern United States, is uncertain, but it is probable that it is derived from the fact that these and other materials broadly included in this designation were at one time chiefly used by shipping. The forest service says that the term "naval stores" in olden times referred to pitch alone which was carried on the old shipping vessels for use in calking the seams of the boat. This now includes tar, turpentine, pitch, rosin, etc. The term, no doubt, was applied to supplies which were stored in shipping vessels and in this way were called "naval stores."

KLEMME LOCAL NEWS

John Wellemeyer, son of Fletcher Wellemeyer, came Sunday from Kansas City, Kansas. He will work at Wellemeyer's store this summer. He reports that Andrew Wellemeyer will arrive in Klemme thi week end.

Mrs. Marlin Cromer is improving in health so that for the past week she has been able to sit up in a wheel chair on the porch. Her many friends are glad to hear that she is much better after her long illness.

We are glad to report that little Colleen, daughter of Mr. and Mrs. Harry Gram is making a good recovery at Mercy Hospital from her mastoid operation. Mrs. M. C. Gram went over Monday and stayed with her while her mother came home Monday for a short time.

Miss Mildred Hoffman, of Fairfield, Iowa, who has been instructing in home economics at the Oxford Junction, Iowa schools, the past year, came Friday for a week's visit in Klemme. The young lady is a particular friend of Mr. D. M. Lewis, science teacher in our school. Miss Hoffman is being entertained at the Dr. D. P. Anderson home.

Mr. and Mrs. J. J. Stille and children and Mr. and Mrs. Elmer Schaefer and children drove to Ackley, Sunday to visit Mrs. Stille's sister, Mrs. Ralph Jaenson and family. A fine trip was reported in spite of the rain.

Emery Schaefer is confined to his home and bed this week with a case of mumps. His sisters from Marble Rock are assisting with the work while he i enjoying (?) a "swell time."

EIGHTH GRADE GRADUATION EXERCISES WILL BE JUNE 12

The eighth grade graduation exercises will be held the forenoon of June 12th, the date of the County Farm Bureau picnic. Governor John Hammill will give the address. This will give everyone an opportunity to attend the picnic and the graduation exercises the same day.

omething Really New n Wash Machines

These Features Are Indispensable in the Modern Washer—They are exclusively MEADOWS:

1. SELECT-A-SPEED—A washing speed for every type of fabric.
2. Mechanical unit sealed with a life time guarantee.
3. Seamless copper tub merged with steel armor jacket under 3,000,000 pounds pressure.
4. Double V Belt Drive. Not one service call reported because of belt trouble in two years.
5. 6-vane impeller of Bakelite—the one perfect material for the purpose.
6. Tub Surface nine-tenths as hard as diamond, can not stain, tarnish, or scratch. Genuine chromium plate over nickel on copper.
7. Extra large wringer rolls of genuine Meadows Elastica—pure black para rubber.
8. Die-cast wringer of genuine Doehler metal.
9. Equipped with Induction Motor or Briggs & Stratton full power four cycle gas engine.
10. The ONE washer—with controlled water currents—that WASHES by WATER ACTION alone.

Tune in on WHO every Monday, Wednesday and Friday between 11:15 and 11:30 A. M.
—Enjoy The Meadows Program

CAMEL
CIGARETTES

WHY CAMELS ARE THE BETTER CIGARETTE

Camels contain such tobaccos and such blending as have never been offered in any other cigarette.

They are made of the choicest Turkish and American tobaccos grown.

Camels are always smooth and mild.

Camel quality is jealously maintained . . . by the world's largest organization of expert tobacco men . . . it never varies.

Smoke Camels as liberally as you choose . . . they will never tire your taste.

Nor do they ever leave an unpleasant after-taste.

Mr. and Mrs. Riemer of Garner, parents of Mrs. Emil Beier, visited at the Beier home Wednesday.

Miss Lydia Beier visited at the Elmer Schaefer home Friday afternoon.

Mr. and Mrs. Art Schoenwetter spent the evening Sunday at the J. J. Stille home.

Prof. Moon and the Rev. and Mrs. Whyte were dinner guests at the Herman Gast home Saturday.

Mrs. Ed. Schoenwetter and daughter visited at the Tanner home Sunday.

Rev. Whyte and wife and Mr. Moon were dinner guests at the Lew Abele home Friday.

Mr. and Mrs. Art Schoenwetter and Mrs. Geo. Schoenwetter spent Friday in Garner.

Mr. and Mrs J. J. Lemke were in Clear Lake on business Thursday.

Rev. and Mrs. Whyte and Prof. Moon were pleasantly entertained at the Henry Wade home Thursday.

Mr. and Mrs. Clarence Tanner, Mrs. Ben Neiman and daughter Margaret visited relatives at Steamboat Rock Sunday.

Mr. Lloyd Ulrich and sons and his sister, Nettie Wade and children spent the evening at the Quentin Stille home Sunday.

Miss Hilda and Doris Schaefer of Marble Rock were supper guests at the Emil Beier home Tuesday evening.

Reatha Ball, the young girl who makes her home at the Will Krous home, visited at the Emil Blumer home from Friday until Sunday.

Mrs. Emil Beier visited at the Carolus home Tuesday Miss Alice has shown some improvement the past few days.

Mr. and Mrs. Walter Manhal, of Watorloo were week end visitors at the John Velau home. Mrs. Manhal is a sister of Mrs Velau.

Mrs. Tanner visited a few days last week in Sioux City with her sister-in-law, Mrs. Julia Schaeper and children. She found them all well and happy.

Mr. and Mrs. Roy Schaefer and children and Mr. and Mrs. Ben Riemer and Lois and Mr. and Mrs. Ben Ridder were guests at the Fred Gates home Sunday.

Thursday afternoon Mrs. Emil Beier, Hilda and Doris Schaefer and Mabel Schaefer and Lois Riemer visited at the Clarence Cook home near Kanawha.

Mrs. Beier would like the new members of the Kings Heralds to try and all be on hand June 9. The meeting will be postponed on account of the meetings being held at the church.

The meetings held at the Liberty Church have been fairly well attended. A full house turned out Friday night to enjoy the program so ably put on by the children of the vicinity. Prof. Moon surely did wonders with them in so short a time. Another similar program will be held the coming Friday evening. Everyone is welcome to these meetings. Come and hear Prof. Moon and Rev. Whyte; its well worth your time. Next Sunday will be an all day service. Everyone is expected to bring their baskets and eat in the basement and enjoy a social hour between services.

WHY
Sky Is Dark at Night, Despite the Stars

The long-standing astronomical mystery of why the sky is dark at night instead of shining brilliantly like the frosted globe of an electric lamp was attacked by Prof. Heber D. Curtis, director of the Allegheny observatory, in a lecture to the American institute of the city of New York.

Explanation may be found, Professor Curtis said, in the fact that the universe is granular like sand grains in a dust storm, instead of being uniform all the way through like a mass of clear jelly. Men are so familiar with the dark skies of night time, illuminated only by the few bright points of the stars, that no one thinks of this as paradoxical.

Yet if the stars are infinite in number at least one of them ought to be in sight at each possible point of the sky. No matter how faint they are their light should combine, astronomers have argued, into a general glare.

The paradox is explained, Professor Curtis said, if one assumes, with the great Swedish mathematician, Charlier, that the stars are arranged in enormous clusters or galaxies, at great distances from each other as compared with their diameters. Mathematical reasoning proves, Professor Curtis said, that this arrangement would produce a sky that is dark, not bright, even for a universe infinite in extent.

This is precisely the structure that seems to exist in the part of the universe visible in man's telescopes. The solar system is inside one of these galaxies or "island universes." Outside this are thousands of such groups of relatively close-packed stars; the groups lying at considerably greater distance from each other like a very few grapes scattered through a large amount of fruit jelly.

Why We Say Crooked Stream "Meanders"

"Meander," meaning winding or crooked, is derived from the ancient name of a river in Phrygia. This stream, which is proverbial for its winding and tortuous channel, flows into the Aegean sea opposite the island of Samos off the coast of Asia Minor. It is now known as the Menderez.

"We speak of meandering streams," says Mark Twain in "Innocents Abroad," "and find new interest in a common word when we discover that the crooked river Meander, in yonder valley, gave it to our dictionary."

Why Fireworks Are Colored

The bureau of standards says that the nitrates of various metals are used for making fireworks that burn with different colors. The nitrates are used because they supply oxygen for the combustion of the sawdust and other ingredients. For open fires the chlorides of the metals are preferable to the nitrates, because rapid combustion is not desired, but only a slow evaporation of the metal salt into the flames. The nitrates are quickly changed into carbonates or oxides in the fire, and these are less volatile as a rule than the chlorides. The chlorides for barium, strontium, calcium, lithium and potassium give colored flames. If too much sodium chloride is used, its yellow flame will tend to mask the colors of the other metals.

Why We Count in Tens

In ancient times when a man had to count, the logical implements on which to count were the fingers and toes. As there were ten of each he naturally began counting in tens. The total result would be 20. Then, so that he would remember the number of times he had "counted himself," he made a mark some place each time that he reached 20. That mark was a "score." That is why the word "score" today means 20. The whole decimal system is based on this fact that we have 10 fingers and 10 toes.

Why Call Them "She"

The use of the feminine pronoun in referring to automobiles, airplanes and other vehicles has been fairly well established by usage, following the older and recognized custom of treating ships as feminine. For this reason certain airplanes have been called "Jennies" and small automobiles "Lizzies." Poets have for centuries represented a ship as having feminine qualities and the Latin word for "ship" was a feminine word.

Why "Lyric Poetry"

The name lyric poetry was given by the Greeks to a kind of non-narrative poetry chanted or sung to the accompaniment of the lyre. The term has come to be used with less restriction, passing to poetry unaccompanied by music but constructed on the system of musical measure, then to any short poem of limited scope of emotion without regard to musical adaptation.

Why Overhand Throw

The reasons that soldiers were drilled to throw their hand grenades in a stiff overhand manner were that more distance could be gained in that way, and the muscles of the upper arm receive less strain than they would have otherwise.

Why Oil Is Iridescent

When water comes in contact with oil, a spectrum is sometimes formed because of the different refraction of light as it passes from one substance to the other and the colors of the rainbow appear.

POULTRY

PASTURING GEESE ON CLEAN RANGE

As General Rule Fowls Are Given Freedom of Field.

The raising of geese has not been specialized like duck raising, for the reason that geese secure most of their feed by grazing. For this reason, geese are raised on most farms in comparatively small flocks. These facts are the principal reasons why geese raising offers an opportunity for most farmers to add another source of income to their spring poultry raising.

Geese may be pastured at the rate of 60 head to an acre, but, as a general rule, they are given free range. This is satisfactory so long as they are not numerous. However, if a large flock of geese is pastured on the regular pasture the live stock will not relish the pasture on account of the goose manure on the grass. Ordinarily, the number of geese raised on any one farm are not numerous enough to cause any trouble from this source.

Geese do not require a great deal of attention. After the first two weeks they are able to look after themselves if given a good range. The principal food of geese is grass, supplemented by insects and other low forms of animal life. If suitable range is not accessible it is not advisable to go into geese raising.

Houses that will protect the geese from rains in summer and from snow, cold winds and dampness in winter are the only essentials from the housing standpoint. Low, open front sheds are often used for this purpose. Care should be taken to see that the interior of the house is dry at all times. Geese like to swim and they will exercise in the snow practically all day, but they should have dry places to roost or they will contract rheumatism. The floor of such houses should be of earth. This should be covered with straw and renewed often enough so that it will be dry. A thin coating of sand often proves helpful in keeping the house dry.

Geese mate more successfully after they are two years of age than when mated earlier. This is more true of the females than of the males. Occasionally yearling geese will produce fertile eggs, but they cannot be depended upon. Small, undersized geese should not be used for breeding purposes. On the other hand, extra large, coarse geese are not as satisfactory as those of full development, but not so coarse. With most breeds the gander will mate with from three to four geese.

Ohio Station Advocates All-Mash Chick Ration

The rearing of chicks to maturity on an all-mash ration is a rather new venture in poultry keeping, and we shall have to take the word of those who have tried it as to its value. This system has been developed and advocated by the Ohio agricultural experiment station, at Wooster, and is fully described in a bulletin issued by this station. They state that they have found the method successful on their experimental farm and equally so in the hands of other poultrymen of the state. Some other stations, where it has been tried, discount these claims somewhat. There is no question as to the attractiveness of the plan and the results at the Ohio station should be sufficient to give warrant for trying it out.

Those who have followed the teaching of poultry experts over a considerable period of years have learned that there is little that can be considered as absolutely fixed, even in the seemingly fundamental principles of feeding and care. Revolutionary findings are apt at any time to upset long accepted practices. The all-mash ration should not have scratch grains added to it, since it combines in itself both the scratch and the mash and the addition of more scratch grain would unbalance it. That is, it would change the proportion of protein foods to the other ingredients and presumably lessen its value. An all-mash should be more coarsely ground than other mashes, to make it more palatable.

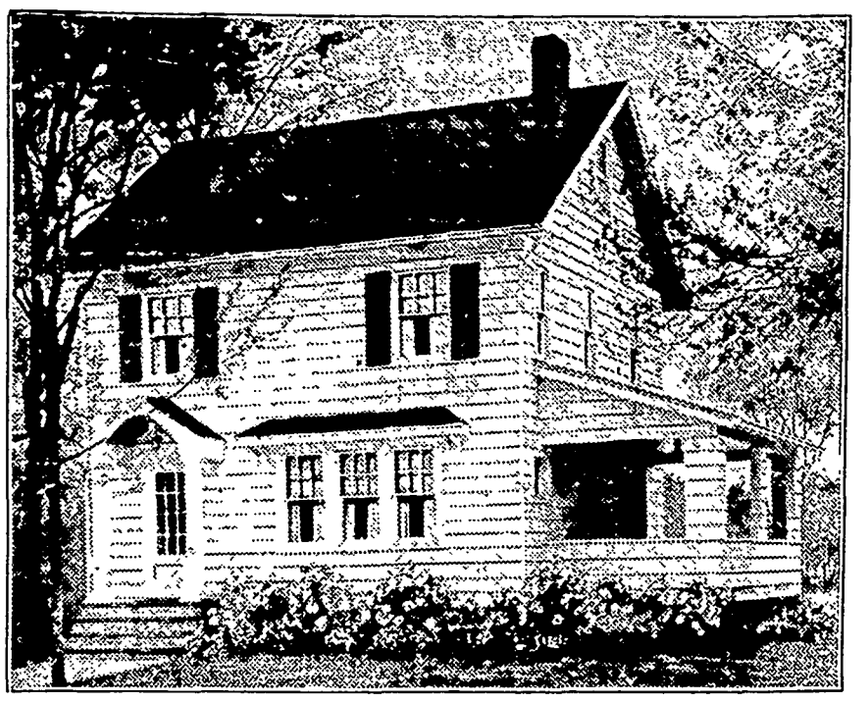
Raising Turkeys

Turkeys can be raised by artificial methods with less loss and more profit than by the hen-hatched and hen-brooded method. Each year the matter of growing more than 20 or 30 per cent of the poults has become more difficult. That the association of turkeys and chickens is one of the leading causes for the heavy losses in baby poults and that turkeys can be raised in brooders and hatched in incubators are comparatively new developments in the turkey situation.

In Case of Roup

Should any of your flock begin to show symptoms of roup, no time should be lost in starting measures to prevent further spread. All houses, pens, coops and runs should be thoroughly cleaned and sprayed with a strong solution of a good coal tar dip and disinfectant. Droppings, litter and trash of every description should be removed and burned. All unnecessary equipment of every kind should be removed from houses and yards and stored elsewhere.

Square Type of House Makes for Economy in Cost of Construction



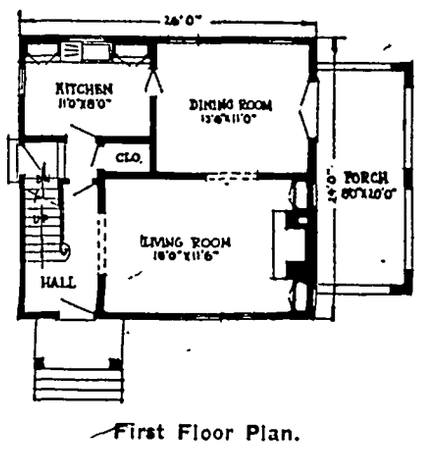
The square type home is always popular, and the large porch which can be enclosed is a feature not found in many homes.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Economy is many times an outstanding asset with prospective home builders when selecting a design for their new home. What runs up the cost of building a home is the irregular shape of a house which requires an irregular shape foundation. Each angle or turn in the foundation requires almost twice as much masonry as the same wall running straight. That is why architects in designing small homes stick pretty closely to straight lines.

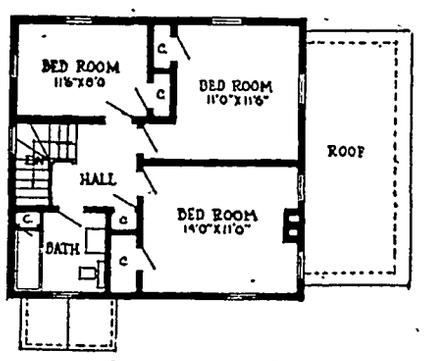
The home building design shown in the accompanying illustration is a rectangular home, 24 feet deep by 26 feet wide. However, the plainness that might come by these dimensions is broken by an artistic open porch at one end. The entrance, too, has



First Floor Plan.

been placed at one end, and with its colonial type porch pillars and roof and the overhang of the roof over the window group at the front, also helps to do away with the plain appearance.

Shown on the floor plans for this home are six rooms and bath. On the first floor the entrance door leads into the stair hall with a large living room, 11 feet 6 inches by 18 feet connected with a hall by a cased opening. The second cased opening leads into a dining room, and the back of the



Second Floor Plan.

stair hall is a kitchen 8 feet by 11 feet. This arrangement of connecting the hall and two rooms with a cased openings gives an air of spaciousness and makes practically all of the first floor into open living quarters. Coupled to this is an open fireplace at one end of the living room which breaks up the square wall effect. Double french doors lead from the dining room to the open porch. The stairs lead to a central square hall on the second floor off of which opens the three bedrooms and bathroom. Two of the bedrooms are larger than those found in a small home, while the third one is about the usual size. The house is of frame construction with clapboard siding. Old-fashioned shutters on the windows upstairs add to the colonial effect of the exterior.

This is the type of home building design which is popular where there is opportunity for surrounding the house with flowers, trees and shrubs. As the illustration shows, this is a most attractive home and can be built at an unusually low cost.

Foundation of Home Shows Real Condition

Several suggestions that will help everyone who is contemplating the purchase of a house are made in a letter contributed by a correspondent.

"Before you buy a house," he writes, "you should start with the basement and examine the walls for water stains and horizontal water lines caused by water seepage, or water standing in the basement.

"The foundation and retaining walls should be inspected for proper thickness," he continues. "A minimum width for main foundation walls below grade for a light-frame structure of one or two stories should not be less than ten inches, if of concrete; thirteen inches of brick, and eighteen inches for stone.

"Concrete walls having a sandy or clayey appearance are deficient in cement, or else are constructed of bank sand and gravel containing a large percentage of loam. Such walls should be examined for sand and loam pockets which are detrimental to the walls' structural strength and permit the entrance of water.

"The wall plate or mud sill, which lies directly upon the foundation and upon which the floor rests, should be minutely examined for dry rot and decay. This is generally the first member of a dwelling's superstructure that goes bad."

Yellow Color Makes Up for Lack of Sunshine

Keep always in mind in the selection of materials for glass curtains that anything having a yellow or golden tone will do much to atone for lack of sufficient sunshine in a dreary or cold room.

This is a fact so widely recognized as to hardly need repetition, but in similar fashion, and not so well known, materials having a rosy tone will lend an atmosphere of warmth and coziness to a living-room or any room where such an effect is desired.

The cheerfulness of the "sunshine tones," as all of the yellows and golds and mellow tans are commonly called, makes them particularly desirable for most living-rooms, but there are times when the subtlety of a faint orchid color for sash curtains in a bed room, or delicate green in a dining room or breakfast porch, will produce wonderfully pleasing results.

Simplicity and Dignity Needs of Small Home

Dignity and simplicity are the basic essentials of the successful small house. Fussy and elaborate details not only detract from the architectural merits of a house, but needlessly add to its cost.

The realization of this fundamental architectural principle is slowly being driven home to the American people, with the result that we are beginning to see a great improvement in our domestic architecture.

The increased cost of building that followed the armistice has at least one good effect. It made people give more serious consideration to the materials used in home building and greatly increased the use of the more permanent materials.

People appreciate more than ever that there is little difference between the cost of the cheaper materials and the best, especially when the difference is reduced to a percentage of the total investment. The use of better materials and construction and the growing appreciation of the good in architectural design is adding to the attractiveness of many an American community.

Common Brick Is Best for English Type Home

People who are insistent upon having their English type home reproduce as nearly as possible in appearance and effect the originals beyond the ocean are careful to have common brick specified for the exterior walls.

And the rougher, the more irregular, the harder burned and deeper in color they happen to be, the better. For it was of that character of brick that most of the oldest English manor houses were built. Many of them, hundreds of years old, are still standing and in use.

The English mason of the earlier days was not the scrupulously careful artisan that is his prototype of the present age. Nor were the architects so careful to have everything work out to a nicety.

In many of the older English houses are found walls that, instead of being plumb and exact, bulge and recede in a manner most inexplicable. Yet even so, these walls have stood for centuries and today are serving as models for ambitious architects.

Insects Revel in Heat of Summer

Some Bugs Do Best or Worst During Extremely Hot Weather.

Midsummer heat has a decidedly cooling effect on one thing at least—enthusiasm on the part of the amateur gardener. Conversely, as the temperature mounts, so does the ardor of the bugs which are interested in flowers.

Worst Garden Insects.

"Some of the worst insect enemies of the garden are doing their utmost just at the time when the gardener wants to take a rest," says Victor H. Ries, extension florticulturist at Ohio State university. "As the season advances the real gardener must become more vigilant and active instead of less so." The blister beetle, the tarnished plant bug and the red spider are among the most vigorous enemies of plants during July and August.

The blister beetle, a black, hard-shelled insect about half an inch long, eats up the plants and escapes before the average poison can get in its work on him. The tarnished plant bug is particularly active on asters. Both may be controlled by one of the several newer spray materials which contain pyrethrum as the active ingredient. These sprays are not to be confused, Ries points out, with the old-fashioned pyrethrum powder. Another antidote for the two bugs mentioned is dusting with sodium fluosilicate. Nicotine oleate is also recommended. Both insects mentioned are active and numerous, and will require regularly repeated applications of spray.

The red spider, a semimicroscopic mite, infests many evergreens as well as the common garden phlox. It may be controlled by dusting with powdered sulphur or spraying with a miscible oil, which is greatly diluted when used as a summer spray.

Alfalfa Seed Injured if Mixed With Sweet Clover

There is no way by which alfalfa seed may be separated from the sweet clover, as they are similar in size and shape. Only the experienced seedsman can detect the prevalence of the sweet clover in any lot of alfalfa offered. Sweet clover is a wonderful crop, and it has a distinct place in the world, but its place is not among the alfalfa either in the sack or in the meadow. If the alfalfa is never intended for anything but hay, a little sweet clover may not matter, but when the one having seed for sale, including alfalfa, is admittedly somewhat adulterated by natural process with sweet clover, see to it that the price is plenty low enough. The chances are that he bought the supply at a bargain up where the growers and seedsmen are wrestling with this very problem. The sweet clover may not do any harm in the cornbelt meadow, but better it would be for a good stand of alfalfa if all the seed sown were alfalfa and not partly something else.

Not Advisable to Burn Off Sweet Clover Land

It is not a good plan to burn off the land any kind of trash which will make humus in the soil. Even old sweet clover grass is worth too much plowed under to be burned off. Of course, if there is enough fine trash in the field to afford a good harbor for chinch bugs there may be some justification for burning over a field. But sweet clover growth does not usually afford good enough protection for the chinch bugs to live over winter. Burning over red top, timothy and blue grass does sometimes make it look as though it was helped, but this is likely to be only an appearance, because one can see the new grass starting better than when the old growth is not burned off.

Farm Notes

Meadow fescue is a perennial grass with habits of growth much like timothy.

* * *

Sudan hay is low in protein, but has about the same feeding value as prairie hay.

* * *

There are only two safe bulls—the one confined in a "safety first" bull pen, and the dead bull.

* * *

Among the most desirable varieties of the red currants are the Fay or Fay Prolific, the Perfection and Pomona.

* * *

A reason why the soy bean is growing in popularity is because it is easy to seed, cultivate, harvest and thresh.

* * *

Iacope is the name of a new variety of cabbage which is claimed to be highly resistant to the disease, cabbage yellows.

* * *

Farmers who use a large number of electrically-driven devices on their farms report that they save the cost of many days of hired labor.

* * *

Tree planting on idle land and woodlot thinning of second-growth timber go hand in hand. Both practices aid in the development of the greatest possible income and satisfaction from that part of the farm on which they are applied and which now is yielding little or no income.

Orchard Information

SUMMER PRUNING BAD FOR GRAPES

Practice Delays Maturity and Causes Loss of Sugar.

"Summer pruning delays maturity and decreases the sugar content of grapes," says Richard Wellington, horticulturist at the Geneva experiment station speaking at Cornell's farm and home week here recently.

Mr. Wellington described the experiments performed at Geneva to determine the effect of summer pruning on grapes. He stated that as a rule the late maturing varieties show a greater decrease in sugars and a more striking difference in maturity. According to Mr. Wellington, Delaware is the only variety which gives a higher sugar content when summer pruned.

"The lack of maturity was related to a decrease in sugar, although this relation varies with the variety," he stated.

"Just what effect this pruning will have upon next year's crop and the reduction in winter hardiness, it is now too early to state, but it is probable that the vine as well as the fruit stored up less food, such as starches, and consequently should be more subject to adversities. Since the fruit of the summer-pruned grapes was in no way superior to unpruned grapes, either in size or appearance, in all the late varieties was much more immature, and in all varieties but two contained less sugar, the practice is condemned as being unprofitable and, in fact, injurious."

Cover Tree Wounds With Grafting Wax or Paint

Young fruit trees that have been injured by rabbits or mice may be saved by covering the barked places with lead paint or better still with grafting wax. If the rodents have not been destroyed or the trees protected against them, they should be examined and all injuries treated at once.

If the wounds are small a covering of grafting wax or paint will be sufficient. However, if a tree is more than half girdled it should be bridge grafted early next spring.

Bridge grafting is done by inserting one or more cions over the wound, the number depending upon the size of the wound. Cions are cut slightly longer than the height of the wound so as to arch outward a little from the tree.

Cions for bridge or other grafting are selected while the trees are dormant and stored in moistened sand or moss and kept in a cool place until time for grafting. Only terminal growth made the last season or well ripened watersprouts are used as cions, and it is important that they be in good condition at the time for grafting.

Orchards Different in Regard to All Ailments

No two orchards are alike in regard to the occurrence or the severity of attack of the common injurious diseases and insects. Where the grower, therefore, has sprayed his orchard properly for a number of years and knows the insects and diseases that are present, he may be able to change or vary the spraying suggestions making the interval between application longer or shorter as required. He may also change the kinds and proportions of spraying chemicals. If he knows his conditions and has studied his problems carefully, the alterations made may be beneficial and at the same time less expensive.

Horticultural Hints

The codling moth is the most serious apple insect.

* * *

Among the raspberries one has a choice of three types—red, black and purple.

* * *

Vigorous trees, control of leaf-spot, and bees for pollination are necessary for maximum cherry yields.

* * *

Nitrate of soda or sulphate of ammonia, used at the rate of 250 to 300 pounds per acre, is commonly used to fertilize the vineyard.

* * *

Thinning increases size, color and other desirable qualities in apples, pears, and peaches. It should be done soon after the June drop. Remove all defective fruits and leave the rest about six inches apart.

* * *

The fruit crops may be profitable even on poor soil, but remember they will respond to good soil and care just as other crops do.

* * *

The fruit grower who fails to make proper use of manures and commercial fertilizers is likely to be "penny wise and pound foolish."

* * *

Unless you know how to propagate fruits and like the job you had better let the nurseryman, who is a specialist, do it for you as he can usually grow better plants at less cost.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

FALSE ECONOMY

THRIFT is a splendid thing but when it reaches the point of erliness it ceases to be a virtue. of its most peculiar manifestaas is the practice of keeping down nds to "save the rugs." In the al districts of some sections of country the whole house will be t up tight, summer and winter, that the carpets won't fade." ny city matrons in lesser degree guilty of the same conduct.

Prisons of former years were both rk and damp; and they consequent- not only confined those unfortunate ough to be sent to them, but killed em with disease. However, in these ys of enlightenment even many lls are reasonably light, and get enty of fresh air. Why then, emue the penal practices of past years saving the colors in rugs and carts?

Germs are cowardly things. They e the dark and thrive in it. They e equally attached to dust. Conrsely, they flee from sunlight, fresh and cleanliness.

Physicians realize the fundamental ct that an abundance of sunlight essential for normal development d the maintenance of a good physil condition. Drawn blinds bar it together.

While in many latitudes it becomes possible in the winter time to keep e windows constantly open during e day, this need not be so during e late spring, summer and early ll. One thing is certain, winter ll not keep out the sunshine if you willing to let it in.

One step farther is required, howr: window glass filters out the st beneficent portion of the sun's ys. It becomes necessary therefore, t only to let in light but to permit e sunshine to enter direct. In vere weather a few minutes is ough. In mild seasons one cannot re too much of it. Therefore, raise blinds, and keep them up; then ow open the windows and let in e sunshine and fresh air. Better little dust and faded colors than ease.

Be thrifty. But don't let thrift in s connection get the better of you. you do, you will be a miser—perps a sick one. And you even may n into a dead one!

* * *

A VICIOUS PEST

THE fly is one of the dirtiest insects in existence. It is a pity t it presents such an inoffensive pearance and that it lacks a sting. if it were ugly and aggressive manity's indifference to it would mediately change into opposing its ngerous activity. But that is where e trouble lies. The harm that it es is accomplished so slyly that the erage individual is likely to become reless regarding this pest, especialif he happens to live in the country True, there is a great difference tween the house of former days full flies fresh from the barnyard and comparatively flyless farmhouse today. However, much still needs be accomplished before this enemy life has been laid low.

Typhoid fever is a disease of filth d uncleanliness. It is invariably tracted by taking food, water or k which has been infected by tyoid fever germs. And it is right re that the innocent looking fly bemes such a powerful and deadly ssary.

This insect instinctively haunts un otected cess pools and in this man collects germs on its feet which later deposits on food by the sim process of walking on it. Oute conveniences should therefore ays be efficiently protected. t is not always possible, especially farms, to remove the barnyard oducts that are such a favorite unt for the fly; but even there a tain amount of sanitary care and efficient screening of one's house l diminish the hazard from that urce.

Moreover, there is absolutely no exse for anybody to maintain any attracting spots in the immediate ghborhood of their dwelling. Exed garbage and other filth magtic to the fly should not be toler-d.

s to food (and this applies to city rural folk equally) thoroughly sh uncooked foods such as lettuce, ery and endives. This mechanical cess may remove fever infecting ms deposited by flies in the process marketing this produce.

o conclude, the best kind of fly human beings is a dead one. Do tolerate conditions that breed and t give him quarter if he invades r home. Swat—and live!

SIGNBOARDS ARE VERY UNSIGHTLY

Industries Depending on Highways for Business Worst Offenders.

(Prepared by the United States Department of Agriculture.)

In a canvass of advertising signs on the highways, the bureau of public roads of the United States Department of Agriculture found that the automobile industry and those industries which serve it are the worst offenders. Their signs carry advertisements for cars, tires, oils and other accessories. Hotels and restaurants, the bureau says, probably rank second in the amount of advertising done along the highways.

Thomas H. MacDonald, chief of the bureau, in a recent statement declared: "There is little of fairness to the public in the fact that the industries which depend upon the highways for their whole business should be the worst offenders in erecting and maintaining thousands of glaring, disfiguring signs along our streets and roadways." He also pointed out that many of the producers of the best products do not advertise in this way.

Distract Driver's Attention.

"These signs," says Mr. MacDonald, "are concentrated on the main traveled highways and are habitually placed at turns in the road where the motorists should be giving most careful attention to driving. In many instances they cut off the view of approaching cars at curves and at road intersections. Some even cut off the sight of approaching trains at unprotected grade crossings. Those which carry the word 'stop' and other words ordinarily employed on the legitimate warning signs weaken the force of the properly placed cautionary signals."

The bureau found that signs tend to multiply on poor or inferior real estate or other property along the road; that frequently abandoned sheds or barns near the roadside are covered with unsightly advertising; and that lowlands along small streams over which highways run are popular positions for large billboards.

The unsightliness of the tin signs hung on wire fences or attached to tree trunks was very noticeable to the investigators. Many such signs have been completely washed out by the weather, yet remain to disfigure the landscape.

Danger Signals Obscured.

The effectiveness of the standard numeral signs and direction and danger signals on the principal transcontinental highways, which have contributed immeasurably to the convenience and safety of travel, is hindered in many instances, says the bureau, by advertising signs which are so placed as to obscure them or withdraw attention from them. In many cases such advertisements are a positive hindrance and menace to the traveling public, especially when they contain misleading information about distances and the condition of the road ahead, which is belied in less obtrusive fashion by the public signs.

In his last annual report Mr. MacDonald stated: "In practically all cases these roadside advertisements merely repeat in the same form appeals that are made quite properly and insistently through other agencies. They are unneeded by the public and are of doubtful value to the advertisers. It is hoped that means may be found by suitable legislation to effect their complete elimination upon all roads constructed in part with money appropriated by the national government."

MOTOR QUIZ

(How Many Can You Answer?)

Q.—What is the most economical driving speed?

Ans.—About thirty miles an hour.

Q.—Are one-piece spark plugs easy to clean and what is the best way to clean them?

Ans.—Yes. Fill lower part of the plug with alcohol, metal polish or equal parts of ammonia and water and allow to stand for a few seconds. Rub the carbon from insulator with a stiff wire or small wooden peg covered with one thickness of cloth. Wipe plug dry and clean the sparking points with emery cloth.

Q.—Is it necessary to prime the fuel pump after the supply of gasoline has been exhausted?

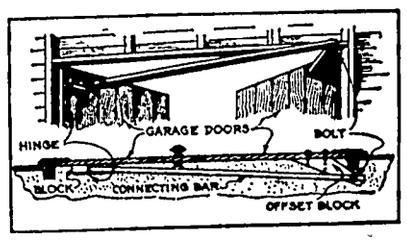
Ans.—No. The fuel pump is self-priming. Simply stepping on the starter primes the pump.

Q.—What can be done to make it easy to remove rim lugs in changing tires?

Ans.—A few drops of oil applied to the rim bolts when changing tires will cause them to come off much easier the next time it is necessary to change a tire.

Making Double Doors Open at Same Time

The illustration shows a novel fitting for any double garage doors. It is designed so that when you open or shut the door at the left in the illustration, the other door will open or shut automatically. The material



Side and Top Views of the Ingenious Device for Making Double Doors Open at the Same Time.

you need consists of a board of sufficient length, three bolts, a strong iron hinge, and wood screws.

As you open the door at the left, a connecting bar, pulled along with it, opens the door at the right by pulling on the end of the offset block. In closing, the thrust of the connecting bar closes the door at the right.—Popular Science Monthly.

The coming census will give the automobile salesman an insight to the few remaining possibilities that exist in his line.

* * *

The idea of the bill making automobile licenses payable July 1 is in part that Santa Claus and the tax collector ought to be kept as far apart as possible.

FAMOUS GEYSERS ARE ACTIVE AGAIN

Yellowstone Park Wonders Back to Life.

Washington.—After eight or nine years of comparative quiet, unusual activity is now being displayed by two of the largest geysers in Yellowstone National park, the Giant and the Giantess, according to reports recently received at the Department of the Interior.

The Giantess, which played only once during the summer of 1928, has played twice since the beginning of the present calendar year, with a 22-day interval. During the second eruption it played for over four hours. The period during which water was erupted lasted only about 50 minutes, the rest of the four hours being given to steam and enough accompanying water to form a fine mist coming down.

From these two eruptions it is hoped this geyser is coming back to activity. The average height of the Giantess' eruptions is from 200 to 250 feet. Until recent years it has usually played two or three times a season.

The Giant geyser, which used to play every eight or ten days, during the last few years extended the time between eruptions to a month or more and last summer and the year before only played at night when tourists were not able to see it. It also has played twice so far this year, at one time throwing water to a height of 180 to 200 feet for a period of 62 minutes. Sometimes the Giant throws its water as high as 250 feet. Until the advent of the new geyser in the park the Giant has been classed as the greatest existing geyser since the old Excelsior, which played out in 1890.

The new geyser, which as yet has not been given a special name, suddenly broke out last July. It appears to have continued activity without interruption through the winter, although close observations have been impracticable under winter conditions. Its crater, which resembles that of the old Excelsior, measures 90 by 140 feet. Its tube may be measured to a depth of 74 feet below the surface, one foot deeper than that of the Giant. During the latter part of the past summer it erupted once in every ten to fourteen and one-half hours, the period of eruption lasting from four to six hours. It has been estimated that about 700,000 gallons of water are thrown out in one of its four and one-half-hour eruptions.

Escaped Monkey Has Fun With Train Crew

Reno, Nev.—No. 9, the fast mail train of the Southern Pacific, was made a monkey of when it rushed through eastern Nevada, according to trainmen going through here.

When the train left Ogden there were 14 monkeys in a cage on one of the baggage cars. When the train reached Lakeside there were only 13 monkeys in the cage, while the fourteenth, not satisfied with the manner in which the train was proceeding, was out doing its best to help.

The monkey scampered over cars and under cars and the 60-mile-an-hour rate of speed mantained by the train had no terror for the animal. For 200 miles the monkey played tag with the train crew. Then at Carlin the animal left the conveyance and played games with Carlin residents. Most of Carlin's population turned out to help capture the truant, and it took all of them to do it.

Eventually Mr. Monk was overtaken and placed on No. 19 of the Southern Pacific for transportation to San Francisco. The monkey was none the worse for its vacation.

Indian Tribe Claims $17,000,000 From U. S.

Havre, Mont.—Assiniboin Indians are preparing to wage an intensive battle to recover $17,000,000 they claim is owed them by the United States government. They have appointed Everett Sanders, former secretary to President Coolidge, as their leader in the fight to succeed James Good, who resigned his post as Indian leader to join President Hoover's cabinet.

The Indians' claims is for unoccupied lands and unpaid annuities under the treaty of 1851.

Popular for Dogs

Bridgeport, Conn.—Bridgeport dog owners, who once preferred the names of "Fido" in large majorities, now are turning to more distinguished canine names. Scrutiny of dog license records here revealed "Lindy" and "Mussolini" threaten to eclipse "Fido" as a pet name.

Coeds Prefer English; Men Pick Economics

Cambridge, Mass.—English is the most popular subject among college girls and economics among men, if a survey conducted at Harvard and Radcliffe is an accurate barometer.

Twenty-eight per cent of Radcliffe girls are concentrating in English, compared with 16 per cent of Harvard men. Seventeen per cent of the Harvard students are majoring in economics, while less than 3 per cent of the Radcliffe girls have shown preference for that subject.

Saxophone Second to Accordion in France

This year, 1929, marks the anniversary of the accordion. It is doubtful if even in its native Vienna, where the humble accordion first was devised by an instrument maker named Damain in 1829, the anniversary will attract as much attention as has been given to it in France. Never in all its 100 years has the accordion enjoyed such prestige with the "elite," the sophisticated, the wealthy, as it does today. Jazz music is responsible. The saxaphone was not melancholy enough. The accordion was substituted. It is the instrument of the street, of the soloist, of the waltzes that are scorned as the ashes of the past on Montmartre, but still are flushed and gay with the breath of life in the corner bistro where neighbors gather after nightfall; of the villages of the provinces, and of the seaports where "at twilight the nostalgic spirits of sailors beneath foreign skies become drunk with its cajoling music and the simple music which brings back to them their faraway native land."

Crabs Four Feet Long

King crabs measuring four feet in length and even longer have recently been found in the Alaskan waters and they are being taken in grat quantities and their meat shipped to the United States, where it is highly esteemed, as evidenced by a rapidly growing demand. The crabs are caught in nets sunk deep in the water of Cook inlet, and when brought to the surface and dressed, the average yield of meat is six and a half pounds per crab. These are said to be far superior to the great crabs which have been taken from the Japanese waters.

For your daughter's sake, use Red Cross Ball Blue in the laundry. She will then have that dainty, well-groomed appearance that girls admire.—Adv.

Dr. R. W. Specht and family of Garner visited with Klemme friends Tuesday evening.

Wayne Lemke, who is employed by the J. C. Penny Co. at Mason City, spent Sunday at home.

Mr. and Mrs. Oscar Schuldt, of Chicago were visiting Klemme relatives last week.

Miss Marie Blank is back on the job at Wellemeyer's again after a short vacation.

Frank Carpenter went to the hospital Tuesday to have a carbuncle removed on his neck.

Mrs. Oscar Swanson is enjoying a visit from her sister who came from Chicago, Monday.

Dr. and Mrs. W. F. Missman entertained his brother, C. A. Missman and family of Woden, Sunday.

This community has had plenty of rain this past week and there should be plenty of moisture for the crops for a few weeks at least.

Commencement Exercises will be held tonight at the H. S. Auditorium. Rev. Davies of Mason City will deliver the address.

The Royal Neighbors will have a Bake Sale Saturday, June 8th at J. N. Day's Store, beginning at 11:00 a. m.

Col. Chas. A. Lindberhg and Miss Anne Morow were quietly married Monday. Klemme joins the nation in extending best wishes.

Dr. L. R. Parsons and family of Belmond, and Dr. R. W Specht and family of Garner, visited at the Dr. Missman home Sunday evening.

D. D. Ross Garner, and Mr. George Murdice of Joliet, Ill. called on the Wm. Smith and J. N. Day families one day this week.

The public is invited to the annual school picnic to be held Friday at C. A. Larsen's lawn in northeast Klemme.

Mr. and Mrs. Clarence Kluckhohn and Eugene, and Mrs. C. G. Waterman and Marian, were at Belmond Monday evening on business.

Walter Lauden and family of Forest City came Wednesday for a visit with Klemme relatives. Walt reports that crops look fine up his way.

The Baack residence west of the State Bank is rapidly undergoing a change and will soon be ready for Mrs. Stooldryer who will open a cafe there.

Mr. and Mrs. Charles Ax drove to St. Paul Saturday morning for a visit with Mrs. Ax's brother, Chas. Swald and family until Sunday evening.

Levi Klotzbach and family are today visiting at Monona and other points in northeast Iowa. We understand Floyd will work there this summer.

Mr. and Mrs Tom Nelson, Jr expect to drive to Sioux City Friday to bring their son, Harvey home as his college closes then for the summer vacation.

The Klemme Food Market presents a metropolitan appearance as the remodeling is practically completed. Mr. Larsen has now a very nice grocery and meat market.

An old landmark, the Schaefer Building, has about dissappeared as workmen are cleaning up the few remaining boards and timbers on the corner opposite Wellemeyer's.

Mr. Haefner, father of Mrs. Ed. Wellemeyer of Garner, died Monday night. Mr. Arthur Wellemeyer, of this city, took the body to Giard, for burial Wednesday morning.

Miss Mildred Wheatman has been notified by the Superintendent of Schools at Iowa Falls that she will teach a special grade, an over-flow of grades 2 and 3 in their Central School.

Dr. W. F. Missman attneded a clinic at Hampton hospital Tuesday forenoon. Some widely known men were present to lecture and instruct in special branches of the profession. Abanquet was served at noom.

The Womens Foreign Missionary Society of the Methodist Church will meet at the Parish House on Thursday afternoon, June 6th at 2:00 o'clock. Mrs. Frank Ward is the hostess for this meeting.

Elmer Dow, former Klemme resident, and Dr. Skovgard, of Sheffield, visited with Klemme friends Monday evening and took in the Boy Scout meeting. Mr. Dow is a Committeeman and Dr. Skovgard the Scoutmaster at Sheffield. They complimented Troop 56 on the good work in signalling demonstrated Monday evening.

DINGS AT SCHOOL THE PAST WEEK

ST WEEK AT SCHOOL WAS A WEEK OF ACTIVITIES

elve Seniors Received Diplomas Last Thursday Evening

Everything is quite at our Public ools this week, following a week more than usual activity getting s out of the way, grades made , averages taken for the year d other last minute clerical de- ls to look after before closing the ords for the 1928-29 school year chers left for their various hom- Friday afternoon and evening, cept Supt. Penrod, who remains a ween or more to make final rangements and look after busi- ss for the Board.

Commencement Thursday Eve

The Commencement Exercises re held at the school auditorium t Thursday night. The program s carried out as printed in the es last week. Rev. Davies, of son City gave a wonderful talk d emphasided 'character" in a st forcible manner. His talk was l of good, sound advice for old d young alike.

Diplomas were awarded by Pres. D. Gimer to seven boys and five ls. Students from the country ried away all honors. Laurence T. Greiman was presented a med- by Supt. Penrod for having the hest average of the class. Ken- h Gast was a close second and bel Schuldt was third highest in class All three students had close average, according to Mr. nrod.

The class of Eighth Graders were esented diplomas entitling them high school admission.

The Girls Glee Club, under the rection of Mr. Don Lewis gave veral numbers on the program. e young ladies have developed in- real artists this past winter and ir singing was greatly enjoyed. A packed house turned out for e commencement this year.

School Picnic Held Friday

Friday was the big day of the ar for the children especially and e weather was ideal for a picnic ich was held on C. A. Larsen's acious lawn east of the school. As usual, the entire community de it a holiday and turned out force to enjoy this day together ere were "eats" for everybody d we believe some of the younger ys set up a new record for con- ming ice cream. One lad had al- dy stowed away six dishes of ce eam and still seemed to be going rong.

ntral States Electric Co. March Alley Lights	2.52
ed Gates, March Salary	75.00

Bills allowed.

Meeting adjourned.

A. J. Kudje, Clerk.

BOY SCOUTS ENJOY HIKE AND OUTDOOR MEETING

Troop 56 Scouts Study Trees On Monday Afternoon Hike

"OUTING" is three-fourths of "SCOUTING."

With this fact in view Leaders of Troop 56 are inaugerating more of the Out of Doors into the program for Klemme Boy Scouts. Weather permitting, a majority of the programs this summer and fall will be carried out out-of-doors.

The first hike of the "new year" for Troop 56 was held Monday afternoon and evening and was in charge of Troop Committeeman Rev. Grosshuesch, who has charge of hiking and camping and the majority of the out door work of Scouting.

Permission and arrangements had first been made to use a site at the Trumbell Timber near Goodell for the day's activity.

On the hike to the camp the Scout Pace Relay was won by the Eagle Patrol, of which Wayne Pavey is the patrol leader. That patrol made the most accurate time.

When the Timber was entered a headquarters site was laid out and a trail marked, using a number of scout signs, to direct leaders of the troop to camp when they arrived later Each patrol also laid out a marked trail for the other patrol to follow and criticize.

Rev. Grosshuesch directed the Scouts in Nature Study and several varieties of trees were studied and fully identified.

As the supper hour approached C. G. Waterman, Dr. W. F. Missman and R. A. Jorgenson drove out to the Timber and unloaded packs and food supplies The men were required to locate the Scouts and followed the trail to camp.

Cooking fires were soon kindled and a variety of choice foods were soon being prepared. Scouts cooked individually or in pairs and the menus ranged from hunter's stew, kabobs, broils, and other forms of meat cooking, and many other very delicious outdoor dishes.

After the evening meal the camp was cleaned up, pots and pans washed and packs made up.

A Council Ring had been built during the afternoon and the Council Fire ready to light for the evening's program.

The Council Program was an impromtu affair with stories, stunts, and Scout songs predominating. As the fire died down the ashes of the "first" council fire were gtahered and preserved for the next fire—thus will the future council fires be linked with the early history of our Troop.

It was a tired, happy, dusty gang of boys when they arrived home at about 9:30 Monday evening.

JAMES KURTZ DIED SUDDENLY YESTERDAY AFTERNOON

Had Been Hale And Hearty Up To Time Of His Death

James Kurtz, farmer residing north and west of Klemme, died very suddenly Wednesday afternoon at 5:30 o'clock. Heart trouble was thought to be the cause of his sudden death. Mr. Kurtz was a man 72 years of age, but he appeared to be much younger. Up until his sudden death he had felt hale and hearty and was in the house when he dropped to the floor dead.

The family lived near Belmond for many years and for the past two or three years were farming the Weigman Section 4 miles northwest of Klemme. Mr. Kurtz was a kind man, fair and square in his dealings and beloved by his family and his many friends. At the age of 72 he was still the active manager of his farm. He was born in Lebanon County, Pennsylvania.

Funeral services will be held on Sunday afternoon at 2:00 o'clock at the Methodist Church at Belmond, and interment will be made in the family lot at the Belmond Cemetery.

NOTICE TO LANDOWNERS

Landowners are urgently requested to have their claims for refund on open ditches, filed with the County Auditor before July 1, 1929 to avoid confusion on 1929 tax list.

CHRIS JACOBS,
County Auditor. 2tc.

LITTLE BROWN CHURCH SCENE OF WEDDING MONDAY

Former Klemme Girl Married To Wisconsin Young Man

The Little Brown Church in the Vale, near Nashua, owa, was the scene of a wedding ceremony Monday which united Miss Florence Carlson, of Ingram, Wis., and Mr. Reeve Ellison, of Weyerhausen, Wis The nuptial vows were given at 1:30 officiated by Rev. L. C. McCorison, pastor of the Church, reading the single ring ceremony. The couple was attended by Miss Grace Ellison of Weyerhauser, and James Carlson of Klemme.

The Bride wore a dress of peach georgette and silk crepe, with a peach flower trimmed hat. She carried a bouquet of pin kand white carnations and roses.

The bridesmaid was dressed a flowered silk crepe dress

After the ceremony the bridal party drove to Klemme where a dinner was served by Mrs. Clarence Bredlow.

Mrs. Ellison is a daughter of Mr. and Mrs. G. H. Carlson, who formerly resided at Klemme She attended school here until 1920 when she moved with her parents to Ingram, Wis. After completing high school and a two year course at the Wisconsin State Teachers College, she began teaching in Weyerhauser, where she has been teaching the past four years.

Mr. Ellison is a son of Mr. and Mrs. M. J. Ellison of Weyerhauser. At present he is employed by the Soo Line Railroad Co, holding a position at Weyerhauser.

Those present at the wedding were Mr. and Mrs. G. H. Carlson of Ingram, Wis., Mr. and Mrs. M. J. Ellison and the Misses Grace, Lenora and Phyllis Ellison of Weyerhauser, Wis, Charles S. Carlson and James Carlson of Klemme.

Mr. and Mrs. Ellison are spending a few days of their honeymoon with Mr. and Mrs. Clarence Bredlow after which they will leave on an extended touh thruogh the west. The couple expects to reside at Weyerhauser.

The other members of the party are visiting relatives and friends at Klemme and Storm Lake. They expect to return home in a few days.

REFORMED CHURCH NOTES

JUNE IS MONTH OF WEDDINGS IN THIS COUNTY

Business At Clerk's Office Picks Up As Wedding Month Arrives

June has always been a popular month for marriages and this year June has a good start as three licenses have been issued by Chris J. Johansen the pat week. They are:

Allen Raw, Britt, owa, and Mildred Higdon, Britt, Iowa. May 31.

John Dahlstron, Mason City, and Clara Tuthill, Mason City. June 1.

Vincent T Dougan, Britt, Iowa, and Margaret M. Lawler, Woden. June 3.

CLARENCE BREDLOW NOW ONE YEAR OLDER

Relatives Give Him A Pleasant Reminder In Form Of Surprise

Clarence Bredlow was pleasantly surprised last Thursday evening by the immediate relatives of the family. The occasion being his birthday. An enjoyable evening was spent after which refreshments of sandwiches, home made ice cream and cake were served. Those present were Charles Bredlow and Edna and Mabel, Herbert, Curtis and Lester; Mr. and Mrs. Elmer Bredlow, Will Suckow and family, Walter Bredlow and family, James and Charles Carlson.

REFORMED BIBLE CLASS HAS FINE OUTDOOR MEETING

Special Occasion Was To Celebrate Mabel Schuldt's Birthday

Tuesday night the Bible Class assembled as usual at the Reformed Church. After a short meeting Rev. Grosshuesch begged to be excused on the plea that he had an important engagement, and invited any who might wish to go with him. All present except Miss Mabel Schuldt knew what this "important engagement" happened to be, and all did go with him an dthe trip ended at the Herman Schuldt farm. When Miss Mable arrived some time later she found all of her friends from the Bible Class and the Choir assembled.

A huge bon-fire was built and the group of 45 young people gathered about and finished their Biblo Class program, after which games were played and last, but not least, the young folks enjoyed a weiner and marshmallow roast.

The party was brought to a close by singing America. Needless to say, all present had a wonderful time, and are wishing that Mabel may have more birthdays soon.

CONRAD MTEZGER DIED HERE LAST EVENING

Mr. And Mrs. Metzger Visiting At Home Of Their Daughter

This community was shocked to hear of the sudden death of Mr. Conrad Metzger, who passed away at the home of his daughter, Mrs Clarence Kluckhohn Wednesday evening at about six thirty o'clock, after a brief illness of but a few hours. Cause of his death was heart trouble.

Mr. and Mrs. Metzger who have been residing at Bluffton, Indiana, had spent the winter in California. They arrived at the Kluckhohn residence on Memorial Day, planning to visit with their daughter a few weeks before returning home.

Mr. Metzger, who is about 75 years of age, had not been well of late, but his condition was not thot to be serious. He had been up and around and was ill but a short time before death claimed him.

At this time no definite arrangements as to time of holding funeral services have been made, as relatives from a distant have not been heard from as we go to press. The funeral services, however, will be held in Klemme, and interment will be made in the Klemme Cemetery.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

The two weeks of meeting held at Liberty Church were well attended all the way through. They helped to awaken new interest in church activity, and brought great spiritual uplift to the entire community. On last Sunday, which was the last day of the special meetings, six babies were baptized; eighteen boys and girls were received into preparatory membership; and five were received into full membership of the church.

Services this coming Sunday will be held according to schedule both in Klemme and at Liberty.

The Children's Day Program given in the Klemme church last Sunday was enjoyed by a capacity house and it was pronounced by many as being an excellent program. The offering taken amounted to something over $12.00.

KITTEN BALL CONTEST TO BE HELD AT F. B. PICNIC

A township Kitten Ball contest will be conducted at the Farm Bureau picnic on June 12. It is hoped that every township will organize a ball team and get into this contest. The work will be in charge of Lawrence Pilgrim. Write the F. B. office for further particulars.

FARMERS WILL MAKE ANNUAL TOUR TO AG COLLEGE

The Hancock County Farm Bureau will conduct a tour to Iowa State College on Sept. 13. It was thought that in as much as previous tours have been taken in June that it would be well to go in the fall and visit the Experiment Station when the crops were matured.

ESTRAY NOTICE

A black horse, weight about 1,000 pounds, white face, came to my place. Owner may have same by proving property and paying cost of keep and advertising. Tom Roths. (J-6-tfc.)

FARM BUREAU PICNIC NEXT WEDNESDAY

Dont forget the Farm Bureau picnic next Wednesday, June 12th at Eagle Lake state park.

The annual 8th grade commencement exercises will be held in the forenoon, the big dinner at noon, and all kinds of games, contests and sports of all kinds.

Don't miss the big day of all the year—June 12th!

Attends Iowa U. Commencement

Mrs. C. A. Arnold and Wilbur Arnold drove to Iowa City Saturday to attend the commencement exercises. Elmer Larson, cousin of Wilbur graduated from the medical department. They returned to Klemme Tuesday.

MEMORIAL DAY PROGRAM WAS WELL CARRIED OUT

Morning Program Met With Favor Of Everybody Here

The Memorial Day Services held in Klemme last Thursday morning was one of the best programs enjoyed for some time.

Lieut. Dwight Osborne acted as officer of the day and handled the program in fine shape and had everything well arranged and the program went off with clock-like precision.

The Duncan band had been secured and provided some fine music, interspersed with patriotic numbers.

High points of the program at the city park were the readings by Oral Gibson, Mrs. P. W. Johnson and Miss Valeria Koerner. Rev. Davies, of Mason City delivered the Memorial Address and brought out many fine points in his talk.

Klemme is fortunate in having two Veterans of the Civil War: Mr. Lew Lewis and Mr. Sam Eckerman, who were given seats of honor on the platform. Mr. Henry Jost, is Klemme's only veteran of the Spanish-American War. Gold Star parents were honored with special places on the platform.

The staff of our schools provided two fine musical numbers, a mixed quartett and a male quartet.

The parade formation, under the command of Leut. Osborne made a fine appearance, headed by the band and next in line the color bearer and guards, firing squad and Veterans. Troop 56, Boy Scouts and leaders came next in line, followed by the Legion Auxiliary who were all attired in white dresses. A very pretty part of the formation was a group of little flower girls who rode on a decorated platform mounted on a trailer. The Camp Fire Girls were out in full regalia. Other groups and individuals composed the balance of the parade to the cemetery where appropriate services were held by the Legion and the graves decorated. At the close of the service taps was sounded over the grave of the Unknown Soldier, and Kenneth Kluckhohn, Bugler of Troop 56, answered taps on his bugle, giving the effect of an echo.

The parade returned to town and disbanded at Main Street.

Boy Scouts of Troop 56 took charge of flag decorations and set out the flags early in the morning, at half mast, and after the program hoisted the Colors to full mast and in the evening gathered in all flags and stored them until needed again.

The Times commends all who had a part in the making of and carrying out the Memorial Day Program —is was very well accomplished.

COLLISION WRECKS TWO CARS ON HIGHWAY SUNDAY

Chevrolet Coupe And Ford Touring Badly Smashed In Wreck

An auto accident on the Wilson highway Sunday at the intersection west of the Ralph Ludeke farm Sunday afternoon wrecked two cars and slightly injured the occupants of both cars.

Mrs. Nettie Wade accompanied by Lloyd Ulrich's little boy, and Owen Neuhring's little girl had driven to Klemme in Walter Bredlow's Ford Touring car. As the left town again they drove out west over the Ludeke hill and, it was as they reached the highway that the collission took place between the Ford and a Chevrolet coupe driven by a Mr. Snyder of Belmond. With Mr. Snyder in the coupe were three ladies and a baby Mrs. Snyder, her mother, Mrs. Schoonover, of Britt, and another daughter and baby.

In the mix-up both cars were badly smashed up. The Chevrolet has been repaired, but the Ford looks like a total wreck.

Luckily no one was seriously injured in the wreck. They were all taken to Dr. Missman's office and had cuts and bruises dressed.

EYE, EAR, NOSE AND THROAT CLINIC

Dr. Carlson will be at my office Tuesday, June 11th to remove tonsils and conduct a clinic. Phone or see me for appointment.

Dr. W. F. MISSMAN.

1—Colonel Lindbergh and his bride, the former Anne Morrow, leaving the Morrow mansion at Englewood, N. J., immediately after their marriage. 2—Students of the professional schools of Mexico City in riotous demonstration against new regulations. 3—Roger Q. Williams and Lewis A. Yancey at Old Orchard Beach, Maine, ready for their projected flight to Rome.

NEWS REVIEW OF CURRENT EVENTS

House Passes Tariff Bill Boosting the Duties on Nearly All Articles.

By EDWARD W. PICKARD

IMPORT duties on many agricultural and industrial products are raised to new high levels by the Hawley tariff bill which was passed by the house of representatives. The final vote was 264 to 147. Twelve Republicans voted against the measure, but on the other hand twenty Democrats, mostly from the Southern states, voted for it. The dozen Republicans in opposition were: A. H. Andresen, Victor Christgau, Frank Clague, G. G. Goodwin and C. G. Selvig (Minn.), Merlin Hull (Wis.), E. H. Campbell (Iowa), C. A. Christopherson (S. D.), T. J. Halsey (Mo.), W. P. Lambertson (Kan.), F. H. La Guardia (N. Y.), and James M. Beck (Pa.).

The Republicans from central agricultural states voted against the bill, chiefly because of failure to boost duties on dairy and other farm products high enough and because of the imposition of duties on building materials. The increased duty on sugar was the chief reason for the adverse vote of Representative La Guardia.

All of the more important changes made in the tariff by the measure are upward except that the rates on children's books are reduced. So, too, is the rate on carillons, if any.

The bill ends the terms of members of the present bipartisan tariff commission and provides for the appointment of seven new members on a nonpartisan basis, with salaries of $12,000. The flexible tariff system is retained, but with a change in formula for the ascertainment of costs.

The senate finance committee, to whose hands the Hawley bill is now committed, will take several months to rewrite the measure, after which it will be debated by the senators. During that period, it is hoped, congress can take a recess and escape some of the hot weather.

BY THE decisive vote of 57 to 26 the senate passed the combined census-reapportionment bill that was so obnoxious to the drys of the South. Its main features have been told before in these columns. Passage of the measure by the house was considered a certainty.

PRESIDENT HOOVER'S first Memorial day address, delivered at Arlington National cemetery, was an earnest plea to all the nations of the world to join in the peace movement by making the Kellogg pact effective. He urged that they all reduce their naval armaments and navy building programs to the limit required by the needs of national defense. The maintenance of permanent peace, the President declared, would be the highest honor that could be accorded the memory of those who had died in war.

MRS. MABEL WILLEBRANDT resigned as assistant attorney general in charge of dry law prosecutions, and the President accepted the resignation in a letter expressing deep regret at her leaving the government service and appreciation of the work she has done. She is to become Washington counsel for the Aviation corporation.

Reports that Mrs. Willebrandt planned to leave the government had been current since it became known that President Hoover had no intention of placing her in charge of all prohibition enforcement when the dry bureau is transferred from the Treasury department to the Department of Justice. It was stated in Washington that Mr. Hoover would not select Mrs. Willebrandt's successor until about the time she retires, which will be June 15.

PRESIDENT HOOVER'S special law enforcement commission held its first meetings and began the work of organization to get in readiness for its gigantic task which it is believed will keep it busy for two years. In a brief address to the commission the President said:

"It is my hope that the commission shall secure an accurate determination of fact and cause, following them with constructive, courageous conclusions which will bring public understanding and command public support of its solutions. The general public approval of the necessity for the creation of this commission and the extraordinary universality of approval of its membership are in themselves evidences of the responsibility that lies upon you and of the great public concern in your task and of the hopes that you may succeed.

"I do pray for the success of your endeavors, for by such success you will have performed one of the greatest services to our generation."

COL. CHARLES A. LINDBERGH and Miss Anne Morrow were married Monday afternoon at the Morrow estate just outside of Englewood, N. J., and the cohorts of reporters and news photographers, who have dogged every move of the young couple, knew nothing about it until the affair was all over and the bride and groom had sped away in an automobile. Much as the people of the United States are interested in Lindy and his doings, a gleeful chuckle ran all across the continent when it was learned that he had put one over on the press and camera men. The wedding ceremony was of the simplest, with no bridesmaid or best man and with only members of the families present. The nuptial service was conducted by Rev. Dr. William Adams Brown of Union Theological seminary, a close friend of Ambassador Morrow. At its conclusion Colonel and Mrs. Lindbergh entered a waiting automobile, cleverly evaded pursuing reporters who thought they were just going for a ride, and disappeared entirely from the ken of the public.

MME. ROSIKA SCHWIMMER'S long fight for naturalization in the United States came to an end when the Supreme court affirmed the decision of the Chicago Federal District court that the famous Hungarian radical and pacifist is unfit for American citizenship. The majority of the high tribunal, in an opinion read by Justice Butler, reversed the Circuit Court of Appeals and found with the Chicago District court, that Mademoiselle Schwimmer's admitted lack of nationalistic sense and boasted "uncompromising pacifism" make her "liable to be incapable of that attachment for and devotion to the principles of our Constitution that is required of aliens seeking naturalization." Justices Holmes, Brandeis and Sanford dissented.

ANOTHER decision by the Supreme court upheld the Presidential "pocket vetoes" which have been used by nearly all Presidents to kill legislation they deemed undesirable. The opinion interpreted for the first time that section of the Constitution which provides that bills not signed by the President within ten days or returned without his signature before congress adjourns shall not become law. It came as a blow to those advocates of government ownership and operation who insisted that the Muscle Shoals resolution, "pocket vetoed" by President Coolidge at the end of the first session of the last congress, became law without his signature.

Senator Norris at once introduced another resolution identical with the one killed, and it was reported favorably by the committee on agriculture, but the Nebraskan had little hope that the senate could act on it before the summer recess.

THERE is a great to-do over governmental affairs in the Philippines. Insular Auditor Ben F. Wright refused to issue a certificate releasing the million-dollar fund for a wharf development scheme at the city of Ololo, asserting the contract was invalid. He was sentenced to prison for this refusal but has been set free by a habeas corpus writ granted by Supreme Court Justice Street, and thus the case will come before the full court in July. Americans in the islands say Mr. Wright sought to protect American funds and faced the penitentiary for protecting the treasury, which in turn represents millions in bonds issued by the bureau of public works and chiefly held by Americans. If he loses in the island courts he contemplates carrying the case to the Supreme court of the United States. Opposed to Mr. Wright are Manuel Quezon and his followers, who are striving for complete autonomy.

PEACE, at least to a degree, has come to Elizabethton, Tenn., for the striking workers in the textile mills voted to accept the terms of the employers and apply for reinstatement in their old jobs. The settlement was largely due to the efforts of Miss Anna Weinstock, who was sent to the scene by the federal Department of Labor. She obtained from the rayon mills an offer that was much more conciliatory than any previously made. The companies agreed not to discriminate against any former employee because of his or her affiliation with the union, provided the employee's activities were legitimate and were not carried on at the plants. The management agrees to meet a committee of employees for the purpose of adjusting any grievance.

THERE was great excitement among the universities of the Middle West when the faculty committee of the Western Conference, usually known as the Big Ten, expelled the University of Iowa from the conference, effective January 1, 1930. Put in a few words, the reason for this drastic action was that Iowa had been administering so-called athletic funds for the support of individual athletes. The Iowa authorities, from President Jessup down, professed to be exceedingly surprised by the expulsion, and the student body in Iowa City was tremendously worked up. There were ominous threats that the action would result in the breaking up of the Western Conference because other institutions also were vulnerable. It seems not unlikely that the date of actual expulsion was set so far ahead in order that the trouble might be adjusted meanwhile and Iowa permitted to retain her membership, and there are predictions that this is what will happen.

The championship track and field meet of the Big Ten was held at Northwestern just before Iowa was expelled, and was won by the University of Illinois. Two new world records were set. Tolan, young colored sprinter of the University of Michigan, ran 100 yards in 10 5-10 seconds; and Rockaway of Ohio State university negotiated the 220 yards low hurdles in 22 8-10 seconds.

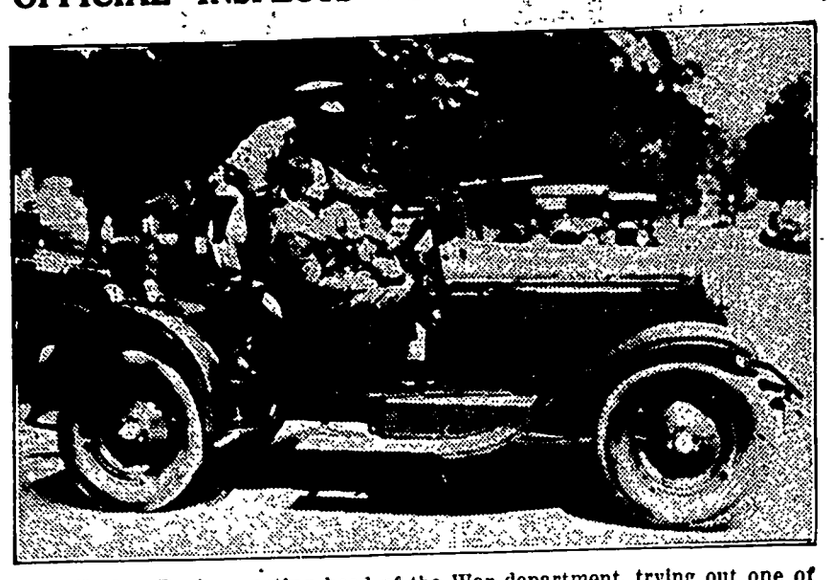
RAY KEECH won the 500 mile automobile race in Indianapolis, his average speed being 95.585 miles an hour. Louie Meyer was second. Billy Spence was killed when his car was overturned. Out of thirty-three starters, thirteen finished, dividing the prize money of $100,000.

JAMES KELLY and R. L. Robbins, flying a re-conditioned plane over Fort Worth, Texas, shattered all records for sustained flight, remaining up for 172 hours and 81 minutes. They came down then only because their propeller blades had been cracked by hail. Lieut. W. G. Tomlinson of the navy won the Curtiss seaplane trophy, making a new speed record of 175 miles an hour.

REPARATIONS experts reached an almost complete agreement in Paris and if the German reservations can be adjusted the great problem will soon be solved. As the plan stands Germany will pay a total of about eight and a half billion dollars over a period of fifty-eight years, the annuity figure being approximately $487,000,000. Payments under this Young plan are to begin on September 1. The matter of early evacuation of the Rhineland, being purely political, was not considered by the experts. Dr. Gustav Stresemann, German foreign minister, announced he would be in Paris Monday, when it was hoped the Belgians and Germans would reach a settlement of certain disputes that hampered full agreement.

AMANULLAH has abandoned his efforts to regain the throne of Afghanistan and has passed through India on his way to Italy, where he will reside. The former king does not believe Bacha Sakao, who seized the throne, will be able to retain it very long, his possible successor being Gen. Nadir Khan.

OFFICIAL INSPECTS NEW ARMORED AUTOS



F. Trubee Davison, acting head of the War department, trying out one of the new armored cars which have just been approved by the army. The cars carry a crew of three men and two machine guns, one of which is mounted for use against aircraft. The cars are to be used for reconnaisance and communication duty with cavalry.

SPEEDING MOTOR CARS TAKE TOLL

Wild Animals Face Serious Menace From Automobiles on Highways.

Wild animals, whose movements and natural increase are restricted by agricultural and industrial development, now face a serious hazard from automobiles, which are increasing in number and are being driven over improved highways at the higher average speeds possible by modern construction, better servicing facilities, and more liberal speed regulations. Approximately one person in five drives an automobile. The highway system includes more than 615,000 miles of surfaced highways, with approximately 90,000 miles in important interstate routes.

Counted Carcasses.

One member of the United States Department of Agriculture, observing the highway menace to wild life, determined to count the animal carcasses he passed while on two motor trips. On a 632-mile trip in Iowa last summer he observed 225 individuals dead along the highway, crushed by speeding automobiles. These included 40 reptiles, 43 mammals and 142 birds—29 species in all. Of the birds, 43 were red-headed woodpeckers and 26 were domestic fowls.

Similar in South.

On a tour early in October from southern Iowa to north-central Florida, a distance of about 1,400 miles, a similar count identified 23 species in the death toll of highways. The 234 individuals included 6 amphibians, 81 reptiles, 45 mammals, 67 birds, and 35 miscellaneous vertebrate forms. The bird list included 23 domestic fowls and 21 English sparrows. Six cats, two dogs, and a pig composed the group of domestic animals other than poultry.

Forbid Petting While Driving in Skidmore

In Skidmore, Mo., the town council recently enacted an ordinance that is likely to meet with some disapproval on the part of those who keep one arm entwined around fair companions with the other arm free for driving.

The new law, according to a bulletin issued by the Automobile Club of Illinois, proclaims that "The driver shall not place an arm around the person of another, but shall keep both hands free. . . . Nor shall any person place an arm or arms around the person of the driver.

"Anything that makes for safer and saner driving should be accepted as worthy of such action, and the step taken by the Missourians in the passage of the ordinance will likely be followed by other municipalities, declared Si Mayer, president of the club."

Problems of Commercial Vehicle Are Different

The problems of the commercial vehicle are different from those of the individual motor car. In the case of the motor truck and bus we have a parallel to the frieght and express operations and to the old-fashioned stage coach.

The rapid facility offered by the motor truck has tripled the speed of deliveries of merchandise as compared with the days of combination railroad and horse-drawn wagon. The result has led to a change in merchandising methods of the country, whereby local stores carry smaller inventories, but have rapid access to supplies of large central warehouses.

English Trying Out New Type Automobile Motor

A new type of motor is being tried out in England, in which a rotary sleeve valve along the top of the engine is used. It is a simplified adaptation of the sleeve-valve principle. Here a cylinder with intake and exhaust ports for each operating cylinder is placed under the head, driven by gears from the main shaft. As it revolves it opens and closes the ports of the row of six or eight cylinders in the engine, permitting gasoline to enter or the burned gases to leave each chamber in order.

Spark Plugs Should be Installed Often

The points of a spark plug actually wear out. This, in addition to the cracking of the porcelain, is a result of age. The point that comes down from the center of the plug, which is the one that carries the high tension positive current, will appear to be eaten away. Plugs at 10,000 miles often will show so much wear at the points that the gaps will be much too wide for perfect firing at low car speeds. The points can be brought closer together, but since the wear is uneven there is danger of not getting the right clearance. The safer plan is to install new plugs.

Fair Motorists Warned to "Step on the Gas"

Warned to Step on Gas.

Patrolman on James river bridge, at Norfolk, Va., longest in world, is shown warning fair motorist to "step on the gas" and do over 35 miles per hour over the four and a half-mile stretch. This is the only way to relieve traffic congestion on the $6,000,000 span that connects Newport News and Norfolk, Va. The sky is the limit when it comes to speed.

"High" Means "Low" at Some Gasoline Depots

Life's marked mobility has created a situation whereby the car owner buys his gasoline from many different stations—at least during those months of the year when the open road calls. There are many good stations from which to buy gas, but the fact that all of them do not handle the same brands interposes the need for a precaution. That is to remember that "high test" is a general term and may mean an entirely different thing as applied to different gasolines. Sometimes, "high" is "low" as compared with what the car is accustomed to get.

AUTOMOBILE NOTES

A horsefly on a radiator is a pathetic sight.

* * *

Sunday is supposed to be a day of rest, but not on a motor-crowded highway.

* * *

An oil millionaire bought nine automobiles in two and a half years, and really that is easier than washing them.

* * *

Boston police say they don't know how to handle jaywalkers. What's the matter with the old-fashioned stretcher?

* * *

Perhaps the habitual honkers in traffic tie-ups are adults who in babyhood were allowed to retain their rattles too long.

* * *

The mechanical genius that produced the Sunday flivver must be accredited also with having provided the fast-going ambulance.

* * *

Oil producers complain of over-production. Autoists will thus be able to account for the abrupt and marked decline in the price of gasoline.

Their Portraits Will be Much in Demand after July

ELMO SCOTT WATSON

IT IS hereby predicted that on and after July 1, 1929, the American people are going to become very much interested in collecting portraits of the great men of this nation and that, of them all, the portraits of the eleven notables pictured in this article will be the most in demand. For, on date the United States Treasury begin issuing the new reduced currency upon which these portraits will be the distinctive mark of the various denominations. The following table is a "Who's Who" of the new currency.

Denomination	Portrait	Back Design
$1	Washington	One
$2	Jefferson	Monticello
$5	Lincoln	Lincoln Memo.
$10	Hamilton	Treasury
$20	Jackson	White House
$50	Grant	Capitol
$100	Franklin	Independ. Hall
$500	McKinley	Five Hundred
$1,000	Cleveland	One Thousand
$5,000	Madison	Five Thousand
$10,000	Chase	Ten Thousand

There is a very definite reason for having a distinctive portrait on each of the different denominations of bills. This will make each denomination easier to recognize so that there will be few mistakes made in making change and you are not likely to hand someone a $5 bill or a ten thinking it is a one. At present we have eleven denominations made in 30 different designs. There are five kinds of $10 bills. The new currency will have only one. At present the face of Washington is on both the $1 and $20 bills. On the new currency Washington will appear on the $1 alone. Under the old system of currency it was possible for counterfeiters to raise the ones to twenties, since both had Washington's portrait on them and only the figures needed to be changed. In fact, the adoption of the distinctive portraits and characteristic embellishments on the back of the new bills will be the best guard against counterfeiting that Uncle Sam could possibly have. So if you will memorize the portraits as they appear on the bills of the different denominations you cannot be short-changed and you will not be so likely to make mistakes in making change yourself.

SALMON P. CHASE

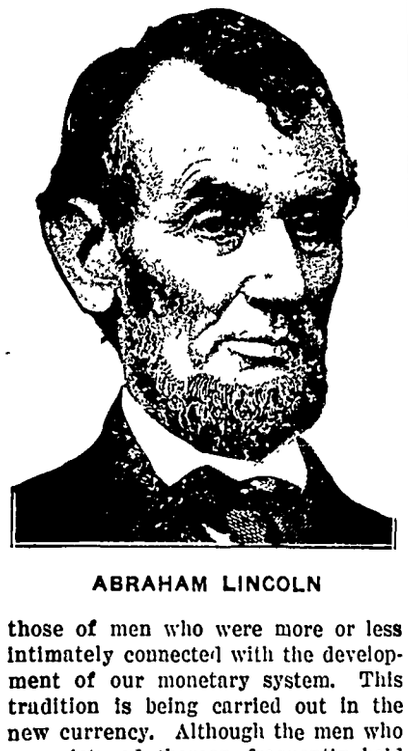
But there are several other reasons why the reduction of the size of the present bills, which are seven and seven-sixteenths by three and one-eighth inches, to the new size of six and five-elevenths by two and eleven-twelfths inches, will be advantageous both to the makers of our money and the users of it. A substantial saving will be made in manufacturing the new currency because the amount of paper required will be reduced almost one-third. To put it into concrete terms, it will save the government enough paper annually to cover one thousand acres. Less ink will be needed, shipping weight will be cut and more notes will be produced by the same operation by the bureau of engraving and printing because each plate will have twelve instead of eight subjects.

So far as the public is concerned the new currency will be more convenient to handle. It will, for example, go into an envelope of ordinary size without folding, something which the old bills would not do. The new bills will fit more comfortably into the palm of the hand for counting, where-

GROVER CLEVELAND

as the old size cramped the teller's hand. The new money will not require such a large pocket bill-fold and already new bill-folds are being manufactured which will hold the new currency without folding. The advantage of this is that the money will be kept flat and will last longer, since it is at the point of folding that bills break and have to be replaced. In general appearance, the new money will closely resemble the currency now in use but it will have a distinctive feature, consisting of localized red and blue fiber incorporated in the body while the process of manufacture so placed as to form particular stripes.

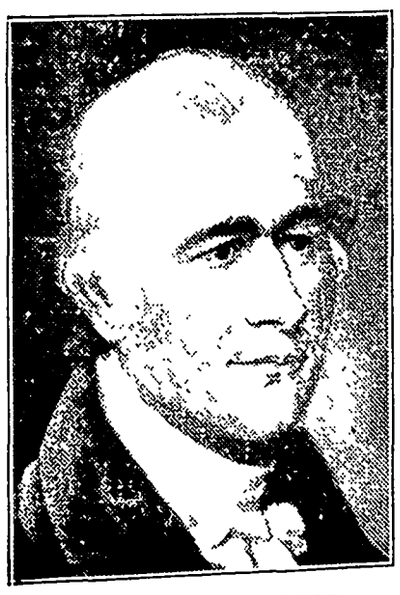
In the past the portraits on the currency of the United States have been



ABRAHAM LINCOLN

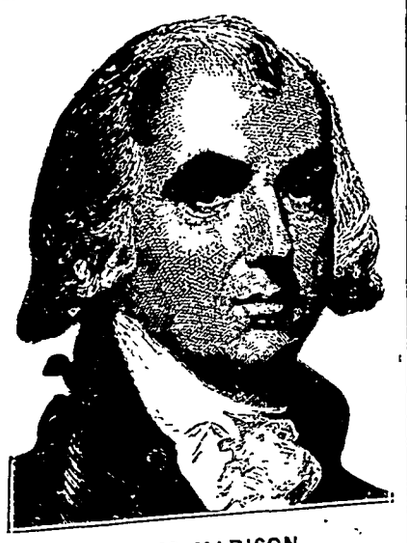
those of men who were more or less intimately connected with the development of our monetary system. This tradition is being carried out in the new currency. Although the men who are pictured thereon frequently held positions in regard to currency and other problems which were widely divergent at the same time, all of them had something to do with the evolution of our money system.

So the next time one of the new hundred dollar bills comes into your possession and you look upon the benign countenance of Benjamin Franklin, it should remind you that Ben's advice to you would be to save that hundred dollars rather than to spend it. For Franklin was the first apostle and exponent of thrift in this country. More than that, Franklin's name is inseparably connected with the financing of the movement which



ALEXANDER HAMILTON

made the United States of America possible—the Revolution. For it is not too much to say that had it not been for Franklin's efforts to get money from foreign powers to aid the colonists, their revolt against England could not have succeeded. Not only did Franklin obtain from France, Spain and other countries loans which were poorly secured at the best but his name was used by other Americans who went abroad for the same purpose. Nearly every one of them, when in need of money, drew drafts on Franklin at Paris and congress itself did the same thing. What is more remarkable is the fact that the drafts often were presented for payment before Franklin had been told that they had been issued. He never failed to honor them and, such was



JAMES MADISON

the confidence of the lenders in him, that rarely if ever were requests for loans, in which his name was used, denied.

The face of George Washington on the new one dollar bills, the denomi-

ULYSSES S. GRANT

nation which will be used oftenest by the most people, is not only a natural tribute to the first great American but it is also a reminder to us that it was during the administration of the first President that our monetary system was established. Similarly the portrait of Thomas Jefferson on the two dollar bills and the portrait of Alexander Hamilton on the ten dollar bills remind us that they were members of Washington's cabinet, Jefferson as secretary of state and Hamilton as secretary of the treasury. Although Washington had great difficulty in preventing political clashes between these two members of his cabinet because of their views on politics, both of them were intimately connected with the establishment of our money system. It was Jefferson who found-

BENJAMIN FRANKLIN

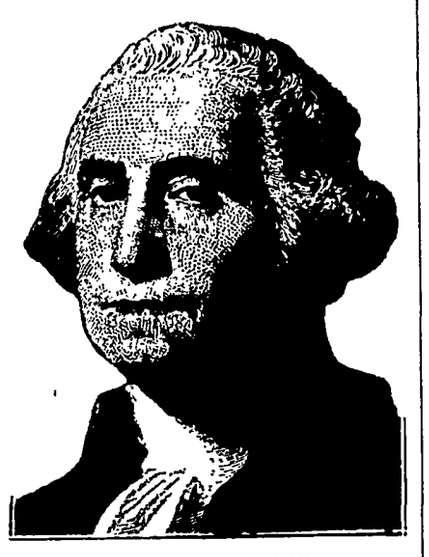
ed the American system of coinage based on the decimal system as a substitute for the more involved British system. So when we find it easy to reckon our accounts by the simple knowledge that ten cents make a dime and ten dimes make a dollar, instead of having to struggle with involved calculations of pence, shillings and pounds, we can be grateful to Thomas Jefferson. In view of that fact it may seem to some that we are showing ingratitude to Jefferson by placing his portrait on the two dollar bills which by some people are considered "unlucky bills" and a denomination to be avoided.

Hamilton is credited by most historians with being the founder of the fiscal system of the United States, and is frequently referred to as the first and greatest secretary of the treasury. Certainly, it took a man of genius to take hold of the financial

WILLIAM McKINLEY

affairs of a new republic whose credit among other nations was none too good, whose future existence was problematical and whose resources were weakened by a long war and put them upon a firm foundation which has never been shaken from Hamilton's day to this. The name of James Madison, whose portrait appears upon the five thousand dollar bills, is closely associated with those of Hamilton, whose follower he was at first, and of Jefferson, whose secretary of state he became.

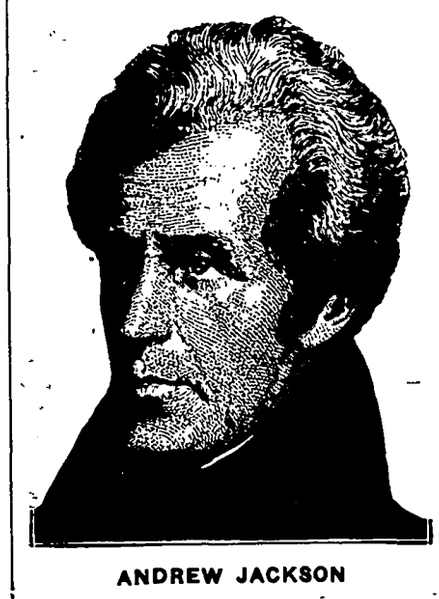
The picture of Andrew Jackson on the twenty dollar bills reminds us of the beginning of a new era in American history. When the question of states' rights versus federal domination first became acute and the problem of the United States bank arose, to which Jackson was irreconcilably opposed, he was the storm center of a stormy administration. It was during this time that Abraham Lincoln, the memory of whose greatness is recalled every time that a five dollar bill is passed through your hands, first came into contact with the problems of state and national finance. As a member of the Illinois legislature, he was a supporter and defender of the state banks that had been established in Illinois. When Lincoln became President and the gigantic task of financing the Civil war fell upon his shoulders, he turned to the man whose face you will see on the ten thousand dollar bills (when and if you ever see one)—Salmon P. Chase, secretary of the treasury from 1861 to 1865. Specie payment was suspended in the United States in 1861 and it became the duty of Chase to determine ways and means of carrying the government financially through the war. So he resorted to the issuing of bonds and



GEORGE WASHINGTON

making green-backs legal tender, and his name has come down in history as "the father of the green-back."

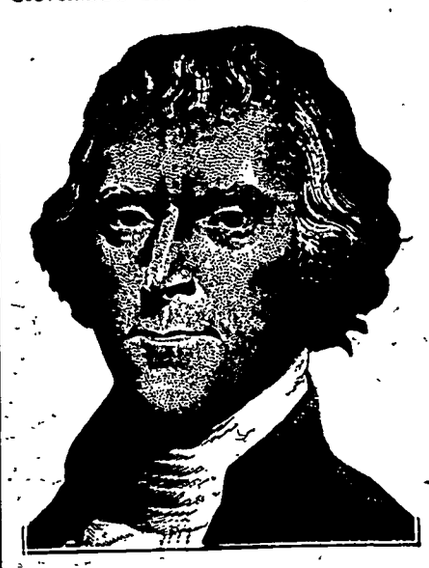
The appearance of Ulysses S. Grant on the new fifty dollar notes is a tribute to his fame as a soldier in winning a war which saved the nation, rather than a monument to his connection with national finance. For the fact is that Grant would be the last man in history to be designated as a financial genius. A failure in business in his early life, his financial venture with a banking firm in his later years was a failure and he was left penniless. But there is no greater example of heroism known than the way in which Grant met the problem of family finances at this time. Bankrupt, crippled from a fall, dying of cancer of the tongue, he dictated two volumes of memoirs, when to speak meant agony, so that his fam-



ANDREW JACKSON

ily would be provided for and he did not cease from his task until it was finished.

The portraits of two recent Presidents on the new currency, William McKinley on the five hundred dollar bills and Grover Cleveland on the thousand dollar bills, recalls the connection of both with the money history of the United States since the Civil war. Cleveland will be remembered for his insistence on the observance of the gold standard and his opposition to enforced coinage of silver under the Sherman silver purchase act. Leader of a party divided within itself on the money question, as evidenced by the Democratic nomination of Bryan, in 1896, and Bryan's adherence to bimetalism at the historic ratio of 16 to 1, the boldness of Cleveland's stand is clearly revealed.



THOMAS JEFFERSON

The portrait of McKinley recalls the fact that the country accepted his views on money in preference to Bryan's 16 to 1, and sent him to the White House instead of Bryan.

BANDED BIRD FLIES OVER SEA TO AFRICA

Route Followed Mystifying as Feat Itself.

Washington.—The finding of a dead bird on a beach in South Africa may unlock a secret which has long puzzled American naturalists.

The bird, an Arctic tern, carried a small metal band on one leg with the number 548,138 and, in abbreviated form, the address of the bureau of biological survey, United States Department of Agriculture.

O. L. Austin banded the tern at Turnevik bay, Labrador, on July 28, 1928. Four months later it was found in South Africa.

Scientists have recognized the Arctic tern as the Lindbergh of the bird world. It makes the longest migration of any bird, summering in the Arctic and wintering in the Antarctic. Eleven thousand miles to a winter resort is an all-time record.

What Route Is Mystery.

By what route does the Arctic tern fly from the North pole to the Antarctic? That has been the question.

H. J. S. Heather of Durban, Natal, has communicated to the National Geographic society the circumstances of the important find, which may answer the question:

"The tern was picked up by Mr. Wackrill of Johannesburg, a few miles south of Port Shepstone. His discovery, the biological survey wrote the finder, was the most remarkable case that has been reported in any country. It suggests that the Arctic tern leaves the northern reaches of North America, flies to Portugal, crosses the length of Africa and then 'hops' to the Antarctic continent."

The new evidence adds about 2,000 miles to the previous 11,000 miles estimated airline flight of the species. The Arctic tern enjoys more daylight than any other living creature because it lives in regions where the sun never sets and only experiences night on its semiannual journeys across the equator.

Terns and other shore birds travel more widely than any other feathered creatures. The golden plover raises a brood in Ungava or northern Labrador and in the fall wings out over the ocean, never stopping until it reaches Bermuda. On it flies, pausing perhaps at the Bahamas, or the Lesser Antilles on the way to South America. The first of the golden plovers have been reported arriving in Paraguay before the last have left the breeding grounds. They "winter" on the Argentine pampas where the summer sun makes food plentiful.

Even unadventurous appearing warblers travel far to escape the cold breath of winter. Of our American species and subspecies twenty-two winter in the West Indies, forty-four go to Mexico, thirty-seven push on to Central America, while twenty-two reach South America. It is a fact for never ceasing wonder that some warblers and other small birds fly 500 miles across the Caribbean sea without resting.

Probably the most remarkable nonstop oversea flights are those of the Pacific golden plover. Coming south from Alaska it touches at the Aleutians and then takes off for Hawaii. It crosses 2,800 miles of open ocean. How plovers are able to locate the Hawaiian islands in the middle of the Pacific is a mystery of nature.

Remarkable Flight Records.

Birds that nest in the southern hemisphere also have remarkable records for travel. The slender-billed shearwater makes a circuit of the Pacific ocean. It breeds in southern Australia, flies north along the Asia coast and returns south by the American coast.

Promotion of bird-banding has revealed many unknown and unsuspected facts of bird migrations and habits. Telltale bands have shown the male wren to be an extremely inconstant fellow who ought to be paying heavy worm alimony and have also supplied facts on which practical plans for the conservation of birds life can be made.

"At present nearly 1,200 banding stations are in operation in all parts of the country," writes E. W. Nelson, formerly head of the bureau of biological survey, in the National Geographic Magazine.

"The operators send the data regarding each individual bird banded to the bureau, which has established an indexed card file of such records. Widespread interest is expressed in reports of the capture of banded birds, of which 13,734, representing about two hundred species, have been retaken, either alive or dead."

Farmer Catches Muskrat, Then State Exacts Fine

Billings, Mont.—Just because he caught a muskrat by the tail and impounded him in a box with the idea of starting a muskrat farm, F. G. Kell was fined $25 for possessing a fur-bearing animal without having obtained the proper permit or license for its capture. The muskrat was running around in Kell's barn when the capture was made.

Sights Whale School

Eureka, Calif.—One of the largest school of whales seen off the coast near here in recent years was reported by Capt. Willard Cousins. Cousins said there appeared to be about fifty of the marine monsters in the school. The spouts thrown up by the whales, according to Cousins, resembled a field of geysers.

Acidity

The common cause of digestive difficulties is excess acid. Soda cannot alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children, too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

PHILLIPS Milk of Magnesia

POISON IVY

Hanford's Balsam of Myrrh

Money back for first bottle if not suited. All dealers.

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains no deadly poison. K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee. Insist upon K-R-O, the original Squill exterminator. All druggists, 75c. Large size (four times as much) $2.00. Direct if dealer cannot supply you. K-R-O Co., Springfield, O.

Mr. Moon and several men of the church took all the children of the Liberty Church to Twin Lakes Saturday for a fishing trip. No fish were caught but all report the time of their life.

Saturday night a party was held in the basement of the Church for the young people. Mr. Moon provided the entertainment and a fine time is reported by all. Refreshments of ice cream and cake were served.

A full house enjoyed the special services at the Liberty Church Sunday. A feature of the program that attracted the most attention was the rocking of the new babies in a dainty decorated cradle by four little girls. After the cradle rocking the babies were baptized. The followins had sons babtized: Mr. and Mrs Jim Thomas, Mr. and Mrs. Emil Pringnitz, Mr. and Mrs. Will Lemke, Mr Lloyd Ulrich and Mr. and Mrs. R Carolus, and the small daughter of Mr and Mrs. Walter Bredlow. After a fine sermon by Rev. Whyte a big group of boys and girls were taken into the church on probation and two new members taken in and also two by transfer. About fifty people enjoyed the picnic and social time at the noon hour in the church basement, followed by a fine program by Prof. Moon. Altogether it was a full day for all Liberty church goers and one long to be remembered

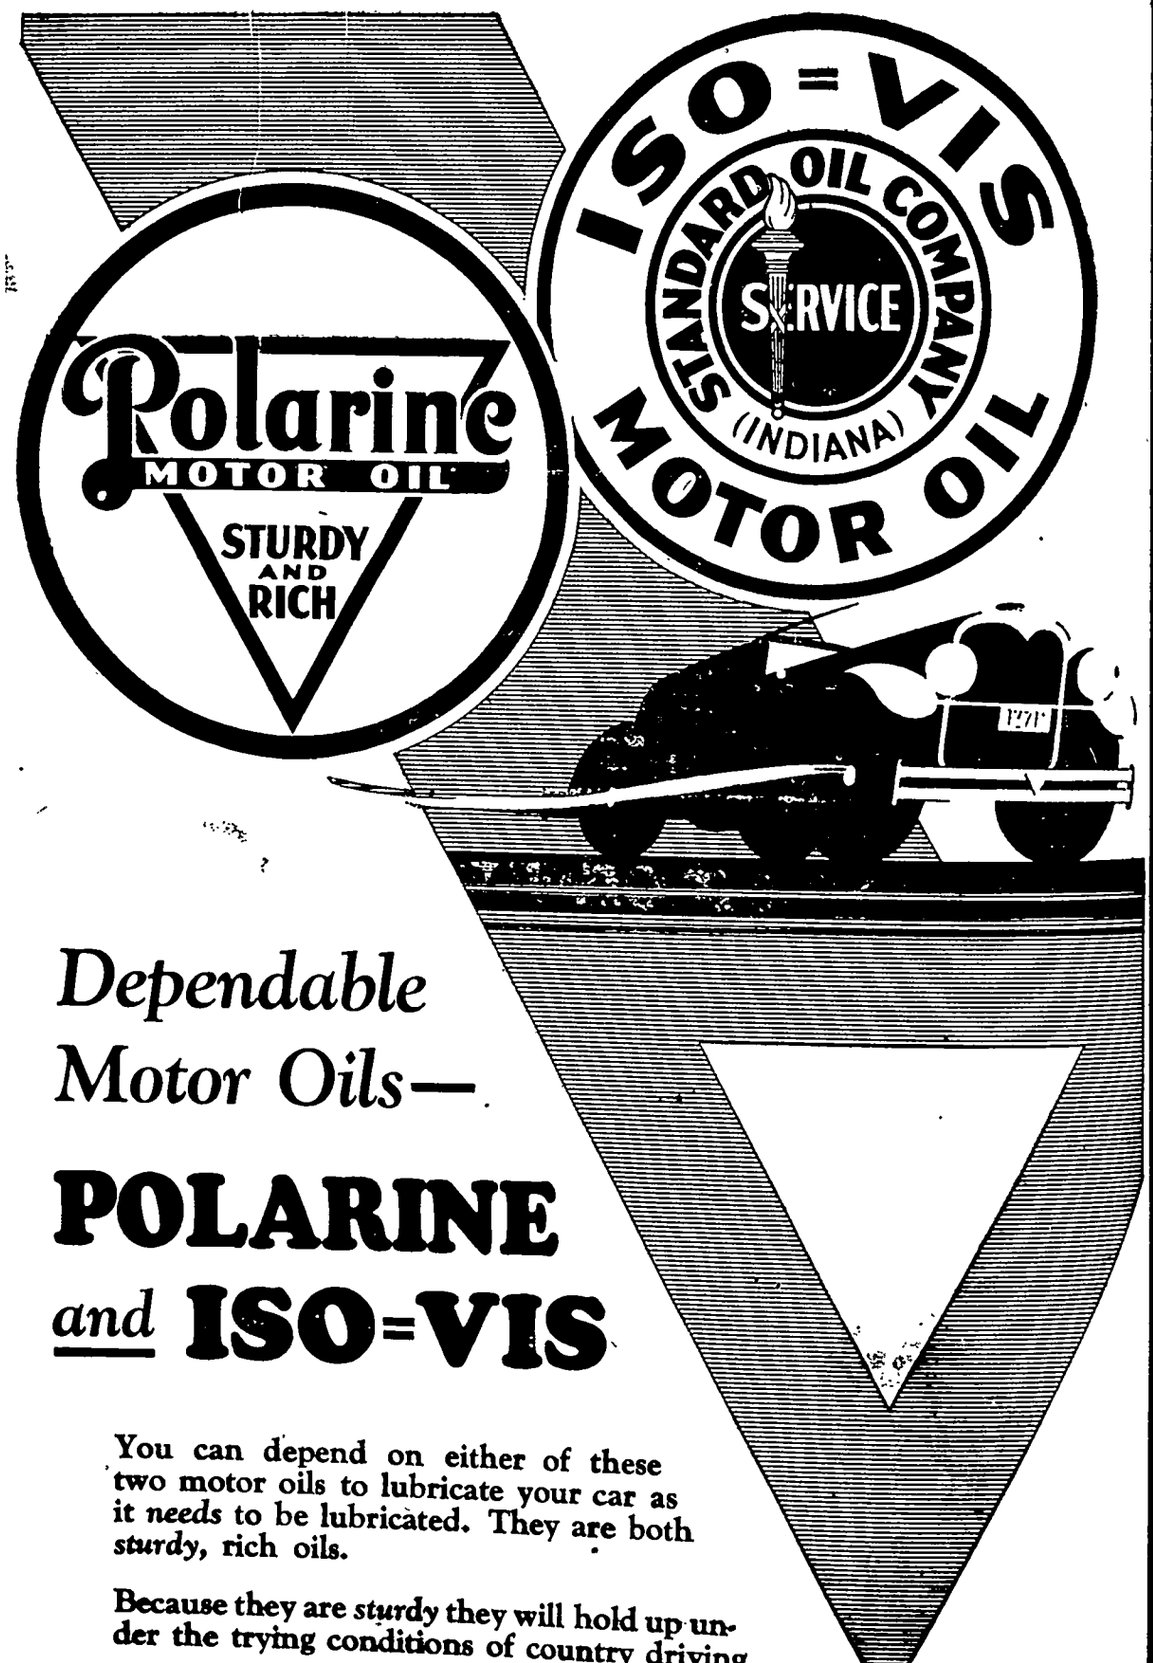
Let Us Drain Your Car And Fill With POLARINE Phone 96, Klemme, Iowa



Dependable Motor Oils—

POLARINE *and* ISO-VIS

You can depend on either of these two motor oils to lubricate your car as it *needs* to be lubricated. They are both *sturdy*, rich oils.

Because they are *sturdy* they will hold up under the trying conditions of country driving.

Because they are *rich* they will keep a cushioning film over every bearing surface.

Iso-Vis, the most sensational advance in motor oil, maintains a constant body — wears and wears and WEARS, lubricating at highest efficiency all the time. Many motorists run 1000 miles and more without draining the crankcase.

Polarine needs no introduction—for 20 years this dependable motor oil has been giving satisfactory service in millions of cars. If you want dependable lubrication for the least money, buy Polarine and drain the crankcase every 500 miles.

Polarine and Iso-Vis are made in different grades — use the grade made for *your* car.

GOODELL AND VICINITY ITEMS OF INTEREST

(By Special Correspondent)

A large crowd attended the childrens day program which was held in the U. B. Church Sunday.

A number from here attended the Commencement Exercises at Belmond Wednesday night.

Mr. and Mrs. ay Griggs, Kenneth and Nellie, were Clear Lake shoppers Friday. x

Rev. and Mrs. Bainbridge went to York, Nebraska, to attend revival meetings.

Mr. and Mrs. Tom Roths and sons Junior and Robert, and Fernon Griggs were Belmond callers Saturday evening.

Miss Mae Griggs went on the bus Monday to Des Moines to visit her sister, Lela, who works for the Northwestern Telephone Co. there.

Mr. and Mrs. Gus O'Krueg and daughter, Dorothea and Mr. and Mrs. Harry Ruka and daughter Ruth were Belmond callers Saturday.

Mr. and Mrs. Gus O'Krueg accompanied by their daughter, Dorothea, drove to Hampton Sunday evening when the latter left for Oklahoma City where she will teach in a training school.

A reception was held in the U. B. Church parlors Tuesday night in honor of Miss Dorothea O'Krueg, missionary from Porto Rico, who is enjoying a furlough in the states, and is visiting here with her perents, Mr. and Mrs. Gus O'Krueg.

KLEMME LOCALS

Mrs. Wm. Smith received the sad news of the death of her brother, Charles Ross, who died at Los Angeles, California Saturday. Funeral services were held Monday. Mr. Ross was known by many around here as he lived in this community for a while.

Harvey Nelson came home from Morningside College at Sioux City last week end. After Harvey had been home for a few days he was notified that he had won a scholarship by his excellent work the past year.

There are eighty boys and girls of lal ages enrolled in the Reformed Bible School this year. The school begins at 8:00 a. m. and continues until noon each day. The course, we understand, will continue for a total of twenty-five days.

Friday evening Miss Adella Kuhlman entertained a number of young ladies at a picnic at Goodell Woods. She is leaving this community soon and will go to Menno, South Dakota to be with her parents. The young ladies present at the picnic were Misses Stella Bock, Gail and Alvina Buss, Geraldine Smid, Edith Haupt, Adella Schroeder and Norma Stromer. All report a very fine time.

Mr. Carl Heiden and the Misses Mildred and Lenora Wheatman all drove to Decorah Friday evening, where the young ladies reside. Mr. Heiden's home is at Dennison. He expects to go to Cedar Falls from Decorah for summer school. Miss Mildred expects to be at home most of the summer and will teach an over-flow class of grades 2 and 3 at Iowa Falls next fall. Miss Lenora expects to go to the Black Hills soon and will roam around the mountains this summer and may go to college again next fall. She has been an outstanding primary teacher in Klemme and the best we have ever had. The Times wishes her success in whatever she undertakes in the future.

WATER CARNIVAL FEATURE AT BAYSIDE NEXT SUNDAY

Water Illumination And Fireworks For The Evening Program

Automobile riding on the water at the Bayside Amusement beach will be the feature attraction at Bayside Amusement Park, Clear Lake, Iowa, next Sunday June 9th. Alphonse King of Niagra Fall, Can. will do marine auto riding in a grand water carnival and water pageant next Sunday afternoon and evening. The evening performance will include georgeous water illumination and fire works. The automobile is provided with buoyant attachment under the car and side, to prevent the car from upsetting on rough seas. The car is propelled by its own motor power having paddles on the hind wheels and a rudder with which to steer it. Besides this sensational attraction all kinds of acquatic games, in which 14 swimmers will take part, will amuse the hundreds of Bayside Park visitors expected next Sunday. Swimming, races, diving contests, log rolling contest, acquatic horse racing, slippery pole walking over the water, tub race, polo games in water, and live duck chase, will be some of the features of the day's entertainment. Fifty swimmers are wanted to compete for prizes. A concert band also has been booked for Sunday at Bayside, and concerts will be played afternoon and evening. The water pageant is to be one of the largest events of its kind ever sponsored in Iowa. Manager Ritz believes that hundreds of people will be present to view Alphonse King's famous acquatic exhibition. Nothing like it has ever been held before at Bayside Park. It is daring, sensational new and nobel. Mr. King claims he is the only one in the country presenting such a program of stunts on the water.

FARM BUREAU PROJECT LEADERS HAVE PICNIC

A meeting of the township project leaders and local leaders of the Farm Bureau of Hancock County was held at the home of Mrs. Ernest Schubert at Britt on Tuesday, May 28. Eighteen ladies representing six different townships were present. A picnic dinner was enjoyed at noon.

After the picnic dinner, matters of general interest pertaining to the home project work were discussed. Som information was given out concerning the Women's Rest Camp but it is not all available at this time and notices will appear later. Mrs. Schubert gave a talk on Naturo Study and Mrs. Fred Oxley talked on Co-operative Marketing. The project for next year was discussed and the general trend was towards Food and Nutrition.

Everyone spent an enjoyable day at Mrs. Schubert's home.

—Mrs. Fred Oxley,
Publicity Chairman.

Why Upholstery Frays

Use generally is regarded as the chief factor in rapid wear of the upholstery. Tests, however, fail to sustain this judgment. It is the dust that works its way into fabric that does the damage most rapidly. That is why the makers of fine cars advise buyers to have the upholstery brushed with a whisk broom at least once a month and, after the brushing, subjected to a thorough cleansing with a vacuum cleaner. It means a valuable extension of upholstery life and much better appearance.

Why Water Whirls

The bureau of standards says that the rotary motion of water passing down a pipe is caused by the shape of the opening and the friction of the sides. The direction in which it runs depends upon how it started, and it is not always the same direction.

Why Snow Is White

Snow is white because the crystals are so minute that each cell of the retina receives a general impression produced by the combination of different wave lengths reflected from in numerable minute facets.

1268 acres would make a big farm

AT Milford, Michigan, 1268 acres have been made—not into a farm—but into a Proving Ground for automobiles.

Long before your General Motors car is built, specimen models are sent to the Proving Ground. This fleet is tested in actual use. It has to meet every bad driving condition, from heart-breaking hills to slam-bang bumps.

But that isn't all. Other cars of American and European manufacture are bought and put through the same tests, so that General Motors always knows how its products compare with others.

The tests involve speed, power, endurance, braking, riding comfort, handling ease; fuel, oil and tire economy; body strength—every phase of car construction and performance.

When the specimen cars are finally able to meet every test, they are sent back to the factory. The car you buy is made exactly like them.

The next time you examine a General Motors car in your dealer's showroom, think of those 1268 acres. They would make a big farm. But they make a better promise of *proved car value*.

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$725. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine Beautiful new Fisher Bodies *Also* Light delivery chassis. Sedan delivery model. 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

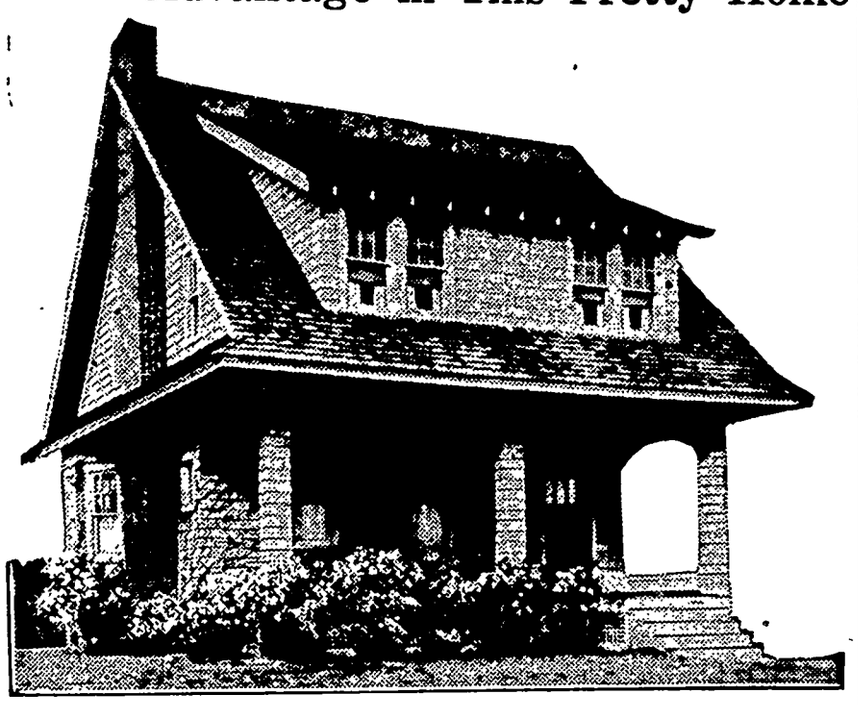
Shingles Are Used to Excellent Advantage in This Pretty Home



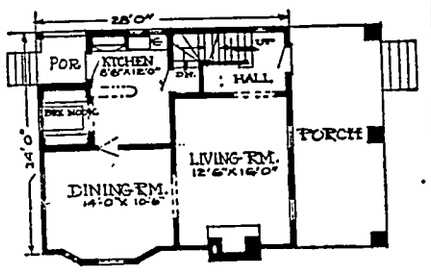
A second story of greater area than the floor below is frequently used, overhanging the porch, to gain additional space above stairs. Here the idea has been used quite successfully, creating an atmosphere of modest seclusion about the entrance.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

During the last few years shingles have been used to a very excellent advantage for the outside walls of modern frame homes. They make an attractive exterior for the reason that they may be had in colors, or the silver gray which is reminiscent of the homes which have been weather-beaten by the salt ocean air. It is this silver appearance that makes the homes along the Atlantic seacoast so attractive.

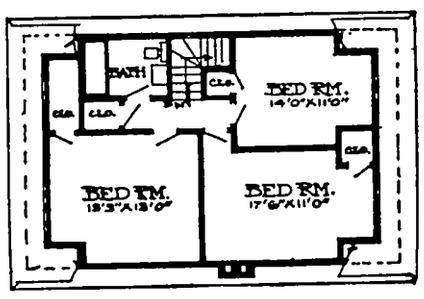
In the home building design shown in the accompanying illustration shingles have been used to a very excellent advantage. However, there is



First Floor Plan.

another feature to this design which is well worth considering; a second story of greater area than the floor below is used, and overhangs the porch in order to gain additional space for sleeping rooms. This overhang of the second floor provides a deeply recessed porch and gives to the house the appearance of greater size than it really is.

The dimensions of the home are 24 by 28 feet. On the first floor are a large living room, a dining room and kitchen with a breakfast nook be-



Second Floor Plan.

tween the kitchen and dining room. On the second floor are three large bedrooms and bathroom.

How these rooms are arranged and their sizes are shown on the floor plans which accompanies the exterior view of the house. It will be noted that the living room extends practically the width of the house with the exception of space for the entrance hall and the stairs leading to the second floor. Back of the living room is the dining room and to the right are the breakfast nook and kitchen. The steep pitch of the roof is broken by a dormer at the front which permits space for double windows for each of the front bedrooms, while another window on either side permits excellent ventilation.

How attractive this home can be made when surrounded by plantings of shrubs and flowers is shown in the illustration.

Oak Flooring Proven Best by Hard Test

A young man consulted a friend of his who was in the lumber business about building a home. They went over the plans carefully, and when they had finished the lumberman turned to the young man and said:

"Of course, you will want oak flooring."

The young man had not thought a great deal of the floors—he was too occupied with other details. The "of course, you will want oak flooring" seemed so much like a foregone conclusion the young man wondered why he would "of course" want it.

As an experiment he talked with another man who was well known for his business ability and his sound judgment. During the conversation the older man remarked:

"You have forgotten to specify oak flooring."

There it was again, that taken-for-granted remark.

When the young man built his home his floors were oak, and years later as he looked at their unchanged beauty he knew why if he built again he would want oak flooring, "of course."

That was not an unusual happening. It has been years since the supremacy of oak flooring has been disputed. Oak flooring has grown to be a necessity to the majority of home builders. The permanent beauty and durability of oak flooring, the perfect floor, have made it highly desirable and almost indispensable in the plan of a home.

The reason it has enjoyed popularity, besides those mentioned above, is that it is so easy to keep oak floors in a state of high finish. In the floors lie a great part of the charm of the interior of a home.

Upon entering a room one of the first things that meets the eye and leaves either a favorable or unfavorable impression is the floor. If it is an oak floor that has been given the little, though necessary attention, there will be recognition of its beauty that cannot be described, but is felt by all—a feeling of quality and richness that speaks of refinement and taste.

Floors are not only a part of the house, but they are a part of the furnishings as well. Yet they are subjected to daily service far more severe than any piece of furniture. To withstand this service and still look well they must be considered as to material, methods of laying and finishing, and attention given their upkeep.

Everything connected with obtaining a satisfactory floor merely is a matter of doing the right thing the right way.

In the first place, oak flooring, although a highly finished product, dressed to a satiny surface accurately machined and side and end matched carefully, is not perfectly uniform in quality, as there are many companies manufacturing it, but it is as nearly "right" as it is possible for nationally known and accepted manufacturers to make it. The laying and care of the floor necessarily must pass to other hands.

But other hands are just as capable in acquiring a permanently beautiful floor as the manufacturer is in furnishing the material.

It merely is a matter of following the few but essential rules of laying and caring for the floor that are more or less necessary to any floor. Those rules are obtainable from any lumber dealer and are in a clear, concise form that eliminates worry and study on the part of the home owner. Another aid in the selection of oak flooring is to buy flooring of a well-known and proven brand.

However, whether the home owner studies oak flooring or not, as the years pass on oak floors will teach him a lesson in flooring that will keep him marveling at its lasting beauty.

Porch Is Made Livable With Small Touches

The passing of winter is marked by the siren call of spring for all to come outdoors.

The porch may have suffered unwonted hardships through the wintry months, but it can readily be made quite a livable place with a bit of ingenuity. E. Helen Dunbar supplies several suggestions in an article for the March issue of the People's Home Journal. Outlining the points to be considered in adding dignity and comfort to the living porch, she says:

"People are becoming more and more eager to get out-of-doors, so let us make the most of porches, however hopeless they may seem at first. No porch exists which cannot be made more livable and attractive at the same time. The principal things to keep in mind as fundamentals, no matter what kind of a porch engrosses attention, are first to secure some privacy by the use of awnings or even simple Japanese screens, second to make the porch comfortable and inviting, the chairs must be carefully selected for comfort first of all, and, third, to make it colorful and very gay and happy, with plenty of little intimate things about so that it has some personality of its own."

POULTRY

FINDS NEW WAY TO STORE EGGS

Small Amounts of Carbon Dioxide Will Be Big Aid.

Eggs can be better preserved if they are stored where there is a certain amount of carbon dioxide in the air, according to Paul F. Sharp of the New York State College of Agriculture, who has just published the results of some experiments on eggs in Science.

Eggs stored in ordinary air spoil rapidly after they lose the carbon dioxide which is a part of the egg. As soon as an egg is laid it starts to become more alkaline and this hastens decay. This alkaline tendency, however, can be easily and conveniently neutralized and controlled if the eggs are placed where the air contains small amounts of carbon dioxide.

This discovery has a practical result because carbon dioxide can be introduced into cold storage rooms in amounts which greatly retard the destructive changes in the eggs and yet the amount in the air will not be enough to prevent workmen from entering the storage rooms. Carbon dioxide can be used also in shipping containers and in refrigerator cars.

A convenient source of this gas can be used, such as the solid form or the gas form in cylinders. Professor Sharp says the only method of preserving eggs which approaches this one in cheapness and practicability is the oil dipping method in which eggs are dipped in a suitable oil which very nearly seals the pores. The carbon dioxide method is superior to the oil method, because the whites of the oil-dipped eggs become cloudy in storage. Those preserved by the carbon are not cloudy after the eggs are removed from the air which contains the carbon dioxide.

Concrete Runs Outside Brooder House Are New

Concrete runs outside of the brooder house are a comparatively new addition to poultry farm equipment but are coming into use because of several advantages. They enable one to use a brooder house without danger from contaminated soil near them, save the labor of moving portable buildings and make it possible to keep chicks near the dwelling or barns, says a writer in the Rural New Yorker. As they do not have to bear heavy weights, a two-inch thickness of concrete is sufficient, except at the edges, where double that thickness is needed to prevent breaking.

They should be smooth for easy cleaning, have a slope for drainage. two or three inches, according to size, and need not be roofed. They, of course, may be of any desired size, so that they give an ample outside run, preferably not less than that required inside for the same number of chicks. They may have permanent fences or movable wire covered frames to set upon the concrete. Movable frames will facilitate cleaning. They may be lightly covered with sand, loam or litter, though the essential thing is that they be kept clean to prevent infection from droppings picked up by the chicks running upon them.

Poultry Hints

Early-hatched pullets produce fall and winter eggs.

* * *

Overcrowding in the poultry house discourages production of eggs.

* * *

Sitting hens should be dusted with sodium fluoride before being put on the nest.

* * *

Gather the eggs frequently to avoid the dirt that may be carried in on the hen's feet.

* * *

Chicks hatched so as to begin laying the first of October are usually the most profitable.

* * *

As many farmers have found, profits with poultry can easily be increased by better feed and care.

* * *

When possible it is well to have a pen where the little pigs can go for food but to which the sows do not have access.

* * *

A colt may be fed on cow's milk provided the milk is not too rich in fat. Use the milk from a cow that does not give very rich milk.

* * *

Unless pullets are laying by October 1 they will miss a great deal of the high-priced egg period. If they start laying much earlier than this, there is danger of a fall moult.

* * *

A small poultry flock properly fed and cared for is more profitable than a large flock given indifferent care.

* * *

Protein is a constituent of feeding stuffs which is used by chickens for building muscles and tissues, in addition to the production of eggs.

* * *

Early feathering and early crowing mean early maturity. Early maturity means early profits. Always select the cockerels that feather first and then select from them the one that crows first.

For hot weather breakfasts *try* the *Wake-up Food*—quick new energy

IDEAL BREAKFAST for warm weather—the Wake-up Food, Post Toasties! So rich in the energy you need, yet so light and tempting to appetite. And so easily digested that it releases its rich store of energy quickly for either work or play! That's why it is called the Wake-up Food.

During these warm days serve it for breakfast or luncheon or supper. That family of yours can't help but like it—tender hearts of choice white corn, delicately flaked and deliciously flavored and toasted crisp. And how they'll benefit by its quick energy!

Remember, there's just one way to get the Wake-up Food—ask for Post Toasties in the red and yellow, wax-wrapped package.

French and American Cities Closely Linked

An American city was officially represented at the impressive ceremonies held in Orleans, France, in celebration of the five hundredth anniversary of the raising of the siege of Orleans by Joan of Arc.

The city is that which the French colonists of Louisiana founded in 1718 and christened La Nouvelle Orleans.

The two cities of Orleans, old and new, have long maintained friendly relations. On the two hundredth anniversary of the founding of New Orleans her sister in France took part in impressive ceremonies, and in the following year received from New Orleans a bronze medal and later the embroidered silk flag of the city. The flag now hangs in the Hotel de Ville at Orleans. On anniversaries of the battle of New Orleans, old Orleans takes the flag out and flies it from the rooftop.

Going Far Back

In the study of cosmography—in observing the nebulae of extra galactic space—we are witnessing scenes and events which occurred in past ages. When we look out into the depths of space we are gazing back into history. The nearest star we see today as it was four and a half years ago; the nearest nebulae, the irregular Magellanic clouds, as they were 100,000 years ago; the frontiers of the known universe, as they were 200 million years ago back in the carboniferous age of the geologists.—Edwin Hubble, in Harper's Magazine.

"O Happy Day" sang the laundress as she hung the snowy wash on the line. It was a "happy day" because she used Red Cross Ball Blue.—Adv.

The Forward March

"Even perfection can be perfected."

Commander Richard E. Byrd was praising, at a New York banquet, the advance made by aviation.

"There is room for improvement everywhere," Commander Byrd went on. "This was well understood by a Norfolk girl.

"'Give me,' said a Richmond girl, 'the man who can drive with one hand.'

"'I, for my part,' said a Norfolk girl, 'prefer the man who asks me to drive.'"

Says Dresses Caused Cold

Short dresses worn by some of the maidens of Buchan, Czechoslovakia, were responsible for the severe cold spell in Europe. So declared the preacher of the Buchan church recently. He announced from the pulpit that a spirit appeared to him and explained about the weather and the dresses. His pious congregation accepted this interpretation of the phenomenon.

But They Ate

She—Isn't the moon lovely tonight? Do you know it always fills me with hunger for something.

He (hastily)—Let's. Dance.—Tit-Bits.

New life for old leather

FARM STOCK

PPING LOSSES MAKE LARGE ITEM

of Big Faults Is Overding Cars in Summer.

es sustained by swine producers United States in marketing ogs amount to the astonishing more than three million dollars This tremendous waste can rged directly to the carelessness ippers and the negligence of portation companies. In the lanof the day, "Something ought to e about it."

e of the biggest factors in causese heavy losses is the overload- cars, especially in hot weather," E. F. Ferrin of the division of l husbandry of the University of esota. "This fault is chargeable to the carrier which compels ipper to pay freight on a greatelght than can be loaded without Cars in need of repairs cause ling or damage to hogs in transit. les in floors, nails projecting on side of cars, cleats on floors, and e doors, are all minor causes of which could be remedied by the ad company. The carriers are er at fault in delivering unclean for reloading, although an order e Interstate Commerce commisexpressly provides that cars must eaned.

at the carriers cannot be held for the loss. The disposition of the per to take a chance induces the tice of overloading, improper bed- of cars, and neglect to remedy or defects in cars delivered to the ing station. In shipments of d cars of cattle and hogs, flimsy itions which break down result in s. Proper bedding of cars will e much loss. In hot weather sand ed with water is by far the best erial. In very cold weather losses d be prevented by tacking one th of building paper along one side he car near the floor. This protecis necessary only on the side of car which will he toward the north the car is moved to market. Most ur live stock goes to market in an ward or westward direction.

nder Assistance to Sow When Farrowing

farrowing time the herdsman ld oe on hand to render assiste if necessary, but should otherwise not disturb the sow. In large rds it has been found an exceedly profitable plan to have an experienced man nearby during the night this time to inspect the sows every ee hours. The farmer with only a sows will find that a few night rs to the hog house at farrowing e will save many a litter, and ve a most profitable investment of time and energy.

n the case of heavy, clumsy sows, those which are very restless at rowing time, it is a good plan to arate the pigs from the dam by cing them in a warm box or half rel as they are farrowed. Sows perly handled before farrowing l not usually resent such separan. When the sow has become quiet, as quickly as possible after farring is over, the pigs should be, e by one, carefully replaced at a ple and watched until their safety assured. If the sow is very cross irritable, it may be necessary to p the pigs away from her for a ger time, returning them to nurse ry two or three hours. A chilled may be revived by immersing it to the head in water as warm as hand will bear.

Live Stock Facts

Remove the ram from the flock as n as the breeding season is over.

* * *

Ton litter methods grow hogs for rket when prices of pork are most ofitable.

* * *

Hogs should sell on profitable levels through this year, judging from the pplies available.

* * *

Good hog men put in all the time sible with their herds, and often able to nail what might be future uble right at the outset.

* * *

Buttermilk or skim milk cannot ry well be compared to barley beuse barley is a dry feed containing ly about 10 per cent moisture while ttermilk and skim milk contain out 90 per cent of moisture.

* * *

Young pigs prefer their barley and ts ground. Usually there is nothing gain by grinding corn.

* * *

Buttermilk that is free from dilun with wash water from the churns practically equal pound for pound skim milk for feeding to hogs.

* * *

The farmer who keeps 50 brood sows averages four pigs to the litter hardly compete with the farmer keeps 25 sows and averages eight to the litter, 200 pigs being proed in each case.

Dairymen Gain by Better Ways

Increased Butterfat Production Brought About by Right Feeding.

(Prepared by the United States Department of Agriculture.)

Owners of dairy cows in California have added $64,297,051 to their income over a period of seven years by raising the average butterfat production per cow for the entire state from 183 pounds in 1920 to 239.2 pounds in 1027, says B. H. Crocheron, director of co-operative extension work in California, in a statement submitted to the United States Department of Agriculture.

On Way to Goal.

At the beginning of the effort in 1920 the California extension service set up as a goal, to be reached in ten years, a state average production of 265 pounds of butterfat per cow. Seven years' concentration on a dairy improvement program, including proper feeding, breeding, and culling, has brought them well on their way to accomplishment of the goal within the time set.

During the seven years the number of cows under test in the regularly organized cow-testing or dairy-herd-improvement associations increased from 30,000 to over 70,000. The work of these associations is the basis for the improvement program. From the testing records is derived the information necessary for proper feeding, breeding, and the detection of unprofitable animals in the herd.

Other Big Factors.

Other factors in bringing up the average in butterfat production have been competitions both in individual production and community records, efficiency studies of individual herds, use of better breeding stock, improvement of health of herds, provision of better facilities for care and management of herds, and the introduction of better management methods and better stock through the dairy work of boys and girls who are members of 4-H clubs. Only the sustained effort of the extension staff and dairy cattle owners on a long-time program, however, Director Crocheron believes, has made it possible to thus move forward the entire production of a state and collectively influence the average of over half a million animals.

Alfalfa Pasture Great Help in Producing Pork

Alfalfa pasture will produce more pork per acre on the average than any other forage crop. It is one of the earliest pasture crops to be available in the spring and if kept clipped when necessary during the summer, it will provide good forage until late in the fall. Under average conditions an acre of alfalfa will pasture from 10 to 20 shotes, depending on the conditions previously mentioned. It should not be pastured too closely as it does not stand very heavy foraging. It probably would be best to pasture it in such a way as to permit the cutting of two small crops of hay during the season in addition to the pasture furnished. Alfalfa is a crop that is high in protein and mineral matter, both of which are very necessary in animal growth and which are decidedly lacking in corn, the feed that forms the basis for practically all hog rations. For this reason alfalfa is doubly valuable as a forage crop.

Testing Seed Oats for Germination Is Advised

Testing of seed oats for germination is advised by L. F. Rickey, of the University of Illinois, who says that samples of seed oats received at the university have shown a great variation in germination.

Quite a few oats were "bin-burned" in storage and the heat so generated was sufficient to destroy the life of a large part of the oats. Samples tested at the university tested as low as 9 per cent.

A quick test of 200 or 300 kernels in soil or moist cloths may be made in the house, an assurance thus secured as to the vitality or lack of vitality of the seed before planting.

Around the Farm

Clip the young pig's wolf teeth.

* * *

Good ensilage is a long step toward economical milk production.

* * *

Be sure you have enough room in your brooder house for your chicks. Overcrowding results in heavy losses.

* * *

Not all plants need a "sweet" soil; some do better in a fairly high degree of acidity. It pays to know your plants.

* * *

Male birds help to spread bacillary white diarrhea among poultry, although the disease does spread without males.

* * *

Cultivate your orchard as soon as the ground is workable to kill the grass and weeds and to free the ulgrass and weeds and to free the nitrogen supply which helps early growth.

* * *

No stock tonic will cure abortion. Immunity to the disease develops rapidly in the bodies of infected cows. As a result of this immunity most cows will calve normally the year after an aborti-

Horticultural News

SPRAY RESIDUE NOT INJURIOUS

Storage Qualities of Apples and Pears Not Impaired.

(Prepared by the United States Department of Agriculture.)

The washing of apples and pears with acidulated water, as practiced in the Pacific Northwest—to remove spray residue, apparently does not injure their storage quality, according to a survey of apples in storage recently made by the bureau of plant industry and the bureau of agricultural economics, United States Department of Agriculture.

In this survey, which was made in the later part of January and the first part of February, this year, 184 cars of western apples which were in storage in five of the principal markets, Chicago, Kansas City, St. Louis, Philadelphia, and New York, were inspected. Of these lots, 113 or 73.3 per cent showed no evidence of decay whatever and 3 lots or less than 2 per cent showed injury which might be attributed to washing. The type of injury common to these three lots resembled burning caused by soluble arsenic, which, according to the investigations carried on during the last two years by the bureau of plant industry, may occur on fruit not carefully rinsed. In one of these lots 23 per cent of the fruit was affected. In the other two carloads, the injury amounted to 8 per cent and 0.9 per cent, respectively; the fruit was not decayed and in most cases would be salable.

The results on the extent of washing injury are corroborated by the records of the bureau of agricultural economics' receiving-point inspections, made during the period September 1, 1928, to January 1, 1929, in which only 4 out of 541 cars of apples inspected showed evidences of injury due to washing.

It is evident that there is no danger of injury from the dilute solution of hydrochloric acid used in washing the fruit, provided it is handled with reasonable care. This method of cleansing was applied with satisfactory results to approximately 30,000 cars of apples this past season under a wide range of field conditions.

Grape Berry Moth Cause of Much Wormy Fruit

The grape berry moth is a rather common insect that causes the grape berries to be wormy. For the control, 1½ pounds of powdered arsenate of lead is mixed with 50 gallons of a 4-4-50 bordeaux mixture. This is made by dissolving 4 pounds of blue vitriol in 50 gallons of water, and with this is mixed 4 pounds of freshly hydrated lime. To the bordeaux-lead combination is added 1 pound of resin fish-oil soap that has been dissolved in a little water. The first application of this mixture should be made as soon as the berries have set. A second should be given just before the berries are large enough to touch one another in the cluster, while a third treatment should be given about two weeks later. Only enough bordeaux for each treatment should be made at one time as it deteriorates rather quickly.

Find Arsenate of Lead Is Harmful to Animals

In Washington and Oregon where they spray orchards with arsenate of lead it has been found that horses suffer with lead poisoning in a chronic form. In many cases it produces chronic roaring or paralysis of some of the nerves that supply the muscles of the larynx. This produces a roaring or whistling sound that is present when the horse or mule inspires air. Quite often a roaring horse or mule chokes down when pulling a heavy load or when tested by speeding. There are not a few roaring horses and mules in the South and it may be that the condition of some of them is caused by eating some of the lead arsenate that is used to dust cotton to kill the boll weevil. Some roarers are called chokers.

Spraying Outfit

The owner of a home orchard and garden feels that he can hardly afford to provide the expensive equipment used by the commercial grower for the control of insects and diseases. Consequently, he has to do with less equipment and put out a large proportion of labor in protecting his plants against the various injurious maladies.

There are two general types of spray outfits that can be used for the home orchard and garden.

Cherry Varieties

Some of the leading commercial varieties of sweet cherries are both self-sterile and inter-sterile. For example, Napoleon, Bing and Lombard will not self-pollinate or cross-pollinate each other. Windsor, Black, Republican, Governor Wood and Black Tartarian, on the other hand, not only appear to be inter-fertile, but are also good pollenizers for Napoleon, Bing and Lombard. The standard varieties of sour cherries are self-fertile and do not require cross-pollination.

PREFERRED *by* millions
—because it's good to eat as well as effective

Cases of recurrent constipation, associated with too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

It's so downright *good*—Post's Bran Flakes with other parts of wheat. With foamy milk or cream, berries or fruit, the crumbly, flavory flakes are delicious. And there's the double satisfaction of knowing that each appetizing mouthful is giving you the bulk to help combat constipation.

Probably this appetite-tempting goodness is one reason why millions prefer Post's Bran Flakes. You can enjoy it every day—and forget it's so good for you! Try it tomorrow morning and right along for the next two weeks. Find out for yourself how good it is to eat—how good it makes you feel. Crisp and ready to serve from the package—and marvelous in muffins and bread.

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

A. D. Gimer and family were at Mason City on business Tuesday.

Look over E. F. Jacobs adv for your needs in Aluminum Ware. 1tc

George Gruetzmacher of Garner was a Klemme visitor Wednesday.

Mr. and Mrs. Jack Steeman came Monday evening from Waterloo for a short visit with Klemme relatives.

William Wenz is the owner of a new Graham-Paige sedan which he recently purchased.

Miss Viola Freie entertained the Larkins Club Wednesday afternoon. Delicious refreshments were served.

Mabel Schaefer left for Cedar Falls Tuesday to attend summer school.

Mr. and Mrs. Fred Bell entertained Mr. and Mrs. Wm. Bell and family Decoration Day.

Rev. H. E. Whyte addressed the Lions Club at Garner Wednesday noon.

Byrnes Missman was at Garner Tuesday morning having dental work done.

Mrs. P. M. Wilson has been enjoying several days visit from her neice of Clarion.

Mr. and Mrs. Fred Musfelt of Clarion visited in Klemme Wednesday.

A baby boy, weight 7½ pounds, was born to Mr. and Mrs. Jake Blumer Monday morning.

E. F. Jacobs and family were at Charles City Sunday visiting with some of Mrs. Jacobs' relatives.

Donald Gibbs came home from Morningside College, Sioux City last week end.

Mr John Peterson of Seneca, Ill., came last week for a visit at the Joe Johnson home.

Edwin Bock, of Garner, visited at the home of his parents, Mr. and Mrs. John Bock, Sunday.

Mr. and Mrs. Walter Ross of Garner were Klemme visitors Sunday evening.

Mr. and Mrs. Jay Griggs, Nellie and Kenneth were at Clear Lake on business Friday.

Mr. and Mrs. Paul Grange and Dorance drove to Mason City Memorial Day afternoon.

Henry Barz, accompanied by Will Barz of Garner, drove to Austin, Minn., Tuesday to look after Henry's farm near there.

Mr. and Mrs. C. F. Keraus drove to Swea City Sunday for a visit until Monday with Mr. and Mrs Tom Mitchell.

Miss Geraldine Smid, who has been at the J. N. Day home for the past nine weeks, is now assisting with work at the A. R. White home.

Eckard Zeidler has been working at the Edwin Josten farm the past week re-shingling the house and painting.

M. F. Penrod drove to Cedar Falls Sunday, and from there went to Iowa City on business, returning to Klemme again Wednesday.

Mr. and Mrs. J. C Thomas and baby son "Lindy" were visiting at Rowan Sunday with Mr. Thomas' mother.

Ethel Wellemeyer and Elvira Stille left yesterday for Cedar Falls to attend summer school. Will and J. E. Stille took them down.

Mr. and Mrs. Allie White were at the Hampton Hospital Saturday to consult specialist regarding Mrs. White who has not been well of late.

Mr. and Mrs. Wm. Smith and Mabel, and Mr. and Mrs. J. D Day and Dorance enjoyed a picnic and fishing expedition near Belmond last Thursday afternoon.

Mr. F. J. White, Jr., of Estherville was visiting at the Paul Grange home Sunday and Monday, and attending to business matters at the Northern Lbr. Co.

Conrad Quandt took a day off and went fishing near Belmond Monday. We have heard of any fried fish dinners at his place so presume the number of fish in the river remains about the same.

Mr. and Mrs. Herman Beek came from Davenport last Wednesday for a visit with Grandpa Yahnke, and with other Klemme relatives and friends for a few days.

Miss Wilma Trumbell came from Belmond Wednesday and will remain in Klemme a few days to get the school records closed for the year.

Mrs. P. M. Wilson took her neice, Jean Henry, acompanied by Thelma Kluckhohn and Gracka Quandt, to Clarion Wednesday afternoon. Miss Henry had been here for several days visit.

Colleen, little daughter of Mr. and Mrs. Harry Gram came home Saturday from the Mason City hospital where she underwent a mastoid operation. She is now getting along fine.

Mr. and Mrs. Lew Newberger and Mr. Wert Loeger drove to Dumont Decoration day. A niece returned to Klemme with them for a visit until Sunday, when Mr. John Schachterle, her father came for her.

Mrs. Levi Ridder came from Manly last Wednesday to spend the week end in Klemme and to attend the Commencement Exercises and attend the school picnic. She has never missed a school picnic yet.

Mrs. Armstrong and daughter, Miss Gibson, of Davenport, mother and sister of Oral Gibson gave last Wednesday for a visit at the Henry Barz home and to attend the Commencement Exercises and school picnic.

Miss Adella Kuhlmann expects to leave next week for Menno, South Dakota, to be home during the summer and assist her mother. She has made many friends during her stay in Klemme who will regret her leaving.

Mr. John Fox and his lady friend of Albert Lea, Minn., were visiting at the home of George Lau Sunday. The men were buddies in the World War and so service together overseas.

Mr. and Mrs. Conrad Metzger of California are here for a visit with their daughter, Mrs. Clarence Kluckhohn, husband and children. They formerly lived in Indiana but spent the past winter in California.

Frank Kluckhohn and family; L. O. Deal and family, Harodl Leitzinger and family and Mr. and Mrs. Pete Moulton made up a picnic party and enjoyed an outing in the Woods near Goodell Decoration dya.

Mr. D. M. Lewis and his lady friend left Friday afternoon for their home at Fairfield, Iowa. Mr. Lewis left his trunk in Klemme as he expects to return later in the summer for a short visit. He will be superintendent of schools at Frederika, Iowa, next fall. Mr. Lewis is a very capable young man, of high character and we feel sure he will make good. We wish him lots of good luck. He gave the Klemme schools the very best of service during his two year's stay here.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

It has been said that 'a step nto the church is a step in the right direction." We at least believe that it is worth trying. Why not take that step next Sunday? You will find your neighbors and friends there. Come and worship with them. There will be preaching service at the regular morning hour of worship both at Klemme and at Liberty. The evening service will be given over to the pupils of the Daily Vacation Bible School, who will present some of the things they have learned.

Twenty three of our Epworth Leaguers attended the Rall at Garner Monday evening. This was the largest delegation present. A good time was reported

MARRIAGE LICENSES ISSUED THE PAST WEEK

Henry John Klouge, Garner, Ia., and Ruth Emilie Greiman, Garner, Ia., June 10, 1929.

C. L. Paulsen, Newhall, Iowa, and Edith Mulholland, Kanawha, Iowa, June 10, 1929.

Lawrence P. Johnson, Kanawha, Iowa, and Jennie J. Peters, Kanawha, Iowa, June 10.

KLEMMME BOYS AMES GRADUATES

TWO KLEMME BOYS GRADUATE IN AMES CLASS

Fred Arnold And Clarence Elder Receive Bachelor of Science Degrees

The fifty-eighth annual commencement of Iowa State College was held at Ames Monday and marked the largest graduating class in the history of the college, when 490 persons were graduated. Others who have been graduated thruout the year bring the year's total up to 783.

Bachelor of science degrees were awarded to 401 seniors at the close of the spring quarter. At this time 62 persons received the master of science degree, 9 received advanced professional degrees and 10 received doctor of philosophy degrees.

Commencement festivities began Friday morning with the Class breakfast. The annual promenade was held Friday evening, the senior play Saturday evening and the baccalaureate services Sunday morning. The baccalaureate sermon was delivered by the Rev. Ernest F. Tittle, First M. E. Church, Evanston, Ill. Dr. C. P. Fitch, head of the veterinary department of the University of Minnesota, delivered the commencement address Monday morning in State Gymnasium.

The following from Hancock County were in the graduating class and received Bachelor of Science Degrees: Clarence Elder and Fred J. Arnold, of Klemme, and Earl R. Chambers of Corwith.

Fred Arnold is a graduate from the Mechanical Engineering department. Clarence Elder graduated from the Agriculture and Science department of journalism.

We are proud of these young men for they made a fine record while at Ames. Fred will leave soon for Waukesha, Wisconsin where he has a good position in a factory which specializes in the manufacture of high class motors and engines of various types. Clarence has been offered some good positions with various publications, but as yet has not definitely decided as to where he will finally locate.

Clarence began his journalistic career in The Times office several years ago and was one of the finest boys we ever worked with. He took a keen interest in the newspaper business and decided to follow it up. We are sure that he will make good in this profession. We wish both of these young men much success.

KOTHENBEUTAL HAS MAY HIGH HERD

M. H. SPROLE, GARNER, COMES IN FOR SECOND PLACE

John Bock, Klemme, Placed His Herd For Third Highest

The following report for the Garner-Klemme Cow Testing Association was prepared by Howard R. Horne, tester for the Association.

May ended with a large number of farmers putting their dairy cows in second place with some they are still in first place.

Fred Kothenbeutal, of Kanawha, with his herd of 14 Grade Guernsey cows was first. 12 were milking, one dry and one just fresh ,so that she could not be tested but was included in the average. The herd averaged 193.6 lbs. milk and 38.6 lbs. fat.

M. H Sprole of Garner was second This herd of Grade Guernseys had an average of 794.6 lbs. milk and 37.2 lbs. of fat. 27 cows in the herd, 25 milking and 2 the calves were sucking. This is the third month this herd has been at the top or in second place. In March this herd led the list with over 40 lbs. fat production. Then in April this herd made an average of 36.4 lbs of fat, an average few herds reach.

The third herd belongs to John Bock of Klemme. 11 head of Grade Holsteins make up this herd. Their average was 1,032.4 lbs. of milk and 36.6 lbs. of fat. This herd was high herd for April with 1,090.4 lbs. milk and 39.4 lbs of fat.

Some Reasons For Testing

Why do we find people testing? Some test for a milk record on their cows. Some test to find the boarders; others test to find out what their cows are doing, iwth still others who test to find out what value they receive for their feed when fed to their cows.

When testing was started it was to get production records on the cows, but today that has somewhat changed. The tester helps with rations that are cheaper to feed to the cows and make more profit. He helps in the purchase of pure bred sires and the buying and selling of female stock for the association members and those interested in that line of work.

Some people think they can tell which is a good cow and which is a poor cow by the looks of their milk One member told a previous tester she knew that one cow was a poor cow because her milk always looked so blue, but when the tester had tested the milk it was found that this cow tested 4.4% fat. This woman told me that this one instance broke her of saying that she knew a good cow or a poor cow by the looks of the milk.

What does a 3.0 per cent of a 4.0 per cent test mean? To some people it just means a test, but to those people who know about a test they will say, "How much milk did the cow give?" and some wonder why they do it but therein lies the secret of a good Dairyman when he takes the test, the milk production and the feed cost into consideration. A cow may have a fat production record of over 400 lbs. for the year and still may not make as much profit as her stall mate that only made 350 lbs fat in the same year. Why? you may ask, and this is the answer; some cows make a more economical use of their feed than other cows do, and just because a cow made 350 lbs. of fat one year does not mean that she will do the same the next year. Some cows make a big record one year and are never able to get up in that class again, because some cows are as dairymen call them 'one-year cows' and are not profitable to keep for often their off-spring are in the same class. We find some people testing only one year and saying they know pretty near what their cows are doing, but a guess is as good as a mile off, and among this kind of dairymen we find those who condemn one dairy breed or another, for there is no best breed and which ever breed you like is the breed for you to havo, so don't have a kind you do not like for you will never make as much of a success with them as with a breed you like.

The Association Tour and Picnic which had been planned for June 14 has been put off until the early part of July, so that it will give all who wish to come a chance to get the corn work out of the way. Everybody plan to come and have a good time, and get acquainted with the members of the Association.

—Howard R. Horne, Tester Garner-Klemme C. T. A.

4-H CLUB GIRLS WILL GO TO I. S. T.

CRAFTY CANNING CLUB MET AT REVA ELDER'S HOME

Two Girls Selected To Attend The 4-H Convention At Ames

The monotony of farm work is greatly lessened by the things that tend to develop one's mind mentally and that acts as an inspiration. 4-H Club Work has a tendency to make a girl strive for the higher ideals of life. Saturday, June 1st, seventeen members of the Crafty Canning Club met with Miss Reva Elder, of near Klemme

During the business meeting it was made known by the Club Leader, Mrs. Chas. Griffen, that two club girls could attend the 4-H Convention at Ames next week. Reva Elder and Winnifred Hampel will be representatives of Ell Township. All Club Girls are urged to bring their club dues to the next meeting Saturday, June 8th, at the home of Charlotte and Adeline Greimann. The dues will help defray the expenses of the girls while at Ames.

Henrietta Nelson gave an interesting talk on flowers as a decorative touch to one's home and table. Flowers should be selected because of their beauty and their color can be used to harmonize with various color schemes. Even the lowly red clover in a cream-colored bowl becomes a lovely centerpiece of beauty when used with white linen and cream colored china.

Norma Wille spoke upon the importance of a good complexion and that it can be obtained through proper diet and cleanliness.

Mrs. Griffen gave the girls various recipes. After adjournment delicious refreshments were served by the hostess.

AVERY 4-H GIRLS APPOINTED THEIR REPRESENTATIVES

Eva Stokesbary Goes To Ames; Leona Prelipp Goes To Camp

The 4-H Girls of Avery township met at the Avery No. 3 schoolhouse on June 5th for their monthly meeting.

The girls decided to send a representative to the 4-H Convention at Ames June 11-14 and named Eva Stokesbary as representative.

Leona Prelipp was elected as the representative for the camp at Clear Lake to be held June 23-27.

A program was planned for the Farm Bureau meeting on June 7.

Refreshments were served by Viola and Edna Koehler.

BAND CONCERTS WEDNESDAY NIGHTS

DUNCAN BAND WILL PLAY ON EVERY WEDNESDAY NIGHT

Ten Cent Movies On Saturday Night Is Added Attraction Now

There is going to be something doing in Klemme this summer and the business and professional men invite everybody to come to Klemme on Wednesday and Saturday nights.

On Wednesday nights thruout the summer the Duncan Band will give free concerts on the streets of Klemme. This isone of the most popularbands in North Iowa and has always pleased the crowds when heard here. Bring your family and tell your friends about the big night every Wednesday in Klemme. The town of Klemme will be your host every Wednesday night this summer.

The merchants of Klemme will have many special bargains for you on concert nights and it will pay you to trade in Klemme. Come and hear the fine band concert, visit with your neighbors and save money on your shopping list.

Ten Cent Movies Saturday Nights

Another fine entertainment has been made possible by the co-operation of the business and professional men and the Legion-Auxiliary, who are proprietors of the picture show. On every Saturday night thruout the summer the regular 25c movie show will be shown to all for only ten cents. The same high class pictures will be shown. The business men of Klemme have made a deal with the proprietor of the theatre to run these fine shows at the reduced price for Saturday nights The business men are paying the difference and giving you a big show for only a dime. Bring the family bring your friends—see the biggest show in North Iowa for only a dime for adults or children.

Besides the ten cent movie you will find other bargains at the various stores in Klemme every Saturday night.

Business Men Had Meeting

Last Friday evening about thirty business men met and resolved to put Klemme on the map and give the people of Klemme and vicinity some real, high class entertainment for the two open nights of the week during the summer months. The result was that it was decided that a good band would please many of the people. Then it was decided to put on ten cent movies on Saturday nights and plans were accordingly made.

To conduct the business the men voted five men to act on a board to make all arrangements. This board was empowered to figure out a fair assessment against each business firm in Klemme to raie funds for the ummer expenses. The Auxiliary ladies, w undrstand will collct this amount in a few days.

Next week we will publish the names of th ebusiness men who are back of this movement and who are providing this summer entertainment.

Come to Klemme every Wednesday and Saturday night and enjoy a good time and visit your friends.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. English service.

11:00 a. m. Sunday school.

The Bible Class will meet Tuesday night.

The Junior Choir will meet at 7:30 and the Senior Choir at 8:15 Saturday evening.

Our Bible School will continue 3 more weeks. Regular attendance will help make this school a success.

The First National Bank has on display several bills of the new paper money which will soon be put into circulation. The new paper money is much smaller in size.

ONE HUNDRED SEVENTY IN THE EIGHTH GRADE CLASS

Annual Commencement Held At Eagle Lake Park Yesterday

One hundred and seventy eighth graders from the rural schools of Hancock County received their diplomas Wednesday forenoon at the commencement exercises held connection with the Farm Bureau Picnic at Eagle Lake State Park.

The commencement address was delivered by Governor John Hammill and the diplomas were presented by County Supt. J. R. Baggs.

Following is a partial list of the class, eighth grade students of this vicinity:

Ell Township Gradnates

Marie Albers — Norma Baac
Lynford Back — Mitchell Boc
Alfred Goll — Curtis Greima
Kenneth Greiman — Estella Griffe
Ronald Groesbeck — Alfred Menk
Lawrence Radloff — Nellie Strome
Edith Swanson — Norma Will
Bernice Weaver

Liberty Graduates

Madeline Abele — Richard Brck
Floyd Greimann — Dorothy Haberkam
Robert Hartzel — Helen Hnube
Raymond Kopacek — Mike Kumshe
Jerry Psotka — Myra Sohlawin
Viola Vondracek

Twin Lake Township

Alva Berhow — Ina Berhow
Ruth Berhow — Esther Buseman
Lila Hanson — Howard Kudj
Arthur Nuehring — Florence Tanne
Florence Tanner
Grace D. Watermiller
Tena Watermiller

Avery Township Graduates

Avis Andreason — Richard Burges
Esther Gealow — Audrey Grigg
Nellie C. Griggs — Clarice Johnson
Leo Kearney — Elmer Langlit
Mary Lieuwen — Truman Nelson
Willbur Wiles

BAYSIDE CUBS WILL OPEN THE BASEBALL SEASON SUNDAY

All-Star Mason City Team Will Play Opening Game With Cubs

Bayside Amusement Park, Clear Lake, Iowa has a salaried Baseball team again this year and Charles Ritz, operator of the Park is the promotor. The first game to be played by the all-salaried Bayside Cubs will be next Sunday, June 16 Mason City's all-star team which will be composed of the best players of the Mason City Twilight League will give the Bayside Cubs a real battle next Sunday afternoon at the Bayside Park, commencing at 3:00 o'clock. Charles Ritz is selling season tickets which are good for all ball games to be played by the Cubs in Cerro Gordo County this summer. Fourteen games are guaranteed the purchaser of one of these season tickets, the selling price of which is $5.00. By purchasing a season ticket one may attend all the games at the Bayside Park as well as any games to be played at Mason City or any other town in Cerro Gordo county. The ticket also permits the owner to visit Bayside on Sundays without addional charge.

Mr. Ritz states that he has one of the best ball teams in northern Iowa and is going to give the fans some interesting games. The Bayside Cubs played Charles City last Saturday and won 14-0. A large crowd is expected next Sunday to see the first game. The entertainment at Bayside Park will also include professional band concerts, afternoon and evening and Alphonse King of Niagra Falls fame will repeat his acquatic entertainment on the beach at Bayside.

LEGION AND AUXILIARY HELD JOINT MEETING

The American Legion and Auxiliary of Klemme held a joint meeting at the Legion Hall on the evening of June 4th. 21 Auxiliary and 11 Legion members attended.

Following a business session and a discussion for community service it was voted to thank all who helped with the Memorial Day services.

Lunch was served following the business meeting by Mr. and Mrs. P. W. Johnson and Mr. and Mrs. Ed Jacobs.

CONSCIENCE AND OTHER THINGS

(©) by D. J. Walsh.)

WHEN Sally heard that Bob Warren was "engaged to a very lovely girl and was going to be married very soon," she thought philosophically. "Oh, well," and somewhat later, "I hope she has money;" and still later into a warm, damp pillow she whispered, "I wish I were dead."

But life had to be lived—existed, then. The world refused to stand still. Things were—and what could one do about it? Days continued to come and go in dull orderly procession, tinsel days with ashen hearts, for one must try to forget—must forget. Mustn't be too feverishly gay, laughter must not sound wild. People might notice. There was the bus to work in the morning; the children at school, eager, questioning; the kindergarten songs and dances; hand-work; lunch; games; the story period; health reports; sometimes an afternoon lecture; home; a dance or the theater—the days seemed to live themselves without her help.

Sometimes things hurt. On the bus in the morning there were little tortures. The sight of a friendly grin like Bob's could send a stab of stinging ecstasy through her heart followed immediately by a stab of another sort. At school she was constantly reminded of camp—Bob's young charges had fairly worshiped him. Pain and then dullness again.

Occasionally she would stop long enough to inform herself that she was a little fool, which failed somehow to produce results. This sort of thing went on for countless ages. (Normal methods of computing time would have made it three years.) In the meantime one heard indirectly of Bob, never from him. He had graduated from law school. He had accepted a position in his uncle's law office, he was making good, and he was still "engaged to a very lovely girl and going to be married very soon." Which last brought from Sally, "She hasn't any money."

About this time fate so decreed that one Neil Rogers should go driving on a dark and rainy evening, and run his expensive roadster into a tree. Neil was picked up by a passing motorist and brought to the hospital where Red Hartshorn was an interne. Between Red and Bob Warren existed a friendship that cause men to marvel and to remember a certain elusive passage from somewhere in the Bible. And—Red had been trying for three years to prove theories of his as to the general unspeakableness of Neil Rogers. Here was the enemy delivered into his hands.

Red worked swiftly. As an acquaintance of Neil's, it behooved him to visit the patient for the purpose of diversion, consolation, and encouragement. The methods employed to encourage the patient to a speedy recovery were somewhat out of the ordinary.

Said Red to Neil, with a carefully forced smile. "Of course, old man, you're not badly hurt! What put such nonsense into your head?"

And Neil, weakly, "Can't fool me Red! Saw your face when you glanced at the chart yesterday. Today, too—how long have they given me?"

"Oh come now Neil, that's all foolishness—"

But it was made evident to Neil that Red was trying to spare him. He interrupted. "How long?"

Red's smile vanished. He turned to the window for a moment, then again faced the man on the cot. "I—Oh, hang it all, Neil, you'll be all right!" with which he made his escape, leaving his victim in a truly lamentable state of mind.

The next day Mr. Rogers' nurse confided wearily to the interne that that patient of hers had decided he was going to die and couldn't be made to change his mind about it. This made Red very, very happy. He was destined to become even happier before the day was over for his next visit to the patient brought results.

Neil did not feel well at all. The belief that he had not not long to live had brought on new complications. He suffered acutely from a diseased conscience plus a colossal fear of his fate in the hereafter. He wanted to see Bob Warren, the sooner, the better. Sally Arnold, too. Yes, he must see Sally and Bob.

"Sally? Sally? Oh, yes, Sally!" Red responded brightly. "Why, I haven't seen Sally for a couple of years. Haven't the slightest idea where she is now. Heard she was teaching out West somewhere. And Bob's in Germany, studying. Chucked law for medicine. Haven't you heard?" Red went into elaborate detail.

It was indeed sad to see how untruthful Red had become, and really appalling was the pride he took in this unholy accomplishment. He continued, "Of course we can write to Bob and perhaps we can find Sally for you." He paused a moment to observe the condition of his victim, then concluded. "Though now that I think of it, Bob's on his way home for a few weeks' vacation—boat docks tomorrow. I'll tell him you want to see him."

The next day was eventful. There was, first, a visit to Neil by Bob Warren. What Bob heard caused him to wire hastily and expensively to Sally. Sally arrived on an afternoon train and went directly to her hotel without seeing Bob.

In the early evening there was again a visit to Neil. Sally sat in the hospital room armchair—a very white and tired Sally—trying not to notice the mockery in Bob's smile or the slight sprinkling of gray at his temples. Red Hartshorn sat near her. Bob was near the bed watching Neil.

Neil told his story in as few words as possible.

"Three years ago," he began, "we were all at Camp Westlake for the summer, and Sally was a councilor at Camp Pineywoods—remember?"

"Well, Sally—Sally—Bob—that is, Sally and Bob—were pretty good friends—" He hesitated a moment, then went on in rapid, jerky sentences.

It seemed that the great interest evinced in each other by Sally and Bob had not met with the entire approval of Neil Rogers. He couldn't imagine what Sally could possibly see in Bob, and how she could prefer Bob's company to that of his own charming self was beyond his comprehension. Her taste was truly deplorable. But so it was, and something, obviously, had to be done about it.

Neil's reasoning as he now told the story, had been thus: "Bob wants Sally, I want Sally. But Sally wants Bob, not me. So I don't get her. All right, I don't get her, but I'll see to it that he doesn't either." Which he proceeded to do.

The mail boxes at Camp Westlake were rude affairs built of wood, each with its wooden door that opened at the top. It was a simple matter to open the box every evening after Bob had mailed his letter, to extract the letter and to drop it carefully into the lake. Neil always recognized Sally's handwriting, so that, naturally enough, her letters to Bob shared the same fate. Not very difficult, either, was the task of starting the rumor that Sally Arnold of Camp Pineywoods was engaged to a man from home or that the New York girl who had a recent week-end guest at Camp Westlake was secretly Bob Warren's fiancee.

Sally's first reaction on hearing the gossip about "Bob Warren's new flame" was a non-inhibited desire to smile. When her letters remained unanswered she began to wonder. She remembered that the young lady referred to was not only very beautiful but also the daughter of a father who had (or so all the good people said) made history on the battlefield of Wall street.

Bob went through much the same experience and since they were both very sensitive and both possessed the unyielding pride of their kind, there was in store for them much pain—a season of torture and then three years of dull heartache.

For Neil there had been remorse of a sort always quieted, however, by the fear of swift punishment at the hands of Bob if he told.

The story over, Neil sank back on his pillow and closed his eyes. Bob turned to look at Sally, and it suddenly came to them both that three years is a long time to be separated from the Most Wonderful One in the World. It became necessary for Red to escort them speedily to where they might have undisturbed privacy.

This accomplished, he returned to the bedside of the patient. Here he found that confession had brought peace to the soul of Neil Rogers, so much so that he had forgotten all about dying and fallen peacefully asleep. Red regarded him tenderly, calculating the number of days that must elapse before Neil would be strong enough to leave the hospital. He smiled in anticipation as he thought of a little conference he would have with Neil at about that time—a conference behind closed doors where he would do unto Neil as Neil should have been done unto long ago; and after that Neil would again spend a week or two in a hospital and Red would seek treatment for bruised knuckles.

As he thought of all these things, Dr. Redfield Hartshorn became very, very happy.

Children Must Learn to Make Own Decisions

Most parents would be highly gratified if they could say that their children always yielded instant obedience to commands. But even if such children existed such a state of affairs would not be of most benefit to them, declares Dr. Frank Howard Richardson, child specialist, in Hygela Magazine.

Why? Because children are by no means finished products. They are in training for independent existence when they must make decisions for themselves. If they obeyed unquestionably they would be mechanical robots and nothing more, Doctor Richardson asserts.

It is an interesting fact that the parent who has not put too much stress on obedience as such is the one who is most unhesitatingly obeyed when an order is given that must be instantly obeyed. In other words the habit that should be stressed in the young child is the habit of co-operation, of obedience to the laws that we must all obey, rather than that of obedience to parental whim, Doctor Richardson advises.

Pests Cure Paralysis

A certain type of mosquito, according to J. F. Marshall, director of the British Mosquito Control Institute at Hayling island, has been found to cure paralysis in some cases. The experiments conducted consisted of inducing the insect to bite a patient suffering from malaria. Then it was induced to bite a general paralysis patient. Partial and complete cures were effected.

Lack of Passing Faddish Influence Makes This Home Good for Years

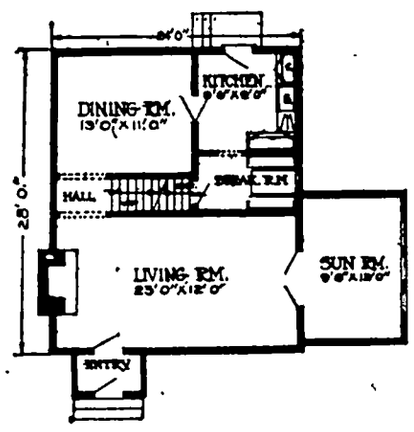
There is nothing striking or novel about this home, but it should appeal to many of the more conservative home builders as one which will maintain its appearance through many years because of its lack of passing faddish influence.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The delightful thing about building and owning your own home is that you can add to and improve it year after year, and every investment of money or of time and labor is not lost, but becomes a real and growing improvement for years to come.

The new home looks bare and raw when the carpenters are finally through; but to the eye of the owner this holds an interesting invitation to set out shrubs and plants, to lay out

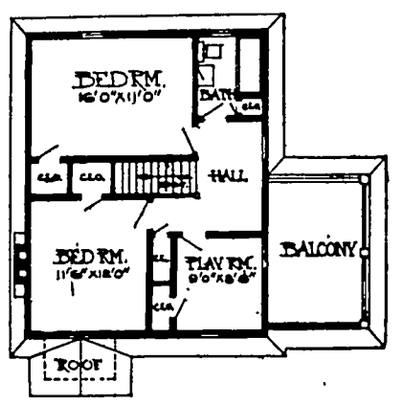


First Floor Plan.

a garden and establish a lawn. It can't all be done the first year, he knows; but a start can be made and a little can be done each season. And through imagination the owner can see the future beauties which some day will be realized.

And there is hardly any other satisfaction in life equal to this of creative work—planning and building up a comfortable, attractive home. It does not have to be large or expensive. We look at the big show places and admire them, and perhaps here and there borrow an idea from them; but it is our own little home place that really arouses our enthusiasm.

There is nothing striking or novel about the home building design shown



Second Floor Plan.

in the accompanying illustration, but it should appeal to many of the more conservative home builders as one which will maintain its appearance for many years because of its lack of passing faddish influence. This is a six-room house, 28 feet by 24 feet. It is a frame construction with outside walls covered with ship-lap siding. An attractive feature of this home is the sun room, 9 feet 6 inches by 13 feet with the balcony above.

The living room extends the width of the house and is 23 feet by 12 feet. The dining room is 13 feet by 11 feet. Adjoining the kitchen is a breakfast nook. The stairs to the second floor run out of the hall which connects the living room and dining room. Upstairs are two bedrooms and bath and a smaller room which is designated as a playroom, 9 feet by 8 feet 6 inches but which is large enough for a small bedroom.

One Per Cent Monthly Fair Carrying Charge

The financing of a home means far more than the mere matter of putting up a few hundred dollars to cover the bare equity. Among the things to be considered are: Saving the money, buying the land, planning the house, buying the material and budgeting for both the investment and the running expenses.

Building a home, or even buying a home, ought not to be considered in a slipshod manner. Few people realize that the home for the family should not be invested in the same manner as a real estate operator or speculator buys up property on the moment or on a shoe string. While the former is putting his hard-earned cash in a place where he plans to house his family for a number of years, the latter expects a quick turnover.

Oliver Wendell Holmes has said that the training of a child should start "one hundred years before he is born." While we would not carry out this extreme statement in connection with the financing of a home, it is very necessary to think of and work out far in advance the home-owning problem. It cannot be done in a hurry, and the greatest amount of deliberation should be exercised.

Some of the simple ways of getting at how much one ought to invest in a home may be worked out somewhat on the following lines: One should not invest in a home the total value of which is more than three times one's yearly income. Also, one should not plan to pay out more per month for carrying charges (which would be practically the same as rent in an apartment) than one's weekly income.

In financing, as in other matters pertaining to the home, the owner-to-be should seek the advice of an expert, whose character is established beyond question. Money and worry will be saved by so doing.

To Give Height

When additional height is desired in low rooms, wall paper with stripes of rising lines in the pattern should be used. The paper should run directly to the ceiling line, and the ceiling should be papered with a plain color close to the shade of the background of the walls, if it is not too dark, so that the change from wall to ceiling will not be so marked.

Good Paint, Painter, Assure Satisfaction

Springtime is house painting time just the same as it is moving time, June bride time, flower garden time.

In the process of freshening up the house and making it springlike as the garden, it is always well to heed the painter's plea for a two-coat job.

The painter says, "It is next to impossible to get the proper kind of a job with less than two coats, in repainting. The outside of a house is bound to become discolored with dirt, and one coat will not completely hide such a surface. Moreover, a two-coat job will last more than twice as long as a one-coat job and therefore is more economical."

It has also been proved time and again that using only the best paint pays. No matter what kind of material is put on, the labor charge for applying it is the same. The cost of application represents from two-thirds to three-quarters of the cost of the whole job, in the majority of cases. If the job wears, bills for painting will not come around again for three or four years. If it doesn't, the bills will be frequent. When paint goes wrong, you have not only lost the paint cost, but what it cost to put it on.

A very important factor in a satisfactory paint job is the painter. A good painter knows how to mix up his white-lead and oil to suit specific surface conditions. Strange as it may seem, two sides of the same house sometimes require quite different treatment. The skilled painter allows for this. With everything taken into consideration, good paint and a good painter are the best assurance that this spring's paint job will look well next spring.

Colored Tile Useful Inside House or Out

In considering various features for the outside of the house, such as floors, steps, pergolas, seats, gate entries, and walks, as well as interior walls, floors, etc., it is well to consider the versatility and durability of tile. One great factor of beauty is simplicity, and because tile possesses brilliancy of coloring it permits a simple and artistic furniture grouping. For outside as well as inside service these distinctive tiles, fashioned of clay and burned by an intense heat to make them lasting and fireproof, are a material unfading and practical.

LIVE STOCK

POTATOES RIGHT FOR LIVE STOCK

Rations Are Generally Comparable to Corn Silage.

Potatoes make a good succulent feed for all classes of live stock when fed as a part of the ration, declares E. J. Maynard, associate animal husbandman for the Colorado Agricultural college experiment station in a new bulletin just issued on "Potatoes For Live Stock."

Copies of this bulletin may be obtained free of charge by writing the extension service of the college.

Subjects discussed in the booklet include preparation for feeding, potato ensilage, potatoes and potato silage for sheep, potatoes for dairy cows, swine and horses.

The bulletin is summarized as follows:

Potatoes fed in live stock rations are generally comparable to good corn silage.

Potatoes may be fed raw to cattle, sheep, horses and swine, but are best cooked for swine. Raw potatoes have only 2.3 the value of cooked potatoes fed to pigs. Raw potatoes proved to be as good as cooked potatoes fed to dairy cows.

Raw potatoes may safely constitute one-half the dry matter in rations for cattle and sheep and one-fourth the dry matter in rations for horses. Cooked or raw potatoes should not replace more than one-half the grain allowance in fattening pigs.

Raw potatoes fed to dairy cows at the rate of from 25 to 35 pounds daily have actually increased milk production, but larger amounts will taint the milk, cause a salvy butter and may cause indigestion and bloating.

The dry matter in potatoes is composed largely of starch, a carbohydrate valuable in both fattening and milk-producing operations.

Potatoes are low in protein or growth-producing material and some protein concentrate or roughage should be fed with them.

Raw potatoes are best fed sliced through a root cutter. Frozen, rotted, or decayed potatoes may cause trouble if fed to live stock.

Raw potatoes have an acrid taste and tend to increase the flow of digestive juices. They should not be fed with other feeds that tend to irritate the digestive system and they should always be fed with caution.

Efficiency Is Key to Beef Feeder's Profit

Efficiency in feeding methods—not a wide margin between the prices paid for feeder cattle and the prices obtained for them on the market—are likely to determine the profit of the beef cattle feeder for the next few years, in the opinion of C. R. Arnold of the rural economics department of the Ohio State university.

However, Arnold believes the beef cattle outlook is at present favorable for the man who produces feeder cattle. It is also favorable for the man who can purchase calves and carry them through a large portion of their growing period, and then feed them out, providing he has an abundance of cheap pasture.

The market outlook for fat cattle does not appear favorable for the next three months, but may strengthen in the late summer, Arnold concludes after a study of figures on receipts of cattle thus far this year, and on the number of cattle now on farms in this and other states.

Best Hog Pasture

Some farmers are short of suitable land or believe that they cannot afford to use good crop land for hog pasture. Anyone who has efficiently used pasture and kept close check on the financial end of his business would testify that the average acre of farm land devoted to hog pasture will yield a return far in excess of that secured from crops of wheat, oats, corn, or hay. Where failures have been noted in the use of pasture, the evident cause was that of an attempt to make some rocky, barren, out-of-the-way piece of land grow the crop.

Before Sow Farrows

A day or so before each sow farrows she should be washed with warm water and a good laundry soap. After washing, the belly and udders should be rubbed with lard to keep the skin from cracking and becoming sore. She should then be put into a properly cleaned pen and left there until the pigs are farrowed. Clean straw, and not old litter scraped up around the pens, should be used for bedding.

Water for Ewes

Ewes with twins, getting a little extra grain food, drink a good deal more than ewes with single lambs getting no grain. The excessive call on the ewe by their lambs causes all the more drouth on the system, and thence more thirst, naturally because there is not so much sap in that dietary as there is in green feed. Indeed, when the lambs get strong, they begin to drink even before they are weaned, if milk runs short and the herbage is dry through a spell of dry weather.

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believes that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is not habit forming. Syrup Pepsin is pleasant tasting, and youngsters love it.

Dr. Caldwell did not approve of drastic physics and purges. He did not believe they were good for anybody's system. In a practice of 47 years he never saw any reason for their use while Syrup Pepsin will empty the bowels just as promptly.

Do not let a day go by without a bowel movement. Do not sit and hope but go to the nearest druggist and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois for free trial bottle.

It Was All Wet

"How did the shower you gave the bride-elect turn out?"

"We had to call it off on account of rain."

For Galled Horse

Around the Orchard

LORING FRUIT BY ETHYLENE GAS

omotes Ripening Process and Makes Fruit Better.

repared by the United States Department of Agriculture.)

The process of coloring citrus fruit means of exposure to ethylene gas s been extended to a number of her fruits and vegetables with vary- success, according to investigat- s in the bureau of chemistry and ils and the bureau of plant industry the United States Department of riculture.

Although the use of ethylene gas in loring oranges is commonly de- ribed in the orange business as the thylene ripening process," the De- rtment of Agriculture workers who veloped the method, after its dis- overer. Dr. F. E. Denny, had secured e public service patent covering it, ve preferred not to use the term ipening" in describing the effects oduced. That term, it is pointed t, is applied in many ways to de- ribe natural processes, and may con- y the idea of increasing the food pply in a fruit or vegetable, that increasing the starch or sugar con- nt. Their experiments lead them to ink that the changes produced by hylene gas are very similar to those hich take place naturally after the uit or vegetable has been harvested d is stored under proper conditions. here is a decided difference, however, the time required for the change. If an orange is picked when imma- re, and before the fruit has stored fficient sugar, ethylene gas will not d to the sugar or reduce the acid. does promote a coloring of the d that makes otherwise desirable uit more attractive to the eye.

In the case of pears the full sweet- ss of the fruit may not have devel- ed when the time for harvest comes. me of the food material is in the rm of starch, which changes to gar in the course of storage. Ethy- ne gas causes the change to take ace more rapidly. A desirable ef- ct has been observed in treatment Japanese persimmons. But in none these cases, the chemists empha- ze, does ethylene cause a halfgrown mature fruit to be made palatable. he experimenters have also had some ccess with green colored apricots hich grew on the inside branches of ees and failed to color for lack of nlight. The department has had en- usiastic reports on treating green matoes to bring out color, but ex- riments by scientists in the depart- nt indicate that immature fruits ll benefit but little, if any. Their sults with other fruits and vege- bles have been inconclusive, and ey are unwilling to forecast success til they have adequate evidence. For citrus fruits the method is wide- used, and inquiries have come from arly every citrus growing country. e method is well established in the rus states of this country.

ow-Headed Trees Are Wanted by Orchardists

Most orchardists want their trees w headed, so the apples can be eas- picked and the trees thoroughly rayed. Therefore, they head their es back when setting out, to make e branches low. The second year but tle pruning will be required if it s properly done the first season, re being taken each succeeding year see that the head is kept well-bal- ced and leaders not allowed to grow o upright.

All young fruit trees should be apped with heavy paper at the base prevent rabbits and other rodents om gnawing the bark in winter. Tar per, or several sheets of a maga- e will protect them. Tie with string hold in place.

Horticultural Facts

In buying red raspberries a mosaic- ee strain should be selected.

* * *

Soil preparation is one of the most portant factors in successful tree owing.

* * *

A lick in time with the proper spray culture may prevent or kill nine- nine or more fruit pests.

* * *

The man who produces high quality its seldom has to worry about a isfactory market for his surplus.

* * *

Where the crop is light and well tributed over the bearing surface, nning is unnecessary, but where the is heavy, thinning should prove fitable.

* * *

etting out apple trees and other it trees in the fall is recommend- by the most experienced orchard- .

* * *

n planting all of the raspberries, it well to have the rows six to eight t apart, and the plants set about ee feet apart in the rows.

* * *

The best way to apply fertilizer to trees is to scatter it around the e one or two feet from the body of tree and increase the distance each .

Sod Webworm Is Injurious Pest

Small Grains and Various Pasture Grasses Are Destroyed by Insect.

(Prepared by the United States Department of Agriculture.)

Its work often mistaken for damage by cutworms, the larger sod webworm is often a pest of economic importance. East of the Mississippi its range is over most of the territory north of the Ohio river, although it has appeared in Kentucky and Tennessee. West of the Mississippi it has been found in Missouri, Kansas, in the Texas Panhandle and even close to the Mexican border in New Mexico, from which point the boundary line of its range strikes northward, avoiding Arizona, but with appearance in Utah and in Washington. Its principal damage has appeared in the Mississippi valley from Ohio to Iowa.

Facts Concerning Pest.

In Technical Bulletin N. 31-T, "The Larger Sod Webworm," published by the United States Department of Agriculture, George G. Ainslie of the bureau of entomology brings together all the available facts concerning the pest, for the convenience of technical workers, and agricultural leaders as well as for farmers in the area where the webworm is likely to prove destructive. Mr. Ainslie's conclusion is that "when once present in a field it can be controlled with difficulty, and measures used against it should be preventive rather than remedial. Such measures are crop rotation, ample fertilization, and, in the case of sod land intended for corn the following year, early fall plowing."

In the moth stage of its life the insect is comparatively large, yellowish-gray, and with a wing expanse of an inch or more. The moths fly about at twilight, and drop eggs that develop into the injurious webworms. There are two broods a year, and the first is likely to injure corn and small grains. The second is more likely to injure grasses in pastures. The larvae winter in a closely-woven case of white silk covered outwardly with earth particles so that it has much the appearance of a small clod.

Parasites Attack Larvae.

The larvae are attacked by several parasites. Birds, mice, moles, ground squirrels, gophers, and predacious insects probably do much to keep down the numbers of the sod webworms. Poisoned baits have been tried without success. In case the injury to corn is so serious as to require new planting, the new rows should lie between the old ones and the infested plants should be allowed to stand as long as possible so that the webworms will complete their growth on them, without turning their attention to the younger plants. The moths emerging from the plants will seek grassy places and will not trouble the corn.

The bulletin may be obtained, while the supply lasts, by applying to the Department of Agriculture, Washington, D. C.

Clean All Poultry and Swine House Windows

Cleaning the windows in the poultry house and the hog house once or twice every year will increase their efficiency at least 50 per cent on the average, according to Ralph L. Patty, agricultural engineer at South Dakota State college.

"Many hog house windows," Mr. Patty says, "are dirty enough so that 100 per cent more light would be allowed to enter the building if they were thoroughly cleaned.

"Cleaning," he declares, "is a much better practice than putting in more windows than are really needed. Too much light in a stock barn has the disadvantage of making the flies bad in the building. The building is not so cool in the hot summer and it will be colder in winter. The best way is to get the greatest amount of value from the window space you already have."

Soy Bean Plant Is Most Valuable Soil Builder

The soy bean plant is one of the most valuable soil builders among the legumes. It is an excellent hay crop and the grain forms a valuable protein supplement for feeding live stock, being utilized extensively in commercial feeds and as a supplement for corn in feeding cattle and hogs. Commercial utilization of the soy bean as a valuable source of vegetable oil for paints, enamels, varnishes, linoleum, soap stocks, rubber substitutes, glue, printers inks, glycerin, as well as various food products waits only upon a sufficient supply of beans to afford a year around supply for oil extracting factories.

Proteins and Nutrients

Investigations at agricultural experiment stations have shown that certain amounts of proteins and total digestible nutrients must be fed to maintain an animal of given weight and to produce a certain amount of milk of a given test. Any excess of the amounts needed will be converted into animal fat or be eliminated in the urine and feces. Protein in great excess of the requirements may stimulate milk production but it may also burn out the cow and very often manifests itself in temporary or permanent sterility. A balanced ration is one which meets the requirements both for maintenance and milk production.

Study Insecticides in Corn-Borer Plan

Some Chance of Securing Control Measure for Pest.

(Prepared by the United States Department of Agriculture.)

The likelihood of effective control of the European corn borer on a large scale by direct applications of insecticides is remote; nevertheless, the possibility of such control is worth investigating in the hope that something of value in this direction may develop, says the United States Department of Agriculture. Moreover, there is some chance of securing a control which may be practical for the protection of small plots of corn grown for the production of roasting ears for market or table use. A study of the possibility of the use of insecticides and moth attractants has been a phase of the corn-borer research program almost from the start.

In the 1929 research program for corn-borer control there will be close co-operation between the insecticide division of the bureau of chemistry and soils and the bureau of entomology, and also with various state workers and the Dominion of Canada. The development of new insecticides for corn-borer control is one of the primary objectives of this division, which has already made many analyses of insecticidal materials and of plants which have been sprayed or dusted with insecticides, to determine the residue left thereon.

The bureau of entomology plans to make a number of experimental tests with the usual insecticidal materials and the newer ones recommended, including tests of toxicity, adhesiveness, number of applications, plant toleration, compatible combinations, and costs. The method of application of each of these materials and the number of applications with reference to the stage of development of the plant and the insect, and in relation to meteorological conditions, are points of importance.

Glass Substitutes on Poultry Farms Useful

The following recommendations are made by the poultry department of the Iowa State College of Agriculture in order to get best results from glass substitutes:

1. Glass substitutes, whenever used, should always be placed in a vertical position.

2. For best results glass substitutes should not be used for openings in roofs or any slanting surface.

3. Glass substitutes used on frames should be securely tacked and firmly braced to prevent whipping.

4. Make all frames removable so they may be stored away from the hot sun and dust during the summer.

5. Glass substitutes admit little, if any, air; therefore the house must be ventilated properly to obtain the best results.

6. Glass substitutes should be kept free from dirt and dust.

7. When window glass or glass substitutes are used, direct sunlight should be admitted whenever possible.

Purdue Issues Warning in Buying Grass Seeds

Farmers and dairymen are warned by the Purdue experiment station to be cautious in buying clover and alfalfa seed. Seeds grown in foreign countries and other inferior seeds are stained different colors to show their origin. Most of these seeds are not adapted to this climate and are subject to serious winter killing. The seed that is stained purple is of Canadian origin and ranks equal to similar classes of native seed. Purity of the seed is another important consideration. Many new weeds have been introduced through low grade and impure seeds, and the Purdue agronomists warn against buying contaminated seed.

Farm Notes

Bridge grafting is the one way to save girdled trees.

* * *

Sanitary conditions are necessary to prevent diseases on a farm just as in a hospital.

* * *

After each very heavy rain topdress your growing vegetables lightly with some nitrogen fertilizer.

* * *

A gasoline engine will relieve the dairyman of many tasks each day at a cost of less than five cents per hour.

* * *

Build the out-take flues for your barn ventilation system from the mow floor to the eaves while the mows are empty.

* * *

At least one colony of bees should be provided for each acre of your apple orchard to take care of cross-pollination.

* * *

Adopt a definite program of sanitation on your farm to reduce the loss of chicks. About half the losses of young chickens occur during the first four weeks.

* * *

If the cockerels are separated from the pullets when they are eight to ten weeks old, the pullets will have a better chance for development and the poultryman can force the cockerels for market.

Aid Strawberry With Wild Ones

Four Promising Varieties Are Found Suitable for Home Preserving.

(Prepared by the United States Department of Agriculture.)

All the strawberries in the United States and most of those of the world—that is, the tame ones—are descendants of two wild American strawberries, one a native of the Pacific coast and the other a native of the eastern United States.

There are many other wild strawberries, however, that did not take part in developing our present kinds. In the untried wild ones may lurk some valuable trait that can be bred into our domestic varieties which may make them even more desirable than they now are. At any rate, plant breeders are turning to the wild sorts for improving the strawberry, especially to develop new types better adapted to such specific purposes as canning, preserving, and candy making.

Four Promising Varieties.

George M. Darrow, who is in charge of strawberry-breeding work for the United States Department of Agriculture, has already achieved some success in this field. From the thousands of crosses made he has selected four promising varieties especially suited for preserving. They are known only by number as yet, and will need to be tested for adaptation before they can be recommended for planting. The breeding of preserving sorts is only begun, he says, and every region will need its own particular variety.

Technique of Breeding.

The technique of breeding is relatively simple, Mr. Darrow explains, but the important and difficult part is in making the selections. To breed a new kind, no matter for what purpose, two parent varieties are crossed. They may be wild or tame. The pollen from the flower of one is placed on the pistil of the flower of the other. The seed developing from such a cross is planted and every resultant seedling grown to fruiting age before selections are made. If there are three acres of seedlings in fruiting there may be 8,000 kinds, each different from the others. From this enormous number certain promising ones are saved and each is propagated in a separate short row. When they bear, if there is sufficient fruit, canning and preserving tests are made of the more promising ones by canners and preservers with whom Mr. Darrow has made co-operative arrangements.

Oyster Shell for Hens of Great Importance

Profitable poultry raising depends on the elimination of weak, unhealthy chickens, subnormal egg production and soft-shelled eggs. Of course, there are many poultry feeds which will help to keep fowls healthy but there is one mineral food which combined with a balanced ration and plenty of sunlight will do away with all three of the evils just mentioned. This is crushed oyster shell.

The best form of crushed oyster shell contains 98 per cent calcium carbonate and therein lies its value to poultry. The formation of the egg requires three distinct steps. The yolk is made first. This passes to the next stage where it is coated with the white or albumen. The final step of the process is the formation of the shell. Eggshell consists mainly of calcium carbonate. It is therefore evident that if the hen has not a sufficient supply of this mineral in her system, fewer eggs will be produced and those that are produced may have soft shells. In other words the calcium carbonate in the crushed oyster shell supplies the egg shell material.

Much Money Is Lost by Planting Inferior Seed

Thousands of dollars are lost every year by planting seed of low vitality. Seed of all field crops should be tested for germination before planting. This is especially urgent now for corn and sorghums. One cannot tell from the appearance of seed how well it will grow. Last year 141 lots out of the 5,000 lots of seed tested at the state seed laboratory germinated from 0 to 50 per cent. This means that several thousand acres would have been planted to seed which would not grow.

Agricultural Notes

Infertile eggs keep longest.

* * *

Seed clover instead of alfalfa if the subsoil is extremely acid.

* * *

Feed poultry yellow corn, cod-liver oil, milk, and leafy feeds for vitamines.

* * *

Keep your lawn open for the best effect. Flower beds set in the lawn make the grounds seem smaller.

* * *

Retailers make best profits when prices of produce are low. The farmer gets more of the consumer's money when products are scarce and high priced.

* * *

The size of the egg a pullet lays has been found to be closely correlated with the age of which she begins to lay. Selection for very early maturity in the smaller breeds is likely to reduce the size of the egg of the flock.

"We All Sing, You Know"

A story Henry T. Finck, the music critic, used to tell had to do with the teacher of Olive Fremstad. Happening to be near where Fremstad's parents lived, the teacher called on them and spoke of their daughter's triumph at the Metropolitan Opera house and abroad, saying finally:

"You must be proud to have a daughter who has done so much with her voice."

"Well," said the mother, calmly, "we all sing, you know."—Philadelphia Public Ledger.

Napoleon's Lucky Stone

The great Napoleon firmly believed in the good fortune attracted by diamonds, and well he might, since it was the famous "Regent" diamond of France, on which he borrowed large sums of money, that made him emperor of the French. Later when the mortgage was lifted on the huge stone he had it set triumphantly in the hilt of his sword.

His Scare

Daughter—Oh, daddy! Just think. Junius says he loves me so much he would die for me!

Father—Thank heaven! I was afraid he wanted to marry you.

Conceit is nature's anaesthetic given to little men to make them content.

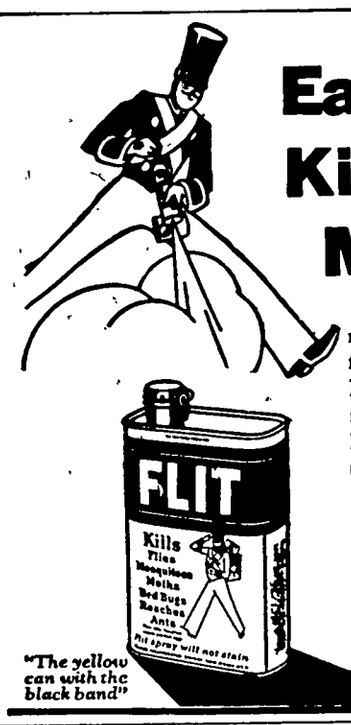
Government Will Test Value of "Paper Mulch"

Government plant experts are engaged in a thorough test of the "paper mulch" which has been used experimentally in some locations with a considerable degree of success. The paper mulch was first suggested by a Hawaiian pineapple grower, who covered the ground with an impregnated paper which permitted the shoots to find their way through but entirely suppressed the weeds that usually grew between the plants and which sapped the ground of its vitality. In this instance it was a great success as well as on some small truck patches where the experiment has been tried in different parts of the country. The government experts, however, will not make an official report on the subject until they have tried it out thoroughly and have conducted experiments with the different kinds of paper which have been offered as suitable.

For true blue, use Red Cross Ball Blue. Snowy-white clothes will be sure to result. Try it and you will always use it. All good grocers have it.—Adv.

An optimist talks more than a pessimist—and wearies people of optimism.

A man's most bitter enemy is the ex-friend who can no longer work him.



Easier way to Kill Flies and Mosquitoes!

Easier—because the new Flit sprayer makes a clean-smelling vapor which floats freely and does not fall in drops. Easier—because Flit kills flies and mosquitoes faster, though harmless to humans. Prove it yourself. Guaranteed or money back.

Don't forget that the business men are giving you movies in Klemme every Saturday night—10 cents for everybody.

We are informed that a former Ed. Jacobs and family drove to Canton, South Dakota Sunday. They left about 7:00 a. m., got to Canton at 11:00 a. m., visited eight hours there and were back in Klemme again at exactly midnight.

Fred Ridder has been at Manly the past week looking after the pool hall for his son, Levi, who with his wife, Mr. and Mrs. Sam Harvey and Enid, and Mrs. Fred Ridder were in Chicago visiting with Mr. and Mrs. Beatty, who is a daughter of Mr. and Mrs. Fred Ridder.

We are informed that Mr. P. M. Greisemer, former Klemme man is at Davenport, Iowa, where he has a position as clerk in a large hotel. F. J. Wenck, also formerly of this place has a clerical position with a construction company working in southeastern Iowa.

Rev. and Mrs. H. E. Whyte drove to Sexton Wednesday afternoon. Rev. Whyte conducted a wedding there in the evening and Mrs. Whyte sang two numbers, "Because," and "When I am with You." The happy young couple who were married were Miss Dorothy Wise and Mr. Lloyd Stevens.

Miss Nova Schlawin is the new assistant operator at the Iowa Union telephone office in Klemme. She is taking the place of Adella Kuhlman who has gone to Menno, S. D., to be with her mother this summer. Miss Kuhlman will be greatly missed by the patrons of the Company. She was an excellent operator and always pleasant and cheerful.

Mr. and Mrs. R. W. Elder and daughter Reva, accompanied by Byrnes Missman and Winnifred Hampel drove to Ames early Monday morning to attend the Commeneement Exercises. Reva and Winnifred remained at Ames to attend the 4-H Convention. They will be entertained at Margaret Hall during their stay in Ames.

Mr. and Mrs. R. A. Jorgenson entertained Miss Adella Kuhlman, and Rev. Grosshuesch and family, and Dr. Zinn at a six o'clock dinner Saturday evening. This was given as a farewell for Miss Kuhlman who has gone to Menno, S. D. Miss Kuhlman will be greatly missed by her many Klemme friends. She assisted with work at the Jorgenson home for several weeks a couple of years ago while Mrs. Jorgenson was ill She is a very pleasing and cheerful young lady.

Mrs. Mary Waterman, mother of C. G. Waterman of this city, is now at Hermosa, South Dakota, in the Black Hills. Mrs. Waterman will spend the summer on a ranch owned by Miss Hormel, a friend. Mrs Waterman, Miss Hormel and the Misses Marian and Bernice Ansel, all left Iowa City Tuesday via Omaha for the west. Mrs. Ansel, mother of the two girls and sister of Miss Hormel will leave later. The ranch is located five miles from Hermosa and the prinoiple mode of travel is by horesback. The ladies expect to have a fine time and will spend much of the time in the beautiful mountains. A truck broguht Mrs. Waterman's furniture to Klemme Monday and it will be stored here until fall when Mrs. Waterman expects to again reside in Klemme.

GREIMANN-KLINGE MARRIAGE WEDNESDAY AFTERNOON

Miss Ruth Greimann, daughter of Mr. and Mrs. W. F. Gremann, Jr., and Mr. Henry Klinge, son of Mr. and Mrs Fred Klinge, Sr. were married Wednesday afternoon, June 12 at the home of the Bride's parents. Only the immediate relatives of the young couple were present at the wedding ceremony.

That evening a reception was held in their honor to which the many young people and friends were invited and a fine time was reported.

The young couple will reside on the farm west of the Fred Klinge, Sr. farm where a new set of buildings have been built for them.

Both are fine young people and have many friends in this community who wish them happiness and success.

Mr. and Mrs. Herman Priebe and Verner, Mr. Ben Swalve, Mr. and Mrs. John Swalve and children, and Mrs. Gilbert Schaeper and Bennie had a picnic dinner at the Henry Behrends home at Dumont Sunday. Mrs. Behrends is a daughter of Mr. Ben Swalve.

ADOLPH LAURITSEN HONORED AT UPPER IOWA U

Klemme Young Man Completes College Course At Fayette

Mr. and Mrs. Einar Salling drove to Fayette last week Wednesday to be present at the commencement exercises of the Upper Iowa University, their son, Adolph Lauritsen being in the graduating class.

"Abe" has made a fine record and the Times is proud of him. He is another of "our" boys who has made good. While attending the Klemme school Adolph was employed at the Times office and was a fine boy. Later he completed high school at Garner and then attended Upper Iowa for two years. He then went to Renwick where he taught in high school and coached athletics. He made an enviable record as coach

Adolph then went back to Upper Iowa last fall to continue his studies and made a remarkable record of completing a the balance of his two years work in one year. He will attend summer school this year to make his four years of college work complete.

During the commencement exercises the president of the college called Adolph up in front and presented him with the prize for being the best all around student at the college this year, as being an outstanding young man in athletics, studies and college activities.

Mr. Lauritsen will go to Orange Township Schools next year where he will coach athletics. He will again be under his former superintendent from Renwick who urged Adolph to join him at Orange.

The Times wishes Adolph lots of success, happiness and properity. He is deserving of all of this.

OBITUARY—JAMES KURTZ

James Kurtz, a son of Levi and Susanne Kurtz, was born on the 7th day of February, 1858, in Swatara Township, Sebanon County, Penn., and passed awayat his home at Garner, Iowa, at 5:30 p. m. Wednesday, June 5, 1929. He was ill only a short time before deat His death being unexpected, but he had been in rather poor health the past few years but was able to be up and around and was a man who never complained.

About fifty years ago he came to Iowa from Pennsylvania and a few years later he went to Illinois. On the 6th day of January, 1891 he was united in marriage to Miss Ella Knoll at Fulton, Ill. They made their home in Albany, Ill., where all of their children were born.

He came to Bemond, Iowa in 1917 where he resided until the past few years, when he came to Garner to make his home on a farm southwest of town. He has been engaged in farming all of his life.

He was a man who was well liked by everyone and will not only be missed by his family, but by a host of relatives and friends.

He was the father of twelve children. Levi, a son, proceded him in death October 26, 1918 who died during the world war in Franee.

Those left to mourn his loss are: his wife, three sons, eight daughters and twelve grandchildren. The children are: Charles, Garner; Mike of Belmond; Mrs. Wm. Tideback of Belmond; Mrs. Ray Best of Belmond; Mrs. Ross Smith of Prophestown, Ill.; Mrs. Aaron Greiman of Klemme; Elizabeth, William, Anna, Susan and Bernice at home; also three brothers: John of Womelsdorf, Penn.; George of Womelsdorf, Penn.; and Levi of Newmanstown, Penn.

Funeral services were held at the family church at Belmond and interment made at the Belmond cemetery.

Card Of Thanks

We wish to thank all who their sympathy an dhelp during our recent bereavement, and for the floral offerings contributed in memory of our husband and father.

Mrs. James Kurtz and Family.

WOULD PRESERVE HIGHWAY BEAUTY

Nevada Will Not Permit Erection of Billboard, Sign or Notice.

While state, county and local laws governing advertising signs on the highways are designed, in most states, to afford protection to motorists, only in Nevada do they also attempt to preserve the scenic beauty of the roads. This was disclosed by a survey of such laws recently by the bureau of public roads of the United States Department of Agriculture.

No Permit for Signs.

In Nevada no permit is granted for the erection of any billboard, sign or other form of notice on any location which may measurably destroy the natural beauty of the scenery or obscure a view of the road ahead or of curves and grades or intersection highways or railroads. While the majority of states restrict the placing of signs within certain distances of curves, grades or intersections of highways or railroads, Nevada is the only state of the 48 to restrict the placing of signs where they will spoil the beauty of the scenery along the highways.

"It is unfair to the motoring public that the very industries which depend upon the highways for their whole business should be the worst offenders in erecting and maintaining thousands of glaring, disfiguring signs along our streets and roadways," Thomas H. MacDonald, chief of the bureau of public roads, recently declared.

"The most offensive of these shriek at the traveler who is in hopeful search of the beauty of the countryside and a restful, uplifting change from city streets. They shriek at him to buy gas and oil, automobiles, grease and tires. The tourist is most frequently enticed to stop at second-rate hotels," he continued.

It is to the credit of many of the producers of the best products that their wares are not advertised in this way, he pointed out, and to certain oil companies and others who have withdrawn from this practice.

Other Offenders.

"The billboard advertisers are not the only offenders against the highways," Mr. MacDonald stated. "Nine out of every ten of the roadside filling stations and lunch stands merit the condemnation rather than the patronage of the passerby.

"These conditions will not be cured by scolding. The larger companies will abandon these invasions of the rights of the public, some through an awakened conscience, others through necessity, because this fight for clean roadsides is just starting.

"A number of the state highway departments have made splendid progress, and some notable legislation has been made effective. One of the best of such laws is that of Connecticut, which licenses all roadside filling stations, requires the location and arrangement to be approved, and keeps this business off the right of way."

Oil Filter Must Have Its Regular Servicing

Three years ago before adoption of the oil filter, car manufacturers recommended that oil in the crankcase be changed every 500 miles.

Today these manufacturers' oil changing recommendations range from 1,000 to 3,000 miles. The average recommendation is every 2,400 miles.

This longer use of the oil has been made possible because of adoption of the oil filter, which filters the oil, removing from it foreign matter that otherwise would cause wear to the engine's vital parts.

The manufacturers' oil changing recommendations are based on the use of an oil filter, and it is further recommended that the filtering unit be renewed every 10,000 miles in order to insure its working at highest efficiency.

The filter, it is explained, besides removing the abrasives from the oil before they can damage cylinders, pistons and other internal parts of the engine, also effects a saving in oil of about $29 per car per year.

Source of Annoying Noises Is in Tops

Roadster and phaeton tops that are put up in a hurry when the first drops of a summer rain begin to fall may prove to be a source of annoying rattling. If the attachment in front is to the windshield frame, it frequently happens that the nuts are not tightened all the way down. The bows also may not be firmly moored. In some of the more inexpensive cars, the bows are held in place by a cotter pin. Unless this pin is put in properly, it will mean an annoying squeak that sometimes is hard to locate. A washer usually will take up all play at this point.

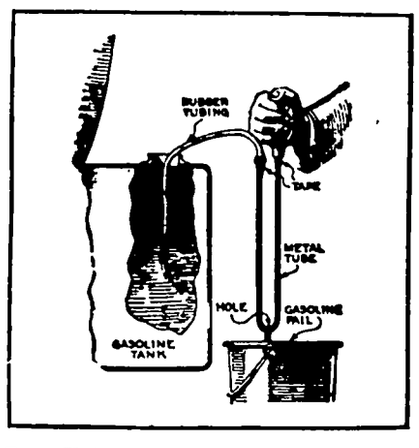
Car Advice of Others Often Is Very Faulty

It is bad business to be guided by other motorists' experiences. Cars are very different in their construction and detail, and the little things are the ones that make the big difference.

Recently a motorist had a new timing chain installed on his car and felt that he was through with chain troubles for some time to come. It developed that he got this idea from a friend whose car is equipped with an automatic take-up device which compensates for the stretching of the chain.

After driving a thousand miles with the new chain, he was surprised to find that the spark timing became retarded as a result of the chain wearing down a little, stretching and then jumping a tooth. Where automatic take-up is not provided an initial adjustment is necessary after the first 700 miles of the new chain's service.

Self-Starting Siphon Very Handy Accessory



Bent Tube and Bulb a Handy Siphon.

Instead of sucking rubber hose to start gasoline siphoning out of a tank, construct the neat siphon shown in the illustration. Bend a piece of brass or copper tubing into a U shape. To one end attach a rubber bulb like photographers use. To the other attach a piece of hose. Then drill a hole in the tube at the bend. Insert the rubber tube in the tank and squeeze the bulb. Press your finger tightly over the hole and release the bulb. Remove your finger and gasoline will flow from the hole in the pipe. The hole must be below the level of the gasoline in the tank.—Popular Science Monthly.

AUTOMOBILE HINTS

Unhappily the path of the just is not a one-way thoroughfare.

* * *

At the beginning of 1929, Italy had approximately 172,000 motor vehicles in operation.

* * *

As to America's sense of humor did you ever notice the spare tires some carry on their cars?

* * *

"The part of the automobile that causes more trouble than any other is the nut that holds the steering wheel."

* * *

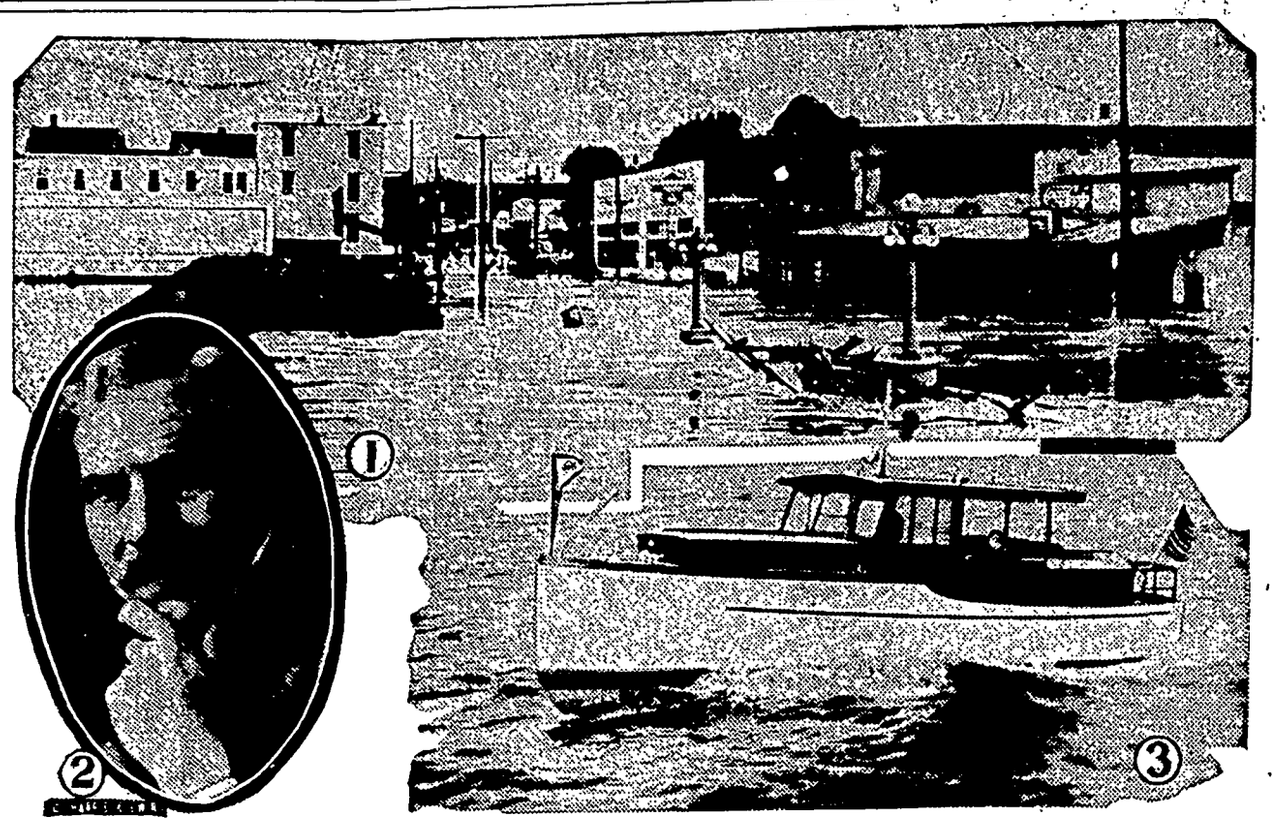
Women are now fairly good car drivers. They have, so to speak, started from the back seat and worked up.

* * *

We do not see why they call them ambulance-chasers in New York when some of them get to the hospital ahead of the ambulance.

COACHING WOULD-BE AUTOMOBILE DRIVER

The Berlin motor licensing bureau is demanding that all would-be drivers of automobiles or motor cycles under the ages of eighteen pass the most stringent tests before acquiring licenses. In the Berlin technical high school apparatus has been installed on which young aspirants are coached before they take tests. A young lady is shown above going through her lesson.



1—Scene in Houston, Texas, where vast damage was done by flood waters of the Buffalo bayou. 2—Ramsay MacDonald, Laborite, who became prime minister of Great Britain. 3—Express cruiser Mouette in which Colonel and Mrs. Lindbergh spent their honeymoon.

NEWS REVIEW OF CURRENT EVENTS

Progress of the Farm Relief Measure—MacDonald Now British Prime Minister.

By EDWARD W. PICKARD

NOW known as the agricultural marketing act, the farm relief bill came out of conference last week and was then accepted by both the house and senate. It was scheduled to be in the hands of President Hoover for signature about June 12. From the bill as modified the export debenture plan was omitted, all the conferees except Senators Norris of Nebraska and Smith of South Carolina voting for this course. On other features the measure represents a compromise between the senate and house bills, the essential points of the latter being retained. Provision is made for a farm board composed of the secretary of the treasury and eight members appointed by the President at salaries of $12,000. The President will designate the chairman of this board. Commodity advisory councils are to be set up to advise the board on methods of dealing with crop surpluses.

Commodity stabilization corporations, all the stock of which is owned by co-operatives, are authorized to buy, store, and market surplus commodities. The stabilization corporations will be able to obtain loans from a $500,000,000 revolving fund at the disposal of the farm board. Only such part of this fund as congress appropriates will be immediately available. The board may make loans for the handling of crop surpluses and also for the purchase of warehouses and other physical market facilities and may make advances to co-operatives for various purposes, including loans for insurance against price decline. The board may fix the terms of the loans, the interest rate being limited to an amount approximating the rate on outstanding government securities.

President Hoover let it be known that the administration would ask congress to appropriate, before recessing, as much as $100,000,000 from the half billion fund authorized, with a view to having it available for handling the wheat surplus. Department of agriculture experts said this immediate appropriation should be $200,000,000, for they believed more than half that sum would be needed for wheat alone, the price of which has fallen very low. This does not mean necessarily that the entire amount will be loaned to the wheat stabilization corporation to be set up by co-operatives with the approval of the farm board. Some of the supporters of the Hoover farm relief program believe that if a stabilization corporation buys as much as 25,000,000 or 50,000,000 bushels of wheat it will have a tremendous effect on the market, provided it is known that the corporation can borrow unlimited additional funds from the farm board.

SENATOR SMOOT, chairman of the senate finance committee, announced the make-up of the four groups of subcommittees which will consider various schedules of the tariff bill. They are to hold hearings simultaneously, beginning June 13. The free list and administrative provisions will be handled by the full committee.

Paris industrial newspapers urge the French parliament to find some means of erecting retaliatory tariff barriers against United States products. Indeed, throughout most of Europe there is deep resentment against the proposed American tariff measure. The presidents of the European chambers of commerce in a report stated that the policy of the United States is incomprehensible "if one considers its financial requirements," for this country is not only Europe's creditor but also is the holder of the greater part of the world's gold; and if American ports are closed to European merchandise the debtor countries are cut off from their only means of raising money to settle their debts.

PRESIDENT HOOVER in a message to congress asked that the senate and house appoint a select committee to study the matter of concentrating and reorganizing the bureaus charged with enforcement of the dry laws in co-operation with his special commission on law enforcement. At the same time the Treasury department announced the opening of a new drive to stop liquor smuggling in the Detroit area.

PASSAGE of the census and reapportionment bill was accomplished in the house, but only after the majority leaders had freed the measure from negro disfranchisement and alien exclusion amendments that threatened to bring about its defeat. The final vote was 272 to 105.

GERMAN reparations are now up to the governments of the allied nations and Germany, for the commission of experts has concluded its great task with the adoption of the Young plan, the main features of which were given in these columns a week ago. Seventeen weeks of nerve wracking discussion thus came to an end, and while it could not be said every one was satisfied, all at least were relieved.

"Well, are you glad it is over?" some one asked Dr. Hjalmar Schacht, the chief German delegate.

"Who would be glad over the prospect of paying $487,900,000 in the next thirty-seven years and then not be through?" he snapped back.

The Belgian representatives at a creditors' meeting in Paris announced that they would accept the German offer for settlement of the Belgian claims for compensation of the Belgian worthless German marks unloaded in Belgium during the war. This settlement is to be negotiated directly between Germany and Belgium and must be completed before the Young plan goes into effect next September 1.

In Berlin it is thought that a political conference will be called in July to sanction the report of the experts and to take up the question of evacuation of the Rhineland.

President Hoover and Secretary of State Stimson cabled their congratulations to Messrs. Young, Morgan, Perkins and Lamont, the Americans on the experts' commission who really brought about the settlement.

RAMSAY MACDONALD, chief of the Labor party, is now prime minister of Great Britain and his cabinet has been sworn in. Stanley Baldwin handed in his resignation Tuesday and the king immediately summoned MacDonald to form a new government. He submitted the names of the principal members of his cabinet and they were approved by his majesty, who sat up in bed and chatted and joked with the new prime minister for a hour, for they are very good friends.

It was reported in London that Lloyd George was willing to give the Laborites the support of his Liberal following on condition that an electoral reform bill be introduced and no really contentious legislation, such as widespread nationalization schemes, be proposed. The question of the mining industry may present difficulties in which the Laborites and the Liberals cannot agree. The biggest matter on which they are agreed is unemployment relief. The schemes of both parties include large appropriations for building of new houses, slum clearance, drainage of land and reclamation, construction of new roads, electrification and reorganization of the railways, and afforestation on a wide scale. In foreign affairs the Liberals and Laborites are in complete accord.

THREE months in jail are not enough for the punishment of Harry F. Sinclair, the oil magnate. The Supreme Court of the United States last week unanimously upheld the decision of the District of Columbia Supreme court which sentenced Sinclair to serve six months in jail for hiring detectives to shadow the jury in the first Fall-Sinclair criminal conspiracy trial almost two years ago.

Henry Mason Day, vice president of the Sinclair Exploration company and Sinclair's personal representative in the shadowing of the jury, must serve a jail sentence of four months. William J. Burns, head of the detective agency which supplied the detectives, was sentenced to serve 15 days at the same time Sinclair and Day were sentenced by Justice Frederick L. Siddons. The Supreme court reversed the Burns sentence, but permitted a fine of $1,000, imposed on his son, W. Sherman Burns, secretary of the detective agency, to stand.

CHARLES G. DAWES, our new ambassador to the Court of St. James, sailed for England after a final conference with President Hoover and Secretary Stimson. On June 26 General Dawes is to receive the degree of doctor of civil law from Oxford university.

COLONEL AND MRS. LINDBERGH finally were found, not by reporters but by a steamer captain who discovered the moneymooners aboard Lindy's express cruiser Mouette when he helped moor the craft at a pier at Block Island. The Mouette was purchased by the colonel just before his wedding, and he and his bride boarded it at a lonely spot on the Long Island shore. Tuesday the little craft put to sea again, apparently headed for the Maine coast, and again Lindy dodged the press and camera men by going around Cape Cod instead of through the canal. Newspaper reports said a piece of canvas was draped over the stern of the Mouette, hiding its name, and coast guards in Boston declared the colonel for this reason was incurring the danger of being fired on by their patrol boats.

WHILE the Shriners were gathering in Los Angeles for their annual meeting and joyfest, the Supreme court in Washington handed down an opinion that gives the negro organization known as the Ancient Egyptian Arabic Order of Nobles of the Mystic Shrine the right to continue the use of its name and insignia. White shriners in Texas had objected to the activities of the negro organization and to its insignia. They won in the lower courts. Justice Van Devanter in delivering the opinion, to which no dissent was announced, said the white shriners by their failure to object within a reasonable time had lost their right to act.

PORTERS and maids in the employ of the Pullman company have won their three years' struggle for higher pay, having been given a wage increase of $5 a month and various improvements in working conditions. The agreement was reached in a conference between officials of the company and 21 elected representatives of the 12,000 porters and maids. The Brotherhood of Sleeping Car Porters was ignored by the company.

Big building operations in Chicago were held up for several days by a strike of the bridge and structural iron workers, in which the architectural iron workers joined. The former demanded a wage scale of $13 a day, an increase of $1. This was soon agreed to by the Steel Erectors' association, but the Iron league held out longer.

THOUSANDS of Italians who lived on the slopes of Mt. Vesuvius were driven from their homes when that volcano indulged in another big eruption and poured rivers of lava down its sides. The property damage was immense but the loss of life was kept to a minimum by the precautionary steps of the authorities. Tourists were prohibited from approaching the danger zone.

THOUGH the Vatican and the Italian government last week exchanged ratifications of the Lateran pact, the relations between Pius XI and Premier Mussolini are not cordial. The duce addressed the parliament recently on the treaty, and the pope, in a letter to Cardinal Gasparri, characterizes the dictator's speeches as "heretical, modernistic, ponderously erudite but full of errors and inexact." The letter indicates that there may be a long period of disputes over details and expresses the church's resentment of the fact that the state's bills giving effect to the Lateran treaty are not conceived in the same spirit as that pact.

NOBLE BRANDON JUDAH has resigned as ambassador to Cuba; and Dr. Hubert Work has resigned as chairman of the Republican national committee. There were rumors that Work thought he had been ignored by the Hoover administration, but the correspondence between him and the President contained no hint of this.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

THE STITCH IN TIME

MANY people have a decided conception regarding the p of diphtheria antitoxin. They to think that a child suffering this dread malady can receive treatment and automatically be c that because of this scientific w the killing power of this disease been removed from the more a enemies of childhood. Unfortun this is not true for several reaso

Diphtheria antitoxin has saved lives of many young people and continue to do so, but its reco far from having reached the factory point of offering an abso defense to the germs causing trouble. This is not the fault of antitoxin. Given even half a c this preparation will develop a markable power against the infec and wage a successful battle. B half chance is what it often does get.

Parents will promptly admit th plant must grow; that a house be constructed; that many turns the wheel are necessary to reac destination, but they seem loath concede any such process where di theria is concerned. They are willing to recognize the possibility this disease until it is full grown. that is the time when antitoxin the least good.

Diphtheria is a definite develop and while its beginnings can be taken for less dangerous conditi that is no excuse for any person ing his eyes to the possibility of ous trouble. Any kind of a sore th accompanied by fever should be s client notice to put every parent guard. Which means immediately ing the child to a physician or b ing the doctor to it. The professi man alone can discover whether throat condition is of common diphtheritic variety. In most stances, fortunately, he will be to allay all fears. But in those c that he cannot do so, he can im diately put antitoxin to work. That the time when it gives a splendid count of itself.

It is not too much to say that most instances where antitoxin been given soon enough, it has the victory. It has amazing power this stage of the disense, but its p er wanes in proportion to the len of time elapsing before the case treatment.

Take no chances on the possibili of diphtheria. Give the doctor antitoxin a fair opportunity. Both them will give splendid accounts themselves.

P. S.—A gentle reminder: Don't fuse antitoxin with toxin-antitox The former is treatment, the la prevention. Have your child munized with toxin-antitoxin. If advice is followed it will be unnec sary to put antitoxin to the test.

* * *

THE SILVER LINING

ONE can be healthy and sick the same time. Thousands d onstrate this fact daily by harbori the mental leech commonly known worry. And while worry is life's d cloud, happiness is its silver lining.

Happiness is one of the most p tent drugs. It is also one of the m essential. The man or woman w does not cultivate it and the spir back of it, is desperately reducing chances for long life.

Mind over matter is a too well tablished fact to be discredited. existence is proved daily in ma ways. For example, it is a summer night. Suddenly out of the darkn a revolver is stuck in your face w the command, "Hands up!" What the seventy degrees temperature n Your hands are cold and you shi all over. Merely mind over matte

Since suggestion plays a part in activities, why not recognize the fa and govern ourselves accordingly?

But there are limitations to be sidered. It is one thing to look the bright side and quite another be fanatically optimistic. If one ill, merely to smile will not be enou To deny the existence of germs pain by calling them something is distorting the silver lining and eventually snuff out your life.

Happiness that attempts to el inate cold facts isn't happiness at One who is engaged habitually that kind of bliss (lovers, lunatics poets excepted) are plowing in wrong field and sowing therein wrong kind of seed.

It is the sensible type of the pr uct that now is being urged. Hap ness properly applied is one of greatest protections extant for ge al well being and health. Its po lies in its effectually blocking its tal enemy, worry.

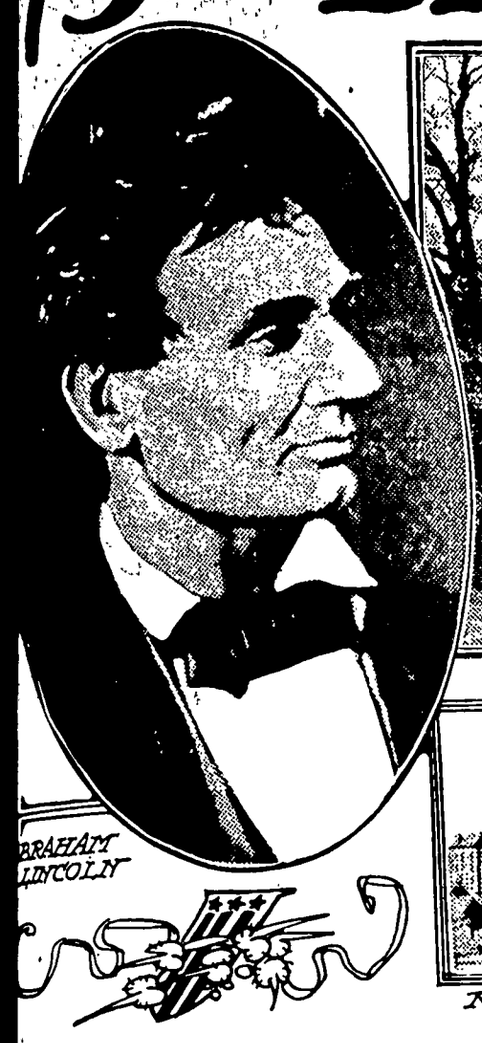
Therefore cultivate the sunny of life, and life, in turn, should sunny for you for a long, long time.

(©, 1929, Western Newspaper Union.)

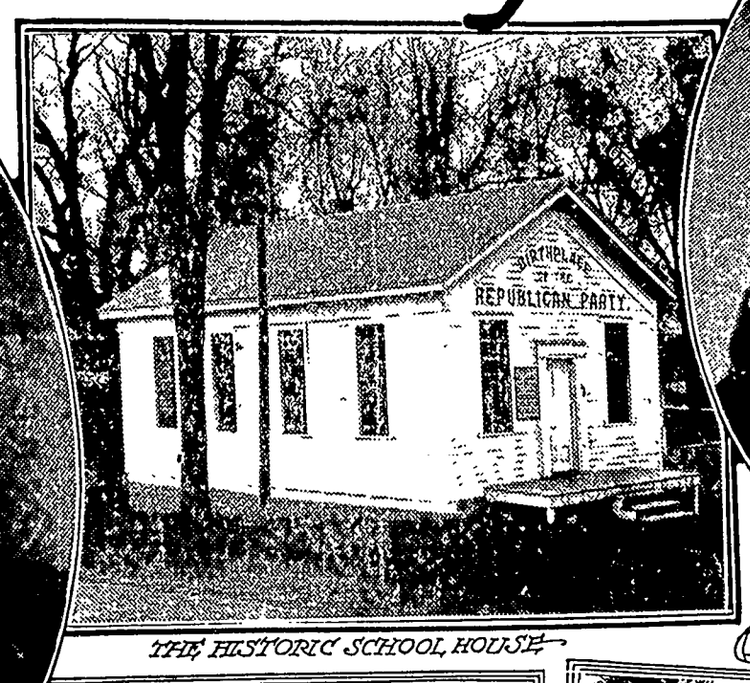
Earliest Use of Gold

The use of gold as ornaments suggested its subsequent use money and that finally made it standard upon which the coinage the world is based. Cubes of employed by the Chinese may been the earliest coins, but mo authorities accept the theory gold as coins was first used by Lydians.

G.O.P. Celebrates Its 75th Birthday

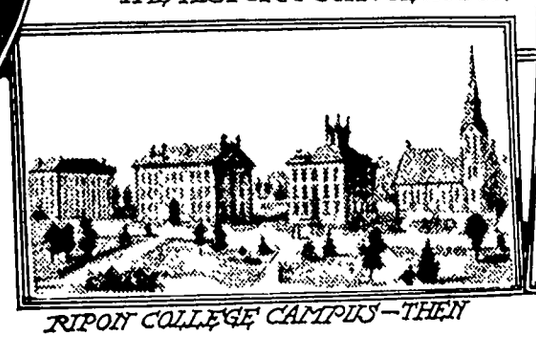


ABRAHAM LINCOLN

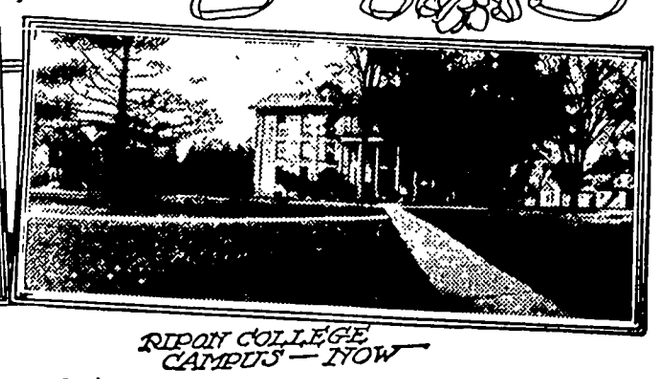


THE HISTORIC SCHOOL HOUSE

ALVAN EARLE BOVAY



RIPON COLLEGE CAMPUS—THEN



RIPON COLLEGE CAMPUS—NOW

By ELMO SCOTT WATSON

THE Republican party, familiarly known as the G. O. P. (because its adherents, pointing with pride to its achievements, among them the fact that in eighteen Presidential elections since it was founded it has been victorious thirteen times, call it the "Grand Old Party"), celebrated its seventy-fifth birthday this month. And thereby hangs "a tale of two cities" or rather tale of the rivalry of two cities for the honor eing known as the "birthplace of the Republ n party." The two cities are Ripon, Wis., and kson, Mich.

support of its claim residents of Ripon will e you to a little white schoolhouse and show the tablet beside the door on which you may d, "In this schoolhouse March 20, 1854, was t the first mass meeting in this country that nitely and positively cut loose from old parties advocated a new party under the name Republ n." In celebration of that event there was t on the campus of Ripon college, centering ut that historic schoolhouse, recently, a pag t depicting the growth of the Republican par nd a celebration of the diamond jubilee of the ty. The principal speakers at this event were nes W. Good, secretary of war in President ver's cabinet, and Walter J. Kohler, Republ n governor of Wisconsin.

Residents of Jackson, Mich., in support of their m to the honor, will take you to a group of oaks nding at Second and Franklin streets and tell that here the Republican party was born on y 6, 1854, when the name Republican was pted by a convention of state delegates. Wheth the Republican party was born on March 20, or y 6, 1854, and whether its birthplace was Ripon, s., or Jackson, Mich., is relatively unimportant, mpared to the event itself, the critical era in our tory during which it took place and the signifi nt aftermath of that event.

The Republican party was born at a time when e dispute over slavery was at its height. It grew t of the growing opposition to slavery as an in tution especially in the states which had been rmed from the old Northwest territory. In ac rdance with the famous ordinance of 1787 the rthwest territory was to have no slavery within boundaries after the year 1800. The ordinance ve to the owners of fugitive slaves the right to cover them even after the runaways had escaped yond the Ohio, but as a matter of fact the ndergrounds railroads" which aided escaping aves to their freedom were active throughout is territory. The northern part of the territory as once known as Michigan and included the esent states of Michigan, Wisconsin, Minnesota d a part of Dakota. Wisconsin became a state 1848 and from its beginning as a commonwealth as dominated by ardent foes of slavery.

Two years after Wisconsin became a state there me to the town of Ripon from New York a man ho was to give Ripon its claim to the title of irthplace of the Republican party." He was van Earle Bovay, born in Jefferson county, New ork, July 12, 1818, and a lawyer by profession. ovay soon became a leading citizen in the little amlet of Ripon and his best friend was Jedediah owen, the principal merchant of the place. There ere only about a hundred voters in Ripon at the me but they had a wide choice of parties for it as at a time in American history when the lines hich separated the traditional Whigs and Demorats were breaking down and new parties were onstantly being formed.

Bovay himself was a Whig and an eloquent and rdent one. He was not so partisan however but hat he recognized his party was likely to crumble any time from the discordant factors within it. he dispute over slavery was becoming more acute ll the time. The great leaders who had sought ome way of reconciling the differences between he North and the South over the slavery question ere in their graves and the threat of disunion nd possible civil war was already looming over he horizon. It seems that in 1852 Bovay sugested hat a strong antislavery party be formed to be alled the Republican party. He broached the subect while on a visit to New York city to Horace reeley, the famous editor of the New York Tribune. But nothing came of the suggestion at that ime.

Two years later matters reached a crisis when n January 23, the famous Kansas-Nebraska bill as introduced into congress. Kansas and Nebraska were to be admitted as territories with ower to do as they pleased about slavery, despite he fact that the Missouri Compromise of 1820 had orbidden slaves in any states or territories north of the line 36 degrees 30 minutes. In its final form the bill declared the Missouri Compromise, "inoperative and void" because it was "inconsistent with the principle of nonintervention by congress with slavery in the states and territories as recognized by the legislation of 1850."

When the Kansas-Nebraska bill was introduced, Bovay wrote to Greeley as follows: "Your paper is now a power in the land. Advocate calling together in every schoolhouse and church in the free states all the opponents of the Kansas-Nebraska bills, no matter what their party affiliations. Urge them to forget previous organizations and to be bound together under the name suggested to you at Lovejoy's hotel in 1852. I mean the name of Republican. It is the only one which will serve all purposes, past and future—the only one that will live and last."

During February of that year Bovay called again and again to foes of slavery to rally under the banner of a new party. Late in the month he gathered together in the Congregational church at Ripon a group of those who believed as he did. On March 20, a mass meeting was called in district schoolhouse 2, a small white frame building. Of the hundred or so voters in Ripon, Bovay was able to get fifty-three to his meeting. They were a varied lot so far as political affiliation was concerned—Whigs, Democrats and Free-Soilers. To them Bovay offered his resolution that a new party to be called Republican be organized at once, based on the opposition to slavery. As a result, his suggestion was adopted and the town committees appointed by the Free-Soil and Whig parties were dissolved. A committee on organization was appointed, consisting of three Whigs, one Free-Soiler and one Democrat. They were Bovay, his friend Jedediah Bowen, Amos Loper, A. Thomas, and J. Woodruff.

Considering the slow process which usually represents the evolution of a political party, the growth of the Republican party was swift. Under the leadership of Stephen A. Douglas, who was ambitious to be the Democratic Presidential nominee in 1856, the Kansas-Nebraska bill was passed in May, 1854. Immediately fierce opposition flamed up in the North and during the summer it continued to burn. It is at this point that the claim of Jackson, Mich., to being the Republican cradle comes to the front. On July 6, 1854, there was held in an oak grove on the outskirts of Jackson a state-wide representative mass meeting, acting as a state convention, assembled in response to a call signed by several thousand citizens of Michigan inviting the co-operation of all who were opposed to the extension of slavery.

The chairman of the committee of resolution, Jacob M. Howard, wrote and supported a platform of considerable length which was unanimously adopted. It denounced slavery as a "relic of barbarism, a great moral, social and political evil" and declared that it was the purpose of the fathers of the Republic to prevent the spread of slavery. It also asserted that it was now the duty of congress to carry out this purpose by restoring the restriction on slavery laid down in the Missouri Compromise. The delegates also resolved "that postponing and suspending all differences in regard to political economy or administrative policy, we will co-operate and be known as Republicans until after the contest be determined." They also earnestly recommended that there be called a "general convention of the free states and such of the slave-holding states as may desire to be represented, with a view to the adoption of other more extended and effectual measures in resistance to the encroachments of slavery." The name Republican was also used later in a Wisconsin convention as well as at state gatherings in the East, held in New York, Massachusetts, Vermont and Maine.

The new party gained strength during the next two years as it drew to its standard various elements from other parties. The Whigs had suffered a defeat in 1852 which had demoralized them and had practically shattered that party. Then, also, there had risen the American party or the All American party, commonly known as the Know Nothings because of the reply they made when asked about details of their organization and supposedly secret ritual. This strange body, founded on racial and religious prejudices, had succeeded in electing governors in several states and had sent nearly a hundred representatives to the house of representatives.

The Know Nothings were a conglomeration. Some of them favored the extension of slavery, while others opposed. There were also the Free Soilers committed to the abolition of slavery by political means. The Free Soil party had been connected with the Liberty party, which had much the same view, and also it had taken over a faction of the New York Democrats, called the Barnburners, because their extreme views were compared to the policy of a man who burned down his barn to get rid of the rats. The Free Soilers flung wide their motto, "Free Soil, Free Speech, Free Labor and Freemen."

To the growing new party of the Republicans came many kinds of political faiths who had the common bond of opposition to slavery—all "Anti-Nebraska or Kansas" men. Some had been Whigs, some Democrats, others had turned from such short-lived organizations as the Free Soilers and the Know Nothings. An informal convention, which might better be called an organizing committee, was held in Pittsburgh early in 1856, at which the name Republican as the title of a national party was firmly fixed. Among those present at this convention were Horace Greeley and Abraham Lincoln.

The campaign of 1856, the first one in which the Republican party officially participated and, incidentally, suffered its first defeat, is described in the volume "Builders of the Republic" in the Yale University Press "Pageant of America" as follows:

Meeting in convention in Philadelphia, in February, 1856, the Know Nothings or the American party found sectionalism intruding even into their organization. Indeed, after angry debate, most of the antislavery delegates withdrew, leaving the southern wing in control. With a platform that attempted to divert attention from the slavery question by crying up the foreign peril, the party went into the campaign with Fillmore and Donalson as its candidates.

The Democrats tried hard to present an appearance of harmony. Since the doctrine of popular sovereignty was to be their major plank, it was expected that either the "Little Giant," or Pierce would be the nominee. But the North so opposed the proceedings in Kansas that the leaders were passed over by a man less closely connected with recent domestic events. As minister to England, James Buchanan had been abroad during the most trying times. His availability was enhanced because his name was linked with that aggressive foreign policy which had been employed to distract the country from internal troubles. Acceptable to the South, he could be supported also by the conservative elements of the North.

The Whig party, practically defunct; contented itself with indorsing the candidates of the American party. There was thus need for a party which would stand four-square against the Democrats and the extension of slavery. This need was filled by the Republican party which had grown with surprising rapidity since 1854. To it had thronged a miscellany of malcontents, a fact of which its rivals made the most. In spite of its heterogeneity, the party showed remarkable solidarity. Assembling in Philadelphia on the anniversary of Bunker Hill, the delegates, passing over the more prominent leaders—such as Chase of Ohio, and Seward of New York—selected John C. Fremont of California, a young man little known in politics, but with a well-advertised record as an explorer of the Far West. The platform vigorously denounced the proslavery and jingoistic activity of recent years.

The Republicans launched a campaign that in vigor and spectacle resembled that of 1840. With "Bleeding Kansas" as their cry, they appealed, through the agency of newspaper editors, such as Horace Greeley, of the New York Tribune, James Gordon Bennett, of the New York Herald, Henry J. Raymond, of the New York Times, and Gen. J. Watson Webb, of the Courier and Enquirer of New York, to the Northerners' dread lest the "Buchaneers" expand their domain of slavery. The opposition played upon the widespread dislike for the Abolitionists as a means of discrediting the Republicans. The eccentric personalities of the reformers, their extravagant acts and still more extravagant words were a heavy burden for the new party to carry.

As the campaign developed it appeared that the Republicans were too sectional in their appeal and not sufficiently organized to carry the country. Buchanan gained many adherents who had become alarmed by the apparent radicalism of the Fremont followers. Fillmore took occasion to announce that Fremont's election would endanger the Union. In the South, it need hardly be said "black Republicanism" was identified by many with all the "isms" in the dictionary.

The contest was rather close. Buchanan received 174 electoral votes to 114 for Fremont, while Fillmore received 8 from Maryland. The Democrats had had a close call; and the size of the Republican vote gave the old line leaders cause to worry for the future.

These leaders had even more cause to worry four years later. For in 1860 the Republican candidate was Abraham Lincoln and the new party was swept into power—a power which it was destined to hold uninterruptedly for a quarter of a century until Grover Cleveland, a Democrat, was elected in 1885. Cleveland was again elected in 1893, but at the end of his term of office in 1897 marked the beginning of another period of Republican domination until interrupted by Woodrow Wilson's election in 1912. And the seventy-fifth anniversary of the Republican party's birth finds it still in power.

POULTRY FACTS

EGG PRODUCTION DURING SUMMER

Poultry Men Agree That It Depends on Best Care.

Facing poultry men during the summer is the problem of preventing a rapid drop in egg production with the coming of warm weather, when eggs bring good prices. Standard egg production in New Jersey for June is 18 eggs per bird, for July it is 16 eggs, and for August, 13 eggs. Whether or not a flock makes standard production during these three months depends entirely on the care it is given by the poultry man, announces the poultry department of the New Jersey agricultural experiment station.

According to the station, successful poultry men agree that good summer egg production depends on attention to little details of management and not on one outstanding factor. Culling the flock, for example, is not the most important factor in obtaining standard production, but just one of the many factors. In fact, culling should be last in the effort to hold production.

The laying house should receive attention first, as a means of holding egg production. All windows should be opened to provide good ventilation and to keep the house cool.

Lice and mites are often the cause of the flock falling off in production. Careful inspection of the birds and coop should be made once a month for these parasites. It is considered a good practice to treat the flock for body lice by using sodium floride or any lice powder. Generally, one treatment is sufficient for the entire summer. The roost, drop-boards, and nests should be painted with any coal tar product as a means of controlling the mites. When such cannot be obtained, a mixture of kerosene oil and old crank case oil from the tractor or automobile can be used to advantage.

Heavy consumption of mash, so important to heavy production, is obtained in the summer by feeding only 8 or 10 pounds of grain to each 100 birds; keeping mash always before the birds; and keeping the layers confined to the house where they will always be near the mash hoppers.

Other factors found to be important in feeding are: a daily supply of fresh green feed such as dandelions, lawn clippings, and weeds from the garden; and a constant supply of fresh, clean, cool water.

When production falls below 50 per cent, it is time to start culling, if the foregoing factors mentioned have been carefully followed.

Provide Natural Shade for All Young Poultry

An ideal range will provide natural shade where the young birds may find protection from the hot summer sun. Many poultry flocks do not have this natural protection, say poultry specialists of the Pennsylvania State college, so some means of protection must be provided. Moving the colony houses near a cornfield makes ideal range conditions. Sunflowers planted around the colony house also will provide satisfactory shade. If the colony houses cannot be moved near a cornfield and sunflowers are not used, some form of artificial shade should be provided. Old feed bags placed on a frame about two or three feet above the ground will give the needed protection.

Always Make Fowls as Profitable as Possible

There is a great temptation for the poultryman who is ambitious to equal the records made by others. Naturally any one wants to make his hens as profitable as possible, and as the rule generally applied is to keep a hen only to the end of her first laying year and then replace her with pullets, the effect of high egg production on the laying hens apparently is negligible as she is sent to pot before any evil effects of force feeding can interfere with her laying.

Mistake With Geese

A common mistake made in raising geese is to try to feed them upon grains without sufficient grazing. If the geese have good green feed they will need but little additional. Grit and oyster shell should always be accessible. During the summer a satisfactory method consists in providing one feed a day of equal parts of corn meal, bran and ground oats. During the winter the same grains are satisfactory, but steamed clover or alfalfa hay should be added.

Grain for Geese

Geese should not be fed hard grains, but ground feeds mixed in what are known as mashes and fed in a moist state. A good ration for geese would be three parts of yellow corn meal, four parts of wheat bran, one part of red dog flour or flour middlings. To this add 5 per cent of meat scraps and during the laying or breeding season 15 per cent. At all times 1 per cent of fine sifted sand and one-half per cent of fine table salt. Any kind of green feed will help.

A Cruel Thing

Paul Poiret, the Paris dressmaker, said one day to a reporter in New York.

"Cruel things happen sometimes in dressmakers' shops. In my shop a mannequin was once displaying dinner gowns to a middle-aged couple. The mannequin was about nineteen, tall and supple, with gorgeous eyes. She put on dinner gown after dinner gown, and she certainly was beautiful in them.

"As she posed in her eighth or ninth gown, a rather daring creation, the middle-aged wife nudged her husband and hissed:

"'George, you never look at me like that.'

"'Well,' mumbled George, 'you never look like that.'"

His Pleasant Dream

Sam—"I dreamt last night that your mother was ill." Louise—"You brute! I heard you laugh in your sleep."

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

Mrs. Henry Ludeke and son Paul have recovered from having mumps.

Mrs. Cliff Schwartz of Ventura was a Klemme visitor Monday.

Henry Smid is entertaining the mumps this week.

Mr. and Mrs. Fred Becker spent Sunday evening at the Herman Priebe home.

The Royal Neighbors served hot hamburger and hot beef sandwiches Wednesday nigth.

Mrs. Nels Back was called to Blairsburg by the serious illness of her father.

Mrs. Owen Neuhring has gone to Cedar Rapids to visit her mother who is seriously ill.

Miss Agatha Steiman is working at the Emil Pringnitz home this summer.

Ben Lau came Tuesday from Minneapolis for a visit with Klemme relatives and friends.

Ben Katter, of Alberta, Minnesota was visiting at the R. W. Elder home Tuesday.

Paul Grange and family drove to Ruthven Sunday to take Mr. S. S. Grange home after a visi there.

Mesdames Pete Moulton, Harold Leitzinger and John Etchen were Garner visitors Tuesday afternoon.

W. F. Pavey and Mr. and Mrs. Ben Coobs took in the Odd Fellows doings at Garner Tuesday evening.

Mr. and Mrs. Herman Priebe left Tuesday morning for Freeport, Illinois and points in Wisconsin.

Mr. and Mrs. C. F. Keraus were at Clear Lake Monday and Tuesday on business.

Klemme girl, Florence Smith, was recently married to a Mr. Bramer and now resides at Milwaukee.

Miss Adella Kuhlman entertained the Misses Stella Bock and Edith Haupt for dinner Sunday.

Mrs. Rosendahl has had her home repainted this past week. It is a nice improvement.

Mrs. W. F. Missman and Byrnes, and Mrs. John Day and Dorance were Mason City visitors Friday.

Mesdames W. F. Lau and L. O. Deal were at Forest City Friday on business.

Mrs. Martin Brinkman and children and Mrs. Anna Baack were Mason City visitors Thursday.

Mr. and Mrs. Einar Salling drove to Des Moines Saturday, returning Sunday evening.

Mr. and Mrs. C. A. Larsen are having their house remodeled by having their front porch enclosed. Marlin Croner is doing the work.

Mr. and Mrs. Herman Beek left for their home at Davenport after visiting with Klemme relatives and friends for about two weeks.

Mrs. Calvin Grosshuesch, Mrs. E. Schlei and the Misses Edith Haupt and Adella Kuhlman were Mason City visitors last Thursday.

P. M. Wilson drove to Ames last Sunday to bring his daughter, Miss Gladys home. She has completed a year of work at Drake University.

Mrs. M. O. Barr and LaVonne, and Mrs. R. C. Ludeke and children were at Clear Lake Monday afternoon.

Mrs. Frank Kluckhohn is enjoying a visit from her mother, Mrs. Kindon, who came from Thompson.

Mr. and Mrs. Elmer Schlei entertained the Misses Adella Kuhlman and Edith Haupt for dinner Tuesday.

Miss Adella Kuhlman left Wednesday morning for her home at Meno, S. D., to spend the summer with her parents.

It is reported to us that Claire Pollock of Garner died suddenly Tuesday. Mr. Pollock was secretary of the Garner creamery.

Mrs. Frank Kluckhohn and Mrs. Martin Jensen spent Thursday with Mrs. Chris Anlerson at the hospital at Hampton.

Mrs. Mary Waterman, of Charles City came last week to remain in Klemme for the summer months, visiting with her son, Arthur and family.

Mrs. Asa Gibbs and daughter, Anna have one of the most attractive yards in Klemme. At this time the yard is richly decorated with many beautiful flower beds.

Miss Knight, of Mason City came Saturday to visit for several days at the J. N. Day home. Miss Knight is the nurse who took care of Mrs. Day during her illness this spring.

Dr. Carlson was over from Mason City Tuesday morning and conducted a tonsil clinic at Dr. Missman's office. Quite a number had their tonsils taken out.

Mr. and Mrs. Arthur Kudje and daughters drove to Britt Saturday ovening to take over a birthday cake for Art's father which Mrs. Kudje made.

Levi Klotzbach and family and Bill Anderson and family returned the first of the week from Clayton County where they visited with relatives since Memorial day.

The Klemme Legion and Auxiliary are planning to have a picnic dinner next Sunday at Eagle Lake State Park, if the weather is favorable. As this is "Fathers Day" the picnic will honor the fathers.

Fred, Mable, Helen, Mildred, Novella and Ruth Beier came Sunday from Beltrami, Minn., for a visit with Klemme relatives and friends. Beltrami is 500 miles from Klemme.

The Auxiliary ladies entertained the home talent play cast at a 6:30 o'clock dinner Friday evening at the Legion Hall. The affair was also made a farewell party for Miss Adella Kuhlman who left Klemme yesterday. All report a fine time.

The following had their tonsils removed Tuesday morning at Dr. Missman's office: C. A. Larsen, Miss Pearl Johnson, three of John Christian's children and Ruth, daughter of Ben Ridder. All are making a good recovery.

Don't forget to come to Klemme next Wednesday night to hear the Duncan band play a concert in Klemme. The band invites any Klemme and vicinity players to sit in with them for any of their concerts. Due to the rain last night the band did not come to give a concert.

Mr. and Mrs. S. T. Barr, of Manhattan, Illinois, arrived in Klemme last night for a visit with Klemme and Garner relatives and friends. Mrs. Barr is a sister of Mrs. Wm. Smith. Their coming was a pleasant surprise for Mrs. Smith.

Sunday evening Mr. and Mrs. J. N. Day and son Dorance, and their guest, Miss Knight, and Mr. and Mrs. Wm. Smith and Mabel all pac ed lunch baskets and drove to T rell Park at Belmond and enjoye a picnic supper.

Erick Josten drove to Harris, Ia Saturday for a visit until Monda evening with Earl Josten. He re ports that Earl is a busy man th summer as he directs the bands Harris and Armstrong and also i structs at Estherville.

$10,000.00 IN GOLD

to those who explain the

Modern Miracle

A HOME washer with a washing speed for every type of fabric! And as if that weren't revolutionary enough—washing speeds are changed *without the use of a clutch or shift of a gear!*

A genuinely new scientific principle as startling as the automobile differential. Every woman has known for years the need for a washer with a chiffon speed for chiffons . . . a linen speed for linens . . . and faster water action for heavily soiled pieces.

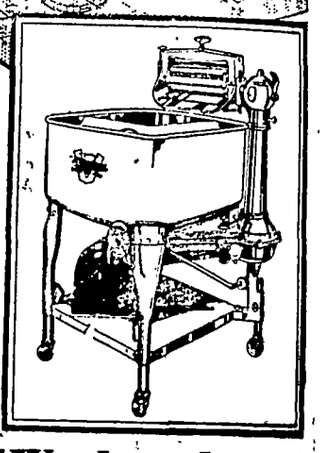
Now it is a fact! With no gears to shift . . . no pedals to press . . . no clutches to throw.

$10,000.00 in Gold will be paid for the best letters expressing opinions on the why and wherefore of this modern washer. The contest is open to everybody.

The main thing is to try! Contest closes October 31, 1929.

Come in and get complete contest information *free*. We'll be glad to answer all your questions about new, revolutionary SELECT-A-SPEED.

Absolutely no obligation to buy or sell anything. Open to everybody. Don't delay. Give yourself plenty of time to write the winning answer.



All Week on the Air!

Meadows broadcasts happy programs every night on nationally prominent stations. Tune in! Hear Ray Miller's College Inn Orchestra and other famous artists.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

There will be regular preaching service next Sunday morning at the regular time, both in Klemme and at Liberty, and again in the evening at 8:00 o'clock at Klemme.

A number of our Epworth League members will attend the District League Convention at Algona this week Friday afternoon and Saturday morning. Two members of our local League will appear on the program Friday Harvey Nelson will lead in devotions and Oral Gibson will take part in the District Bible Story Contest.

There was a good attendance at Church last Sunday evening for the program given by the members of the Daily Vacation Bible School. Oral Gibson also delivered his oration in a very creditable manner at that time.

FARM WOMEN TO ENJOY REST CAMP

FARM BUREAU CAMP STARTS AT CLEAR LAKE THIS WEEK

The County Agent and Home Demonstration Agent at the Farm Bureau Office are anxiously opening their mail and answering telephone calls each day as they hear from leaders and girls, also ladies who are coming to the camp at Clear Lake. The ladies camp will be from June 20 to 23, the girls from June 23 to June 27.

The committee tell us that the camp will be the best that they have ever had There is going to be very good talent there and a well rounded program has been arranged for. Miss Johnston, Mrs Wallis, Miss Nora Eliason and Mrs. Ryron, saw Miss Helen Preston at the Extension Department, Ames, Iowa when down to the convention and sh eis making big plans for the work which she will give at the camp. She asked, "Can I bring my bathin gsuit too?" So Miss Preston believes in the fact that all work and no play makes Jack a dull boy. Miss Eleanor Bauer of Wallace's Farmer, gave a talk at the 4-H Convention at Ames. We know that they have the best of talent for the convention and it will be a real pleasure to have Miss Bauer with us at Camp.

Some of the other people who were at the convention and will be with us at the camp are, Esther Sietman, Nord Davis, and I. T. Bode. If you have not sent in your $1 and your name in to the rest camp, that you may enjoy all of these pleasures and bring home much information to your family or your club.

—Myrtle B. Johnston,
Home Demonstration Agent.

R. A. Jorgenon and C. G. Waterman took in the opening camp fire program at Camp Roosevelt Tuesday night. Camp Roosevelt opened that day for the summer camping season. Forty eight Boy Scouts were enrolled for the opening period, which is considered a good number. Most of the periods are full with seventy-two scouts each period.

BOY SCOUTS WILL GO TO C.R. JULY 16

BOY SCOUTS ENJOY OUTING AT GOODELL WOODS

Followed Five Mile Trail To Locate Buried Treasure

Scouts of Troop 56, Klemme, enjoyed a five mile hike Monday following a Scout trail which led them to the timber at the Iowa river northeast of Goodell.

The Scouts left Klemme about 1:30 p. m., each Patrol following a trail. The trails joined near the Albert Johnson farm and the single trail continued to the woods where the trail divided and each Patrol required to follow a separate trail. A point was reached where the trail for each ended. Digging into the ground the Scouts found a bottle containing a slip of paper. On the paper wsa a code, requiring that the message be signaled to the other Patrol, a distance of a quarter of a mile or more. They likewise had a message to signal and by the use of flags the mesage was relayed by wig-wag and the next trail mark for each Patrol disclosed. They could then proceed in real earnest to find the buried treasure, and after following trails winding about in the woods, each Patrol eventually discovered the "treasure" buried under tree stumps and when opened contained peanuts and candy.

Further progress was made in the identification of trees; camp was prepared and wood gathered for the cooking fires. Each Patrol cooked a big kettle of hunter's stew and a royal feast was later enjoyed.

Monday's hike was in charge of Troop Committeeman Rev. Grosshuesch. The troop was joined by R. A. Jorgenson and C. G. Waterman who came out to enjoy the fine supper made by the Scouts. Kenneth Kluckhohn was quite successful in baking biscuits in the open. He also made hunter's stew, as did Byrnes Missman and Harold Jot. The Scouts are becoming real experts in outdoor cooking.

Troop 56 will have a hike or an over-night camp every two weeks during the summer. These hikes are not altogether for pleasure alone but woodcraft, nature study, outdoor cooking, trailing, signaling and camping are all made a real study.

Camp Roosevelt Opened Again

The first period began at Camp Roosevelt, on the south shore of Clear Lake Tuesday with 48 boys enrolled. The camp can take care of seventy-two scouts a week and nearly all of the other periods are already filled for the camping season.

Troop 56, Klemme, have chosen the Fifth Period and will go to the Camp Tuesday, July 16th for an outing of one week.

The Camp is open every evening and Sundays to parents and visitors We would urge that parents of our community attend the evening programs at Camp Roosevelt and also visit the Camp Sunday afternoons. It will give you some idea of what the Scout Movement is doing for boys. Parents are always welcome at Camp Roosevelt during visiting hours. If you are a boy who wants to know more about Scouting, ask the Scoutmaster or any Scouts for particulars.

BABY BEEF TOUR WILL BE ON FRIDAY, JUNE 28

Arrangements have been made for the Baby Beef Club Tour, to be held on Friday, June 28th. Rex Beresford o the Extension Service will be here to instruct the club members in regard to the feeding and managing of their calves.

Some judging work will also be given. Stops will be made at each club member's home. The tour will start at the W. L. Lawhorn home, north of Garner at 9:30 a. m., and will end at the J. M. Townsend farm west of Britt. Definite time will be sent to each member.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. Sunday Rev. Schroer, missionary from Japan will be with us and talk about his work in the mission field. This will be an English address.

Collection for Foreign Missions.

11:00 a. m. Sunday school.

8:00 p. m. Tuesday, Bible Class.

The Bible School will continue two more weeks. Attendance has been satisfactory and we hope that parents will continue to send children regularly.

WILL CELEBRATE FOURTH AT BAYSIDE PARK

A big July 4th celebration will be staged at Bayside Amusement Park, Clear Lake, Iowa, manager Charles Ritz announced this week. More attractions than ever before will be offered Bayside visitors on July 4th and a mammoth fireworks spectacle will be presented at night on the water. Mr. Ritz bought the celebration fireworks early in order to get the very best display. Bayside's July 4th entertainment will include all kinds of races, a big ball game, band concerts afternoon and evening and all the fun concessions.

Next Suday, June 23rd, the Musical Brooks will be the feature attraction on the out-door stage. They will entertain old and young with chimes, a one-man band, a comedy fiddle offering and other musical novelties. Cedar Falls will play the Bayside Cubs on the Bayside diamond at three o'clock. Manager Ritz believes it will be a real battle Popular band concerts will be played next Sunday afternoon and evening by the popular Bayside Cubs band.

WATCH FOUND AFTER 22 YEARS IN GROUND

WATCH IN GROUND TWENTY-TWO YEARS STILL RUNS

Peter Merkel Plows Up Watch Lost By Ben Miller 22 Years Ago

When Peter Merkel, who lives east of Klemme, was plowing a few weeks ago he saw something shiny sticking out of the ground. He investigated and found it to be a gold cased open face Elgin watch, apparently in quite good condition.

Going into details Pete had previously learned from Wm. Schlawin that twenty-two years or more ago a farmer by the name of Ben Miller lived on the farm and had lost his gold watch. A search at that time and later years failed to bring the watch to view. Years passed by and the lost watch was forgotten, until Mr. Merkel plowed it up.

Mr. Merkel took the watch to a jeweler at Garner who examined the timepiece and found that about all it needed was a new stem and the total cost of repairs amounted to $2.50. The watch is a 15 jewel Elgin and since having the new stem installed keeps accurate time and is none the worse for its years of repose under the surface of the ground. Scratches on the case would indicate that it had been struck by plows or other tools, but the glass was not even chipped. The field where it was found had been under cultivation continuously and perhaps the watch had been jostled about many times.

Mr. Merkel says that if anyone knows of the whereabouts of Ben Miller that he may have his watch back again by just writing to Pete Merkel, Klemme, Iowa.

SPECIAL

This summer—Violin, Piano, and Guitar Lessons. Two lessons a week, one free, Tuesday and Friday, Wednesday and Saturday. 75c a week. Mildred Johnson, Klemme. tfc

SIXTY-FIVE ATTEND PICNIC AT E.L. PARK

LEGION AND AUXILIARY ENJOY PICNIC AT STATE PARK

Held A Joint Picnic Last Sunday At Eagle Lake Park

The American Legion and Auxiliary of Klemme held a joint picnic Sunday at the Eagle Lake State park which was attended by sixty-five people from Klemme and vicinity.

A picnic dinner was enjoyed at 12:30 and the afternoon was spent in playing kitten ball and in exploring the beautiful little park.

Those present were: Mr. and Mrs. Albert Caorlus and family; Mr. and Mrs. John Panhoff and family; Mr. and Mrs. George Alden and family; Mr. and Mrs. Ben Merkle and family; Rev. and Mrs. H. E Whyte; Mr and Mrs. Wallace Pavey and family; Mr. and Mrs. P. W. Johnsom and falily; Mr. and Mrs. Paul Grange and Dorance; Mr. and Mrs. Lew Lewis; Mr. and Mrs. Ed Jacobs and Elwyn; Mr. and Mrs. Ben Coobs and Melvin; Mrs. E. J. Arnold and children; Mrs. Martha Bredbenner and Novella; Miss Dorothy Carolus; Mr. and Mrs. David Schwichtenberg and family; Mr. and Mrs. John Lemke; Miss Berdice Schwihctenberg; Wm. and Lydia Bock; Miss Marie Blank; Mr. and Mrs. J. C. Thomas and son; Miss Irene Harms; Mrs. W. F. Lau and daughters, Elise and Jean; and Miss Leona Lau.

Everyone present had a fine time and were sorry that the bad weather in the morning kept more from attending.

MRS. MARLIN CRONER PASSED AWAY WEDNESDAY NIGHT

Funeral Services Will Be Held At Reformed Church Saturday P. M.

This community was shocked this morning when it was learned that Mrs. Marlin Croner had passed away at eleven o'clock last night, (Wednesday) June 19th.

Mrs. Cromer had been ill since about Christmas time and had been confined to her bed most of the time since. She had contracted flu last year and since that time had not been well.

Besides her husband she leaves her little daughter, Dorothy, her aged mother, Grandmother Schroeder and one brother, Henry, of Chicago, besides many other relatives and friends.

Mrs. Croner was a very pleasant woman, always cheerful and never complained. She was loved by all who knew her, she was always happy and ever ready to extend help to those in need. She has a host of friends who will miss her.

Funeral services for Mrs. Croner will be held Saturday afternoon. At the home at 1:30 and at the Reformed Church at 2:00 o'clock. Her pastor, Rev. Grosshuesch will officiate.

The Times will publish the obituary next week.

The community extends their sincere sympathy to the bereaved ones in their time of sorrow.

Miss Gracka Quandt played in Miss Gertrude Ely's piano recital at Belmond Tuesday evening. Gracka plays very well and displays some fine talent at the piano. On Friday evening Marian Waterman and Buster Jongenson will go to Belmond and play in Miss Ely's recital of younger piano students. The recitals at Belmond are held at the Congregational church. On next Tuesday evening Miss Ely's students in Klemme will appear in a recital at the Methodist Church.

The students of the vacation Bible school of the Methodist church gave a very interesting program Sunday evening. They acted out a number of parts of Bible stories which they had studied.

FARM BUREAU PICNIC WELL ATTENDED AT EAGLE LAKE

Cold Weather Kept Many Away From Annual Gathering

The annual picnic of the Hancock County Farm Bureau, held at Eagle Lake State Park, Wednesday, June 12th, was attended by approximately twenty five hundred people The cold, rainy weather prevented many from attending.

The Eighth Grade Graduation Exercises were held in the High School building at Britt.

The main speaker on the program was Joe Jones of Ainsville, Vice-President of the Iowa Farm Bureau Federation. Mr. Jones brought out and discussed many of the activities of the Iowa Farm Bureau Federation.

The Horse Pulling Contest was of interest to a great many people. The team belonging to Mr. Whitley demonstrated some real pullin ability.

The Madison township Kitten Ball team was successful in winning the ball contest. The Red Top Post Driving Contest was of interest. C. V. Tanner of Goodell won the contest and received twenty posts and O. E. Ford of Garner got second and received fifteen posts, and Frank Spangler of Britt got third with ten posts.

WHITE LILY CAFE NOW LOCATED IN NEW QUARTERS

Is Now Located In Building West Of State Bank Building

The White Lily Cafe, of which Mrs. Josephine Stooldryer is the proprietor, is now located in new quarters across the street from the old location, in the Baack building, which has been remodeled and fitted up for a restaurant.

The White Lily now presents a fine, neat appearance, with fixtures and tables nicely arranged. All of the rooms have been redecorated and remodeled; partitions moved about and various changes made.

The quick lunch counter forms a hollow square; the tables and the booths are at one side and to the rear of the lunch room, but all in one continuous room. The arrangement is quite modern and presents a neat, attractive appearance.

The Cafe can also accomodate those who want hotel accomodations for the night as four airy bedrooms are available to the transient.

Mrs. Stooldryer, who has been in Klemme since last fall, is to be congratulated on the fine improvement she has made.

PENROD WILL ATTEND SUMMER SCHOOL IN MINNESOTA

The Times is in receipt of a card from Supt. M. F. Penrod. He states that he will attend the summer school at St. Paul where he will take a short course in Agriculture.

Mr. Penrod had been up to see his farm northwest of the Twin Cities. He says the clover needs rain in that vicinity. He asked to have the Times sent to his new address at 1449 N. Cleveland St., St. Paul.

BLACKSTONE AND SENNEFF NEW LAW FIRM AT GARNER

F. E. Blackstone, Garner, and Frank Senneff, Britt, have formed a law firm at Garner under the firm name of Senneff & Blackstone.

Mr. Blackstone had been in partnership with the late Will Ramsay for over thirty years, and during that time they had built up a large legal practice. Mr. Senneff is one of the best lawyers in the county. The new firm should make a strong union.

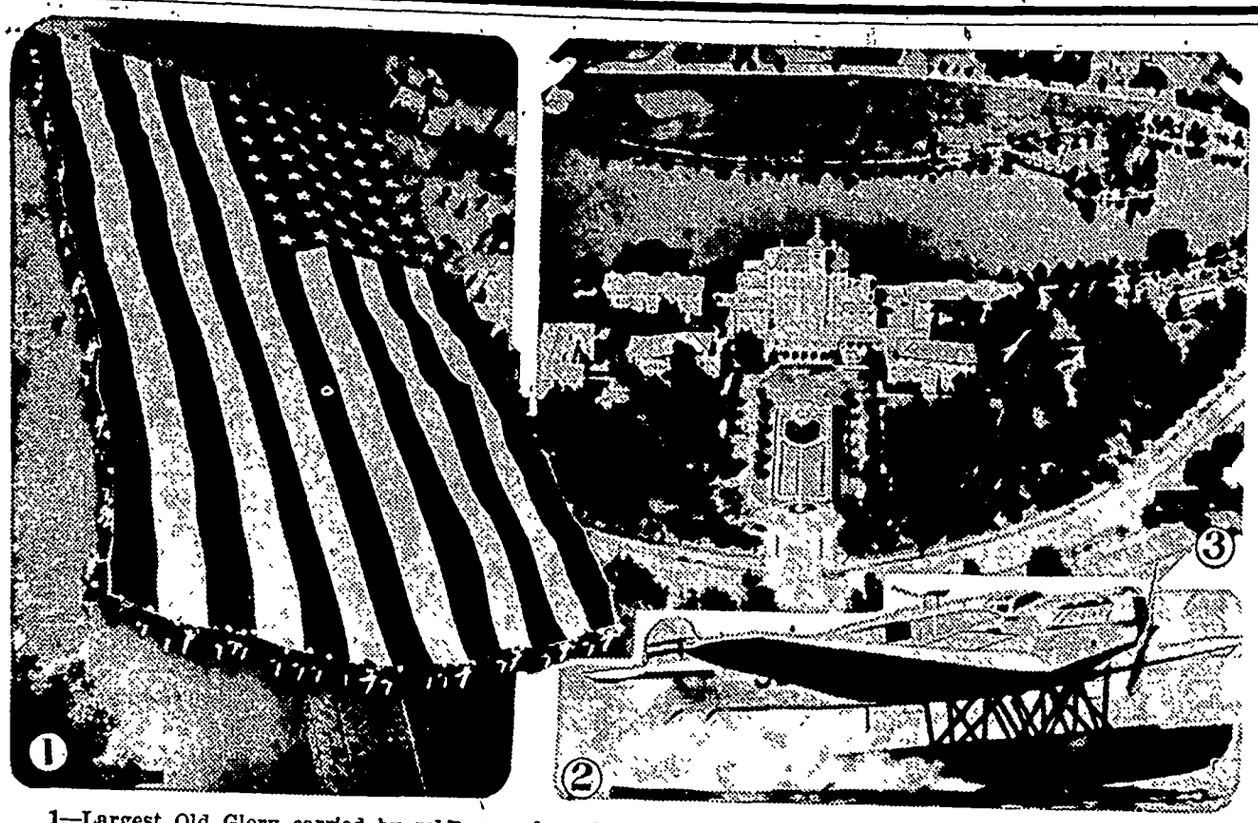
THREE GIRLS JOIN CAMP FIRE GIRLS OF KLEMME

The Ta-Ta-Pochon Camp Fire held a Ceremonial Meeting in the Park. Monday evening.

Miss Irene Harms, Miss June Ludeke and Miss Elise Lau became Camp Fire members.

July 7 the Camp is going to Clear Lake to spend their vacation.

Next Saturday there will be a Bake Sale at 11:00 o'clock a. m. at the Wellemeyer Store.



1—Largest Old Glory carried by soldiers and marines to capitol in Washington for annual flag service. 2—Seaplane on which three Swedish aviators started flight from Stockholm to New York, being forced to land in Iceland. 3—Air view of the Broadmoor hotel, Colorado Springs, where President Hoover's oil conservation congress convened.

CAN'T JUMP OUT OF CAR TO CHASE CATS

How the owner of the Irish Setter, Pat, manages to keep the pup from risking his life jumping from the moving car to chase cats. The little covered wagon keeps the dog safe. He's a Los Angeles dog.

NEWS REVIEW OF CURRENT EVENTS

Ramsay MacDonald Coming to Washington for World Peace Conference.

By EDWARD W. PICKARD

RAMSAY MACDONALD, new prime minister of Great Britain, is planning to come to the United States to confer with President Hoover, in regard to naval armament reduction and enforcing the Kellogg pact outlawing war by joint action of the English speaking peoples. In Washington the news of this plan was well received, and it was learned at the White House that Mr. Hoover would be glad to meet Mr. MacDonald and discuss with him questions of mutual interest to their two countries. American Ambassador Dawes, on his way to England, was apprised of this development by radio and almost immediately after his arrival in London he went to Scotland for a conference with the prime minister who was taking a ten days' vacation at his home in Lossiemouth. Mr. Dawes was expected to deliver to Mr. MacDonald an invitation to visit Washington and hold there a conference with President Hoover and Prime Minister Mackenzie King of Canada. The best guess in London was that the trip would be made about the end of July after the session of parliament adjourns.

According to London corespondents, Mr. MacDonald said: "If President Hoover invites me to Washington I am going to answer 'I will go.' I shall hope to settle this question of Anglo-American relations once and for all." It was asserted he hopes to carry the discussion much further than naval subjects. He believes the world is entering on an era of great industrial and financial combines whose boundaries will cut across all national frontiers, and he is desirous of a discussion on economic co-operation and avoidance of cut-throat competition in foreign markets. Mr. MacDonald, as a Socialist, welcomes the welding of industry into trusts and sees no objection to the spread of trusts in the international field under proper governmental control.

JUST when it appeared that the farm relief bill as doctored up by the house and senate conferees and approved by the President had clear sailing, the senate messed things all up by rejecting the conference report by a vote of 43 to 40 because the export debenture feature had been eliminated. In this step the Democrats were joined by 13 Republicans, all listed as radicals except Couzens of Michigan. The debenture advocates not only stood by their scheme, but they were especially determined to force the house to go on record on this feature of the measure.

President Hoover immediately called leaders of the house and senate to the White House and a program was agreed upon. This was to send the bill back to conference as the senate asked, and to have the conferees agree on their original report, after which it was expected the house would reject the debenture plan by a comfortable margin and accept the conference report. There appeared to be no doubt that the senate also would adopt the report of the conference after the house had rejected the debenture by a vote of 250 to 113.

The most interesting feature of the affair was the outspoken threat of Senator Brookhart of Iowa that a third or "progressive" party would enter into the congressional campaign next year and the Presidential campaign of 1932 if the debenture were not included in either the farm bill or the new tariff bill. He asserted the President rather than the senate was to blame for delays in obtaining farm legislation.

Tariff hearings were begun by the senate finance committee, and Senator Wesley Jones told the senate this work should be speeded up with a view to completing the enactment of the legislation early in the fall, and therefore congress should recess for only a brief time. But Senator Watson, majority leader, expressed the belief that the tariff bill could not be finally acted upon until just before the regular December session.

SIGNATURE of the Young plan for German reparations payments by the seven interested nations is having speedy result in the way of settling other post-war problems. The council of the League of Nations met in Madrid, and the Germans carried out their plan of bringing before it the matter of early evacuation of the Rhineland. Aristide Briand, French foreign minister, proposed that an international conference be held this summer for the handling of all outstanding questions left over from the war, and this was agreed to by Dr. Gustav Stresemann, German minister of foreign affairs. Prime Minister MacDonald of Great Britain already had intimated that he was willing to participate in such a meeting. It was generally believed that the conference would be held in July, probably in London or The Hague.

It had been supposed that the council at this Madrid session would take up the vexatious question of national minorities, but Stresemann insisted it should be referred to the World Court at The Hague. This was strongly opposed by Briand and the representatives of the secession states, and a compromise was reached by which the matter was held over for the September session of the League assembly.

French Socialists in convention at Nancy declared in favor of the Young reparations plan, evacuation of the Rhineland and immediate ratification of the Mellon-Beranger accord for the payment of the French debt to the United States. Certain of the United States senators led by Howell of Nebraska have attacked the Young plan as "another move by the allies and the international bankers" to cancel not only the war debts but also the interest on the allied obligations to America. Administration leaders and State department officials asserted nothing in the Young settlement would affect the war debts owed the United States. J. P. Morgan, one of the American experts, declared on arrival in New York that the bank for international settlements, to be established under the Young plan, would be the greatest instrument for the preservation of world peace yet devised.

PRESIDENT HOOVER, because he used to be secretary of commerce, was especially interested in the ceremony of laying the cornerstone of the magnificent new Department of Commerce building. Surrounded by many other high government officials, he wielded the trowel that was used by President Washington in laying the cornerstone of the Capitol 136 years ago, and in his address he said the event marked the emergence of the Commerce department into full maturity and service. The building will be the largest single public structure in Washington and in its actual floor space will be the largest office building in the world. It is to be the most important structure in the government's $115,000,000 program for public buildings in the city of Washington.

NEARLY every day the quick shooting enforcers of prohibition furnish more ammunition for the foes of Volsteadism. Last week they killed an apparently innocent citizen at International Falls, Minn., and a young man at Detroit whose companions admit he and they had been trying to run a boatload of liquor from Canada. Drys in congress took the opportunity to denounce the activities of prohibition officers and Representative Clancy of Michigan demanded an investigation of the Detroit case, but after a trip to that city he said the shooting was justified. Representative Florence Kahn of California introduced a bill in the house directing the treasury to pay $25,000 to the dependents of every person "wantonly or negligently killed by any prohibition officer not acting in self defense." Other congressmen urged that the treasury forbid the use of firearms by dry agents, but Seymour Lowman, assistant secretary of the treasury in charge of all prohibition enforcement agencies, said this could not be done. He declared that agents had been cautioned for more than a year against reckless use of firearms, and that he did not see what more could be done to prevent killings without crippling enforcement.

Two officers of Hopkinsville, Ky., who were convicted for killing a man in a prohibition raid were denied a new trial by Federal Judge Dawson in Louisville. In Silver City, N. M., a dry agent induced a bootlegger to sell him liquor and the latter was shot by other agents as he was making the delivery. Angered by the dry raid at Ripon, Wis., during the celebration of the Republican party's seventy-fifth birthday, Assemblyman Lamoreaux of Ashland county introduced a resolution asking the federal government to desist from attempting to enforce the Eighteenth amendment in the Badger state. About the same time dry agents raided the favorite drug store of Wisconsin's wet legislators in Madison.

Mr. Lowman has ordered heavy reinforcements for the dry enforcers of the Detroit area, in the way of both men and boats. In response to this the big rum runners of the Great Lakes met in Ecorse and laid plans to operate in unison. They adopted a shuttle system whereby traffic will be diverted to Lake Erie or Lake Huron when the enforcers are concentrated on the Detroit river, and they also have devised an elaborate intelligence system and began buying larger and better boats.

These are just a few of the wet and dry developments that take up vast space in the columns of the metropolitan dailies.

UNLESS all indications are wrong, peace between Mexico's government and the Roman Catholic church will be declared in the near future. Archbishop Ruiz of Michoacan and Bishop Pascual Diaz of Tabasco held conferences with President Portes Gil in Chapultepec castle as the climax of long negotiations, and there was good reason to believe they arrived at an understanding which would need only the approval of the Pope. In well informed quarters in Mexico City it was asserted the basis of the agreement was mutual consent for a broad interpretation of the country's religious laws, both sides making concessions.

THREE United States district judges sitting en banc in Chicago found the Standard Oil Company of Indiana and fifty-one associated concerns guilty of violating the Sherman antitrust act by pooling their so-called "oil cracking" processes. The decision which granted the government a permanent injunction restraining the defendant companies from further violations of the law, came after more than four years' litigation. In the original suit, filed in 1925, the government claimed the defendants conspired to restrain trade and create a monopoly by refusing independent concerns the right to use their Burton "cracking" process, used to extract gasoline from crude oil. In defense the Standard of Indiana held that the process had been of vast benefit to consumers and had materially lowered the price of gasoline.

THREE Swedish aviators started to fly from Stockholm to New York, but a broken gas feed pipe forced them to land on the coast of Iceland. They got their plane to Reykjavik and last week made three attempts to fly from there to Greenland but were driven back each time by rough weather. The aviators, Ahrenburg, Floden and Ljunglund, are trying to establish a new air trade route between Europe and America.

GALVESTON'S international "pageant of pulchritude" came to an end with the awarding of the title "Miss Universe" to Fraulein Lisl. Goldarbeiter of Vienna, Austria, the young governess being adjudged the most beautiful of all the contestants. Miss Irene Ahlberg of New York was named "Miss United States." The affair did not come off without a small scandal, for Theda Delrey, "Miss Tulsa," who was selected for ninth prize, was accused of being really the "Miss Houston" of two years ago and therefore ineligible as a former contestant.

THREE DEVICES WILL SAVE CARS

Minimize Wear and Increase Life of Automobile Engine.

The three devices that minimize wear, and increase the automobile engine's life are air cleaners, oil filters and crankcase ventilator, students of General Motors Institute of Technology were told in an address by Sumner S. Howard, a director of service.

"The air cleaner prevents road dust from being breathed into the engine through the carburetor and causing excessive wear to cylinder walls, piston rings, etc." Mr. Howard said. "There are two types of air cleaners, each having their respective merits. One is the centrifugal type, which requires no cleaning, and the other the 'oil-wetted' type, which is easily cleaned by plunging it up and down in a can of gasoline and then re-oiling for use again. It should be cleaned according to recommendations in the car owners' instruction book.

Work of Oil Filter.

"The air cleaner's 'twin brother,' the oil filter, removes the foreign matter from the crank-case oil, thus reducing engine wear and making the oil last longer. It filters the oil at the rate of about a quart a minute so that the entire contents of the crankcase are filtered about every ten minutes.

"The oil filter is an excellent device, but it must be kept so. In the most commonly used filter devices, the cartridge or straining element is good for about 10,000 miles as it then becomes clogged and the oil is by-passed without straining. It is the same as having no filter, and this is why the oil filter should be serviced after 10,000 miles operation.

Crankcase Ventilator.

"An ally of the oil filter and air cleaner in preventing wear is crankcase ventilation, which removes or minimizes water and fuel that would contaminate the oil. Crankcase ventilation, which is in quite general use, is usually accomplished in two ways. One is to pass a blast of air from a fan through a tube, causing a suction from the crankcase, which carries with it any vapors that may be present in the crankcase. The other method is to take a certain portion of air across the surface of the crankcase and into the intake of the carburetor, carrying with it the water moisture and fuel vapors."

Trains Now Halted at Unprotected Crossings

Grade crossings at towns on some of the less active branch lines of railroads in Massachusetts and New Hampshire are now unguarded without violation of rather strict laws governing the protection of intersections of roadways and railways. Until recently pensioned employees served as gatemen and flagmen at such crossings.

Pedestrians and vehicles no longer need "beware of the locomotive." The locomotive now "bewares" and comes to a full stop before rolling over the crossing.

This practice may cause a few seconds' delay to passengers, but it saves the railroads a considerable amount by relieving them of the necessity of stationing crossing men at points where there are but four or six trains a day.

Spring Clearances Are Lessened by Usual Use

During the inspection of the new car while one is jotting down the various identification marks and numbers, it is a good plan to measure the clearance between the centers of the springs and the frame just above.

Later on, when the car has been given a season or so of hard work, it will be found that the clearances are less. If springs have settled more than a quarter of an inch as indicated by the variations in clearance measurements, the car will not ride easily.

White Crosses Too Depressing in Ohio

Motorists in Ohio have started a movement for the repeal of the law which requires the erection of a white cross at every spot along a highway where there has been a traffic fatality. To pass these crosses continuously stimulates more careful driving, it is said, but it also has a depressing effect on travelers. One 75-mile stretch of highway has 69 crosses along its sides, nearly one to a mile.

Instrument Will Tell Needs of Auto Battery

Inventor Holding New Device.

The "Uno," an instrument invented by C. W. Ward, of Los Angeles, by which the motorist can tell whether his battery needs charging and also if it has sufficient water. The device is a galvonometer acting as a voltmeter and is connected with the battery by means of a lead electrode with another insulated wire running to the starter switch. The inventor is holding the new device.

Clever Job in Freeing Sticking Accelerator

Experienced motorists do not get alarmed when the accelerator, underlubricated at its various points of anchorage or suffering from a deficient spring tension, begins to stick slightly. They merely pull it up with the sides of their shoes. Sometimes it becomes second nature for them to resort to this practice. That is wrong. No matter how skillful one is in freeing a sticking accelerator, there are times when failure is inevitable and the punishment is inflicted upon the transmission gears. When the accelerator sticks, have it freed at once.

AUTOMOBILE FACTS

The public has averaged an investment of $1,000,000,000 a year for the past ten years in good roads.

* * *

Happening to be on a motor highway is probably a modern town's easiest way of getting on the map.

* * *

Something else the old-timers did not receive when they bought a new horse was free service for six months or a year.

* * *

The nation rejoices happily in the possession of an ex-President who is not afraid to use a little old last year's car.

* * *

Do not have the valve clearance set closer than the factory directions call for. When set too close the valves will not seat properly when the engine is hot.

* * *

The state of Texas, largest state in the Union, has the largest highway mileage of all the states in the country. It has 180,000 miles of roads within its borders.

When Food Sours

Lots of folks who think they have "indigestion" have only an acid condition which could be corrected in five or ten minutes. An effective antacid like Phillips Milk of Magnesia quickly restores digestion to normal.

Phillips does away with all sourness and gas right after meals and prevents the distress so apt to occur two hours after eating. What a pleasant preparation to take! And how good it is for the system! Unlike the burning dose of soda—which is only temporary relief at best—Phillips Milk of Magnesia neutralizes many times its volume in acid.

Next time a hearty meal, or too rich a diet has brought on the least discomfort, try—

PHILLIPS Milk of Magnesia

To be a highbrow, one has to have ambition; but one can be a lowbrow without any.

Mosquito Bites

HANFORD'S

Balsam of Myrrh

Money back for first bottle if not relied. All dealers.

After one is accused, nothing will clear him in the opinion of suspicious people.

GREAT DISCOVERY KILLS RATS AND MICE, BUT NOTHING ELSE

Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O (Kills Rats Only) is a new exterminator that can be used about the home, barn or poultry yard with safety as it contains no deadly poison. K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Sold on a Money-Back Guarantee. Insist upon K-R-O (Kills Rats Only), the original Squill exterminator. All druggists 75c, or direct if not yet stocked. Large size (four times as much) $2.00. K-R-O Co., Springfield, O.

Act Promptly

There is no moment like the present. The man who will not execute his resolutions when they are fresh upon him can have no hope from them afterward; they will be dissipated, lost, and perish in the hurry and scurry of the world, or sunk in the slough of indolence.—Maria Edgeworth.

String to Legacy

Provided she is found to be "industrious, sober and not given to jazz" when she reaches the age of twenty-five, Beatrice Coleman, of Philadelphia, will inherit an estate of several thousand dollars under the terms of the will of Mrs. Rebecca Rolen Williams.

Pity is too often given as a substitution for charity.

SO WEAK SHE COULDN'T WALK

Helped By Taking Lydia E. Pinkham's Vegetable Compound

Gretna, La.—"After my first child was born I took Lydia E. Pinkham's Vegetable Compound for a run-down condition. I could not walk across my room at times, I was so weak. A friend induced me to take the Vegetable Compound. Since that time I have also taken Lydia E. Pinkham's Herb Medicine and the Pills for Constipation, and I have used Lydia E. Pinkham's Sanative Wash. I am a housekeeper and I am still taking the Vegetable Compound as a tonic to enable me to do my work."—Mrs. E. F. Vicknair, 829 Hancock St., Gretna, La.

BURSAL ENLARGEMENTS

Absorbine reduces thickened, swollen tissues, curbs, filled tendons, soreness from bruises or strains. Stops spavin lameness. Does not blister, remove hair or lay up horse. $2.50 at druggists, or postpaid. Valuable horse book 1-S free. Write for it today.

Read this: "Horse had large swelling just below knee. Now gone; has not reappeared. Horse goes as well as ever. Have used Absorbine for years with great success."

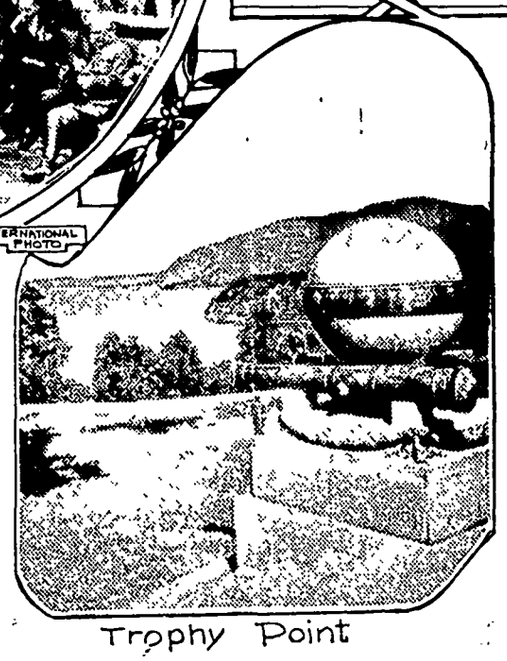
Graduation Day.

INTERNATIONAL PHOTO



Trophy Point

By ELMO SCOTT WATSON

ON JUNE 13 some 299 young men gathered in the big gymnasium at the United States Military academy at West Point, N. Y., there to receive from the hands of a representative of the secretary of war and Maj. Gen. William R. Smith, superintendent of the academy, their diplomas of graduation. And thereby was added to the rolls of the United States army the names of 299 "officers and gentlemen." Mark that phrase well, for it has more meaning than appears from a casual reading of it, and what that meaning is you will come to understand a little better further along.

On July 1 there will arrive at the academy some 400 young men who come from every part of the United States and from every level of the diversified society which characterizes such a democracy as the United States of America. For these newcomers are the raw material from which the "officers and gentlemen" of four years hence are made. During the two months immediately following their admission to the academy they will spend in an intensive military training before they are officially accepted into the United States corps of cadets. This period, the most rigid and exacting of the entire four years at West Point, will be spent under a group of selected instructors from the first class, known as the "Beast Detail," supervised by officers of the tactical department of the academy. For these newcomers in "kaydet slang," are now the "beasts." And it is not until the termination of "beast barracks," followed by a hike of about a week's duration, that these members, now known as "plebes," are absorbed into the corps as the fourth class and take up their new academic duties the first week in September.

The motto of the United States Military academy is "Duty, Honor, Country." During the preliminary training of the newcomers this summer one of the first things they will learn is the real meaning back of that motto. Here is that meaning as it is interpreted in "Bugle Notes," the little handbook which the "kaydets" call the "Plebe's Bible."

The motto of the corps, the standard by which every cadet regulates his personal life is "Duty, Honor, Country." "Country" needs no definition; "Our Country, right or wrong" is the patriot's slogan throughout the nation. But the standards of "Duty" and "Honor" at West Point are distinctive and rigid; and because, in civilian life, the general attitude as to these two principles from time to time and from place to place, the following pages are devoted in great part to a definition of the attitude of the corps in matters of duty and honor:

DUTY

Graduates of West Point have always inspired and set the standard of duty in the army. That they have been able to do so, is due entirely to the inculcation of a keen sense of duty and to the faithful, conscientious and cheerful performance of every task imposed upon them while at the academy. Only he who has acquired the habit of discipline, of duty, and of justice can be trusted to act as a leader in a profession which deals with the lives of men.

Performance of one's duty implies far more than mere obedience to the letter of the law. In other walks of life, technicalities and evasive tactics are condoned and even lauded as an indication of cleverness. In the army where the lives are the price of failure there are no technicalities and an order is given, a statement received at its face value. When it becomes a soldier's duty to obey an order, it also becomes his duty to look beneath the surface of that order for its spirit, and in so doing to put his whole being into its performance. A fearless readiness to assume responsibility and the determination to do, not just the job, but the whole and the best job are what is expected of a West Pointer.

Every cadet is expected to make it his individual and personal obligation to maintain the highest possible standard of duty and to do everything in his power to discountenance and discourage any act or spirit which might place a premium on the nonperformance of one's duty.

HONOR

Honor is the most cherished principle of life; it is the beacon which guides every one during their stay at the military academy and during the career of later life.

The fundamental principles of honor, their application to specific acts and problems, and the methods of administering and enforcing these principles and applications, have long been designated by the general term, the "Honor System." Almost all educational institutions have honor systems, varying in severity, efficiency and effectiveness—honor systems by which to a greater or less degree, students consider themselves bound, and which exert a varying degree of influence on the lives of the several institutions. At the peak of the varying scale stands the honor system of the corps, representing the best, the most steadfastly upheld, the most practical and, at once, ideal system of honor in the world.

The basic principles of the honor system are; no lying, no cheating, no half-truths. . . .

Now all of this may sound very much like the type of thing that you will read in any of the student handbooks, which are given to members of the freshmen class in any educational institution in the United States. And to the cynical-minded, who have observed the break down of honor systems in various institutions, this statement from "Bugle Notes" may mean nothing more than a similar statement in other such handbooks. But here lies the difference: At West Point honor is a living reality. Go there, as did the writer of this article, and you will quickly realize that fact.

It is not because the cadets go about their business with a conscious air of virtue; it is not that they parade the fact that their honor is to them the dearest of all things; it is not that there is a visible evidence of a rigid adherence to a code of honor set forth in formal phrases and exemplified by apparent effort. But it is a part of their every day life and as such it finds its phrasing in a single expressive colloquialism. For the heart and soul and watchword of the West Point code of honor is expressed in just two words "All Right."

Cadet life at West Point is one of rigid discipline, hedged about by many restrictions. The cadet has a certain time for doing a certain thing, he is supposed to be in certain places for certain duties at certain times. If he is not in those places or performing those duties he will receive demerits, those black marks for which he must make amends, usually by doing "punishment tour," which means that he must spend some of the extra time that he would ordinarily have for leisure, marching at attention on the campus. Enough demerits received for infraction of the rules of the academy may lead to his expulsion.

Cadet life is one of Spartan simplicity. Cadets are not allowed to have or receive money; they cannot smoke except in their own rooms; they cannot leave the reservation except at stated times. Christmas leave is only issued a year and a half after the cadet first enters.

In addition to the four daily drills in infantry, field artillery, cavalry and coast artillery lessons must be learned: mathematics, from simple algebra through the latest wrinkle in calculus and least squares; philosophy, chemistry, electricity, French and Spanish, English and history. Cadet rooms must be swept out and cleaned by the cadets themselves—four time daily—and they have to shine their shoes and make their own beds.

Such a program of work and such strict discipline as to conduct soon proves whether or not the cadet has "real stuff" in him. If he hasn't, if his scholarship falls below par, and if, as previously stated, he doesn't keep the rules, out he goes! Neither birth, family, influence nor wealth count at West Point.

Of course, to the average American youth, it would seem easy to "beat the game" and to cover up his rule-breaking, so that he would not suffer the penalty for it. But at West Point "beating the game" is not a popular sport and here is where the "All Right" comes in.

Suppose, for instance, that the cadet leaves his room, the barracks or the post, and in doing so he meets a "tac" (a tactical officer). If the "tac" inquires, "all right?" and the cadet replies "all right!" it most decidedly IS all right, that is to say, these two words are a complete explanation of his action, that his leaving his room, the barracks, or the post is not an infraction of the rules. For, say the rules, "an 'all right,' involves the purpose of a visit, as well as the place. No cadet may report 'all right' when he is going anywhere for an unauthorized purpose." And here is another and even finer interpretation of the rule. "If a cadet is asked 'all right?' his answer should refer to the time that the question was asked and not to the moment that the answer was given." So you see a cadet's action which is not all right one minute may apparently be all right the next minute, but he can not take advantage of the apparent compliance with the rules within that short space of time, for the code of honor of West Point says "no half-truths."

Another of the guiding principles of the cadet, as set forth in the "Plebes Bible" is this: "Quibbling, evasive statements, or technicalities in order to shield guilt or defeat the ends of justice will not be tolerated. The code of the soldier demands courageous and fearless honesty in setting forth the truth, regardless of consequences." So when the cadet answers "all right" it means just exactly that and not a whit less. If the thing he is doing when that inquiry is made is not all right then he says nothing and accepts the demerit which he has earned. For "cadets do not make excuses. Explanations citing extenuating circumstances or adequate reasons for failure in the performance of duty may be submitted." But "Offenders of the code of honor are never granted immunity."

And those rules and this code of honor apply to all—from the lowliest plebe to the most outstanding member of the first class. There is a rather widespread popular belief that in most of our educational institutions athletic stars can "get by with anything." But that distinctly is not true at West Point. Take the case of Cadet Cagle—"Red" Cagle, as you probably have heard of him, the outstanding backfield star of the football team and next year's captain. Last winter Cagle obtained a leave of absence which he spent in New York city. When he returned to the academy he was late, through no especial fault of his, by a very short time. But was this breach of rules overlooked in the case of this great football star? It most emphatically was not. For the next month "Red" Cagle was doing 22 hours of "punishment tour," 22 extra hours marching at attention on the campus. If you will march for an hour at attention you will soon appreciate that 22 hours in a month, or nearly an hour a day extra, is no joke and least of all would it seem so if you were doing it for what might seem to be a very unimportant reason. Think back over the number of times you have been late to an appointment and offered as an excuse for your tardiness an airy "Sorry, old fellow!" and then see how you would feel if you had to pay for it the way "Red" Cagle did for his tardiness.

But remember that discipline at the military academy comes ahead of anything else. Four years of such discipline, of such practice, in self-restraint by the young men who are enrolled there, by their training in scrupulous regard for duty, by their doing the right thing because it is the right thing, according to the code of honor cannot but result in making men of high physical and mental standard.

Those four years have brought a knowledge and physique that couldn't very well be obtained any other place; have given that insight into men that few colleges give; have formed and molded a character that neither knows nor shields crime or deceit; have breathed into it that spirit of the corps exemplified by its motto: "Duty, Honor, Country." And that is why the term "officer and gentleman," when applied to a West Pointer, means exactly that!

DUTY, HONOR, COUNTRY

West Point, thy Duty is to me
As from the Vestal Hearth a flame
That's in this land and o'er the sea
Through all the decades still the same,
More precious far than fame.

West Point, thy Honor is to me
As straight from heav'n the light of life;
To keep me firmly knit to thee,
True to my best in peace or strife,
I guard it as my life.

West Point, Our Country is to me
The Mother-Land, beloved and fair,
Whose dear vales long have sheltered me,
Whose duties I am proud to share,
Whose uniform I wear.

—James E. Briggs, '28.

THE POOR THING

(© by D. J. Walsh.)

WELL, it was nice to be going somewhere. That train whistle this morning would not be laughing at her the while it invited. For she, Annis Randall, was going somewhere. Up at 5, she had done a good day's work before pleasuring. And so she would have a good time. Nice of those club women to remember that her mother had been a member, nice of them to take her mother's daughter to the federation meeting.

She drew her little black "crush" down over her soft hair, got her gloves, pressed a tiny perfume bottle against her handkerchief, went out into her yard. Oh, there they were. The long shining blue car came to a gentle stop; its marvelous door opened. She put her small foot on the step and there she was on a soft cushion between Izzy Hall and Iona Wright. The middle for her, they they said, because she was small. The two women in front smiled good morning. The car swept into Main street and out into the country.

Mrs. Durant was a good driver, Annis knew. But how fast the country flew past. She had wanted to see it. But it was merely a glimpse she had of Holsteins, black and white, against a pasture rich green. She tried really to see a tiny black cabin under a flaming creeper. She had to do merely with knowing it was there. Izzy Hall and Iona Wright were mountains, she could neither tunnel, scale nor go around. And Mrs. Coulter in front had her curtain down. My, how hot. All the glass tight shut to keep out "drafts." Years ago when she went buggy riding she had to dress some even on a rather warm day. This car was hotter than she ever kept her house. Well, when you could afford to be hot you were, she supposed. But, oh, my, she felt sick, very sick. But she mustn't be Mrs. Wright pressing on her right side. Mrs. Hall on her left, she couldn't be sick. She couldn't move. If she listened to what they were saying maybe she would forget. She listened.

"My, I've got a full week before me," Mrs. Hall was saying. "Today and tomorrow the federation. Wednesday the Country club benefit bridge. Thursday the Rotary Inn luncheon, and Mrs. Durant's dinner. Friday I've just got to go to Joplin to get me some shoes. Saturday—"

"Yes," agreed Mrs. Wright, "a body never has any time any more. I've got all you have and more. Doctor wants me to entertain those Loomsies, missionaries from India. I suppose I'll have to but Doctor is always feeding those people going around talking about old foreigners—"

"Well, when you're so busy it does seem a shame."

"I never have any time, always somewhere I've got to go or somebody I've got to entertain or a club paper to write or a bazaar to make something for— H'm, here we are—"

Annis was glad the doors opened. She staggered, but nobody noticed her. After three breaths of air of course she felt better. Mrs. Hall and Mrs. Wright groaned as they climbed the stone steps leading up to the church where the federation met. Why did they make so many steps into a church? No wonder people didn't come much! Annis behind them wished there were more steps. She needed the exercise, sir. But it was nice to be going somewhere. She felt interested in things.

The church was big. It had a pipe organ. Perhaps some one would play it! Sunshine came in through stained windows. What a lovely color effect the hats and dresses and coats of the club women made. Flowers, too, were everywhere; crimson dahlias, cosmos, zinnias, palms against the organ. Was that lady up on the platform speaking? She might be. She nodded her head, lifted her right hand, smiled, her lips moving. A gentle murmur. Yes, she was speaking She bowed, left the platform. A patter of applause. Another lady came to the front of the platform, said tickets for the luncheon were in the vestibule. A speech by a man about Nicaragua, Geneva, the World court, This was very interesting. She had read about these things. Mrs. Hall whispered to Mrs. Wright that she was going to die of sleepiness! What did they want to hear about Nicaragua for? Reports from clubs were called for. Some of these Annis heard, some she did not. The country women's clubs interested her most. Lunch time. They got those tickets in the vestibule, and a great crowd began to swarm down the stairs to the basement dining room. Little Annis got squeezed nearly to death. Scared and faint, she wiggled into a corner to stay until the crowd went past her. Mrs. Hall and Mrs. Wright were in front of her. They were talking. They did not know she was near them.

"The poor thing! I'm glad she came. Just stays there in that house of hers, never goes anywhere. What an empty life!" Mrs. Hall in her thick voice said.

Mrs. Wright was smiling. "I was the one to suggest to Mrs. Durant that she bring her. 'Who would like to go to Iona?'" she asked me, and I had happened to look out from my sleeping-porch and see Annis hoeing—she does all sorts of men's work, you know—and I said, 'Annis Randall.' And so the poor thing got one happy day, one day of real living."

Her sides gouged by elbows, her feet mashed by stepping clubwomen, Annis tried to realize that she was having a happy day, a day of real living. She ate cold mashed potatoes and cabbage slaw, prodded with her fork an invincible, apparently petrified chicken back, drank luke-warm coffee out of a thick handleless cup and felt better. The afternoon program concerning legislation was not uninteresting, if you had read anything in the newspapers. She sat beside Mrs. Durant who took notes. She admired sober, efficient, intelligent, wealthy Mrs. Durant, always trying to do her duty.

The ride home was much like the morning ride. She had to imagine the country. Mrs. Hall and Mrs. Wright discussed housecleaning, bridge, soap, reducing diet.

"Thank you, very, very much" she trilled as she got out of the big car in front of her old pillared, shabby house. She smiled at the four women regarding her. But they did not smile. They felt sorry for her.

She breathed and breathed the sweet air of the late afternoon. A baby boy of three came toddling from a neighbor's, smiled up at her. She bent and kissed him. "Come and get your cookie," she told him.

Her cat arched his back against her ankle welcoming her.

She changed her dress, went into her garden, pulled two tomatoes, cut off some leaves of lettuce, cooked potatoes and a chop, set her table, a bowl of yellow chrysanthemums in its middle. A young girl came in with material for a party dress, wanting a design. Joey Cooper brought her mail. In the peace of her quiet, ordered, flower-fragrant house she opened a letter postmarked New York. Her latest designs had been eminently satisfactory.—Could she send more? The demand for her handkerchiefs was steadily increasing.

She sat presently with squares of linen beside her, a drawing-board before her, a pencil between her fingers She began to work, to create beauty.

"The poor thing!" she heard a thick pitying voice ejaculate.

The poor thing smiled.

Small Animal Provides Sustenance for Whale

How the largest animal in the world catches one of the smallest for its food is shown by an exhibition at the Natural History museum in London, to illustrate recent investigations of the lives and habits of whales.

Last year a British government vessel, the Discovery, took a party of scientists on a voyage to the Antarctic ocean, now the greatest whaling ground of the world. The chief food of the gigantic sea animals was found to be a tiny water creature like a shrimp, but smaller. Living by millions in the icy Antarctic waters, these shrimps are scooped up by the whale in gigantic mouthfuls, filtered out of the sea water and swallowed alive.

In the exhibition in London are shown samples of this living whale food, also of the still tinier microscopic plants called diatoms, which live in the surface layers of the sea and form, in turn, the chief food of the shrimps. Like all other terrestrial creatures, the Antarctic whales get their food, the scientists of the Discovery found, from the rays of the sun.

These rays fall on the surface of the sea, are absorbed by the tiny diatoms and enable these plants to manufacture food, just as sunlight works the food-making process of ordinary plants that live ashore. Then the uncountable billions of diatoms are eaten by millions of shrimps.

Always Handy

Brown's wife was musical. She had other faults as well. But Brown was a good husband, and when she showed a desire to learn the violin he promised to make her a present of one.

"A violin for your wife?" said the assistant at the music shop. "Certainly, sir. One with a chin rest?"

"Yes," said Brown. Then, as a brilliant idea came to him, he hurried after the assistant and caught him by the sleeve.

"Make it a detachable chin rest," he said, "so that she can still use it when she is not playing the violin."

Uses for Animals' Blood

For the most part the blood of animals that are slaughtered for food has gone in tankage to be worked up as fertilizer. In the past few years many other uses have been found for it. It is separated into a clear-colored serum and a red liquid. Both are then reduced to powder form. The commercial haemoglobin is used in finishing leather, as a binder for sawdust, and to a limited extent it is introduced into the feed for animals. The blood albumen is used in the tanning, textile, paper and wood-working industries.

Gambling Institution

A "bucket shop" is an office where people may gamble in fractional lots of stocks, grain or other commodities which are bought and sold on the exchange. The bucket shop uses the terms and outward form of the exchanges, but differs from them in that there is no delivery, and no expectation or intention to deliver or receive securities or commodities said to be sold or purchased.

Meteor's Fast Trip

What is said to be the most brilliant meteor ever seen and probably the largest ever observed in flight was that of August 18, 1783, which traversed Europe from Shetland to Italy at 30 miles a second.

Telephone Types Who Deserve No Quarter

The type who always opens up with a lengthy anaylsis of the weather—the type who is forever repeating "What's that?"—the type who always gets cut off—the type who speaks a language that resembles a combination of Eskimo and Norwegian—the type who always calls the wrong number—the type who invariably gets a busy wire—the type who jollies the operator—the type who curses the operator—the type who always has to borrow a nickel—the type who wrathfully bangs the instrument on the floor—the type who makes believe that he is the butler—the type who, to the accompaniment of a clashing jazz band, announces to his spouse that he is being detained at the office—the type who merely repeats the word "yes" throughout the conversation—the type who, just around the corner, stuffs a handkerchief in the mouthpiece and pretends that he is hundreds of miles away . . . the type who calls up at three o'clock in the morning to report that he has been arrested—the type who stations himself in a booth for one solid hour—the type who begins the conversation with "Guess who this is"—the type who speaks in a low whisper . . . the type who, in the middle of the conversation suddenly says, "Good-by"—the type who never says "Good-by."—Kansas City Times.

"Jocko" Something of a Freak of Nature

A putty nose and a tail a yard long are among the attractions possessed by a monkey newly placed in the famous London zoo. It comes from the African Gold coast. These monkeys have weak circulations in their tails, for the blood has to be pumped so far by the heart. A touch of cold weather, and the tail wilts like a dahlia in a frost. After stormy blasts in the bay of Biscay the average length of the decoration when the creature reaches this country is from six inches to a foot. Even if the tail is still all there, it has been blighted and fades away in the zoo.

Many putty-nosed monkeys eat their cold-storaged tails. They are quite given to this habit until the zoo uses a certain red ointment, which spoils the flavor.

The new putty-nose was brought to England in wonderful condition by the donor, a Mr. Woodward, who is a laboratory expert at the Medical Research Institute at Sekondi, where the yellow fever scourge is tackled.—London Times.

Indian Decoration Day

An annual Decoration day, in both name and deed, is observed by lower Yukon river Indians. Fifteen families of Indians from Nulato and other villages met at Koyuruk, Alaska, to fulfill a queer custom, that of erecting houses over the graves of those who died the past year.

The shelters of the old graves were given a fresh coat of highly colored paint. Many of the unique mausoleums are constructed with skill and care, have windows, floors and rugs, other articles such as were used by the departed ones. Food and drink are renewed each year during the potlatch following Decoration day.

Every western Alaskan Indian tribe has some different method of protecting the spirits of departed ones.

Whales Are "Brainy"

The largest brain in the world, according to speakers at a congress of natural science, recently held in England, is possessed by the whale.

Prof. W. Weygandt argued against a prevalent belief that the largest brain claim is shared by whales, elephants and man. He stated that the whale alone justified the claim, the largest whale ever caught having a brain weighing 7,000 grams.

The human brain, he added, seldom exceeds an average weight of 1,280 to 1,460 grams in the male and 1,140 to 1,340 in the female.

Home

The word "home" is indeed like unto an alabaster box of ointment, very precious, whose fragrance fills the life. Into it has been gathered our most sacred memories, our tenderest associations, our brightest hopes. It matters little whether the home of one's childhood has been a cottage on the hillside or a house in some city street—round it is woven a romance of interest that grows with the years; to it, from distant places alike of work and thought travels back the heart with wistful regret.—Exchange.

Drake's Drum

There is a legend in Devon, that in times of danger to England a booming sound is heard, as of the playing of a gigantic drum. This has been called Drake's drum, it being popularly supposed that the famous admiral is thus endeavoring to awaken the people to the realization of danger. There is no actual drum, of course. After the World war broke out there were many who declared that they had heard this "drum" on the night of the 4th of August, 1914.

Modern Superstitions

School children in London still wear charms against various evils, according to a recent survey. Blue beads are worn to ward off colds. Forty per cent of the youngsters are addicted to wearing amulets of various sorts.

DOUBLE WEDDING ANNIVERSARY SURPRISE PARTY

Mr. and Mrs. T. F. Mitchell And Mr. And Mrs. R. A Jorgenson, Victims

Last week Mr. and Mrs. Tom Mitchell at Swea City received an invitation from Klemme friends to attend a tenth wedding anniversary surprise party to be given Ye Editor and wife at Keraus' cottage at Ventura on Sunday. Mrs. Mitchell was likewise instructed to bake a decorated wedding cake for the event.

The same kind of an invitation was given Ye Editor and family to be present at the twentieth wedding anniversary surprise party for Mr. and Mrs. Mitchell, to be held at the Keraus cottage at Clear Lake Sunday. Mrs. Jorgenson was instructed to bake a decorated wedding cake for Mr. and Mrs. Mitchell. Others of the guests were to bring various dishes of good things to eat and instructions were carried out.

Accordingly the party met at the appointed time and place. The cottage had been beautifully decorated, the tables were likewise decorated, the color scheme being pink and white.

At the appropriate time all were seated and instead of one wedding cake being brought in, there were two, one for ten years, the other for twenty years. It was a complete surprise, especially on the ladies who did the cake baking. They had baked each other's wedding cake.

Those present were, besides the "victims," Frank Kluckhohn and family; Arthur Kudje and family; Fred Kluckhohn and family; C. G. Waterman and family; and Mr. and Mrs. C. F. Keraus.

The "victims" were again agreeably surprised when they were presented with fine gifts.

The afternoon was spent in visiting and swimming in the lake. In the evening a delicious lunch was served and among other things home made ice cream was part of the menu. All had a fine time.

1268 acres would make a big farm

AT Milford, Michigan, 1268 acres have been made—not into a farm—but into a Proving Ground for automobiles.

Long before your General Motors car is built, specimen models are sent to the Proving Ground. This fleet is tested in actual use. It has to meet every bad driving condition, from heart-breaking hills to slam-bang bumps.

But that isn't all. Other cars of American and European manufacture are bought and put through the same tests, so that General Motors always knows how its products compare with others.

The tests involve speed, power, endurance, braking, riding comfort, handling ease; fuel, oil and tire economy; body strength—every phase of car construction and performance.

When the specimen cars are finally able to meet every test, they are sent back to the factory. The car you buy is made exactly like them.

The next time you examine a General Motors car in your dealer's showroom, think of those 1268 acres. They would make a big farm. But they make a better promise of *proved car value*.

"A car for every purse and purpose"

CHEVROLET. 7 models. $525—$725. A six in the price range of the four. Smooth, powerful 6-cylinder valve-in-head engine. Beautiful new Fisher Bodies *Also* Light delivery chassis. Sedan delivery model. 1½ ton chassis and 1½ ton chassis with cab, both with four speeds forward.

PONTIAC. 7 models. $745—$895. Now offers "big six" motoring luxury at low cost. Larger L-head engine; larger Bodies by Fisher. New attractive colors and stylish line.

OLDSMOBILE. 7 models. $875—$1035. The Fine Car at Low Price. New models offer further refinements, mechanically and in the Fisher Bodies—yet at reduced prices. Also new Special and De Luxe models.

MARQUETTE. 6 models. $965—$1035. (5 models priced under $1000) A new car, "a great performer built by Buick." Beautiful colors and appointments. Splendid Bodies by Fisher.

OAKLAND. 8 models. $1145—$1375. New Oakland All American Six. Distinctively original appearance. Splendid performance. Luxurious appointments. Attractive Bodies by Fisher.

VIKING. 3 models. $1595. General Motors' new "eight" at medium price. 90-degree V-type engine. Striking Bodies by Fisher. Three years spent in its development and test.

BUICK. 19 models. $1195—$2145. The Silver Anniversary Buick. Three wheelbases from 115 to 128 inches. Masterpiece Bodies by Fisher. More powerful, vibrationless motor. Comfort and luxury in every mile.

LASALLE. 14 models $2295—$2875. Companion car to Cadillac. Continental lines. Distinctive appearance. 90-degree V-type 8-cylinder engine. Beautiful Bodies by Fisher.

CADILLAC. 25 models. $3295—$7000. The Standard of the world. Famous efficient 8-cylinder 90-degree V-type engine. Luxurious Bodies by Fisher and Fleetwood. Extensive range of color and upholstery combinations.

(All Prices f. o. b. Factories)

ALSO

FRIGIDAIRE Automatic Refrigerator. New silent models. Cold-control device. Tu-tone cabinets. Prices and models to suit every family.

CUPID'S ACTIVITY CRAMPED BY COLD

Fewer Single Girls Found in Warmer Cities.

Madison, Wis. — Cold weather cramps the activity of Cupid. More girls between fifteen and twenty-four years of age living in warm climates get married than girls of the same class in colder temperature cities, a survey submitted in the school of commerce at the University of Wisconsin reveals.

A correlation between temperatures and wedding bells is found.

The warmer the climate the better chance a girl has to get married. In twelve southern cities of 100,000 or more population, having annual mean temperatures ranging from 59 to 69 degrees, 27 per cent of the native white women are single, the study finds.

In twelve northern cities of the same class, on the other hand, 33 per cent of the women are single, the annual mean temperature in these cities ranging from 45 to 48 degrees.

Smaller cities with populations between 25,000 and 100,000, however, do not show such a high correlation between temperatures and marriages. In fifteen warm cities of this class, with annual temperatures running from 60 to 70 degrees, the percentage of single women is, 26. In fifteen colder cities of this class, with annual mean temperature from 38 to 48 degrees, 30 per cent of the women are single.

The statistics for the survey are based on the 1920 census report. For the temperatures the United States weather bureau, the World almanac, and Climatology of the United States were used.

The percentages necessarily had to be corrected when the percentage of men exceeded the percentage of women or vice versa, the survey states.

Of the 144 cities included in the survey, Superior, Wis., had the lowest annual mean temperature, 38 degrees. In that city 37.3 per cent of the native white females are single. The highest mean annual temperature was that of Tampa, Fla., 72 degrees. In that city, 20.4 per cent of the native white women are single. This shows a difference of 16.9 per cent between the coldest and warmest city.

Public as Judge of Art Displays Expert Taste

Washington.—The public is about as good a judge of paintings as artists and professional art critics, directors of the noted Corcoran Art gallery of Washington have found out.

The Corcoran gallery, at its biennial exhibitions of contemporary American oil paintings, conducted a public referendum among the visitors to the exhibition on their choice as the best painting. A painting by Garl Melchers of New York, called "A Native of Virginia," was selected It shows an old country woman leaning on a grubbing hoe.

Melchers, in previous exhibitions, has won second, third and fourth respectively, in choices made by a jury of leading artists and critics of the country.

C. Powell Minnigerode, director of the gallery, said the picture unquestionably was one of the most noted in the exhibition. A $200 prize went to the artist.

Melchers was born in Detroit in 1860 and has gained considerable renown, both in the United States and in foreign countries. He has been awarded decorations by Bavaria, France and Germany for his paintings.

Entomologists' Value Revealed by Institute

Pittsburgh, Pa.—The absent-minded professor who scampers after elusive butterflies and bugs with a net contributes much to the benefit of humanity.

Carnegie Institute of Technology here has more than 1,500,000 specimens of bugs, beetles, etc., and officials point out that study of myriad insects, gathered from near and far, reveals which is beneficial to mankind, and discloses how to rid infested places of harmful insects.

Pittsburgh is the home of four outstanding figures in the entomological world. Dr. W. J. Holland, director emeritus of Carnegie museum, has a personal collection of specimens gathered from the four corners of the earth. Dr. Hugo Kahl, a native of Sweden, presides over the museum's collection. Associated with him are two others—H. G. Klages and B. Krautwurm, both well-known entomologists.

Ancient Gothic Ruins Reveal Old Metropolis

Backtchisarai, Crimea.—Far-stretching ruins of a great city of unknown origin have been discovered in the valley of Eski-Kermen in the very heart of the Crimean peninsula.

The ruins are said to extend more than two miles, and consist of high fortress walls, hundreds of homes hewed out of rocks and six great cave temples, embellished with ancient frescoes. Russian archeologists said the ruins were once the capital of the Goth's kingdom, known in history as the city of Feodora, founded during the reign of Justinian the Great.

CAMEL CIGARETTES

WHY CAMELS ARE THE BETTER CIGARETTE

Camels contain such tobaccos and such blending as have never been offered in any other cigarette.

They are made of the choicest Turkish and American tobaccos grown.

Camels are always smooth and mild.

Camel quality is jealously maintained . . . by the world's largest organization of expert tobacco men . . . it never varies.

Smoke Camels as liberally as you choose . . . they will never tire your taste.

Nor do they ever leave an unpleasant after-taste.

HOW TO LIVE LONGER

By JOHN CLARENCE FUNK

CHOOSE WELL

NORTH AMERICA is a "going concern" just now. Millions of automobiles, containing millions of joy-seekers are on the road. Many of the travelers are back-to-nature tourists—that ever-growing and now vast group who enjoy the marvelous scenery, the fine highways of the day's ride and end up by erecting tents for the night's repose.

Many will find themselves in attractive pine wooded automobile camps. But even in the more elaborate ones, patrons should satisfy themselves as to the purity of the water supplies. While some jurisdictions protect travelers by testing the possible sources of infection, by no means all of them do. It therefore pays to investigate a bit on this important point. But the suggestions to follow concern those who are likely to avoid the established places and seek seclusion and nature in more remote spots.

In thus becoming exclusive gypsies certain personal obligations arise, the fulfillment of which is self-protection and protection for others. Here they are: 1. See that your camp site is well drained. Keep away from marshy land. Of course, get among the trees, but avoid heavy growths or underbrush—mosquitoes hide in dense cover. 2. You will doubtless choose a spot that attracts because it is clean. Keep it that way. Perhaps you will want to come back to it. Then, there is the other fellow to consider. Burn or bury garbage, papers and other litter. 3. Put out your fires. Burned forests are neither good to look at or pleasant to camp in. Be particularly careful about discarding lighted cigars and cigarettes. The best way to do this is to put them out before you throw them away. 4. Keep your sewage out of the streams. Remember that many foolish folks are likely to drink this water. Dig a shallow pit, cover the wastes with earth. Both typhoid fever and flies will be disappointed by this practice. 5. See where the water comes from before, not after, you drink it. In any event, don't drink from a stream. Many thoughtless people have likely polluted it. Moreover, it does not pay to drink from a spring unless it is in a remote place. Not even then if there appears to be any possible source of contamination.

Nothing unreasonable about these ideas, is there? Yet, thousands will deliberately violate every one of them every day throughout the season. Many of them will get ill, some will die, in consequence.

Live to enjoy your automobile excursion next year, too. Follow the rules!

* * *

HAVE A HEART!

THE hot season is baby's danger period. It is also the time of year in which he is most uncomfortable. To many of his tribe, the thermometer means absolutely nothing, though through no fault of his to be sure.

Suffering in a woolen band, heavy long-sleeved shirt, thick socks, petticoat, dress, with the woolen sack crowning all—he yells, he cries and he frets. While his superior parents, entirely oblivious to his feelings run around in shirt sleeves and thin dresses respectively, at the same time bewailing their possession of such a disturbing child!

A little less attention to their own comfort and decidedly more care of the little mite who can't help himself would be much more sensible. For example, when the temperature is above 85 degrees it is only fair to permit baby during the mid-day hour to lie around in diaper and band—the shoulder strap variety, or the single hot-weather garment. True, in such a common sense outfit the young man (or lady) will not be in formal dress, but there will be plenty of time later on for that.

The overdressed child on a tropically hot day is weakened and depressed by heat. Moreover, disease, especially summer diarrhea, is more likely to make him its victim.

Outdoor sleeping is advisable, if safe, unless the house is cooler, which is frequently the case on still superheated nights. Again, if the house is cooler than outside in the daytime, keep him indoors. Otherwise seek outdoor shade, avoid direct sunlight, and by all means protect him and his food from flies.

After all, a baby is a pretty sensible creature. He doesn't ask for luxury, money, for fine clothes, for exotic foods. He does demand, and should receive at all times, comfort plus common sense treatment.

The next time baby sets up a howl, get behind the noise and locate its cause. And remember in torrid weather one of the most common causes for his vocal exuberance is a superfluity of clothes. Have a heart!

(©, 1929, Western Newspaper Union.)

Reclaimed by Ocean

The islands on the western coast of Scotland were originally part of the mainland. The whole western coast of Scotland has sunk. The fjords are submerged land valleys which subsided to a considerable depth below their former level. The Hebrides were formerly one with the mainland, but the land between sank and was covered by the ocean.

Good Building Design for Family That Wants Bungalow Type Home

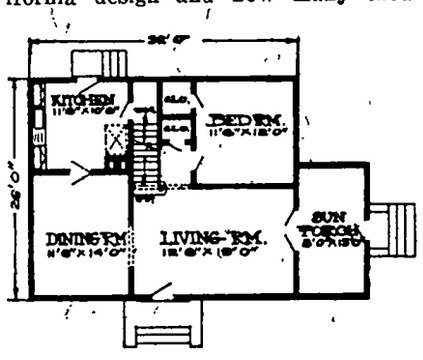
Many people prefer the bungalow type of home because of its greater convenience and arrangement, all on a single floor. When treated as this house has been treated a charming exterior appearance is also achieved with a suggestion of coziness.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Not so many years ago there originated in California a home building design that has since become very popular all over the United States. The bungalow type of home is preferred by many people because of the convenience of its room arrangement, the rooms being all on one floor. The climate of California made this design popular because it could be constructed cheaply, there being no necessity for a basement to house the heating plant, neither was there need for a tight weather-proof house.

Architects in every section of the country have improved upon the California design and now many thou-

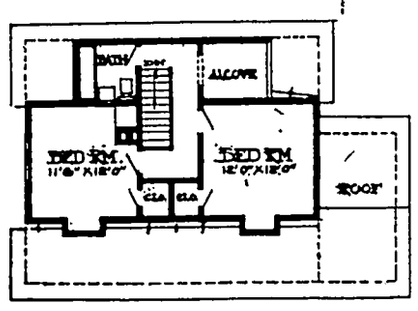


First Floor Plan.

sands of bungalow homes built of all types of building materials are found in both cities and the smaller towns.

The bungalow shown in the accompanying illustration is not a true bungalow for the reason that the pitch of the roof has been made such that there is space for two additional bedrooms and a bathroom on the attic floor. Set into the roof are two fan light dormer windows which are aided by the same type of windows in each of the gables. These provide light and ventilation in the attic in which has been partitioned off two bedrooms and the bathroom.

This home is of frame construction and has a basement the same size as



Second Floor Plan.

the house proper, 26 feet by 32 feet. Set into one end is the sun porch with two sets of french windows on each side and french windows on either side of the french door opening off the brick steps and platform. The first floor contains four rooms, a large living room 12 feet 6 inches by 19 feet, a dining room 11 feet 6 inches by 14 feet and kitchen 11 feet 6 inches by 10 feet 6 inches, also a bedroom 11 feet 6 inches by 12 feet. The two bedrooms upstairs are about 12 feet square.

This is a good home building design for the family who wants a bungalow type home but who needs more bedrooms than are usually found when only the first floor is utilized. When surrounded by lawn and plantings as shown in the illustration it makes a most attractive home.

Gives Facts on First and Second Mortgages

A real estate mortgage is a lien against real property. A first mortgage is a prior lien and seldom exceeds 50 per cent of the value of the real estate pledged as security.

A second mortgage is the same as a first mortgage in kind, but is "second" or subordinate to the latter. The security for its lien is less stable than a first mortgage, and it is therefore more expensive to place a second mortgage.

Like rent, however, it is a necessary evil. If the degree of fluctuation of the value of a property is small, mortgages can be placed to cover such a large proportion of the real value that the owner's equity will be small indeed.

The equity in any property is that part of its value over and above all encumbrances upon it. The smaller the mortgagor's equity, the less each succeeding mortagee's (lender's) security becomes in case third or fourth mortgages are placed.

Foreclosure proceedings are resorted to in event of default in interest or principal by the borrower or mortgagor, in which case the property is offered at public auction.

Amortization is usually insisted upon by holders of lesser liens than a first mortgage, and consists in reducing the principal of such liens by means of installments. The security for a subordinate mortgage is therefore least at its placing, but increases in proportion to the progress of amortization.

Awnings Beautify the Home and Add Comfort

No matter how beautiful the shrubbery adorning a house, how complete the appointments inside, the labor-saving conveniences that lessen milady's cares and no matter how charming the house from a standpoint of architecture, it is the awnings that add the final touch to the home that means comfort and beauty.

There is so much character expressed in awnings today, so much harmony of colors that blend into the house and bring out its full beauty and so much comfort during hot summer days on specious verandas without them.

Not only do awnings protect from the glare of midsummer's sun, but they are absolutely essential for many other reasons. Awnings should be selected with as much care as milady selects her hat, color, style, harmony and many other things considered.

Sealing Coat

A coat of shellac or other kind of sealing coat must be brushed over stained wood that is to be varnished. Otherwise the chemicals in the stain will work up through the varnish and cloud it

Plan Home, Then Look for Suitable Location

In considering a site for your own home it is best that your lot be at least 40 feet wide.

A lot narrower than this does not permit a proper distance between buildings, and cuts off the necessary amount of air and light. A reasonable space is also necessary in order to guard against spread of fire from one building to another. A lot that is too narrow necessitates a certain type of house—one that is long and narrow, and this is not usually the most attractive style.

On the other hand, a lot that is too wide is a source of unnecessary labor and expense. There will be more terrace or curb lawn to care for and a longer expanse of sidewalk to build and keep clean. The assessment for street improvements is also estimated from the number of feet frontage.

A lot should not be selected that is too shallow for a few outbuildings, a clothes yard and a small space for vegetables or flowers. The buyer of a lot should always bear in mind the possibility of some day selling, and should select a site which will appear attractive to others. If possible, choose a lot with some shade trees on it, but do not make the mistake of buying quick-growing trees which will afterward prove a nuisance.

Be careful to select a lot on the most favorable side of the street. Notice whether the morning or the afternoon sun will shine in the rooms where you most desire it or vice versa. Will your front porch be cool in the afternoons; will your sleeping rooms have a good sweep of air?

Notice, too, whether factories or objectionable buildings are likely, in future, to be erected near enough to depreciate the value of your property. Many cities now have a system of zoning legislation which protects property owners from damage to property through the location of undesirable buildings. If such laws exist in your city you will be protected.

"Clinker Brick" Now Used for Buildings

Ten years ago the clinker brick, so-called because it frequently came out of the kiln with the fused appearance of a real furnace clinker, was a total loss to the manufacturer and usually was chuckled into the rubbish heap or the dump. Today clinker brick are used in the construction of the most attractive brick houses and sell at a higher price than the run of kiln brick. The percentage in any kiln is small.

Watch Your Lumber

Home builders should be sure that the lumber they buy will require a minimum of carpenter work of planing, sawing and sorting.

ORCHARD GLEANINGS

FAVORED SMALL FRUIT VARIETIES

Blackberries, Dewberries and Raspberries Named.

The Georgia experiment station, after testing out over a period of 4 to 24 years of blackberries and nine varieties of dewberries, is now in a position to make definite recommendations to growers who are interested in growing these fruits.

According to J. G. Woodroof and J. E. Bailey of the experiment station, the Young variety of dewberries has proved to be outstanding. It is among the first to ripen and is decidedly the heaviest bearer. The plants are very vigorous and disease resistant. The berry is often more than an inch long, highly flavored and juicy. An average of 106 quarts was produced by 10 plants.

The best yielding blackberries, according to the station results, are French Lawton, Eldorado, Mersereau and Crandall, in the order named. Any one of these varities will be maturing as the dewberries cease producing and will continue to provide berries until the Himalaya blackberry comes into bearing to prolong the blackberry season until August. Then the Evergreen dewberry can continue to provide fresh berries until early fall.

Raspberries have also been tested out by the station. The order in which the leaders stand for yield is Van Fleet, June, St. Regis and Golden Queen. The order in which they are matured is June, St. Regis, Golden Queen and Van Fleet. All these varieties are red, except Golden Queen, which is yellow.

Blackberries, dewberries and raspberries should be set to the field in late fall, soon after the plants are made dormant by frost. The rows should be spaced from six to eight feet apart so as to provide adequate room for cultivating the plants and harvesting the fruit. The plants may be spaced from four to six feet apart in the row, depending on the vigor of the plants, and trained to any convenient type of trellis or stakes.

The station is planning to issue a bulletin that will give detailed information about the tests with blackberries, dewberries, raspberries, blueberries, currants and gooseberries, with recommendations as to cultural methods.

Shropshire Most Widely Grown Variety of Plums

To most folks the word "Damson" means a small, late, blue plum with tart flavor used for making jam and preserves, and since Shropshire is the variety of Damson plum that is almost universally planted for this purpose it is Shropshire that characterizes the Damson plums. Yet there are many plums of this type—some black, some blue, and some yellow, others large, small, clingstone, until there are literally dozens of varieties considered as belonging to the group.

Shropshire is perhaps the most dependable variety, and certainly the most widely grown. Though the fruit is not large, nor overly high in quality, the tree is large, vigorous, hardy, and productive, and adapted to a wide region, thus making up in tree characters for what it lacks in fruit characters. French is the opposite of Shropshire in this respect, being inferior in tree characters but larger and better quality in fruit. Both varieties are late in season and very old in point of origin, Shropshire being some three hundred years of age. King is another late kind of larger size than either of the two discussed.

Horticultural Notes

Bridge grafting is the one way to save girdled trees.

* * *

Renew the old strawbery field properly and cultivate frequently until fall.

* * *

Use judgment and discretion in the selection of a suitable site for the strawberry plantation.

* * *

Many growers set their trees closer than 30 feet, but they find when the trees are full grown that they are crowded.

* * *

A few dollars worth of good nursery stock, planted in the proper places, will work wonders in beautifying the farm grounds.

* * *

All who store apples, especially scald susceptible ones, would do well to make a trial of the oiled wrappers the coming season.

* * *

Know when to spray, what to use, how to apply the spray to the best advantage, and what insects and diseases it is necessary to control.

* * *

In grafting apple trees all cut surfaces must be completely covered with wax to prevent drying out. Two kinds of wax can be used: melted and soft.

* * *

Practice clean gardening. Burn or otherwise destroy all cull fruits, or vines, stems, trash and litter about the garden or truck patch. Keep fence rows free from weeds.

"NOW YOU'LL LIKE BRAN"

Effective

and so tempting, too!

These appetizing bran flakes are extra delicious with fruit or in bread and muffins.

POST'S BRAN FLAKES

WITH OTHER PARTS OF WHEAT

© 1929, P. Co., Inc.

Speaking Well for It

Bently—Why don't you try my tailor, old man?

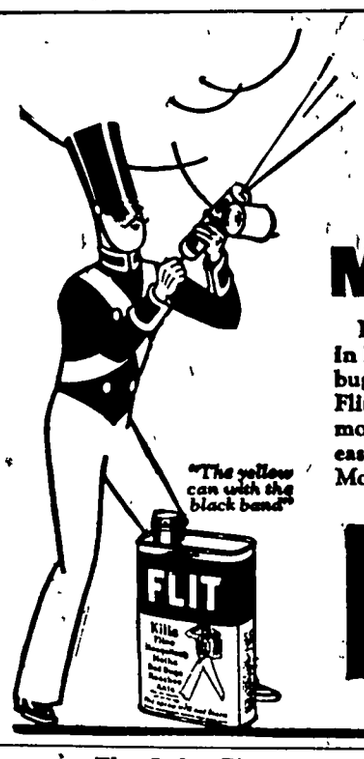
Branson—Does he use good material?

Bently—I should say he does? Why, I had a suit that lasted almost up to the time I paid for it!

Worth Considering

Mr. Knosit—In the Orient the natives still pack their wine around in goatskins.

Mr. Wetmore—Now that's a good idea. They're unbreakable. And you know what it means to drop a full bottle of bourbon.



Mosquitoes Die, or Money Back

Flit is the world-famous "sure thing" in killing mosquitoes, flies, roaches, bed bugs, ants and fleas. More people use Flit because it kills faster (thanks to more insect-killing ingredients), and is easier to use in the handy Flit sprayer. More for your money in the quart size.

FLIT

© 1929 Stanco Inc.

The Safer Plan

Lady—"Aren't you ashamed to ask for money?" Dusty Rhoades—"I got six months for taking it without asking."

That's What Counts

Sportsman—Is the hunting good here?

Native—Excellent! But the fare is awful poor.

That Million-Dollar Feeling

"Gee, Estelle, I went to three dances this week. I sure am all in."

"Take NR tonight, Marie. You'll feel like a million in the morning."

Why are some men and women the picture of health and happiness? Because they keep the digestive system in proper working order. You, too, will feel like a million if you take Nature's Remedy, NR Tablets—the mild, thorough vegetable laxative and corrective.

Get Relief. Drive Out the Poisons

MAKE THE TEST TONIGHT

GET A BOX AT YOUR DRUGGIST

POULTRY

FERTILE EGGS BEST PRESERVED

Only Fresh, Clean and Sound Should Be Used.

Only those eggs that are fresh, clean and sound of shell should be preserved or "put down" for use next winter. One spoiled egg will, in many cases, cause the entire lot to spoil.

"To be absolutely sure that the eggs are fresh and the shells sound, they should be candled," says A. G. Oliver, extension poultry man at the North Carolina State college. "An ordinary shoe box may be used for this purpose by cutting holes in it to fit the egg and fitting it over a lamp or an electric bulb.

This test will show up any porous or cracked shells and will also show if germination has started. This is a safety-first precaution and, as it takes only a few minutes time, should be practiced by every housewife before putting down any eggs."

For best results infertile eggs should be used but fertile eggs can be used with good results if they are put down each day. If this is done no danger of germination will be originated. Never wash the egg before preserving as this removes the natural protective coating on the shell.

In preparing the solution, Mr. Oliver advises one quart of water glass to nine quarts of pure water. The water should be boiled and cooled before mixing with the water glass.

For containers, a clean stone jar is the best but tin or wood vessels may be used. A six-gallon jar will hold about fifteen dozen eggs.

Mr. Oliver states that the eggs at the top of the container should be covered by at least one and one-half inches of the solution. It is not necessary to fill the jar at one time as fresh eggs can be added each day, taking care, however, that the eggs on top are always covered with the solution.

The containers should be kept covered to prevent evaporation and should be stored in a cool place unless needed.

Give Good Ventilation During Summer Months

Plenty of ventilation should be provided for brooder houses during the hot summer months, advises John Ildervort, extension poultry specialist of the Pennsylvania State college. Ventilators at the rear of the chicken house and windows at the front and on the sides should be kept open to allow free circulation of air, Mr. Vanvort says. Results of poultry demonstrations among college flocks prove that pullets reared in hot, stuffy houses are likely to be stunted and unprofitable.

Frequent cleaning of the house in the summer is necessary also to prevent flies from breeding and to keep the air in the building pure. Course wire netting placed around the roosts will keep the pullets from the manure, a means of helping to prevent tapeworm infestation.

Poultry Facts

Give the hens plenty of water.

* * *

Pullets are not so easily culled as hens.

* * *

Home-grown feeds are the best for chicks.

* * *

Ducklings can be brooded much like chicks.

* * *

It is always a problem to have the nests eggs clean.

* * *

Milk, cod-liver oil, corn products, and leafy green food make chickens grow.

* * *

Gather eggs regularly, twice each day during excessively warm or extremely cold weather.

* * *

Turkey hens will lay in places prepared for them. Boxes or barrels placed suitably will do very well.

* * *

As the poults grow older and the season advances the heat can be gradually reduced until they require little or none.

* * *

In order to make the greatest profit from chicks, it is necessary to raise as large a percentage of the chicks hatched as possible. In order to do this they must be kept warm and dry.

* * *

Buy chicks of a reliable hatchery as a sound investment.

* * *

Pullets, like young chicks, should be put on a fresh range—one which has not been frequented by turkeys or chickens the year previous.

* * *

To make a complete job of diversification every farm should have both chickens, turkeys, ducks, geese and guineas. But the same rule applies to all when it comes to the point where there is no profit to be derived from mongrels.

Give Corn Water for High Yields

Need of Fertile Soil and Use of Legumes in Rotation Are Factors.

No one ever saw a good yield of corn on poor land nor during a dry season, unless the crop was irrigated. Large amounts of water are essential to heavy corn production per acre.

"Much interest has been created through North Carolina by our statement that the average acre yield of corn should be at least 50 bushels," says G. M. Garren, cereal agronomist at the North Carolina State college. "We have had a number of letters asking how to obtain such an average yield. In answering these, attention has been called to the need of a fertile soil, the use of legumes in rotation, liberal fertilization and other necessary factors.

Need for Moisture.

"It is also essential that we keep in mind the need for moisture in the soil. Some investigator has found that 300 pounds of water is needed by the corn plant for every pound of dry matter produced. This includes the water evaporated through the soil as well as that transplanted through the leaves."

Therefore, it is important, says Mr. Garren, that the corn grower conserve the moisture in the soil. This is the only kind that benefits the growing plant. The grower may increase the storage capacity of the soil by increasing its humus content, and he may conserve the moisture by keeping a mulch constantly on the surface. This mulch must be restored whenever destroyed, and certainly after every rain. Three inches is a fair depth for cultivation, and any implement that will produce the effect of a drag harrow may be used for the cultivations. For best results, level cultivation should be given except in a very wet season. Then drainage becomes a problem.

Conserve Moisture.

Those who wish to grow 50 bushels of corn per acre must give close attention to the conservation of soil moisture. In many cases, this will call for a change of practice and the securing of more suitable implements for cultivation.

Select Turkey Breeders for Next Season's Crop

Before picking the Thanksgiving birds select the breeders for next year. Choose those birds which show good growth and development. The shanks should be heavy and fat and the legs well-set under the birds. A knock-kneed condition reveals lack of vigor. Crooked keel bones are objectionable. They may be caused by poor feeding or they may be the result of breeding. If possible, do not keep birds with crooked keel bones for breeding purposes. In the colored varieties, turkey growers prefer birds with good color, but health and vigor are more important than color.

Application of Orchard Sprays to Save Fruit

Nearly everyone has read and appreciated the truthfulness of this terse sentence—"Save the Surface and Save all." This statement may be applied with equal effect and force to the application of orchard sprays. Like the paint on buildings and fences, sprays, when applied to the surface of the fruit and foliage at intervals of from twelve to fourteen days up until five or six weeks of harvest time, will save the surface from injury by insects and disease and may prove to be the best insurance against failure.

Around the Farm

Drag the farm roads—let's save some auto repairs.

* * *

Use best seed obtainable. Poor seed is expensive at any price.

* * *

Put grease instead of oil on the farm machines when you store them. It is better because it stays put.

* * *

Whoever buys and plants cheap seeds needs no sermon on gambling—he is sure to learn by loss.

* * *

It's easy to make money as a farmer. You just work hard for 20 years and then sell out to a golf club.

* * *

Try to take the small amount of time necessary to plow the garden just as soon as the ground will work well.

* * *

Of course alfalfa is not grown for its fragrance and beauty, but these qualities should not be entirely overlooked.

* * *

Half of the failures in getting windbreak trees to grow and thrive can be laid directly to faulty preparation of the soil.

* * *

Commercial fertilizers applied according to recommendations will usually give paying increases in earliness, quality and yield.

* * *

In seasons of late corn or in case of early frosts, ensiled corn may save the entire crop, where, under other conditions, the loss would be very heavy.

LIVE STOCK

POUR COOL WATER ON HEAD OF HOG

Icy Liquid on Animal's Body Will Do Much Harm.

When a hog gets overheated, pour cool water on his head, but not on his body, warns J. W. Wuichet, extension specialist in animal husbandry at Ohio State university. "Pouring water on the body of the hog is for some reason very likely to kill him," says Wuichet. "Pouring water on his head cools him off and helps him."

Hogs should be protected from any necessity for violent exercise during hot weather, Wuichet says. There should be no reason why they should be compelled to run about or even to move more than necessary. They should have plenty of shade, and cool water available at all times.

"The hog has very little natural protection from the sun, and consequently some artificial protection must be provided," says the specialist. "Natural shade probably is best, but it is not always available in the hog lot. Where it is available a covering about four feet from the ground and open on all four sides will usually prove satisfactory. In some localities it may be advisable to give additional protection on the side in the direction of the prevailing storms. The shelter need not be elaborate. Almost any sort of open framework over which straw, fodder, or similar material is placed, will suffice.

"Many hog men use a wallow as an additional protection against overheating. If properly constructed and handled, the wallow is a great aid. There is one possible objection to its use for the man who is shipping hogs in the summer time. The hogs which are accustomed to the wallow will suffer more severely when they are loaded in cars for shipment, and the loss from this course will be greater than if the hogs had been inured to hot weather."

Give Additional Feed to Pigs in a "Creep"

When about three weeks old, the pigs will begin to eat grain from their mother's trough. It is important that they be now supplied additional feed, where the sows cannot get at it. This is best done by providing a "creep" in a corner of the paddock or pasture, with openings of such size that the pigs can run in and out while the sows are excluded. At first a little cracked corn seems about the most palatable feed. Later they may be fed a suitable mixture of concentrates, either being hand-fed all they will clean up twice or three times a day or else being fed by means of a self-feeder. For young pigs skim milk and buttermilk are easily the best of all protein-rich feeds. Nothing else aids so greatly in keeping them growing lustily. The concentrates fed pigs at this time should consist of the farm grains, with a considerable proportion of protein-rich feeds like middlings (standard middlings or preferably flour middlings), linseed meal, and tankage. If there is an abundance of skim milk or buttermilk, relatively little of other high-protein feeds need be used.

Live Stock Notes

The sow and pigs should not be kept in the individual pens longer than ten days.

* * *

Pigs will usually begin to eat a little feed when they are three to four weeks old.

* * *

Cattle and alfalfa make the best combination to keep fertility on the soil so let both be taxed alike.

* * *

Pigs fed semi-solid buttermilk gain faster than those fed skim milk. A possible explanation of the fact may be that the skim milk was too bulky.

* * *

Calves that have had no grain, but have suckled good milking cows, may be sold direct to the butchers at seven and nine months old at attractive prices.

* * *

A lamb that is kept gaining from birth until ready for the market will produce its gains at a lower cost than if it is allowed to fool away its time on part of a ration.

* * *

Barley, in an experiment recently completed at Colorado Agricultural college, proved slightly superior and a little cheaper as a feed for hogs than corn for making gains.

* * *

Cattle feeders surely do need a little protection because the cattle market fluctuates so much.

* * *

Hogs are very susceptible to both internal and external parasites. They must be guarded against these, or profit may be easily turned into loss.

* * *

As soon as the lambs are able to nibble at grain and hay, provide a creep for them where they can eat undisturbed by the ewes. This is very important from the standpoint of economical returns.

You Must Wear Shoes . . . . .

BUT DO they hurt? Do your feet smart and burn, corns and bunions ache and nearly set you wild? They won't if you do as millions of others are doing. Shake Allen's Foot-Ease in your shoes, it takes the friction from the shoes and makes walking or dancing a real joy. Sold everywhere.

Ours is a truly great and glorious country; it produces spring chickens all the year round.

Renovated Statue of Queen on Exhibition

There is now to be seen at the Cairo museum in that city the statue of an ancient queen which was recovered in pieces from a quarry where it had been hurled. The lady was Queen Hatscheput and her effigy had been removed and thrown into a quarry at the instance of Thothmes III upon the queen's death in 1480 B. C. The excavations near the temple Delr-El-Baharl, at Luxor, have occupied the expedition for years. In 1927 it was confirmed that all the queen's statues in the temple had been ordered destroyed. After the mutilation or destruction the pieces were thrown by Thothmes' retainers into an abandoned quarry nearby. Finally, 35 years ago, when the temple was first cleared, all the debris from it was piled together. The expedition has been employing as many as 700 Egyptian laborers at a time in the task of retrieving the fragments of the buried statues and about 100,000 tons of rubbish have been removed. Fragments of several of these statues have been recovered and are being assembled, but the work is exceedingly tedious.

His by Deed of Gift

A man who had not been very good during his earthly life died, and went below. As soon as he got to the nether regions, he began to give orders for changing the positions of the furnaces, and started bossing the imps around. One of them reported to Satan how the newcomer was acting.

"Here," said Satan to him, "you act as though you owned this place."

"Certainly," said the man; "my wife gave it to me while I was on earth."—London Tit-Bits.

New energy for work in this *Wake-up Food*

POST TOASTIES

START your breakfast with a heaping bowl of golden crisp Post Toasties in milk with fruit—and you've made a grand start on the day. Energy is what people need in the morning. Here in Post Toasties, the Wake-up Food, is the kind of energy that gets to work for you quickly. It's called the Wake-up Food just for that reason!

And it's so good for boys and girls and grown folks because it is so easy to digest. They all just naturally take to that wholesome, delicious corn flavor.

Tumble the crisp flakes right out of the package into the bowl—they're easy to serve. Don't forget—there's just one way to get the Wake-up Food. Ask your grocer for Post Toasties—in the red and yellow wax-wrapped package.

Yourself and Your Neighbors --Items of Personal Mention--

Dr. R. W. Specht, Dentist, Garner, Iowa. » adv

Clarence Elder drove to Waterloo on business Friday.

Henry Jost and family were visiting at Pomeroy Sunday.

Mrs. P. M. Wilson was a visitor at Clarion Tuesday.

Miss Phillys Root, former Klemme teacher, is at Boulder, Col., attending summer school.

Mr. and Mrs. Fred Arnold and son, Asa, and Shirley Rae Johnson were Mason City visitors Wednesday.

Mr. and Mrs. R. C. Ludeke and children and Mrs. M. O. Barr were at Mason City Tuesday

Mrs. A. G. Koerner and daughter, Valeria, and Miss Leona Lau were at Belmond Wednesday afternoon.

Henry Freie and daughter, Viola, and Miss Eunice Braund were visiting at Mason City Tuesday.

Mr. and Mrs. Eniar Salling were Mason City visitors Saturday evening.

E. J. Arnold and son, Wilbur were at Mason City on business last Saturday.

Dr. R. W. Specht and family of Garner were visiting at the Dr. W. F. Missman home Tuesday evening

Mr. and Mrs. Chris Gram drove to Cedar Falls Sunday and remained until Tuesday visiting relatives.

Mr. and Mrs. M. O. Barr and La Vonne enjoyed a 6:30 dinner at the J. E Tierney home at Garner Saturday evening.

Mr. Marlin Croner and daughter, Dorothy, drove to Mason City Wednesday to get Miss Knight, nurse, to help care for Mrs. Croner.

R. A. Jorgenson and family and C. G. Waterman and family drove to Clear Lake Saturday evening to enjoy swimming.

Mr. and Mrs. Albert Fuller and children of Amboy, Minn., were visiting at the R. W. Elder home this past week.

Mrs. Ben Coobs and son Melvin, Mrs. Harry Buss and children and Mrs. Wm. Laspahn were viiting at Titonka Saturday.

Arthur Wellemeyer was at Des Moines Tuesday to attend the annual convention of Iowa Funeral Directors. He returned Wednesday.

Miss Lenora Wheatman, former Klemme teacher, left Sunday for the Black Hills, where she will spend the summer.

Henry Barz has installed an electric driven De Laval cream separator on his farm. Henry has a big dairy herd and wants speed when it comes to separating.

Coleen, daughter of Mr. and Mrs. Harry Gram, had her tonsils and adenoids removed Friday morning at Dr. Missman's office. She made a good recovery.

Rev. Jason Hoffman of Beme, Minnesota, visited the Bible School of the Reformed Church and spent a few hours at the Grosshuesch home last week Thursday.

Clarence Elder drove to St. Paul Monday on business. He was accompanied by his mother who stayed at Mankato for a visit. They returned to Klemme this morning.

C. A. Larsen and family drove to Garden City, Minn., Sunday for a vist with the Albert Yahnke family. Alva Yahnke returned to Klemme with them Wednesday afternoon.

The Camp Fire Girls will have a Bake Sale at Wellemeyer's store on Saturday morning. Buy your baked goods for Sunday and help the girls go to camp.

Mrs. Sadie Turgsen and son, Vernon, accompanied by Mrs. Fred Kluckhohn and daughter, Thelma, drove to Mason City Friday. Mrs. Kluckhohn and daughter visited at Clear Lake.

Saturday evening for dinner Mr. and Mrs. E. J. Arnold entertained Mr. and Mrs. Chester Phillips and daughter, and Miss Wilda Green of Bocobel, Wis.

The Misses Helen Schaffer of Hokah, Minn., and Valberg Olien, of Emmons, Minn., drove down last Thursday for a visit at the Grandmother Schroeder home.

Mrs. Allie White enjoyed a visit last week from her sister, Mrs. Jas. Fry, husband and children, who were driving through from their home at Boulder, Colorado to Cleveland, Ohio for a visit.

Mr. and Mrs. Allie White drove to Hampton Wednesday and brought Allie's sister, Miss Mamie White home from the hospital. She is improving rapidly and will soon be able to be up and around again.

Mr. and Mrs. Henry Griffen and family, Mr. and Mrs Aug. Kabas of Belmond were entertained at the Henry Busse home Tuesday evening to help Mrs. Busse celebrate her birthday

Mr. C. C. Schaefer and daughter, Hilda, of Marble Rock drove over Friday and visited at the Emery Schaefer home and with other relatives. Doris Schaefer, who has been visiting in the community, returned home with them.

Dr. Carlson was over from Mason City Friday morning and held a tonsil and adenoid clinic at Dr. Geo. Zinn's office. The following underwent minor operations: Mrs. Nettie Wade's two boys; Eugene Kluckhohn; Mrs. Carl Wille and Esther Greimann.

Frank Carpenter brought in some stalks of timothy to the Times Office Saturday which he found in his garden. The timothy heads measured 10½ inches and the timothy was as high as his shoulders. If Frank's garden grows everything that big he must own the Garden of Eden.

Mr. and Mrs. John Day and Dorance, Mr. and Mrs. Wm. Smith and Mabel and their guests, Mr. and Mrs. Barr, were entertained at the Walter Ross home at Garner Sunday for dinner, in honor of Dorance and Mrs. Day's birthdays which are both this week.

Mrs. Henry Ludeke enjoyed a visit from her sisters, Mrs. Cheter Phillip, husband and baby daughter, Muriel Ann, and Miss Wilda Green of Boscobel, Wis. who came last Thursday. They returned home again Monday.

Sunday for dinner Mr. and Mrs. Henry Griffen entertained the following guests: Mr. and Mrs. Albert Hoeft of Garner; Mr. and Mrs. Henry Busse and family; Mr. and Mrs. Henry Kepper and family; Oral Gibson; Ray Brouwer; James Carlson; Mr. and Mrs. Chester Phillips and Miss Wilda Green of Boscobel, Wis. birthday.

The Duncan band gave a very fine concert last night, and a large number of people were in town to hear them. A. R. White and son Albert, and C. G. Waterman, played with the band last night The band will play every Wednesday night. We heard a lot of people say they enjoyed the concert very much, but would enjoy it far more if the street was roped off when the band got ready to play, as the cars passing by was very annoying, and perhaps to the band also. Another danger is that the small children run about the band stand and are liable to be struck by a passing car. We hope this bit of advice will be taken seriously by the city officials and that the street will be roped off during the concert next Wednesday night. Why take a chance of some child being struck by a car just to save some driver a few seconds more time?

Mr. and Mrs. Bert Crottinger and son, Howard, and Miss Lela Griggs of Des Moines, visited Sunday at the home of Lela's parents, Mr. and Mrs. Jay Griggs. Miss Lela has been employed in the Commercial Dept. of the Northwest Bell Telephone Co. in Des Moines since January, and has recently received a promotion in her work with a raise in salary. Her new work will begin July 1st.

FARM WOMEN TO ENJOY REST CAMP

FARM BUREAU WOMEN SPENT VACATION AT CLEAR LAKE

Enjoyed Talks, Stunts nd Fun At Odd Fellows Camp

The Rest Camp for the farm wo-en of Hancock and Cerro Gordo ounties at the Odd Fellows lodge t Clear Lake, broke up Sunday af-ernoon, after three days of discus-ions, stunts and fun.

Miss Barrette of the Mason City ibrary, gave one of the most inspir-ng talks on the program. In her ook review of "The Better Coun-ry" by Dallas Lore Sharp, she in-luded a very realistic description of e tragedy of being stuck in Iowa ud roads. As she sat on the grass the park, with the waters of the ke as a background, she related a ory of the Greek gods, which ill-strated the inborn desire to whisp-r our secrets to someone. She quot-d familiarly delightful little chil-ren's verses and also solemn uths, which demonstraetd her atement that bokos open the world us.

Miss Mary Bates, from Grinnell ollege, gave dramatizations and usical interpretations with victro- music. The toy band, which she rganized, demonstrated the musi-l qualities of common objects a-ound the farm.

"Aunt Elizabeth" On Program

"Aunt Elizabeth," of the Home-ead drove up from Des Moines turday afternoon, accompanied her husband, Mr. Cooke, editor the Homestead, and her eight nths baby. She seemed intense-interested in her family, whicn cludes six children. She told the rm women that the women of Des ines would give "their shirts" to ve the opportunities of study ich are offered to the farm wo-n of Iowa, through the Farm reau organization. She declared at the project work in sewing, trition, child welfare, etc., had ised the standard of living in Iowa re than many people realize.

Conducted Nature Study Hike

Mr. Nord Davis, of the Extension rvice of Ames, lead in a discus-n of the improvement of farm-ad and rural school grounds. At conclusion of his talk Mr. Davis k the women for a hike to study d name the surrounding trees. nday afternoon he showed color-slides of farm and school ground provement.

Y. M. C. A. Man Gives Talk

Mr. Gilman, of the Y. M. C. A. tne chapel service Sunday morn- He talked on the "Triple Life", up-going, or prayer life; the in-ng, or secret life; and the out-g life—the life of service to those und us. He urged everyone to ept responsibilities as they come, by doing things, we acquire pow-and knowledge.

Too Many Leave Our Farms

Mr. Russell of the Des Moines ister, reminded us that 10,000 s and girls of club age leave farms each year. Shall we endeavor to raise the standard living on our farms, so that our s and girls need not be ashamed bring their town friends to the n home?

Miss Schultz of the Y. W. C. A. charge of the swimming instruc

Every Evening Stunt Night

he original stunts on the porch eveing, and the afternoon of ide fun, helped the women to me acquainted.

yrtle. Johnston, home demon-tion agent, was kept busy Sun-afternoon registering the 4-H Girls, who will stay at the p until Thursday, which is y Day.

"Aunt Elizabeth" remarked, hall not feel apologetic for Iowa conditions, if we continue to use these privileges for self im-provement, offered us by our Farm Bureau organization.

OBITUARY OF MRS. MARLIN CRONER

Selma Dorothea Adele Croner, mee Schroeder, was born on the 22 day of January in the year of our Lord 1891, at Houston County, Minnesota.

She was baptized in the Evangelical Church of which her parents were members. At the age of five she came to Klemme, Iowa, with her parents, where her father, Mr. George Schroeder became the owner of a meat market. During her childhood days she attended the Klemme Schools and the Bible School of the Reformed Church. She was confirmed April 16th, 1905 by Rev. Albert Muehlmeier. Her memory verse was Gal. 2-20, "I live, yet not I, but Christ liveth in me." The confirmation text of the class of 1905 is John 15, 5, "I am the vine, ye are the branches."

She was united in marriage to Mr. Marlin Croner, August 8th, 1918. This union was blessed with one child, a daughter.

Mrs. Croner was ill during the last two years of her life, especially during the last half year. The last time she attended Church was on Christmas evening. Throughout her sickness Mrs. Croner carried her cross patiently, believing that God who had laid upon her a burden, would also help her to bear the same. She fell asleep Wednesday evening, June 19th, at 11.20 o'clock at the age of 38 years, 4 months and 27 days. Surviving her and mourning her death are her husband, Mr. Marlin Croner, her mother, Mrs. George Schroeder, her daughter, Dorothy, her brother Henry Schroeder, and many other relatives and friends.

Funeral services were held Saturday afternoon at the Reformed Church with Rev. Grosshuesch in charge Burial was made in the family plot at the Klemme Cemetery.

Card Of Thanks

We wish to express our sincere thanks to our many friends and neighbors for their help and kindness extended to us during the illness and death of a loved one, and for the floral offerings and sympathy shown us in every way.

Marlin Croner and daughter,
Dorothy,
Mrs. Geo. Schroeder and family.

7:45 p. m. Saturday, Senior Choir.
8:30 p. m. Saturday, Junior Choir.

Sunday School Picnic Friday

On Friday the 28th of June our annual Sunday School Picnic will take place on the Church Grounds.

At 10 o'clock in the morning the Bible School will give a short program. A picnic dinner will be served at noon and the afternoon will be spent in playing games and vsiiting. All members and friends of our congregation are heartily invited to spend the day with us.

The Bible School will continue one more week, closing on Friday, July 5th.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

All services next Sunday will be according to the regular schedule, both in Klemme and at Liberty, except at the evening worship hour when we will have lantern slides instead of preaching, showing the work of our church among the negroes of the South.

SPECIAL

This summer—Violin, Piano, and Guitar Lessons. Two lessons a week, one free, Tuesday and Friday, Wednesday and Saturday. 75c a week. Mildred Johnson, Klemme. tfc

CRAFTY CANNERS SERVE NOON DINNER

CRAFTY CANNING CLUB MET SATURDAY, JUNE 22

Real culinary ability and a knowledge of a well balanced meal was displayed in the work done by the memrebs of the Crafty Canning Club Saturday, June 22, when they gathered at the W. J. Hampel home fore a twelve o'clock dinner.

Each girl prepared before hand some food for the meal. Due to the number of girls present two tables were served. Nine club girls with Mrs. Griffen acting as hostess, were seated at the first table; the remaining girls served.

Seven club girls with Mildred Hampel as hostess comprised the second table. Everyone was well pleased with their cooking efforts.

The tables presented a pretty effect of correctly laid covers and a beautiful centerpiece of pink moss roses. The club members agreed that they had spent a very nice time together and decided to plan a similar event before the club year is finished.

Norma Wille represented the club at the 4-H club camp held at Clear Lake The next meeting will be on July 10th at the home of Henrietta Nelson.

WILL GRADE COUNTY ROAD LEADING OUT OF KLEMME

County Officials Say Work Will Be Started Within A Week

County officials have made arrangements to bring the county road leading west out of Klemme to a standard grade. They expect to begin this work within a week, weather permitting. The road will be graded from Highway No. 15 to the Rock Island railroad tracks in the town of Klemme. This grade will be of standard design and properly drained. County officials also expressed their views on having this stretch graveled when the road east from town is graveled, perhaps about the middle or last of July.

Farmers living along the county road east from Klemme will be pleased to know that the contract for graveling will be let within the next few weeks, and it is expected work will start immediately after the contract has been let.

FORMER KLEMME GIRL WEDS CHICAGO MAN

Mrs. Mabel Cullinan, daughter of Mrs. Mary Waterman was married to Mr. Axel Hoefgren, of Chicago, on Wednesday, June 26th.

Mrs. Hoefgren spent her girlhood days in Klemme, attending the local schools and graduating from the Garner High School. Later she attended the University of Iowa and taught in the Belmond high school. After teaching successfully she again returned to Iowa City and attended the University where she specialized in welfare work, and this has been her occupation in Chicago for the past two years. Mrs. Hoefgren is a pleasing young lady and has a host of friends here who wish her much happiness.

Mr. Hoefgren is a succesful young lawyer in Chicago and is also an Iowa graduate, we understand. The Times extends congratulations.

BIBLE CLASS WILL HAVE BIG PICNIC ON FRIDAY

The annual Sunday School picnic for the Bble School of the Reformedi Church will be held this week Friday. The pupils of the Bible School will give a program, beginning at 10:00 o'clock. This is always an interesting program and all should come early for this. At noom the big picnic dinner will be served.

The afternoon is spent in visiting, in games and sports of all kinds.

Members and friends of the Reformed Church are invited to attend the annual picnic

JULY FOURTH CELEBRATION AT BAYSIDE PARK

Clear Lake And Bayside To Stage Joint Celebration Thsi Year

Clear Lake and the Bayside Amusement Park at Clear Lake, Ia., will hold a joint celebration July 4. It is to be the greatest program of July 4th entertainment ever staged at Clear Lake and Bayside. OVERNIGHT HIKE ON SCOUT PROGRAM

SCOUTS STUDY FIRST AID AT INDOOR MEETING

Will Have Over-Night Hike As Next Meeting

Scouts of Troop 56, Klemme, are "brushing up" on First Aid and this part of Scouting was incorporated into the program Monday evening, which was an indoor meeting held at the Parish House. Dr. W. F. Missman, chairman of the Troop Committee, had full charge of the meeting, Monday evening, acting in the capacity of Scoutmaster. The meeting for July 8th will be in full charge of Troop Committeeman C. G. Waterman, as acting Scoutmaster for the evenig. At regular intervals other members of the Troop Committee will act in the same capacity.

Overnight Hike Planned

The meeting for next week will be an overnight hike, the first of the season. Camp will be located, tents pitched, wood gathered and everything in readiness by 5:00 p. m. to prepare supper in the open and to complete tests in outdoor, first class cooking, nature study, etc. A council fire program will be held in the evening. Fathers of scouts are invited to come along and have a good time. An early morning dip and breakfast and then the troop will come back to town.

Visit Camp Roosevelt

Camp Roosevelt is open every Saturday night, Sunday afternoon and evening and Monday and Tuesday nights to parents and visitors. Especially well worth seeing is the Court of Honor every Sunday afternoon at 3:00 o'clock; the opening Camp Fire on Tuesday night and the closing camp fire on Monday nights at 8:00 o'clock.

Klemme Boy Scouts will go to Camp Roosevelt for the fifth period, which begins July 16th, for one week of real Scouting. Plan to visit camp while the local boys are there if you can't go any other time.

Klemme Scouts plan to specialize in various handicraft works at C. R. this summer, such as leather craft, tooling, lacing, tin-can craft, plaster craft, hiking, tenting, cooking, life saving, etc. These special subjects will then be taught in troop meetings the coming year, scouts instructing other scouts in their special handicraft, so that all will master the several arts.

BIRTHDAY SURPRISE PARTY IS GVEN MRS. L. WESSELS

A number of relatives and friends planned a big surprise party on Mrs. L. Wessels last Sunday, the occasion being her birthday. All brought baskets of good things to eat and Mrs. Will Wenz brought a special treat with a large dish of home grown strawberries. At the appointed time the dinner was served and was enjoyed by all.

Those who were present were the following: Mr. and Mrs. Will Wenz; Mr. and Mrs. Martin Peterson and family, from near Ventura; Mr. and Mrs. Will Roswag from near Garner. These were present for dinner and in the afternoon the following people joined the party: Mr. and Mrs. Luke Wessels from Meservey, parnts of Mrs. L. Wessel; Mr. and Mrs. E. Esk and family from near Chapin; Mr. and Mrs. Ben Verkamt and son from near Meservey; Mr. and Mrs. George Wessels and son of near Klemme.

The afternoon was spent in visiting and a fine lunch was enjoyed by all. Mrs. Wessels received many fine and useful gifts and the day was one long to be remembered by all who were present.

MR. AND MRS. HERMAN GAST ON 1350 MILE TRIP

Enjoyed An Eleven Day Vacation In Minnesota And Wisconsin

Mr. and Mrs. Herman Gast and twin daughters, Lois and Lola, returned Monday evening from an eleven day vacation trip that covered 1,355 miles of touring in Iowa, Minnesota and Wisconsin. They enjoyed every day and every mile of the trip, which was really their first vacation since they were married Herman says it was such a fine trip that they are already looking forward to another vacation trip.

They were accompanied by Herman's brother, C. A. Gast and wife of Garner. They left Friday, June 14th and made their first stop at Ottowa, Minn., for dinner and then drove through the Twin Cities and stopped at Little Falls that night. The following day they drove thru the Indian Reservation up to Beltrami where they visited with Herman's brothers Otto and George, and also with Henry Beier, and two of Wes Lenz's brothers. Here they were joined by Herman's brothers and their wives and the party proceeded on together to Grand Rapids and Hibbin, where they visited the large open iron mines, and from there they drove to Duluth and in the evening took a twenty-five mile harbor trip on Lake Superior. This is a wonderful trip and they saw large ships being loaded with iron ore, the aerial ferry bridge, and the lights of the city reflecting out over the harbor waters. The next morning they drove across to Superior, Wisconsin for breakfast, and on up to Spooner, Wis., where they visited the Chas. Lenz family and stayed over Sunday. They drove on home the next day.

It was a fine trip and they thoroughly enjoyed it.

During their absence Kenneth, Mildred and Loran ran the farm and did a good job of it.

The trip was made via. Model A Ford and only one puncture marred the pleasure of the trip.

CITY WATER AUTOMATICALLY PUMPED BY ELECTRICITY

New Automatic Electric Device Now Keeps Even Pressure

For some time the Klemme Pumping Station has been operated with an electric motor and at a great saving in money expended for power. The save amounts to about a third to a half of the former way of pumping with an engine. However, the engine is still in use and is started occasionally to keep it in good running order for emergency use and giving a double pumping service.

A new automatic device has been installed which starts and stops the electric motor on the city pump. In this way the pressure is held evenly and the tanks are always up to pressure and well filled. This new device works perfectly and is a fine improvement. This method is also the most economical way of pumping and requires practically no attention.

With two large tanks, and a new automatic pumping installation, the town of Klemme has a reliable water supply at all times.

JOHN P. CHRISTIANS ON HONOR ROLL AT CREAMERY

The name of John P. Christians in some manner was omitted from the last list of cream checks published. His name might have been overlooked by the secretary, or at the Times Office in setting the list. However the case may be, it was not intentional.

John is one of the good dairymen of the comunity and is always on the list of high producers. His name should have been listed along with the other farmers in the $80 to $90 list.

At the present time there are over four hundred patrons on the Klemme Creamery list, and it is an easy matter to overlook a name in going through this long list of figures. However, the secretary, Pete Josten trys to get them all listed correctly for the Times. If a mistake ocurs The Times will be very glad to list the correct name and amount next time.

Still a Need for a "Safe and Sane Fourth"

By ELMO SCOTT WATSON

DESPITE the determined effort that has been made in recent years to reduce the number of casualties which seem to be an inevitable part of our celebration of Independence Day; despite all the warnings and cautions that are issued by the authorities before that day each year; despite the constantly increasing prohibitions on the use of explosives, the fact remains that America is still a long way from a "safe and sane Fourth," concerning, which we have been hearing so much in recent years.

Did you know that more people have been killed celebrating American Independence than were in acquiring it?

Did you know that Fourth of July celebrations in the last four years have taken a heavier toll of American lives than did thirteen of the most important battles of the war in which our independence was won?

Perhaps you did not, but here is the bitter history of Independence Day celebrations which annually takes the lives of both children and grown-ups—mostly children—blinds them, maims them, or inflicts upon them dreadful burns. In 1925 a total of 250 deaths resulted from Fourth of July celebrations. In 1926, 70 died; in 1927, 30 went to their deaths while celebrating our nation's birthday and last year the Independence Day toll of death was 209.

Official records of the Revolution show that 7 Americans were killed at the battle of Lexington; 49 at Concord; 31 at Princeton; 12 at Cowpens; 92 at the siege of Charleston; 145 at Bunker Hill; 11 at Ft. Moultrie; 72 at Monmouth; 51 at Stone Ferry; 20 at Stony Point; 30 at Bennington; 32 at Saratoga and 2 at Trenton. That is a total of 554 Americans who gave their lives in winning American liberty. From 1925 to 1928 some 559 Americans gave their lives, uselessly, in "celebrating" the winning of that liberty.

Take two Fourth of July celebrations at random and the records show that during one of them, 22 were killed and 437 were injured. For the other the casualty list read 135 dead, and 80 injured. The total for these two celebrations is 159 killed and 517 injured. Add to this the casualty list for any Fourth of July celebration since 1900 (about the time when this "safe and sane Fourth" agitation started) and the total will be greater than the losses suffered by the Continental army when it was defeated at the battle of Germantown or during the siege of Yorktown which ended successfully the American struggle for liberty. The sufferings of the Continentals during the terrible winter at Valley Forge have become traditional. Yet, since 1925, more Americans have lost their lives during Fourth of July celebrations than were lost among the soldiery who shivered in the cold on those bleak Pennsylvania hillsides.

Estimates based on government records show that there were 4,044 killed and 6,044 wounded during the six years of the Revolution, when there was scarcely a day in which there was not fighting of some character going on somewhere in the land. In comparison with that record, look at the figures compiled by the American Medical association and the American Museum of Safety in regard to Fourth of July celebration casualties. During the last 30 years—and that means 30 Independence days—there were 4,290 Americans killed in fireworks accidents and 90,000 injured. How lucky it was for our nation that George Washington's Continental army merely had to fight for American Independence! If that army had had to celebrate the winning of independence, according to our modern methods, it would have been wiped out of existence in a very short time indeed.

Now, these figures quoted above are for fireworks accidents alone and do not include the many deaths occurring after July 4 as a direct result of fireworks accidents or drownings and deaths from accidents to motor cars.

From 1903 to 1915 the American Medical association compiled statistics of Independence day fireworks casualties and found 1,862 deaths and 42,089 injuries were attributable definitely to fireworks. It was an average of 143 deaths and 3,237 injuries each year. In the celebration in 1909 of the "Glorious Fourth," 215 persons were killed and 5,000 injured. The fire loss that day was $1,000,000.

Last year the National Museum of Safety ordered newspaper reports of fireworks casualties from all parts of the country for June and July. The result:

Killed	161
Injured	2,205

Included in the list of dead were 52 childen less than five years old; 54 persons burned to death by fireworks or bonfires; 20 children burned to death by "harmless" sparklers, and 21 children died from eating fireworks. "Unloaded guns" or stray bullets injured 32 persons last year; 30 persons lost one or both eyes, and 300 persons suffered injuries to their eyes.

Recently the country was horrified at the casualty list of 125 in an explosion in a hospital in Cleveland, Ohio. It has also been horrified from time to time when a fire in a school, a tornado, or a flood snuffs out from 100 to 150 lives. Yet it seems strangely unconcerned that every year more than a 100 persons die and more than 3,000 are seriously injured in celebrating the "glorious Fourth." Fireworks are generally held responsible for the appalling death list while as a matter of fact, firecrackers, salutes, pinwheels, bombs and skyrockets account for not more than 5 per cent of the Independence Day casualties. Nor have all of the deaths been due to the explosions of these fireworks. Many of them result when sufficient care is not taken to keep fireworks from the smaller children. Many children have died from eating poisonous powder pellets, such as are used in dynamite canes. Even the so-called "safety" sparklers have proved fatal to youngsters who have eaten them, believing that they were candy.

But aside from the dangers of celebrating the Fourth there are other reasons why this is an occasion for a high mortality rate. The Fourth of July is the one national holiday in the year when the entire population drops all its workaday cares to swarm to the beaches, the mountains and other places of recreation. The result is an appalling number of drownings and deaths in automobile accidents which far exceeds the number recorded on any other day in the year. So it is apparent that although a great deal of good has been accomplished by those organizations which have sponsored this "safe and sane Fourth" idea and which calls upon every American to assume the responsibility of being a "safety engineer" on July 4, there is still much to be done in making the celebration of this day more in keeping with the spirit of the occasion. One hopeful sign lies in the fact that recreation is displacing fireworks to a certain extent. For the character of Fourth of July celebrations is changing, and for the better, according to a survey recently made by the Playground and Recreation Association of America. Without losing sight of the small boy and his zest for "a good show" on this holiday the association has sent out suggestions for what it calls constructive community programs which have been tried and approved by various cities and towns during recent years.

Substantial progress has been shown, according to this survey, in changing the former flamboyant Independence Day demonstration into occasions that, in some degree at least, interpret the local, state and national events from the standpoint of history and citizenship.

The Parent-Teachers' association has recommended a rural program as follows:

At 8:30 o'clock in the morning a band drawn on a truck moves throughout each neighborhood in town. A man with a megaphone calls out that games will begin at the school playground at 10:30 o'clock. These games are followed by a parade to picnic grounds, where there is a program of community singing and a speaker. A two-hour luncheon period follows. Then there are contests, baseball and story telling for children, followed by a patriotic pageant, the celebration concluding with a block dance.

The Playground and Recreation Association of America has emphasized that the paramount opportunities of community celebrations of the Fourth of July are:

"To recall with pride and reverence the courage, sacrifice and vision of the founders of American independence; to re-emphasize the principles of justice, democracy and tolerance upon which this government was founded and to encourage their continuance in the present and future; through appropriate ceremonies to dramatize the entrance into citizenship of native-born, who have recently come of age and of the foreign born who have just been naturalized; through games, sports, picnics, pageantry, festivals and other spectacles, through music and brief addresses, to bring neighborhoods and communities together in unified programs of recreation and entertainment suitable to the day; to promote safety, especially among children, by substituting wholesome and harmless recreation for the use of dangerous fireworks."

Is there still a need for a "safe and Sane Fourth?" Let the following Associated Press dispatch, dated July 5 of last year, answer that question:

The lives of 205 men, women and children were a nation's sacrifice to the celebration of its 152nd birthday anniversary yesterday.

Fireworks claimed their share of victims, as they always have since the United States first began observing Independence day with skyrocket, pinwheel and cannon cracker. There were eleven such deaths in the entire country, according to the Associated Press tabulation.

Lakes and rivers, however, exacted the heaviest tribute of human life on the holiday, 106 drownings being reported. Motor car deaths ranked next in number with 54. Heat took 12 lives and lightning 3, while 4 were killed in plane crashes. In addition there were 15 deaths attributed to other causes directly connected with America's observance of the Fourth.

Two densely populated areas—the middle Atlantic states and the midwest—had more that half the country's total deaths for the day. In the former there were 68 fatalities, which was 5 more than occurred in the midwest.

The mountain states and the northwest had the best sectional records, with five deaths in each division.

Everywhere through the midwest the temperature was high, contributing both to deaths by heat and by drowning. The midwest led the country in the number of drownings with 38, although the middle Atlantic area had only two fewer.

The airplane accidents were at Joliet, Ill., where a pilot and two passengers plunged to death when the wing of their plane snapped, and at Beaumont, Tex., where one was killed.

Three of the motor car deaths came in races, drivers being killed in Oregon, Pennsylvania and Wisconsin.

The number of persons injured, many probably fatally, ran into the thousands. Premature explosion of a truckload of fireworks at Lamar, Mo., injured 25 persons as 5,000 gathered in the public square to witness the display. In the larger cities the hospital list of persons injured in observance of the day ran into the hundreds.

Chicago, with an ordinance prohibiting the sale of fireworks, echoed all day with firecracker explosions and reports from police and hospitals indicated the number injured was probably greater than in recent years.

Current Wit and Humor

WICKED ANY DAY

"I hear Mr. Brown plays golf on Sundays," she remarked to her husband.

"Well, what of it?" commented the latter.

"Why, I think it's dreadfully wicked."

"Wicked! It's wicked to play the kind of golf Brown does on any day of the week!"—Montreal Star.

Same Old Game

She—In olden times, when a man had a favor to ask of a girl, he went on his knees.

He—Much the same nowadays. When a girl has a favor to ask of a man, she often does the same.

She (incredulously)—Goes on her knees?

He—His.

HOW SHE LIKE THEM

Flapper (emitting smoke rings)—"How do you like cigarettes, Miss Goods?" Miss G.—"Between a man's lips, Miss Flipp."

Gone Boom!

My bonnie leaned over a gas tank,
The height of the contents to see.
He lighted a match to assist him—
"Oh, bring back my bonnie to me."

Take It or Leave It

The Installment Buyer—How much is this hat?

Clerk—It is $10 cash.

Mrs. I. B.—And how much by installments?

Clerk—Fifteen dollars. Ten dollars down and one dollar a week for five weeks.—The Outlook.

A Guilty Conscience

"Three months ago I caught a fish that weighed 40 pounds. I don't remember just when it was exactly, now."

"July."

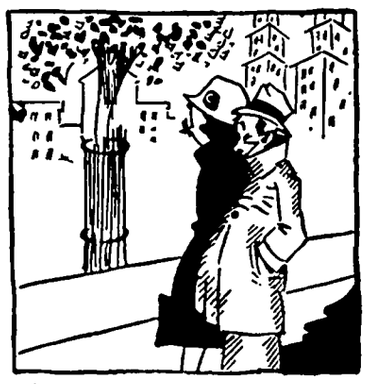
"No, sir. I was telling the exact truth."

Process of Elimination

Professor of Astronomy—I believe I have discovered a new star, Miss Brown.

Miss Brown—How interesting—but you won't be sure, I suppose, until you've counted all the others?—London Opinion.

FRIED CRISP WITH EGGS



Miss Belle Letters—How do you like Bacon, Mr. Smith.

Mr. S. (more given to eating than reading)—Fried crisp with eggs, Miss Belle.

Traveling to the Light

Into the cloud there comes a rift
That shows the sun's bright ray,
When some one gives a friend a lift
Along the stormy way.

Equipped for the Job

The Boss—I can't take you on as a collector. You have a criminal record as a stickup man.

The Applicant—But think of my experience. Day or night, with my little gat, I always got the money.

The Gallery

Lord Blessus—Yes, we've been fox hunting. Did you like the sport?

Mr. Eaglebird—It looked to me like the hounds were doing all the hunting while you fellows were just following to look on.

Paid for Their Own Comfort

"How could you afford to send your daughter abroad to continue her musical education?"

"Huh! It didn't cost me a cent."

"How does that happen?"

"The neighbors sent her. I didn't, though I wanted to, I'll admit."

Whew!

Wife (playfully)—Guess who this is!

Husband (anxiously)—Edna?

Wife (furiously)—Edna ! ! !

Husband (quickly)—Guess who this is!

Kill All Flies! DAISY FLY KILLER
Placed anywhere, kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Can't spill or tip over. Will not soil or injure anything. Guaranteed. Insist upon having DAISY FLY KILLER from your dealer or send $1.25 to HAROLD SOMERS, Brooklyn, N.Y.

IN THE GRAND STAND

(© by D. J. Walsh.)

MMA WILCOX had paid her quarter and climbed into the grand stand because she was too tired to stand up another ute. She had come to the fair ely for the sake of bringing the ldren, not because she had any ging for it herself. Fairs, like many er things, had lost their pleasur- e significance when her husband d, leaving her with four boisterous 's and girls to bring up alone. The time she had been here Jake had ught her, and she thought of that by day now as she sat on the hard gazing down upon the crowd be- and trying to follow the doings of twins and Merle and Arthur.

mma was a small woman with a ently smiling expression, lovely hair which was always a little un- and blue eyes that seemed exact- o match the faded gingham of her e-made frock. In her lap were purse, half a bag of popcorn and quawker which the twins had com- nded her to keep for them until nted.

flash as of a mirror turning in sun caught her eye and she ced toward the entrance to the unds where through the gates down little hill came a great glittering flonking for room it moved down track to the parking space which at one side of the grandstand.

The Lull's new car!" Emma ught. "And Lucia is in it driving ll alone!"

he sight of the large, superb figure the uncut mohair cushions had n her a fresh sense of the inequal- of life. For she and Lucia Lull started even twelve years back. eed, it might be said that the pros- ts were slightly in Emma's favor, at that time Jake Wilcox had med a young man of mightier mise than George Lull. But some- the fortunes of the Lulls had n while those of the Wilcoxes had lined. George Lull had invested in ething that had made him rich rnight, while Jake Wilcox died, ing his family with about half as h as was needed to support them. n consequence Lucia Lull drove a 00 car with the inexpert grace of mid woman, while Emma Wilcox ked in shabby shoes which she had earn for herself, and in the hard- way, too, for with four children o for, taking boarders was no joke. ia, doubtless, had driven over to fair grounds because she had thing else to do, but Emma was e because her children found in fair n great playground, and she determined to deny them no sure that was innocent and rea- able.

Then Emma, after a glance at Lucia 's car, looked back to the place re her children had been she found twins missing from the little fa- ar group of four. Anxiously her e scanned the scene before her in y direction, then with intense re- she saw them approaching the nd stand, trotting along, clinging d to hand in spite of their eight rs. Bob and Bab! Dressed as near e as boy and girl may be. She ed at the dear, quaint, little fig- . They were coming to the grand d to find her, wanting another el apiece, may be. She began to ble in her purse and had succeed- in locating the coins by the time joined her.

Well?" she said, straightening 's hat and Bab's hair ribbon.

t's going to rain," Bob said.

t's going to rain hard!" Bab ngthened her brother's assertion.

mma, assured by the blue sky be- her, merely said:

Then you better stay here with me, rs. Are Merle and Arthur coming, "

They're watching the man with the ch Flirts. You pay a nickel and w a ball—"

low rumble of thunder interrupt- he child.

Dear me!" Emma said. "That does d naughty, doesn't it? But the is all blue."

ou can't see it here," Bob said. had taken his station one side of while Bab did the same on the r side.

No. It's all behind the grand stand, ng down Third Brook," Bab nded.

Well we shall be all right here. It pass away, and if it does come on't last long" Emma said com- bly.

he instant darkening of the air, her crash and snap of lightning lit a downward rush of raindrops sent people flying to shelter. Em- aw Arthur and Merle fly toward long building where the poultry housed. They would be safe and here. A procession of people were ing the grand stand, whipped into y by the breathless downpour. a heard a voice:

et me in here, please?"

e looked up into Lucia Lull's face. ow pale she is!" Emma thought, then remembered that when they been girls in the same set Lucia's of thunderstorms had marked her many a good laugh. Why hadn't stayed in her car? But of course s like her to leave it and run e grand stand for shelter.

me sit on mamma's lap and room for the lady," Emma said took Bab upon her lap, while in ress and confusion Lucia dropped Bab's place. She was thinking: "Lucia hasn't really spoken to me for years, not since she got lifted to her present station. I wonder if she will now. I don't care. I shan't wait for her to do so. Poor thing! She is horribly frightened—and it is terrible."

It was appalling. Bab hid her face in her mother's shoulder as the storm broke with a rage of elements. If the wind had turned every soul in the grand stand would have been drenched although that was not the worst of it. Some one began to sing and others to beat time. A sharp crack interrupted and some one cried: "Sit still!" Emma felt a creepiness of apprehension. Suppose the old building, unused to such a heavy weight, should collapse? The best thing to do in any case was to "sit still."

"It's leaking right down upon me!" Bab said.

It was. The rain had forced its way through the roof in a thousand places. Emma raised her umbrella and hoisted it over her brood. Then she saw a trickle descending upon Lucia's silk-clad shoulder. She saw also that Lucia had closed her eyes to shut out the glare of lightning, and that her hands were shaking with nervous fear.

Instantly Emma shifted the umbrella over the woman beside her, then, as a blast of thunder seemed tearing the earth to pieces, she put her arm about Lucia.

"It will soon be over now," she said. "Bob, how many did you count between the flash and the report?"

"Only three that time—Oh! Now I counted six!" The gallant little fellow cried.

Lucia, moaning, leaned close to Emma's comforting embrace.

"Oh! If I only stayed at home," she said. "I don't see what made me want to come. But I was lonely and—"

"I counted ten that time!" exclaimed Bobby.

Lucia made an effort "Why, you are giving me all the umbrella!" she said. "And you are getting wet, all of you. Here! I can't take it, Emma."

Emma smiled.

"We haven't anything on that will spoil. Your dress will be ruined, Lucia."

Bab, trying to be hospitable, held out the bag of popcorn, and to Emma's amazement Lucia reached in a white hand and took a few grains.

"Mamma," Bob said, "the hot-dog man ran away and left his stand and the hot dogs are all burning up."

"He will come back now. Look! There comes the light!" Emma said.

The storm had gone on up the valley. The rain dwindled into drops like a hose that is shut off. People began to appear, the band struck up and Arthur and Merle came splashing through the puddles toward the grand stand to join their mother.

"Are you going home now, Emma?" Lucia asked. "If you are I will take you in my car."

"Thank you, Lucia, but there are so many of us, and the children—"

It was Lucia who now put her arm about Emma while her eyes rested wistfully on Bab's charming little face.

"I envy you these children—and your courage—and calm self-reliance in a time like this and—everything, Emma," she sighed. So it was that the big tires of Lucia's car splashed through the puddles instead of Emma's worn shoes. She sat beside Lucia, quietly happy. She had found her old friend again and she was sure from Lucia's manner that she should never again lose her.

Explanation of Birds' Keen Sense of Flight?

For many years scientists have puzzled over the mysterious sense that enables birds to guide their flight accurately over long distance in all kinds of weather. Migrating birds sometimes fly tremendous distances. The Arctic tern, for instance, flies from the Arctic to the Antarctic every year—completely around the world—and the golden plover flies from Nova Scotia to Venezuela, some 2,400 miles, although it is out of sight of land during the whole trip. Fogs, storms, cross winds, do not prevent them from reaching their destination, and they frequently return to the very tree they left the year before. Homing pigeons have been known to find their home from a point as distant as 1,500 miles.

The newest theory on the subject comes from John T. Nichols of the American Museum of Natural History, who suggests that a tiny radio compass may be a part of the bird's brain. Aviators have devices which enable them to steer their plane along a magnetic beam emanating from a radio station by means of signals which inform him when his plane is off the course. It is possible that birds have some natural sensitiveness to magnetism which would keep them flying in a straight line through any kind of weather.—New York World Magazine.

Perpetual Motion a Myth

No perpetual motion machine has as yet been invented. The law of the conservation of energy is an absolute barrier to all schemes for obtaining by mechanical means what is called "perpetual motion," or a machine which will do an amount of work greater than the equivalent of the energy, whether of heat, of chemical combination, of electricity, or mechanical energy, that is put into it. Such a result would be the creation of an additional store of energy in the universe which is not possible by any human agency.

Concentration

Concentration simply means being oblivious to outside influences of all sorts when you are in competition.—American Magazine.

POULTRY

TURKEYS RAISED IN CONFINEMENT

Better Results Secured Than Where Poults Are Free.

In times past many people felt that turkeys could not be raised in confinement but that they should have a large area over which to range. This contention has changed now, however, and in several localities turkeys have been raised in confinement with a great deal of success.

The Minnesota and Nebraska experiment stations have been among the leaders in investigational work in turkey production, in recent years, with some such work being done at other experiment stations in various parts of the country. At both of the stations mentioned it was found that better results could be secured if the poults were raised in confinement than if they were allowed to range over a large area, the method once followed in turkey production. In view of these findings, those who wish to go into turkey production, either on a small or large scale, are no doubt interested in the practices to be adhered to in this method of turkey raising.

The United States Department of Agriculture has found that turkey production has declined consistently since 1890, in the face of an increase in the production of all other lines of poultry and live stock. This decrease in production cannot be attributed to a decrease in demand, for the demand has always exceeded the production, or at least, there has never been a surplus of turkeys on the market with which to contend.

This decline in turkey production can be explained almost altogether by the fact that farmers have always felt that turkeys should have unlimited range. Because of following this method of production the turkeys came in contact with the chicken yards, to the detriment of the turkey business. The disease problem among turkeys which come in contact with chickens is great enough that it has tended to cut down on production among farmers and farmers' wives who have, in the past, raised turkeys and chickens together on the same range.

In the Nebraska investigations it was found that the old method of raising the turkeys on the open range with natural hatching and brooding by turkey hens was not successful. On the other hand, artificial brooding and hatching, by means of which feed and environment could be kept under the control of the producer, was found to yield very good results.

Electric Brooders Are Clean and Convenient

The New York experiment station found electric brooders very satisfactory except in extremely cold weather, when this type of heat did not warm up the space in the house away from the brooder. Like electric incubators, brooders heated by electricity are clean, easy to regulate and very convenient.

Individual farm light plants extend the advantages of this electrical equipment to farms which are not located on an electric "high line." Because many farm plants are equipped with both generator and battery power, the supply of current for the incubator or brooder is constant and reliable.

Aylesbury Duck Meets Favor as Market Fowl

The Aylesbury duck comes from the Vale of Aylesbury, from which fact it derives its name. It is the market duck of England. It has a long body, deep keel, and legs placed a little behind the center of the body.

The Pekin is Chinese, and is the most popular market duck in America. Its legs are set far back, giving an upright carriage.

While the Indian Runner is not a popular market duck on account of its small size, its flesh is tender and palatable, and its foraging habits give it a game quality that will make it in demand with epicures.

Watch Young Birds

Watch young and delicate birds very closely as they are most susceptible to the deadly roup germs. The same is true of fowls suffering from common cold or catarrh. The throat and nasal passages, being already sore and inflamed, are easily infected. Sick birds should always be isolated. They can be much more effectively treated when away from the flock and they cannot contaminate the healthier ones if the disease should prove to be contagious.

Don't Hurry Pullets

It is best not to hurry the pullets into heavy production. Allow them to come into production normally without feeding highly stimulating feeds. Fewer "blow outs" will occur when production is not forced on the start. Feed two parts of grain to one part of mash. The pullets will continue to gain in weight and still receive enough protein to encourage the egg organs to function without interfering with growth. Any change in feed is to be discouraged.

Waste to Market Poor Vegetables

If Not Good When They Leave Ground Never Will Be Any Better.

Vegetables that are not good when they leave the field will never be any better, according to Paul Work of the New York State College of Agriculture. It does not pay to put poor vegetables on the market. For the good of both the producer and the consumer poor stuff should be plowed under for fertilizer or fed to live stock and not dumped on the vegetable market.

Grading Pays.

Careful grading of vegetables pays. When the produce merchant or the customer sees poor specimens of vegetables or fruit in a carload or a basket, he judges the whole lot to be poor in quality. The buyer assumes that there is more of the worst than he sees, and he therefore uses the defective specimens to make the seller lower his price. The cost of marketing is so great that low grade vegetables are seldom worth shipping or taking to market.

Less Storage.

Storage of vegetables is less important than formerly because shipping under refrigeration has improved. The movement of products to market over long distances and during all seasons of the year has reduced the need for long time storage. However, the fluctuation of prices from day to day and the eagerness of merchants as well as growers to catch the best prices has increased the use of storage plants for short periods. Refrigerated storage is used more because it keeps the vegetables in the best condition. Burying vegetables in pits and other forms of outdoor storage are rapidly going out of use.

Gently Sloping Hill Is Best Orchard Location

Never plant fruit trees or small fruits in low places with higher ground surrounding them. Such places are altogether too frosty to be safe for fruits. The best location is on a gently sloping hill where there is a free movement of air. This, in general, should be on the eastern, or southeastern or southern side of the slope in order to take advantage of the protection against western and northwestern winds.

A southern slope has a little disadvantage in that it warms up a bit earlier in the spring than a northern slope and may make a day or two difference in blossoming time. This, of course, increases slightly the hazard from frost, but the benefits accruing from the warm, sheltered side of the hill are much greater than the danger.

Brood Sows Should Be Given Lots of Water

Brood sows should be given very little grain for 24 hours after farrowing but should have all the water they desire. The first feed given after farrowing should be limited in amount and fed as a thin slop. The amount fed is increased gradually as the pigs need more milk, until in 10 or 15 days the sow is being fed all she will eat. The brood sow's ration during the suckling period should be slightly laxative and provide for increased milk production to meet the needs of the pigs.

Plowing Under Rape

Rape does not take nitrogen from the air or add anything to the soil which it does not take from the soil in making its growth. The advantage gained in plowing under a crop of green rape lies in the added vegetable matter which goes back into the soil. The decomposition of the vegetable matter reacts on soil particles and liberates plant food so that a better crop is likely to follow. However, you have added no fertilizer to the land.

Farm Notes

Alfalfa hay supplies cheap protein.

* * *

A successful farm cannot be located by observation alone.

* * *

Sanitary conditions are necessary to prevent diseases on a farm just as in a hospital.

* * *

Co-operative marketing of farm products is one way of increasing the farmer's bargaining ability.

* * *

Late fall plowing will destroy some of the hibernating worms, but it is not as effective as the earlier plowing.

* * *

Oats can be made into reasonably good silage. However, the oats should be cut before the stems have become woody.

* * *

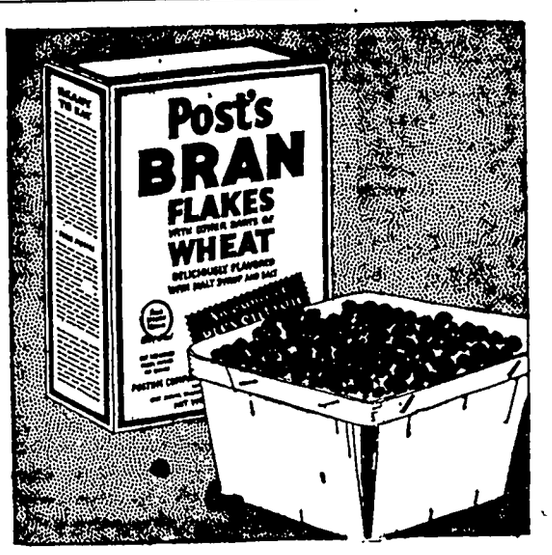
Don't neglect to thin the radishes to an inch apart if you want early radishes of uniform size and quality. Don't make them fight to live.

* * *

Sturdy, healthy, well-hardened plants that have been transplanted at least once are generally superior to ordinary unhardened plants.

* * *

When cutworms are found to be working on plants, quick action must be taken to stop them. They can destroy a stand of crop in a short time.



"Now you'll like bran"

Millions choose this ally against constipation because it is so effective and the bran flakes are so delicious . . . . .

POST'S BRAN FLAKES

Pigs Outwitted

When pigs refuse to have their pictures taken, they can be set in position like a group of ten pins on a bowling alley. A contrivance designed by Gus Bohstedt, animal husbandman of the University of Wisconsin, provides a large frame of wood and galvanized iron with individual pens. The camera is focused in the frame and the hogs are driven into their pens. When everything is ready the pens are lifted into the air and the camera is snapped before the animals move, eliminating undesirable poses and oft-lost patience.

Odd Hiding Place for Money

While cleaning old rubber tires before they went into a regenerator at a Hanover (Germany) factory, a woman employee discovered in one of the tires a small package, neatly tied, containing $265. Both the woman and the factory owner claimed it. The judge decided in favor of the finder, unless the American who, to judge from the wrappings of the package, lost it, should turn up to claim it.

Constituents of Honey

Honey contains 18 parts water, 73 parts carbohydrate (including 70 parts sugar and 2 parts dextrin), .02 mineral substances or 4 parts of pollen grain, gum, bee glue, formic acid and volatile oils and other flavor substances.

Question of Degree

"Was Maude in a bright red frock at the dance?"

"Some of her, darling, some of her."

Organizations for self-improvement are worthy; organizations to improve others not so good.

We don't call confidence in one's ability to accomplish what he undertakes, self-conceit.

When self-confidence goes to seed, it becomes vanity.

Erudite

"Can you spell cat?" we asked of the little Boston boy.

"Yes, sir, and I can do conic sections."

AFTER OPERATIONS

"I was three times under an operation and I was very weak and nervous and could not eat. I suffered for ten years. I learned about Lydia E. Pinkham's Vegetable Compound and my husband bought me a bottle. I felt a little better and he bought me two more. I had the Compound in my home for two years and took it all the time. Now I feel strong and can do anything."—Mrs. A. Michalk, 5443 Mitchell Ave., Detroit, Michigan.

Lydia E. Pinkham's Vegetable Compound

W. N. U., DES MOINES, NO. 26--1929.

Kill Dangerous Flies Quicker!

Clean smelling Flit vapor, from the handy Flit sprayer, kills flies *quicker!* It contains more insect-killing ingredients, though harmless to humans and stainless to fabrics. That's why more people use Flit. Money back guarantee. More for your money by the quart.

NOTICE TO BIDDERS

Sealed bids will be received at the office of the County Auditor, Garner, Iowa, until 1:30 P. M., July 9th, 1929 for gravel surfacing and incidental work on the Klemme-Ventura road and the Goodell-Meservey road.

Bids will be opened at the above office promptly after the time for receiving same has closed.

A certified check or cashier's check, amounting to five (5%) per cent of the bid, made payable to the County Auditor, shall be filed with each bid, which in case of the bidder receiving the award, should he fail to execute a contract and file a bond within ten days after the acceptance of his bid shall be retained by the County as liquidated damages.

The successful bidder will be required to file a bond for seventy-five (75%) per cent of the contract price executed by a responsible surety procured from a resident agent drawn to protect the County and sub-contractor and such as will be approved by the Board of Supervisors.

Specifications for the above work may be seen at the above office, or at the office of the County Engineer, Garner, Iowa.

Payment will be made from the County Road Fund.

Tender will be received on the following items:

Klemme-Ventura Road

7500 cubic yards of gravel screen, load, haul, 1 mile.
48750 units of additional ½ mile haul.
3000 cubic yards of stripping pit.

Goodell-Meservey Road

8200 cubic yards of gravel screen, load, haul, 1 mile.
39750 units of additional ½ mile haul.
3000 cubic yards of stripping pit.

The gravel for the Klemme-Ventura road will be taken from the pit in the NW¼ of section 31, Ell Township.

The gravel for the Goodell-Meservey road will be taken from the pit in the SE¼ of section 20, Avery Township.

Work must be commenced by August 1, 1929 and must be completed by October 1, 1929.

Published by order of Board of Supervisors.

CHRIS JACOBS,
County Auditor.
Garner, Iowa, June 26, 1929.
(Publish June 27, July 4, 1929).

PUBLIC NOTICE

To Whom It May Concern:

You are hereby notified that at 10 o'clock A. M. on the 9th day of July, 1929, at the Court House in Garner, Iowa, there will be conducted a hearing on the proposed plans and specifications and proposed form of contract, which have been heretofore adopted by the Board of Supervisors of Hancock County, Iowa, and on the cost of and necessity for the following public improvement, the estimated cost of which is $12,020.00 viz: Gravel Surfacing the Klemme-Ventura Road and the Goodell-Meservey Road.

At said hearing any interested person may file written objections to the proposed plan, specifications or contract form or cost of such improvement and may be heard orally in opposiiton thereto, but objections must be in writing to constitute a legal basis of appeal.

Dated at Garner, Iowa, this 26th day of June, 1929.

CHRIS JACOBS,
County Auditor,
Hancock County, Iowa.

Miss Myrtle Irving, of Rockford. Ill., was an over Sunday visitor at the home of her parents, Mr. and Mrs. Clint Irving.

KLEMME LOCALS

Marlin Croner's mother, of Garnet, Kansas, arrived Friday night to attend the funeral of Mrs. Marlin Croner. She will visit with Grandma Schroeder for a time and will then go to Chicago to visit with her son there, before returning home.

Mrs. Henry Schroeder, of Chicago who came with her husband and son to attend the funeral of Mrs. Marlin Croner, is visiting at the home of Grandma Schroeder for a week or more, while Mrs. Lena Schroeder and daughter are at the Rochester clinic.

The adult class of the Methodist Sunday school gave a picnic at the Eagle Lake State Park in honor of Mr. and Mrs. Leonard Sampson and family, who are moving away from this community. Mr. Sampson is working at Decker's Packing Plant at Mason City and the family expects to move to Mason City soon.

Dr. and Mrs. D. F. Bradshaw and son, Carl, of Britt, visited at the home of Mrs. P. M. Griesemer and Mrs. John Gruetzmacher Sunday. The Bradshaw family recently moved to Britt from Chicago. Mrs. Bradshaw is a cousin of Mrs. Gruetzmacher and was formerly Miss Rose Herz.

Several from here took in the Epworth League Convention at Algona last Friday and Saturday Those who attended from Klemme were: Rev. and Mrs. H. E. Whyte; Harvey Nelson; Reva Elder, Oral Gibson; and Blanche Gimer. Oral entered the Bible Story Contest and easily won first place. He will next compete in the convention at Lake Okoboji next month.

Emil Barz and son. Max, Mrs. Lena Schroeder and daughter, Adala, and Bert Mathews drove to Rochester, Minnesota Sunday. Mrs. Schroeder and daughter remained in Rochester as the former was going through the clinic to seek relief for neuritis in her arm, which has troubled her for some time.

Miss Alice Carolus is at the hospital at Iowa City receiving treatment. Paul Grange took her to Clarion from which place she took the train. Miss Carolus has been in poor health since her accident last spring when she was severely burned when a brooder stove blew up. Her friends hope that she may be benefited at the hospital.

A Mr. Parsons at Belmond met with a serious accident last week. Mr. Parsons was working on the rebuilding of the factory which burned down. He was using an electric nail-driving outfit and in some way the machine struck him on the head, knocking him unconscious and in this condition he fell forty feet. He is in a critical condition Miss Ely, who teaches piano in Klemme. has her studio at the Parsons home at Belmond.

Edwin Bock took his sister, Miss Stella, to Des Moines Sunday where she will attend the Capitol City Business College for three months. She will then return home for a few weeks visit. With her uncle she will then drive through to Los Angeles tos pend the fall and winter and will attend college there. Miss Stella has made an excellent record teaching school. However, she believes there is a better opportunity in the commercial field and will specialize toward that end. We wish her much success and predict that she will make good in her new line of work. Mr. and Mrs. Will Barz and Mr. and Mrs. Eric Clarke of Garner were also at Des Moines Sunday visiting the Barz girl and Edwin and Stella joined them and all enjoyed a picnic dinner.

RELATIVES GATHER AT WILLE HOME FOR PICNIC DINNER

Mr. and Mrs. R. W. Dinzy of Waterloo, Iowa Saturday morning for a visit with Mr. and Mrs. Henry Wille. Mr. Dinzy is a brother of Mrs. Wille. So in their honor there was a big family gathering Sunday and a picnic dinner was served at the Wille home.

Those present were: Mr. and Mrs. Ernest Palmby and family of Vernon Center, Minn.; Mr. and Mrs. Fred Barz and family; Mr. and Mrs. Albert Barz and family; Mr. and Mrs. Lesley Hartbeck and family; Mr. and Mrs. Harold Leitzinger and family; and Mr. and Mrs. Walter Rosendahl.

All brought well filled baskets of good things and everybody enjoyed the big dinner and the social gathering and visiting after dinner.

The crowd was joined By Mr. and Mrs. John Bock and Mitchell who came to visit in the afternoon.

WERE HERE TO ATTEND THE MRS. CRONER FUNERAL

A large number of relatives and friends from out of town and a distance were here Saturday to attend the funeral of Mrs. Marlin Croner.

The following relatives and old friends of the family were present:

Mr. and Mrs Henry Schroeder and son, Albert, of Chicago.

Mrs. Elizabeth Croner of Garnet, Kansas.

Mr. and Mrs. Albert Meyer and son of Dakota.

Mr. and Mrs. Alfred Meyer and baby, and Miss Martha Meyer, of New Abion, Iowa.

Mrs. Fred Schroeder, and Mr. and Mrs. August Schroeder, and Mr. and Mrs. Freedman Schuldt and two children, of Caledonia, Minnesota.

Mr. and Mrs. Verner Gross, and Mr. and Mrs. Lloyd Gross and son, George, of Algona.

Mr. and Mrs. Will Barz, of Garner; and Mr. and Mrs. Fred Shipley, of Belmond.

MISSIONARY SOCIETY WILL MEET TUESDAY, JULY 2nd

The Women's Foreign Missionary Society of the Methodist Church will meet Tuesday, July 2nd at the home of Mrs. John Josten. Please note the change in date.

All extension members are invited and urged to attend this meeting. A special program is being planned.

Anyone having any old sheets or any other material which can be used for bandages are askde to bring it with them. to thsi meeting.

Implement and Lumber
NEWS
Formerly Called "The Northern Lights"

Take a look at the display of implements just west of the Wellemeyer Dept. Store.

The following have been delivered Loaders the last day or two:

Albert Kraus
J. J. Tebben
C. J. Bode
D. Swalve.

By the way; we can place a second hand side delivery rake.

It will pay you to have the clover and alfalfa absolutely cured before putting it in the barn. One of the first and essential things to do after cutting it is to use a Side Delivery and Tedder—you won't have any troubel with it heating if dry when put up.

IT WON'T BE LONG NOW before it will be time to start wondering if the old binder is going to perform thru this season of cutting or not. Don't wait too long; get the repairs ordered and if you are thinking of getting a new one come in. We can make it possible for you to get a new binder.

THE NEXT APPEARANCE OF THE IMPLEMENT AND LUMBER NEWS WE WILL TRY AND MIX UP A FEW WISE CRACKS—WE FEEL INDISPOSED AT THIS WRITING!

We'll bet this nice gentle rain will be the cause of some one wanting a side delivery and tedder. Let's see!

WE ARE GOING TO TELL YOU some news in our corner of the paper from time to time.

Taking on the Case Line of Implements means something to this **community. We,** The Northern **Lumber Co. have** been in Klemme **a good many years,** doing business **year after year with** the people of **this community and** we are going to **continue, not only** in the Lumber **business, but also** in the Implement **business. We are** here for service. **We are here to** back up what we **sell. Your past** experience and **dealings with** the Northern Lumber **Co. should not** make it hard for you **to do business with** us in the Implement Line.

We will soon be unloading a car of Barb Wire, Woven Fence and Post., Don't forget when you want anything along this line, we will have all the different specifications.

THERMOFILL Dry Insulation for **Residences.** This is not something new. It is a proven insulation and if you want to cut your coal bill 15 per cent a year, let's get together. The new house being put up by Ben Coobs is going to be insulated with this DRY INSULATION. It comes in convenient 50 lb. sacks, easily handled. It is put on between the attic joists about 2" thick and this will check approximately 60 per cent of your heat loss. It also keeps the heat out during the hot summer months. Ask us about it. See it after it is applied, make a test on one room by recording the temperature before applying and after. It will keep the summer heat out—it will keep the furnace heat in when its cold.

Klemme Food Market

Mr. and Mrs. Fred Kothenbeutal entertained a lot of relatives and friends at their country home Sunday. Those present were: Mr. Roy Kothenbeutal (brother of Fred) and his lady frieud, Miss Bessie Albee of Rochester, Minn.; Herman Kothenbeutal and family of Hamptom, and August Kothenbeutal and family of Hampton.(These men are cousins of Fred.) Wm. Brand and family of Kanawha; and Manville Hegg and family of Kanawha. A fine time and a big dinner was enjoyed by all.

The piano recital given by Miss Gertrude Ely's pupils at the M. E. Church Tuesday evening, drew a large crowd. Miss Ely's pupils displayed real skill and their numbers were greatly enjoyed by all. Miss Ely is giving up her class here sa she will go east agian to persue her tudy of music. Last year she studied abroad under noted European artists. Miss Ely is a teacher of rare abildty and will be greatly missed by her pupils here and at Belmond, where she has a large class.

Sunday Mr. and Mrs. C. F. Keraus entertained a lot of company for dinner. Those present were Mr. and Mrs. C G. Waterman and Marian of Klemme; Mr. and Mrs. Tom Mitchell of Swea City; Mr. and Mrs. Sam Nachazel and son Clarence, Mr. and Mrs. Joe Nachazel and son Laurence; Ernest Nachazel and children and his mother; Will Nachazel, wife and son; and Mr. and Mrs. Ed. Kaplan and children, all of Alden, Iowa. Mrs. Nachazel is a sister of C. F. Keraus.

As Henry Schroeder and son, Albert and Harry Sandry, were on their way to Chicago Sunday their car was run into by another at or near Manchester, Iowa. The car was damaged to such an extent that it had to be left at Manchester for repairs and the men took a train for Chicago. No one was injured ,except Mrs Sandry who received a few slight cuts on one arm. The fenders of the car were smashed and other parts damaged, but not beyond repair.

ESTRAY NOTICE

A black horse, weight about 1,000 pounds, white face, came to my place. Owner may have same by proving property and paying cost of keep and advertising. Tom Roths.

NEWS REVIEW OF CURRENT EVENTS

Congress Recesses, the Farm Aid and Reapportionment Measures Are Signed.

By EDWARD W. PICKARD

WITH the farm aid bill signed by President Hoover and $151,500,000 appropriated to begin putting its provisions into operation, and the census and reapportionment measure also made law by the President's signature, congress quit work for the summer in the middle of the week. The senate recessed until August 19, when it will reassemble to begin debate on the tariff bill which its finance committee is expected to have completed by that date. The recess of the lower house is to extend until September 23, and between that day and October 14 it intends to hold only perfunctory sessions twice a week on the supposition that the senate will not have passed the tariff measure before the latter date.

Senator Borah of Idaho made a strong fight to have the tariff revision confined to agricultural and directly related commodities and in the course of a heated debate asserted that his resolution to that effect was in accord with the President's views and the primary purpose of the special session. Most of the regular Republicans and seven Democrats, however, stood firm for more general revision and succeeded in beating the resolution by the narrow margin of one, the vote being 38 to 39.

JUST before recessing congress gave its approval to President Hoover's recommendation that France be relieved of the necessity of paying the $400,000,000 due August 1 for the surplus war supplies it purchased after the close of the war, on the condition that the Mellon-Berenger debt funding agreement be ratified before that date by the French parliament. Under the terms of that accord the sum mentioned is absorbed as part of the entire French debt which is funded over a period of sixty-two years. The arrangement was attacked in both houses. The senate adopted a separate resolution on motion of Senator Howell of Nebraska declaring that in effect the United States under the Mellon-Berenger agreement canceled the entire $4,230,777,000 of the principal and accumulated interest up to 1925 of the French debt. The payments to be made by the French government over a period of sixty-two years are merely the equivalent of annual interest payments of 2.17 per cent on the original sum, the resolution declares.

As the matter now stands, if either the French parliament or the American congress fails to ratify the Mellon-Berenger agreement, France must pay the $400,000,000 on May 1 next.

TRANSFER of prohibition enforcement activities to the Department of Justice has been indefinitely postponed. Senator Jones introduced a resolution for the appointment of a joint committee to study reorganization and centralization of dry enforcement, as asked by the President, but the anti-Volstead senators, aroused by the repeated killings by enforcement officers, started such a hot debate, demanding that the shootings also be investigated, that the administration leaders had the resolution withdrawn until August 19, when it was promised a vote would be taken.

Citizens of International Falls, Minn., where Henry Virkula, an apparently innocent man, was killed by enforcement agents, appealed directly to the President for protection. He did not reply immediately, so the city council of the place sent a telegram to him to the same effect. Then, at the White House press conference, Mr. Hoover gave out this formal statement:

"I deeply deplore the killing of any person. The Treasury department is making every effort to prevent the misuse of arms. Any case of misuse will be determined by the orderly proceedings of the department and the courts. I hope that the communities along the border will do their best to help the treasury end the systematic war that is being carried on by international criminals against the laws of the United States. It is these activities that are the root of all of our difficulties."

Mayors of Detroit, Wyandotte, River Rouge, Trenton and other towns and cities of Michigan close to the Canadian border responded with pledges of wholehearted co-operation with the federal authorities if a sane enforcement is adopted. That the rum runners up that way are encouraged by the attacks on the enforcers was shown when the crew of a well-known liquor smuggling boat opened fire on a customs patrol speed boat near Detroit, smashing its bow and windshield and damaging its machinery. Officials of the Province of Ontario announced that they would try to reduce the peril of border gun fights by disarming the occupants of all boats leaving lake and river ports.

WHEN Oscar De Priest, colored, was sent to congress by a colored Chicago district everyone knew trouble was likely to result. It has come, and is likely to stay for some time. In the house Mr. De Priest had conducted himself in a manner that cannot be criticized, but the presence of himself and his family in Washington has brought on social complications. Mrs. Hoover recently entertained several congressional women in the White House, and among her guests was Mrs. De Priest. Of course the South rose in immediate and loud protest, and the action of the First Lady has been attacked as unseemly and unwise by southern legislatures, officials and individuals. The implications of the affair are more than social, for the administration is receiving numerous warnings of a renewed solid Democratic South, these coming especially from those states below the Mason and Dixon line which were carried by Hoover.

VIRGINIA'S anti-Tammany Democrats, who, being bone dry, were opposed to Al Smith, consolidated themselves in a state convention in Roanoke which was dominated by Bishop James Cannon, Jr., of the Methodist Episcopal church south. The 800 delegates nominated Prof. William M. Brown of Washington and Lee university for governor and C. C. Berkeley for attorney general. The executive committee was authorized to select a candidate for lieutenant general, and may name either J. H. Price, the regular Democratic nominee, or the man to be picked by the Republican convention. The De Priest incident cropped up here, too. I. C. Trotman bolted the convention when it rejected a platform plank be offered denouncing Mrs. Hoover's action in entertaining the Negro woman.

AMBASSADOR DAWES and Prime Minister MacDonald between them gave a great boost last week to the cause of reduction of naval armament and consequently of world peace. Their speeches, the one at the dinner of the Pilgrims' society in London and the other at Lossiemouth, Scotland, had been awaited with intense interest and neither of them was a disappointment. General Dawes declared that naval reduction was the problem of outstanding importance to the world at the present time, and he discussed the methods whereby it might be brought about. He said it must concern all naval powers and should have world sanction. The final negotiations, he asserted, must be carried on by statesmen rather than by naval experts, from whom he personally would expect a failure to agree. Said the ambassador:

"It would seem that to adjust to human nature the method of arriving at naval reduction each government might separately obtain from its respective naval experts their definition of the yardstick and then the inevitable compromise between these differing definitions, which would be expressed in a final fixation of the technical yardstick, should be made by a committee of statesmen of the nations, re-enforced from the beginning by these separate expressions of abstract technical naval opinion and able again to seek further naval advice if necessary before the final fixation.

"These statesmen should further be the ones to draw up for the world the terms of the final agreement upon naval reduction which should be couched in those simple terms understandable to the ordinary man in the street and which, while the pet aversion of the casuist, are the highest expression of true statesmanship. That final agreement covering quantitative dispositions would go to the nations for approval or rejection."

Mr. MacDonald told of his conversation with General Dawes and expressed his sincere belief that they might be instrumental "in preparing a board around which other nations might ultimately sit in co-operative fellowship studying the arts and the ways of peace."

PREMIER POINCARE of France held a long conference in Paris with Foreign Minister Stresemann of Germany, who was on his way home from Madrid, and though there was no public announcement, it was understood they reached a complete agreement concerning the coming conference that will put the Young reparations plan in operation. Then M. Poincare went before the foreign affairs and finance commissions of the house of deputies and urged that the way be cleared by the ratification of the American and British debt agreements. He told the two commissions that the great liquidation conference would be called soon so as to enable the chamber of deputies and the reichstag to ratify the Young plan in good time for it to go into effect on September 1 and for the former body to put its O. K. on the debt agreements.

LOTTI, Assolant and Lefevre, the French aviators who flew across the Atlantic from Old Orchard, Maine, are being accorded all due honors in their home land, for they made a great flight notwithstanding the fact that they landed first on the coast of Spain instead of Le Bourget. This was made necessary by the unexpected presence in their plane of one Schreiber, a brash American youth who stowed away on the Yellow Bird and whose added weight made the take off difficult and prematurely exhausted the supply of fuel. Displaying scarcely the intelligence of a seven-year-old child, Schreiber did not realize that he was endangering the lives of the aviators and imperiling the success of their flight. The three Frenchmen treated him with the greatest forbearance and admitted he had nerve. But it is good to read that he was almost completely ignored in Paris and all right minded people hope that that will be his fate on his return to the United States. M. Lotti made the youth sign an agreement that half of any money he might receive as a result of his foolhardy exploit should be given to Assolant and Lefevre, the pilots, and to a fund for victims of air accidents.

Seven persons lost their lives when the City of Ottawa, huge air liner of the Imperial Airways on her way from England to Paris, with eleven passengers fell in the English channel three miles from the English shore. The main shaft of one of the two motors broke and the pilot was unable to keep the plane up or to land safely. Four passengers and the pilot and mechanic were rescued.

COLONEL and Mrs. Lindbergh emerged from their honeymoon seclusion aboard a power boat on Wednesday, appearing at Mitchel field, New York, to take part in the first tests in the prize competition held by the Guggenheim fund in the hope of discovering an absolutely safe airplane. Lindy put on a helmet and parachute and took up the first entry, after which he gave Mrs. Lindbergh a ride in a fast army plane.

ALL the troubles of Gen. Bramwell Booth, former commander in chief of the Salvation Army, came to an end when he died at his home in London. He was given a great funeral by the army whose council had deposed him recently, and its flags were kept flying high for as its officials said: "General Booth is not dead—he has passed to glory." Others taken by death were Asa P. Potter, well-known capitalist of Boston; Sir A. Maurice Low, for many years American correspondent of London papers, and S. F. Kingston, veteran general manager for Florenz Ziegfeld.

PLANS FOR CENSUS TAKERS UNDER WAY

Counting Millions in U. S. Gigantic Task.

Washington.—When the vast army of 100,000 census takers swoop down on America next year there will be in Washington another small army of clerks transcribing the incoming records and preparing reports for the President and congress.

The census bureau already is making preparations for taking the fifteenth decennial census. Tentative report forms are being drafted, extra office space is being made available for the 6,000 temporary clerks who will be employed, and machines are being adjusted for the coming task.

The average mind cannot conceive of the stupendity of recording a brief history, for that is in reality what a census is, of more than 120,000,000 people. The actual enumeration will require only 30 days in rural districts and half that time in cities.

100,000 Enumerators.

If it were not for the machines used in tabulating the census, the work probably would not be finished before time for the next one to be taken. The men and women who actually canvass the country have a simple job compared with the clerical phase of it.

The 100,000 enumerators work under 550 supervisors. The country is divided into sections and subdivided into civil districts. These population counters record the statistics on double-faced sheets with a capacity of 200 names.

When the sheets reach the census bureau they are transcribed on cards which have been ruled into 24 parts. Figures and combinations of figures are used instead of words and the transcription is effected by means of a punching machine. Each of the 24 sections of the card is perforated in such a manner as to denote certain facts in regard to the individual whom the card represents.

The cards are then placed in a machine which automatically classifies them according to sex and if desired further classification may be made as to color, age, etc.

They next are taken to the machine, upon which the census officials pride themselves most—the recording machine. It was invented by a bureau official especially for census work, and as one of the chiefs said, "There is nothing like it on earth." It will print 60 different items simultaneously at the rate of 400 a minute.

Machines Work Fast.

During the coming census 48 of these machines are expected to dispose of over 3,000,000 cards a day, correctly. The perforated cards are stacked in one side of the machine and descend through complicated mechanical apparatus which, by means of the perforations, operate from one to 20 sets of type, printing the totals of all of the divisions of the cards on a large sheet of paper. This constitutes the permanent record from which the government printing office publishes the final report.

Palace of Hospitality to House Rome Guests

Rome—A "Palace of Hospitality" to be used for parties of provincial students, workmen or agriculturists visiting Rome as guests of the city, is being fitted out and furnished by order of the governor.

The "Palace of Hospitality" will consist of two or three floors of a building already used for certain municipal services and is close to the Tiber, near the Temple of Vesta.

Hitherto, when numerous commissions, delegates and parties of students and others have come to Rome on the invitation of the city they have been accommodated in schools, with consequent upsetting of the scholars' work.

The "Palace of Hospitality" will be fitted out like a hotel, with regular kitchens, restaurant, baths and writing and reading rooms.

A part of it will always be kept open, but the complete service of dormitories, restaurants, baths and recreation rooms will only be available on such occasions as may necessitate the accommodation of several hundreds of persons.

Close School Because It Has but One Pupil

Poole, Dorset.—Little Dorothy Batrick, ten, was the only pupil so they have closed her school.

Dorothy is the only child of school age on Brownsea island in Poole harbor. The Dorset county council recently voted to close the school because one pupil was not enough.

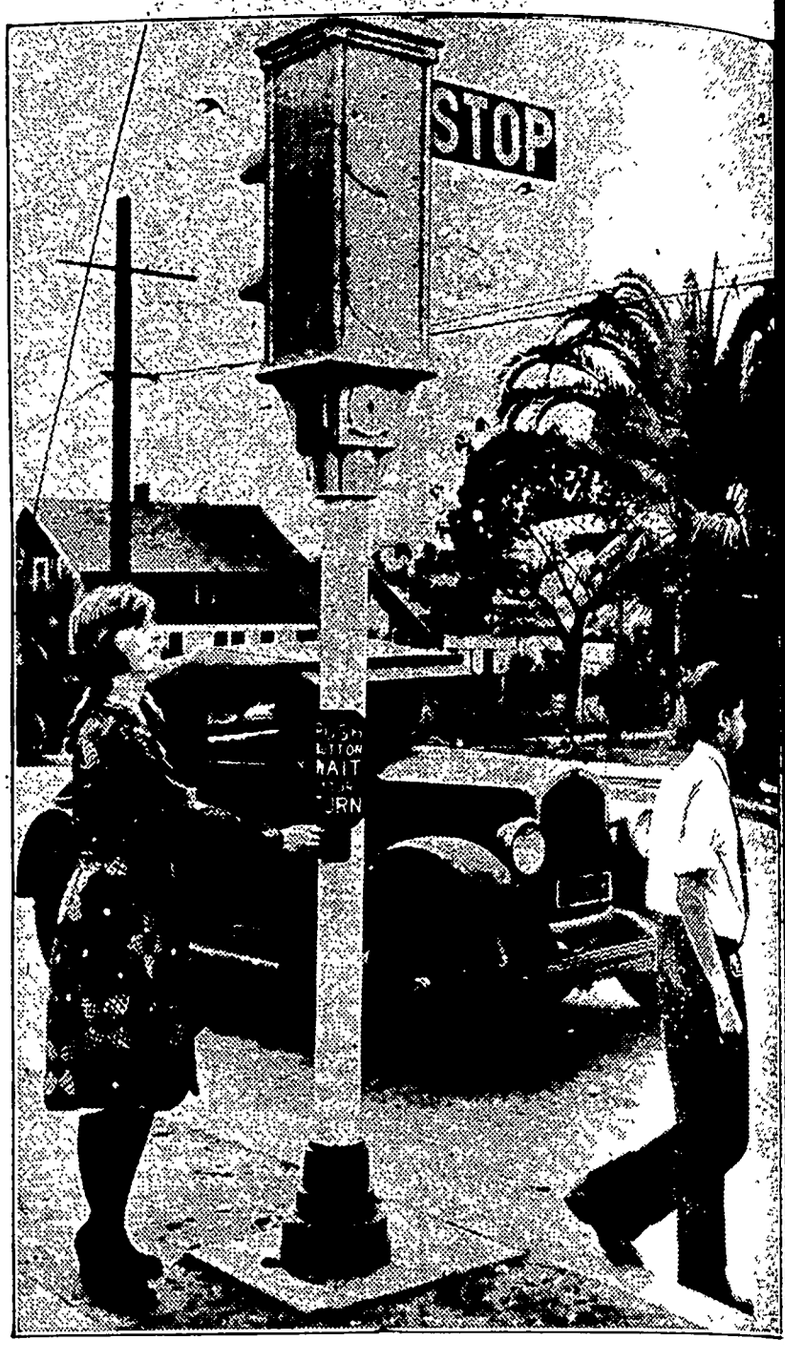
The nearest school for Dorothy is five miles away and she would have to cross the channel each day to get to it. Both her sisters and her brother were educated at the island school.

Find Old Bear's Head Cut From Sandstone

Springfield, Mo.—Finding of a bear's head carved from sandstone on an Ozark farm near Warsaw, Mo., has attracted attention of archeologists.

The crude yet very plain figure may be more than 1,000 years old and might have been worshiped as some sort of idol by prehistoric races which once roamed America 500 years before the landing of Columbus. The figure, two feet square, has been placed in the Drury college museum here.

INVENTION GIVES PEDESTRIAN CHANCE



A girl pushing the button on the new traffic signal towers installed at Los Angeles. The signal says "Stop," and the lad is shown safely crossing before a stopped auto. The stop signal stays up for 15 seconds—enough time in which to cross the street—and then the go signal allows traffic to proceed. After a lapse of 25 seconds, another pedestrian may press the button for the stop signal again. The signal is intended for streets and intersections where traffic flows intermittently heavy and light.

MOTORISTS MUST OBEY BOY PATROL

Offenders Will Be Arrested and Prosecuted by Chicago Police.

Motorists who ignore the orders of members of the school boys' patrol in Chicago will be arrested on warrants and prosecuted in court, Commissioner of Police William F. Russell says:

The commissioner declared that the patrol was by far the most effective agency yet devised for protecting school children and pledged the complete co-operation of the police department to it after a conference with representatives of the accident prevention department of the Chicago Motor club. The club has fostered the patrol and supplied it with white Sam Browne belt and badges since 1920. Every school in Chicago, both public and parochial, has a patrol. The members stand at intersections near schools and assist pupils safely across the streets.

Be Given One Warning.

"I have assigned a patrolman in each of the 40 police districts to inspect at least two patrols each day," asserted Commissioner Russell. "Not only will they see to it that the patrol members are working in accordance with regulations drawn by the Chicago Motor club, but they will also ask the members of the patrols for the license numbers of all automobiles which failed to stop in accordance with their upraised arm. The owners of these vehicles will be given one warning by the police. A record will be kept, and upon a second offense a warrant will be sworn out, charging the car owner with reckless driving, and he will be arrested and prosecuted.

"Few persons realize the wonderful efficiency of the school-boy patrolmen. There are more than 10,000 of them throughout the city. They have made it possible for hundreds of policemen who formerly guarded crossings near schools to be relieved of this work and go out after real criminals. There is no question but that these boys have saved a large number of their classmates from injury and death. Motorists who disobey their signals two or more times will be prosecuted by the police department to the limit."

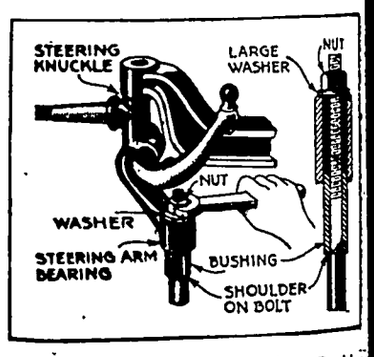
To Enforce Regulations.

Dr. Charles J. Lunak, assistant superintendent of schools, recently issued orders to all principals and school-boy patrolmen to enforce the patrol regulations devised by the motor club. E. C. Delaporte, director of physical education, was recently appointed by the board of education as supervisor of patrols. Rev. D. F. Cunningham, superintendent of the parochial schools of Chicago, similarly endorsed the patrol movement.

The 40 policemen assigned by Commissioner Russell to inspect a minimum of 80 patrols each day will be under the supervision of Police Lieutenant James J. Scully, head of the unemployed boys' bureau of the police department. The commissioner's action marks the first time that the Chicago police have supported the patrols in every possible manner.

Convenient Method of Forcing Brass Bushing

Driving a bronze or brass bushing into place with a wooden mallet often is difficult and always is hard on the mallet. A much simpler way to force the bushing into place is shown in the illustration. Make up a special bolt with the shank slightly smaller than the hole through the bushing. The shoulder on the bolt should be square so that it will not injure the edge of the hole. By turning the nut you can pull the bushing into place easily.



Simple Method of Forcing Bushing Into Place, Using Special Bolt With Nut and Washer.

This method of inserting a bushing often will save dismounting the part to get it into the arbor press and may permit a job to be done where the shape of the part is such that it is hard to get at with the press. Best results will be obtained if the bolt is cut with a fine thread.

Note that when a bushing is forced into place the hole actually is reduced in size sufficiently to cause a jam if the bolt is made too close a fit.—Popular Science Monthly.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q.—Does it aid to stop quickly when obliged to drive over broken glass?

Ans.—No, because the tire will more likely pick up a sharp object when it slides.

Q.—Is it advisable to check the differential and transmission for grease when the car is cold?

Ans.—No. Wait until warmed up as grease congeals on the inside of the case when it is cold.

Q.—What is the cause of an engine losing power when climbing hills or grades?

Ans.—Common causes are sticky valves, worn out spark plugs, dirty breaker points, etc.

AUTOMOBILE FACTS

Twenty-five states in the Union have no laws governing tree and shrub planting along highways.

* * *

The world highway mileage is placed at 6,500,000 with 3,000,000 of that total in this country.

* * *

The state of New York leads in the matter of good roads mileage with 14,000 miles of hard-surfaced roadways.

* * *

A medical expert declares one should walk a half-mile each day. The lack of parking space forces one to do this very thing.

Hogging Down Corn

ogging down corn is a satisfactory n to follow in fattening hogs for rket provided conditions are sat- etory for this practice. However, here is much rainy weather during period the hogs are running in the n field, it is very likely that more n will be required to produce 100 nds of gain because some corn will wasted in the mud. Tankage or er protein supplement will be re- red for the most economical pork ns.

Hasten Tomatoes by Fertilizing

Plants Need Long Season and Right Aids to Hurry Their Growth.

"Fertilize tomatoes to hasten their maturity," advises F. O. Underwood, of the vegetable gardening department of the state college of agriculture at Ithaca, N. Y. "The tomato," he points out, "requires a long season to mature a full crop, so that anything a grower can do to ripen them is apt to mean a bigger total yield."

Professor Underwood says that many points have to be considered in fertilizing the crop, such as type of farming and soil, previous crop grown and fertilizer used, money returns, and the cost of the fertilizing materials.

Plant Food Needed.

Tomatoes need some of all the plant foods for their best development. Nitrogen is needed early in the season to help develop a good vine to carry the fruit; though too much nitrogen may produce too rank a leaf growth at the expense of fruit. Some potash is also needed, but phosphorus is particularly needed to get large yields and ripen the fruit before frosts in the fall.

"If a grower," says Professor Underwood, "is applying manure liberally, say at the rate of twelve or twenty tons an acre, he is probably supplying enough nitrogen and potash, but additional phosphorus will probably pay. Phosphorus increases the fruit and seed parts of plants, and acid phosphate is the best source. Applied at the rate of from five hundred to a thousand pounds to the acre, it should give good yields.

"On sandy soils, or on other soils where little or no manure is used, complete fertilizers usually pay. The 4-12-4 or 5-10-5 are both good; the former on the heavier types, while the 5-10-5 makes a good mixture for soils less well stocked with nitrogen and potash. Though the 2-8-10 is often used, a 4-12-4 seems better for the crop. The 2 per cent of ammonia in the former mixture is probably derived from some organic chemical which will be slowly available to the tomatoes. Tomatoes need nitrogen early in the season, and not when the fruit is forming.

Fertilizer Pays.

"Exact amounts will depend upon individual soils and cash returns, but the tomato crop will usually pay for additional fertilizer up to 1,600 pounds to the acre, although good crops are grown with less.

In addition to proper fertilizers, however, the plants must be well-grown, and must be set at the proper time. Soil and weather conditions also play their part."

Supply Farrowing Pens With Needful Fenders

Every farrowing pen should be supplied with fenders to protect the little pigs during and after farrowing. These consist of 2 by 8 inch planks fastened as shelves about eight inches from the floor, along both sides of the corner in which the sow makes her bed. This largely prevents the sow from squeezing the pigs against the wall or lying on them while they are small. If the farrowing pen has a concrete floor, a board overlay in the nest corner makes the sow's bed warmer, drier and cleaner.

Recommend Apple Spray When Pink Buds Appear

Summer spray for apples, usually known as the cluster bud or pink spray, is most effective when applied as soon as the pink buds appear in the blossom clusters, says L. C. Williams, extension horticulturist, Kansas State Agricultural college. The cluster bud spray consists of one and one-half gallons of liquid lime-sulphur and one and one-half pounds of arsenate of lead to each fifty gallons of spray. Dry lime-sulphur may be used instead of liquid material.

Agricultural Hints

Poisoned bran will stop the army worm army.

* * *

Get in a planting of peas at two weeks' intervals.

* * *

Let's give the pasture a hair cut—get those bitter weeds before they get into the milk.

* * *

African millet is regarded as one of our most drouth-resistant crops. It is a good forage and hay crop.

* * *

Grading of farm products is a vital factor in the profits of the farmer and promises to become even more so.

* * *

Grasses and weeds growing along roadsides and fence rows offer a perfect winter haven for many insect pests.

* * *

Maintain the fertility of your garden and truck crop soils by the use of green manures, barnyard manures and proper crop rotation.

* * *

Co-operative marketing has been getting on a sounder basis in recent years, and farmers will probably find it an important way of safeguarding their interests in the future.

Per Capita Potato Yield Right Guide

Price Trend Upward When Production Is Low.

Per capita production of potatoes in the country, as a whole, is as good a guide as any, when the grower is trying to decide whether he should store his crop in hope of higher prices that prevail at harvesting time, or sell them for the market price when they are dug, according to C. R. Arnold of the rural economics department of the Ohio State university at Columbus.

Arnold reports that the bureau of agricultural economics of the United State Department of Agriculture has been studying records for the past 27 years, and finds that when the national production has exceeded 3.8 bushels per capita, the price has tended downward during the ensuing season. The trend has usually been upward when the production has been less than 3.2 bushels per capita.

Only when the indicated crop was not much more than three bushels per capita was the grower usually justified in holding his potatoes. In other years the chance of profit was too uncertain to balance extra cost of risk, storage and shrinkage.

Production in the late potato states, according to the federal investigators, is the most important factor in determining the season's price level.

Cleanest Culture Helps Strawberry Leaf Spot

The Ohio station gives the following advice about handling leaf spot of strawberries:

"Plant resistant varieties; the majority of present-day commercial varieties are somewhat resistant.

"Set plantations where both air and water drainage are good. When setting out plants remove and destroy the diseased leaves; do not leave them about the patch. Practice the cleanest culture possible.

"Rotate strawberries with other crops frequently. It is rarely profitable to fruit a strawberry planting more than two years, due in part to the accumulation of fungous pests. Many plantations should be plowed under after one crop has been secured.

"In renovating a plantation to be fruited the second time, destroy all diseased leaves. The fungi causing the leaf spots over winter on affected leaves. Mowing off the old leaves and burning over the plantation is advisable when a planting is badly infected.

"If these recommendations are followed closely spraying will not usually be necessary. However, one to three applications per season of 4-4-50 Bordeaux spray may be profitable in controlling unexpected attacks."

Pigs at Weaning Time Should Be Given Grain

Pigs at weaning time should be getting all the grain they will eat. The ration should include tankage or skim milk. With a good pasture on which to run, pigs should be getting a good start for market weight. Pigs which are doing well should make a pound a day gain in weight. Self-feeders are a convenient means for feeding corn and tankage, and the use of self-feeders results in as good and often better gains than the hand-feeding method. A self-feeder should keep the feed dry, keep feed before the pigs at all times, and prevent waste.

Treating Potato Seed Increases Usual Yield

Seed potatoes treated three or four weeks ahead of planting will show no delay in sprouting as is often the case with seed treated to kill disease organisms it may be carrying. Treating seed that is coming out of dormancy may cause it to become somewhat dormant again. Early treating gives the seed time to come out of dormancy and be ready to grow as soon as planted. Treating seed potatoes has increased the average yield 22 bushels per acre in the test plots conducted for the past eight years in Kansas.

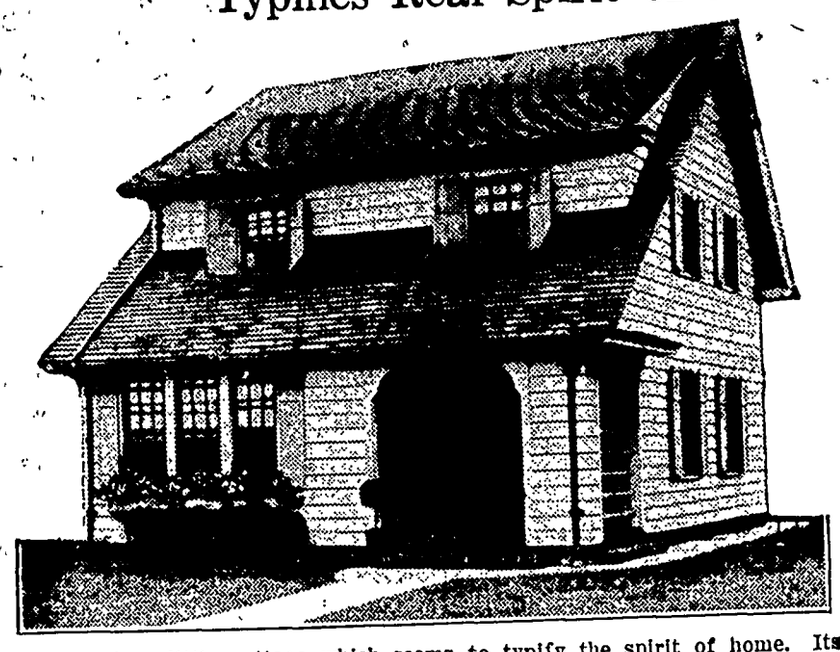
Dusters Satisfactory in Fields for Killing Bugs

Dusters are fairly satisfactory in potato fields, for killing bugs. However, under most Nebraska conditions they are not nearly as satsfactory as they are in regions farther east. To be used most advantageously the dust should be put on when the plants are damp with dew and when there is little wind. It is not at all advisable to try to use a duster on a windy day. Consequently it is very desirable to dust the plants in the early portion of the day before the wind comes up. —H. O. Werner, University of Nebraska.

Grinding Feed Does Not Increase Digestibility

For feeding dairy cattle, the grinding of a roughage will not increase its digestibility nor its value as a feed. Grinding coarse feeds may reduce waste by eliminating the coarse parts of the feed and may make the feed more palatable. When feed is high in price, grinding may prove advantageous. Grinding coarse feed will not make the feed into a concentrated feed. Neither will grinding dry, coarse roughage make the feed as good as when put in the silo.

Design for Small Cottage That Typifies Real Spirit of Home



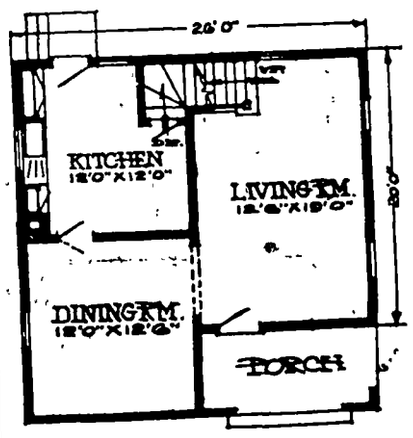
Here is a little cottage which seems to typify the spirit of home. Its story-and-a-half construction has been designed to produce a charming outward appearance and the interior will be found equally satisfactory.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Where your house is to be built is almost as important as building it. The particular size of lot, with the particular frontage or natural advantages which you want may not be available to you for several reasons. The kind of neighborhood, the distance from transportation, the conditions as regards paving, sewer, gas and electricity, etc., are some of the things that will govern your selection of a homesite. So we say pick out the place you want to build before you attempt to choose a house plan.

Having done that, and with the lot in mind, try to find a house that will fit it. If it is a narrow lot, then you must have a narrow house; if it is a shallow lot, then you must find a plan that is not too deep from the



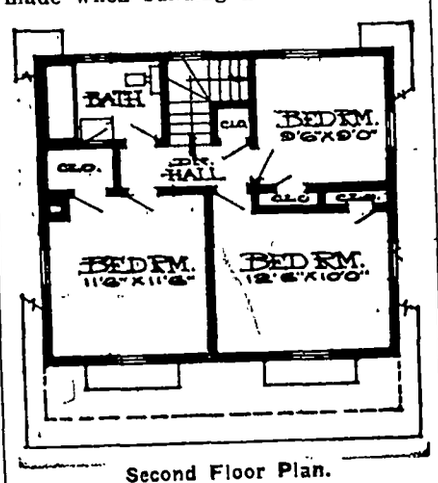
First Floor Plan.

front to back but that it will not merely go on your lot, but will leave a little room for a backyard and perhaps for a flower or vegetable garden.

It is only by using a complete plan, too, that you can get a definite estimate on the cost of building your home. All other figures are but guesses and it is dangerous to guess when building, no matter how experienced in building the guesser is.

The proper person to give you a definite, reliable estimate on your home is your local lumber dealer or builder. Consult him; get the benefit of his advice on homebuilding conditions as they obtain in your community. He will tell you and his counsel will be as reliable as any can be, for your permanent satisfaction is his concern and he will see that you get it.

Finally, remember that in homebuilding, as in everything else, you can not have everything you want. Compromises have to be made somewhere and probably more have to be made when building a home than in



Second Floor Plan.

anything else. So don't give up too easily.

As a suggestion to those who are contemplating building a home here is a small cottage which seems to typify a real spirit of home. It's story and a half construction has been designed to produce a charming outside appearance and the interior will be found equally satisfactory. The house is small, the dimensions being 20 feet by 26 feet, but it contains six good-sized rooms. The living room extends the depth of the house and is reached through the covered entrance porch. It is 12 feet 6 inches wide and 19 feet long. At the front, to the left, with three windows at the front and one at the side, is the dining room 12 feet by 12 feet 6 inches. At the rear is the kitchen 12 feet square.

An open stairway leads from the rear of the living room to a central hall on the second floor, opening off which are three bedrooms and a bathroom.

The broken roof lines of this house with the dormer-like windows gives it the appearance of a much larger house than it really is. It provides plenty of room for a good sized family and is of the type that is most economical to build.

Poor Water Pipe Sure to Become Big Expense

One of the most important features of building a home and one that is frequently overlooked by the man who is building for the first time or who has never had any experience living in a house, is the water pipe.

Of course, the pipes are concealed behind a wall or under the floor. Once installed they are not easily accessible to repairs or replacements. To replace the water pipe in a house is a big and expensive operation, and one that most contractors do not like to figure on for it means tearing up flooring and cracking plaster.

Wouldn't it be far better to select some dependable kind of pipe before the house is built and include it, even though it does cost a few dollars more? There can be only one answer to this question.

Many architects who are designing homes for discriminating clients today specify brass pipe. Brass pipe is immune to rust and will last as long as the house stands.

"Chalking" of Paint Causes Dark Patches

You no doubt have seen buildings which, after from six to twelve months from the time of painting, have shown very decided patches of bleached-out looking, pale spots.

Usually the remark is heard at this time that the particular paint used has faded badly. This may be so. In the majority of cases, however, it is not so.

The fault is that the paint used has failed or broken down too rapidly by what is known as "chalking." The pale-faded-spotty appearance is due to loose pigments freed from the vehicle and held as a powder on the surface. Wash this spot well with a damp cloth and the original color will reappear, showing that it is not "fading," but "chalking," which has spoiled the appearance of the property.

Method of Painting Over Stain Finish

It used to be the style when painting inside woodwork to stain it dark. Nowadays the vogue is painted woodwork done in light colors such as creams, buffs, grays and other tints. As a result homeowners in some instances are faced with the problem of painting over stain finishes.

If such a change is made, there is a certain method to follow in the painting. The reason why care is necessary is that old stain under the new coats of paint will often "bleed"; that is, the oil and turpentine in the new paint will commence working on the stain and dissolve it so that it shows through to the surface of the paint in unsightly patches. Mahogany stain nearly always bleeds, mission frequently does, and golden oak less often.

Skilled painters are well acquainted with this fact and take steps to prevent it by sealing the stain. Usually they paint over the stain with two coats of pure shellac. After this is thoroughly dry, a coat of white lead and flatting oil paint is applied. If no bleeding occurs within two weeks, the work can be finished off in any manner desired. In obstinate cases the stain will still work through two coats of shellac and one of paint. Then it is necessary to put on coats of shellac and paint until the bleeding stops.

Popular Floor Wood

One of the most popular floor woods is oak, which may be laid in an irregular manner with boards of alternate widths to give an antique effect. It displays nature's beauty in grain and coloration, blending over the entire lustrous floor expanse.

Good Construction

In building a home a man can do well to ponder the facts that good construction pays since it needs be paid for but once!

Horticultural NEWS

PROPER TIME TO PRUNE RASPBERRY

Soon as Harvest Is Over Remove All Old Canes.

Now that the harvest of raspberries (red and black) is over, the proper time is here to remove the old canes, the ones which fruited this season. This should be done as soon as possible after fruiting is over, so as to allow all the sap and food which is necessary to keep them alive to go into the young canes that came up from the base of the plant this spring, writes B. W. Keith in Rural New Yorker. These old fruiting canes will die anyway before many weeks, so why leave them to "sap" the plant? They also harbor diseases and insects and if they are cut out, taken from the field and burned, it will help that much toward having healthy canes for next year's crop.

Berry pruners of any kind can be used in cutting out these old canes, just so they are cut off close to the stump of the plant. In commercial fields, where there are a great many old canes to remove, it becomes quite a back-breaking job to do all the cutting with common hand pruners, and it also becomes quite a "prickly" job, unless leather gloves are used. To escape the back-breaking and pricking business, some wise farmer devised a combined pruner and "pincher" whereby he could cut off the canes and at the same time pinch onto them, pull them out of the row and place then in piles so they could be easily handled with a common pitchfork.

This combined affair is made by making a pair of "pincers" similar to those used by blacksmith, forge tongs for instance. On the under side of one of the jaws of the "pincers" is riveted a sharp blade made from a file or something similar, and should be attached so as to shear past the other jaw about three-fourths of an inch when the "pincers" are closed. The handles should be made so they could be driven into a three-foot wooden handle of some kind, which would enable the farmer to use the implement without stooping over. He can stand upright and catch hold of a respberry cane at the base with the "pincers" and, as the sharp blade cuts the cane off, the jaws of the pincers hold fast to it just above the cut and the canes can be removed.

Throw the old canes in piles between the rows, throwing the canes from the two rows into one row of piles and, before the leaves have time to dry up so they will drop off and remain in the field, remove the canes to some convenient spot and burn. It is best to burn them before they dry much to catch the insects and diseases.

Peach Aphid Does Not Spread Tobacco Mosaic

After being accused of spreading tobacco mosaic disease, the peach aphid, a common type of yellowish-green plant louse, has been given a verdict of "Not Guilty."

This little insect has been regarded by certain investigators as capable of transmitting the virus of tobacco mosaic from infected to healthy tobacco plants. But after careful investigation, Isme Hoggan and James Johnson of the agricultural staff of the University of Wisconsin have freed the accused of any responsibility in the matter.

And as a result of these studies, certain important conclusions have been reached in respect to the spread of virus diseases of insects. While the peach aphid can no longer be convicted of spreading the serious disease known as tobacco mosaic, this insect is regarded as capable of transmitting cucumber mosaic in tobacco, a relatively unimportant disease from a commercial standpoint. Whether other species of insects are guilty or not remains to be demonstrated.

Northern Spy Apple Is Particular About Soil

The Northern Spy apple grows well on a soil that is not too heavy. The main problem with this variety seems to be t get it thoroughly matured. On soils that are slow or that delay the ripening of the fruit, it is an inferior product. Climate complicates the matter still further so that there are relatively few places in the country where Northern Spy is at its best. Rather than trying to guess whether or not Northern Spy will do well with you, you had better inquire from your neighbor. If you find old trees producing the kind of fruit that you want, the information will be worth more to you than any amount of theorizing.

Humus Is Important

Humus is an important consideration with black raspberries. They need plenty of moisture and this is difficult to keep in a very heavy clay soil. A clay soil will, however, grow fine crops of nice berries if it has been supplied with humus through turning under green crops or the application of barnyard manure. The red raspberry will do well in a rather wide range of soils, but the most success with them has been on a rich light clay loam.

Your Fortune--

You may have been working ten, twenty, even thirty years, and in that time you have earned a great deal of money.—

But how much of it have you now? The fortune is passing through your hands. Are you getting part of it? If not, start saving now. It isn't too late.

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

Dwight Osborne was at Des Moines Sunday.

Henry Barz and family were at Garner Saturday evening.

R. C. Ludeke and family were at Clear Lake Sunday afternoon.

M. O. Barr and family were Clear Lake visitors Sunday evening

Mr. and Mrs. C. F. Keraus were at Mason City Monday on business.

The Wellemeyer Co. are invoicing this week.

On account of the rain the Duncan Band did not play Wednesday evening.

The Camp Fire Girls wil go to Clear Lake July 7th where they will spend a week at a cottage.

Byrnes Missman spent Wednesday at the Otto Lemke farm helping put up hay.

Mrs. R. A. Jorgenson and son, Buster, were at Garner on business Wednesday afternoon.

Mrs. Albert Yahnke and daughter, Alva, of Garden City, Minn. are visiting at the C. A. Larsen home.

Mr. and Mrs. A. D. Gimer and children visited at the Clarence Johnson home Monday evening.

M. N. Zeiger, of Garner, was in Klemme on business Wednesday morning.

John Etchen is driving a new Chevrolet Coach which he purchased from himself!

W. F. Pavey is driving a Chevrolet enclosed car which he purchased last week at Belmond.

Max Barz is in the country this week visiting with his cousins at the Albert and Henry Barz farms.

G. Gobeli was at Hampton the other day to see his son who was operated on for appendicitis.

C. G. Waterman and family drove to Clear Lake Sunday evening to enjoy the band concert.

R. A. Jorgenson and family had dinner at the J. Jorgenson home at Garner Sunday.

Mr. Marlin Croner and his mother drove to Des Moines Monday on business.

Mr. and Mrs. August Baack and son, Howard, visited at the Frank Kluckhohn home Sunday evening.

George Lawhorn has been painting at the Nels Back farm the past week.

Miss Ruth Johnson, who is a student nurse at Mercy Hospital, Mason City, is enjoying a vacation.

Mr. and Mrs. Ely, of Belmond, visited at the Dr. Missman home Sunday.

Mr. and Mrs. Leonard Sampson and children visited at Traer all last week.

Mrs. R. W. Elder and son, Clarence, were at Garner on business Saturday afternoon.

The Ladies Aid of the Reformed Church met at the home of Mrs. Will Wenz Wednesday afternoon.

Charles Ax and family visited Sunday at the Levi Neese home at Ventura.

NOTICE—I am again able to resume my practice and am ready to attend your calls. Dr. Geo. Zinn. 1c

U. G. Smid returned Wednesday morning from over a week's visit at La Fayette, Indiana, and Chicago.

Mr. and Mrs. A. D. Gimer attended a Buttermakers' Picnic t Clear Lake last Thursday. They report a fine time was enjoyed.

Sumner Trumbell is having a two week's vacation. George Lawhorn is carryng mail on route one while Sumner is laying off.

Mrs. John Gruetzmacher and Mrs. P. M. Griesemer were entertained at the Frank Schuldt home at Garner Friday evening for dinner.

Mr. and Mrs. Fred Musfelt and Mrs. Hattie Lanahan and daughter, of Clarion, were visiting in Klemme Sunday.

Mrs. Clarence Barnes and little daughter, and Mrs. Paul Pirtchard and boys of Garner, were business callers in Klemme Tuesday.

Mrs. Wallace Pavey and daughter, Juanita, spent Tuesday helping Mrs. Verner Lewis cook for corn shellers.

Rev. Grosshuesch, Ben Swalve, and Bennie Schaefer attended a Mission Feast at the Reformed Church at Kanawha.

Mrs. Herman Back and daughter have returned from their visit with Mrs. Back's parents at Cedar Rapids, owa.

Frederick, son of Mr. and Mrs. Ralph Blank, came from Estherville last Thursday evening to spend several weeks visiting with Klemme relatives.

Mr. and Mrs. William Kirchheck of Cedar Rapids, Ia., came last Wednesday for a two days visit with Mr. and Mrs. Henry Wille. Mrs. Kirchheck is a neice of Mrs. Wille.

Mrs. Heusman and Mrs. Dick Swalve of George, Iowa, spent several days at the Ben Swalve home and with other relatives. The latter is a sister-in-law of Mr. Swalve.

Sirley Rae, daughter of Mr. and Mrs. P. W. Johnson, is the owner f a dog which she purchased from Dr. Anderson. She is quite pleased with her mew pet.

Mr. and Mrs. Sumner Trumbell entertained the County Mail Carriers and their wives Tuesday night. Following a social time delicious refreshments were served.

Dr. W. F. Missman was a professional caller at the Hampton hospital Tuesday morning. Mrs. Ray Christie of Goodell underwent an operation there that morning.

This vicinity sure had a nice, steady shower yesterday, which was welcomed by farmers and gardeners. The ground was getting quite dry in this vicinity.

Mr. and Mrs. Henry Schuldt are rejoicing over the arrival of a ten pound baby boy who arrived at their home Tuesday morning. They now have a family of two boys an dtwo girls.

Mr. and Mrs. Fred Ridder returned Wednesday from Chicago. Mrs. Ridder had been there for a few weeks visiting with her daughter. Mr. Ridder had been there since Saturday.

Mr. and Mrs. S. T. Barr again visited at the Wm. Smith and J. N. Day homes Sunday on their return trip to their home at Manhattan, Illinois. They expected to arrive at their home Monday evening.

A rather heavy lady at Goodell fell Sunday when the steps at her home gave away and in the fall she broke her arm at the elbow. Dr. Missman was called by Dr. Snearly and the woman was taken to the Hampton hospital for surgical care.

"Red" Carlson had a "hot time" making hay the other day. "Red" had a good size load all ready to haul home, and as he had left some wild barley grass piled up, figured it would be a good idea to burn it to get it out of the way. This Red proceeded to do, but the wind blew some sparks into his wagon load of hay and things were getting hot in general. In trying to push the rack off to save the wagon, Red burned his arms quite severely and got his face scorched. When the smoke had cleared away Red discovered he had saved the horses but the balance of the outfit was a heap of ashes.

GOOD PROGRAM SUNDAY AT BAYSIDE PARK

Fast Bayside Cubs Will Play Southern Minnesota Team

The many fun concessions, a vaudeville attraction on the open air stage; band concerts and a good ball game will help entertain Bayside Amusement Park, Clear Lake, visitors next Sunday, July 7th. The ball game will start at 3 o'clock and the Bayside Cubs will play Emmons, Minn. nine, which is said to be the fastest team in southern Minnseota. Ritz's team, the Bayside Cubs, is in fine shape for Sunday's battle. Any ball team wanting to schedule a game at Bayside should communicate with Charles Ritz, Clear Lake.

Many bathers are now enjoying the beach at Bayside, which is said to be the finest on the Lake. The Bayside bath house has recently purchased 200 new bathing suits.

Charles Ritz, park operator, invites you to use the free picnic grounds and tables and the children's playgrounds. You will find plenty of tables and lots of fine shade at Bayside and now is a good time to have a family picnic.

..FAMILY GATHERING HELD AT IOWA FALLS SUNDAY

Relatives Meet W. C. Keraus Family And Enjoy Picnic Dinner

Sunday a large mumber of the Kluckhohn families and relatives met at Iowa Falls where they enjoyed a big picnic dinner and spent the day visiting.

Those present were: Mr. and Mrs. Wm C. Keraus and sons Otho and Verle, who drove up from their home at Traer to meet the Klemme bunch Those from Klemme were: Mr. and Mrs. C. F. Keraus; Mr. and Mrs. Fred Kluckhohn and daughter, Thelma; Mr and Mrs. F. W. Kluckhohn and sons Kenneth and Franklin, and daughter Carmen; and Mrs. Kluckohn's mother, Mrs. Kindon; Mr. and Mrs. Clarence Kluckhohn and sons, Clarence and Eugene; and Mrs. Kluckohn's mother, Mrs. Metzgar; Mrs. G. W. Kluckhohn; Mrs. Sadie Turgasen and sons, Vernon and Donald; Mr and Mrs. C. G Waterman and daughter, Marian; and Mr. and Mrs. Tom F Mitchell of Swea City.

Needless to say that when this bunch gets together they have a feed fit for kings and all have a good time

Mrs. C. F. Keraus and Miss Thelma Kluckhohn accompanied Wm C. Keraus and family to Traer to visit over the Fourth Mr. C. F. Keraus and Mr. and Mrs. Fred Kluckhohn will drive to Traer early the morning of the Fourth and all will return to Klemme Friday.

JULY FOURTH

Klemme is not celebrating the Fourth this year, but many people are planning family dinners, picnics and others will no doubt take in the celebration at Bayside and Clear Lake. At any rate the day will be enjoyed.

The Times is printing a day early this week and may be somewhat short on news which arrives late for this issue. However, we will try to make that up in other isues.

Make a lot of noise, have a good time and enjoy the day, folks.

SPEEDERS!

Obey the Town Speed Limits or take the consequences. We can't get them all but maybe you will be next.

PAUL GRANGE, Mayor.

WORK STARTED ON ROAD INTO TOWN

PRELIMINARY WORK STARTED ON ROAD TO KLEMME

County Will Soon Grade Secondary Road Into Town

Men from the County Engineer's Office were in Klemme Tuesday morning surveying the county road from Highway No. 15 into Klemme. They stated preliminary work on this stretch of road would begin in a few days. Several trees are to be blasted away before the grading machinery will be put to work.

To Let Gravel Contract

Bids for the graveling of the Klemme-Ventura, and the Goodell-Meservey roads will be let on July 9th. Work must be commenced by August 1st, and must be completed by October 1st. However it is very likely that the successful bidder will put trucks on the job at once and these roads will be graveled in a short time.

The notice to bidders, giving a description of the work, will be found elsewhere in this issue.

With the graveling of the Klemme-Ventura road will give farmers living east of Klemme an all-weather road to Klemme, as well as in other directions, connecting up with through highways.

With the completion of these roads and the Crystal Lake-Woden road, practically every town in the county will be directly connected up with every other town by a good gravel road.

Besides the many county or secondary graveled roads there are also a large number of township graveled roads in the county. Hancock County is rapidly approaching the 100 per cent mark in surfaced roads.

COUNCIL PROCEEDINGS

Klemme, Iowa,
May 13, 1929.

Regular meeting of the Town Council held at the Town Hall.

A. Wellemeyer, W. F. Missman, H. F Jost and C. Quandt members of the Council present.

Motion made and seconded, that the following bills be allowed:

Clare & Comnpany, Water Supplies	$ 3.74
Paul Grange, S. U. I. Water Test Expense	2.22
E. F. Jacobs, Supplies	21.38
Harry Gram, Drayage and Labor	7.00
U. G. Smid, Surveying	2.50
Lloyd Lau, Drayage	1.00
C. D. Smock, Labor	.60
Klemme Times, Publishing Council Proceedings & Notices	4.96
Standard Oil Company, 70 Gallons Gasoline	12.25
P. O. Department, Envelopes, Stamps	2.00
Central States Electric Co. April Power	16.55
Central States Electric Co. March and April Street Light	66.85
Lefebure Corp., Firemen Ledger	12.40
John Heginger, 28 Loads Gravel; 1 Day's Labor	35.80
Fred Gates, Salary for April	60.00
A. E Finn, April 15 to May 15 Salary	50.00

Bills allowed.

Bond of Paul Grange for Mayor on motion accepted.

Upon motion the First National Bank of Klemme was made the depository for the funds of the Town of Klemme to the extent of $20,000.00.

Meeting adjourned.

A. J. KUDJE,
Clerk.

Frank Gibbs came home Tuesday to spend the Fourth visiting with his mother, Mrs. Emma Gibbs.

BIG PICNIC HELD AT REFORMED CHURCH LAST FRIDAY

About Three Hundred Attended The Annual Bible School Picnic

A big picnic is an annual feature at the Reformed Church for the boys and girls who attend the summer Bible School. The school closes this week but it was voted to have the picnic a week early this year.

Beginning at ten o'clock the pupils of the Bible School gave an excellent program consisting of competition in finding Bible passages, giving quotations, books of the Bible and other work featuring the course of study. There were songs, and how they could sing. The program was greatly enjoyed by all and the pupils showed wonderful progress.

Shortly before the noon hour the long tables were made ready and a fine dinner was servd cafetria style. It was estimated that there were about three hundred people present.

The afternoon was devoted to all kinds of sports, fish-pond, visiting, etc.

In the evening the Bible Class had their annual party and all enjoyed a fine time.

Cars Collide On Highway West Of Town Friday Night

A Catholic priest, accompanied by two Sisters, riding in a Ford car, coming on the highway from the north Friday night, collided wtih Otto Pringnitz's car, going west, at the interstection at the bottom of Ludeke's hill. No one was injured.

The Ford went through the fence into Al Koerner's corn field but we understand was not greatly damaged. The Pringnitz car, we understand, was somewhat damaged.

NORTH IOWA GRAIN CO. MOVES MAIN OFFICE TO C. R.

Next Monday morning the main office of the North owa Grain Co. will open for business in their new quarters in the Higley Building at Cedar Rapids,

For some time the main offices of the company have been located in the M. B. A. building at Mason City.

This change in the location of the main offices does not in any way alter the operation of the business or make any changes in their line of elevators.

The Times is in receipt of a card from Miss Phyllis Root, teacher of grades 5 and 6 the past year. Miss Root is attending summer chool at Boulder, Colorado, and when she is not studying she takes in sight seeing trips. She said that on Juyl 4th she expects to go up in the mountains and coast in the snow. This is a nice cool thought as we swelter under a July sun in Iowa.

SPECIAL

This summer—Violin, Piano, and Guitar Lessons. Two lessons a week, one free, Tuesday and Friday, Wednesday and Saturday. 75c a week. Mildred Johnson, Klemme. tfc

SIXTY 4-H CLUB GIRLS AT CAMP

SPENT FOUR DAYS AT I. O. O. F. CAMP LAST WEEK

Enjoyed Outing nd Period Of Good Instruction And Entertainment

The Times is indebted to Miss Norma Wille, local 4-H Club Girl of Ell Township who attended the 4-H Club Girls Camp at the I. O. O. F. at Cear Lake. Following is a summary of the days spent in camp.

The Rest Camp for the 4-H Girls of Hancock, Cerro Gordo, and Humboldt Counties was held at the I. O. O. F. at Clear Lake, beginning on Sunday, June 23 and closing Thursday, June 27. There were about 60 4-H Club Girls in attendance.

Miss Myrtle Johnston, Home Demonstration Agent for Hancock and Cerro Gordo Counties, was in charge of registrations and was kept very busy Sunday afternoon registering the 4-H Club Girls as they entered Camp.

Mrs. Putman and Mrs. Wallace were in chage of coking and were assisted by six 4-H Club Girls who changed off helping in various ways

After dinner Mr. Davis gave a talk on landscapes and showed moving pictures of different kinds of flowers and shrubery. Following the lecture period the girls enjoyed a swin and then had supper.

After supper the girls enjoyed a talk by Mr. Bode who told them all about trees, and Mrs. Davis gave a talk on flowers and both were very interesting.

Monday morning it rained so the setting-up exercices were held indoors, and after breakfast games of various kinds were played and later Mr. Bode took the girls on a hike to identify and study trees, which was very interesting. After dinner Mr. Bode was again on the program and gave a talk on fireplaces. He built several fireplaces and in the evening they were kindled.

A dip in the lake was enjoyed Wednesday morning before breakfast. Miss Mary Bates entertained with a musical program following breakfast, after which Miss Esther Sletman lectured on making talks, good manners, etc., all of which was enjoyed.

In the afternoon Miss Baker gave a talk and demonstration on how to make a purse, which was very new and interesting to all 4-H girls She then gave an entertaining program of stunts and music.

Thursday was Rally Day for all the 4-H Club Girls and Boys and a large number were present and enjoyed the big picnic dinner. A program was then given by the 4-H Club Girls and Boys who had gone to the Convention at Ames. This special program was greatly enjoyed by all.

At about 4:00 o'clock friends bid each other good-bye, packed grips and suitcases and broke up camp, hoping that all would return to enjoy the camp next year.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Morning Worship and Preaching Service at the Klemme church at 10:00 o'clock.

Sunday school at 11:00 o'clock.

Liberty Sunday school, 10:15.

Preaching and worship service at 11:15 o'clock.

Epworth League and Devotional meeting at 7:15 o'clock. Leader, Oral Gibson.

Evening worship at 8:00 o'clock.

A cordial welcome will be found by all who attend any of these services.

INFANT SON OF MR. AND MRS. WM. HENNIES DIED

The infant son of Mr. and Mrs Richard W. Hennies, who are employed on the Clarence Bachman farm in Avery township and live in the tenant house on the old Will Bachman farm, died a few hours after bein born Tuesday morning, July 2nd.

The remains were taken to the St. John's Lutheran Cemetery, three miles north of State Center, Iowa, for burial. State Center was the former home of Mr. and Mrs. Hennies.

Mr. Hennies, accompanied by Mr. and Mrs. Will Hennies, of Holandale, Minn., grandparents of the child; Mr. and Mrs. Chas. Harrington, of Owatonna, Minn., and Mr. Arthur Wellemeyer, local funeral director acompanied the remains to State Center.

Mr. and Mrs. Hennies have the sympathy of the community in the loss of their first born.

HOW

FERTILITY OF ARMENIAN LANDS MAY BE HELPED.—The droughty fields of Russian Armenia may have their crops increased by water from Lake Sewang, a great body of water with a surface area of 461 square miles. It has often been proposed to use this water for irrigation, but the authorities have always hesitated to take action, because of the general impression that the lake was of volcanic origin and comparatively shallow, and hence that its water resources were relatively limited. Recently, however, a special commission of the Russian Academy of Sciences has made a careful examination of the geology of the lake, and has discovered that it occupies a natural deep rock basin, similar to that in which Lake Superior lies. Its average depth is more than 300 feet, and since it receives not only numerous surface streams but also the discharge of large subterranean rivers, it is believed that it contains so much water that the removal of a part for irrigation will not seriously affect its level. The erroneous impression that the lake was of volcanic origin arose from the presence along its shores of numerous lava masses which have been proved to be of more recent date than the rivers that flow into and out of it.

How Ruling on Patents Affects the Inventor

After receiving a patent on an article while employed for a manufacturing concern, can that concern claim your patent if it will benefit thereby?

The rule is that in the absence of an explicit contract to the contrary such an invention belongs to the employee. If, however, the invention pertains to the work in which the employee is employed, the invention belongs to the employee, but the employer is entitled to a "shop right"—that is, the right to use the invention in his shop or factory. If the invention is outside the line of the employee's work and is made in his own time and without his employers tools or material, the invention belongs to the employee exclusively. If the employee is employed to work out a specific problem or to design a machine and the employee thereby makes an invention, such invention belongs to the employer. In many large establishments employees are required to sign agreements to assign to the employing company all inventions made relating to the business of the company. In each case application for patent can only be made by the actual inventor, if living, regardless of the ownership of the invention.—Washington Star.

How to Reclaim Sahara

Creation of a vast lake of salt water to change the climate of the Sahara desert and convert a sandy waste into a productive plain has been proposed to the French government by Dwight Braman of New York, with plans designed by John F. Stevens, who was engineer of the Panama canal, says Popular Mechanics Magazine. The idea is to dig a canal from the Mediterranean, connecting a series of small lakes which dry up every summer, and admit enough salt water from the sea to keep the lakes filled the year around. An area 265 miles wide would be flooded. The presence of so big a body of water would modify the climate to such an extent, it is claimed, that 210,000 square miles could be reclaimed for farming.

"—Who Stormed Stony Point With Sword in Hand—"

By ELMO SCOTT WATSON

JULY 15 and 16 of this year mark the sesquicentennial of one of the most brilliant victories in the Revolution, a feat of arms which not only greatly heartened the patriots in the struggle for liberty and gave the British a healthy regard for their opponents but also gave to the victor a nickname which has endured to this day. For it was Gen. Anthony Wayne of "fiery heart and cool, clear brain" who "marched by night with his picked command and stormed Stony Point with sword in hand" on July 15-16, 1779, and from that time on he was known by the adoring soldiery of the Continental army as "Mad Anthony."

That nickname was true so far as it reflected his daredevil courage. But it was not true so far as it suggested recklessness and lack of caution. His later career as a cool and wary commander of the forces sent against the trickiest of enemies, the Indians of the Old Northwest, proved that, for after the famous Battle of Fallen Timbers, west-bound emigrants floating down the Ohio sang:

Wayne, Anthony Wayne!
Free is the river from source to mouth,
Free are the streams of the North and South.
Praise to Anthony Wayne!

Wayne's capture of Stony Point was the high-spot of the year 1779. During that summer Washington and Clinton, the opposing commanders, were warily watching each other near New York. Some time before that the Americans had begun the erection of a fort at Stony Point on the Hudson. Stony Point was a bold promontory, reaching out half a mile into the river from the rocky, wooded shoreline and at its greatest height about 150 feet above the water. It was an important position because it guarded King's ferry, which crossed the Hudson to Verplanck's Point on the east side and which was a link in the American line of communications between New England and Washington's former position in New Jersey.

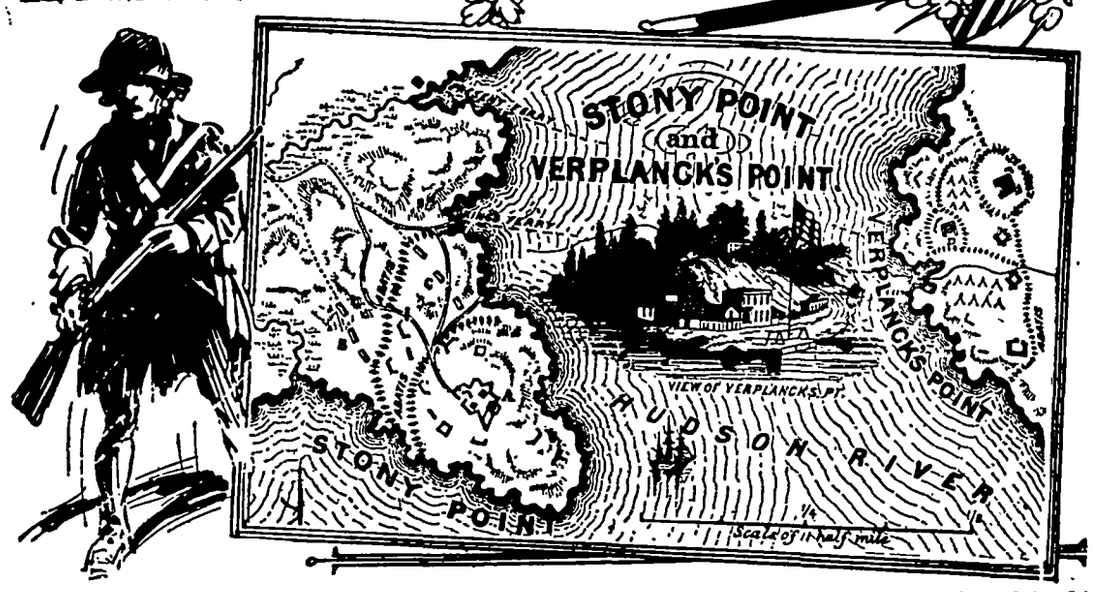
Before the Americans could complete the fort, however, Clinton captured the place and finished the job himself. Inland Stony Point sloped down to a treacherous swamp and to protect this approach two lines of abattis were constructed. On the summit the British mounted seven or eight batteries with communicating trenches and rifle-pits, and they also fortified a natural stone bastian on the east where a government lighthouse now stands. The place was garrisoned with the Seventeenth regiment of British infantry under Lieut. Col. Henry Johnson, a grenadier company of the Seventy-first regiment, some Tories, and a number of artillerymen to man the guns, about 600 in all. They called it "Little Gibraltar" and believed that it could not be captured.

Soon after this Clinton began sending out raiding parties which ravaged the countryside for miles around. Thereupon Washington determined to try to capture Stony Point, not only to put a stop to the raids but also as a dramatic gesture to show Clinton that, despite his apparent advantage in the maneuvering thus far, the Continental army was still a force to be reckoned with. He resolved to carry Stony Point by storm in a night attack and the man he selected for the job was the one man who could most likely succeed, Gen. Anthony Wayne, a brigadier in command of the Pennsylvania line.

Wayne had proved his mettle in several battles, notably at Monmouth. He was distinctly an "assault commander." He believed that the Americans were accustomed to put too much reliance upon their rifles and their marksmanship, and Baron Von Steuben had found him a ready convert to the value of the bayonet. He is said to have remarked once that he would rather lead men with bayonets and one charge of powder than men with forty charges and no bayonets. He was also a strict disciplinarian and a firm believer in the value of smart uniforms and well-kept equipment for maintaining the morale of the soldiers he commanded. In fact, his earliest nickname was "Dandy Wayne."

In preparation for the attack on Stony Point Washington had recently formed his light infantry into a separate brigade and was ready to give this command to Wayne. According to the story, Washington asked Wayne if he would accept the job of storming Stony Point. "I'll storm hell, General, if you will plan it," was Wayne's reply, whereupon Washington, with a quiet smile, replied, "Perhaps we'd better try Stony Point first." So the two men began planning the capture of that place.

For several days before the proposed attack American scouts had been operating around Stony Point, seeking to learn all they could about the garrison, cutting off farm supplies that were going into the fort and preventing the British, so far as possible, from obtaining any information about the movements of the Continental forces. Upon Washington's orders, all of the dogs for three miles around the fort were privately killed so that they could not sound the alarm when the march on the fort began.



Mad Anthony Wayne

His sword blade gleams and his eyelight beams,
And never glanced either in vain;
Like the ocean tide at our head he rides,
The fearless Mad Anthony Wayne!
Bang! bang! the rifles go,
Down falls the startled foe,

CHORUS

And many a redcoat here tonight,
The Continentals scorning,
Shall never meet the blaze of the broad sunlight,
That shines on the morrow morning.

Was e'er a chief of his speech so brief,
Who utters his wishes so plain?
Ere he speaks a word the orders are heard
From the eyes of Mad Anthony Wayne!
Aim! Fire! exclaim his eyes;
Bang! bang! each gun replies.

CHORUS

It is best to fall at our country's call,
If we must leave this lifetime of pain;
And who would shrink from the perilous brink
When led by Mad Anthony Wayne?
Ran! Tan! the bugles sound,
Our forces fill the ground.

CHORUS

Let them form their ranks in firm phalanx—
It will melt at our rifle-ball rain;
Every shot must tell on a redcoat well,
Or we anger Mad Anthony Wayne.
Tramp! Tramp! away they go;
Now retreats the beaten foe.

CHORUS

(From "Sound Off!"—Soldier Songs compiled by Edward Arthur Dolph and published by the Cosmopolitan Book Corporation.)

During this time Wayne was constantly getting valuable information about the garrison from Pompey, the negro slave of Captain Lamb, a patriot who lived on a small fruit farm near the post. Pompey was sent to the fort to sell strawberries to the soldiers and he became a welcome daily visitor. One day he informed the British that it was "corn-hoein' time" and that his master would not allow him to visit the fort any more in the daytime. So they arranged for him to make his visits at night and each time gave him the countersign for the following night so that he could pass the guard.

Wayne decided to make the attempt on the night of July 15. On the morning of July 14 his light infantry battalions were ordered out for an inspection, all to be "fresh shaved and well powdered" with rations and full equipment. After inspection they were ordered to march south and they proceeded to Fort Montgomery, then turned west and went through the pass between Bear mountain and Torn mountain. So well had Wayne concealed his plans that his men themselves did not know what their objective was until they went into camp that night about eight o'clock on a farm a mile and a half below Stony Point.

They were then told the object of their march and the plan of attack outlined. The force of some 1,200 men was to be divided into two assaulting columns, with Wayne himself leading the one on the right and Colonel Febiger, a Dane who had joined the patriot cause, leading the left. There was not to be a musket loaded in either column and if a man attempted to load his piece and fire, the officer nearest him was to kill him instantly. "Mad Anthony" was going to put the bayonet to test. In the center was a small force led by Major Murfree with loaded muskets who were to return the fire of the British to deceive the enemy into believing that the main danger was in the front and center of their works while the two "silent columns" rush forward for their grim business.

A force of 150 men, commanded by Lieut. Col. Fleury, a French officer, and Major Posey, formed the van of Wayne's column and a body of 100 men under Major Stewart preceded Febiger's force. In the advance of each of these was a "forlorn hope" of twenty men each, led by Lieutenants Knox and Gibbons. They were to sacrifice their lives if need be to remove the abattis through which the two columns were to rush to the attack. Pompey, who had learned that the countersign for that night was to be "The fort is our own!" not only told Wayne that fact but volunteered to guide the Americans and he went ahead with two stout soldiers, disguised as farmers.

At about half past eleven that night the Americans advanced to the attack. Each wore in his hat something white so that friend might be distinguished from foe in the darkness. Pompey and his two companions were halted by the first two sentinels and while he engaged them in conversation his companions seized them and gagged them. However, they found the causeway flooded and the water deeper than they had expected. A British sentry heard a splash in the water and opened fire, which was immediately returned by Murfree's men, as had been planned. This brought the British commander down to the center, as it was intended to do. Immediately the two assaulting forces swept forward. The "forlorn hopes" rushed upon the abattis and tore a way through them, one party losing eighteen of its twenty men in doing so. Through these openings poured the Americans and, although the garrison was bewildered at first, they immediately opened a plunging fire of grape shot from the cannon on the bastions, which however, overshot their mark.

Sweeping forward under a storm of musketry, to which the only response was the clash of steel as Wayne's men drove their bayonets home when the fight came to close quarters, the Americans sprang upon the walls of the fort, shouting the countersign which had become their watchword for the night—"The fort is our own! The fort is our own!" Colonel Fleury was the first man over the ramparts and with his own hands he lowered the British flag. Convinced that resistance was useless, the British began surrendering in squads. Their commander, Johnson, returning from the slope where he had been drawn by the fire of Murfree's men immediately surrendered to Febiger. So well timed had been the movements of the two columns that they were only a few minutes apart in reaching the middle of the fort. And so swift and successful had been the attack that sleepy-eyed British soldiers were still tumbling out of their barracks when the Americans were in full possession of the fort.

During the brief fighting at the inner abattis Wayne was struck down by a musket shot which grazed his head. With the blood streaming down his face and thinking that he has received his death wound, he cried "Carry me into the fort and let me die at the head of the column." His aides picked him up, hastily bandaged his wound and carried him over the ramparts on their shoulders while he waved his men on with his sword. Febiger was wounded in the face, Captain Selden was shot in the side and Captain Phelps, Lieutenant Palmer and Ensign Hall were also wounded. The British loss was 63 killed, 70 wounded and 543 taken prisoner.

At daybreak the guns of the fort were turned upon the British ships in the river and they at once cut their cables and dropped down the Hudson, carrying the message of disaster to Clinton. It was a much different message from the one which Wayne sent to Washington telling of his success. "Our officers and men behaved like men determined to be free," he said. Clinton then moved up the river to tempt Washington in hazarding a battle to hold Stony Point.

Washington inspected the fort carefully and decided that it would take at least 1,500 men to hold it, a force which he could not spare. So after removing the cannon and destroying the works, he took away stores and other property to the value of $160,000 and abandoned the post. Since Wayne had demonstrated that this "Little Gibraltar" was not impregnable, its usefulness was at an end.

VENEZUELA MAGNET FOR BIRD TOURISTS

Scientists Learn Facts About Feathered Tribe.

Washington.—The feathered American tourists who go south for the winter do not seek tanned skins, but they are as great gluttons for warmth and sunshine as the men and women who bask on Florida beaches during our northern cold season.

This has been learned by Ernest G. Holt, naturalist, who is heading a National Geographic society-Carnegie museum expedition in Venezuela primarily to study bird life.

"Although Venezuela is in the tropics," says a bulletin from the Washington headquarters of the National Geographic society, "its varying elevations afford a range of climates from that of the hot, semi-desert regions slightly above sea level to the cool, moist areas near the mountain tops. Well up the mountain slopes are conditions comparable to those in the eastern United States. It is there that one would expect to find the thousands of birds that fly to Venezuela annually from North America. Instead, they are found lower down in the hotter, sunnier regions.

Find Many Varieties.

"Among the North American birds which Mr. Holt has found sojourning in Venezuela are redstarts, blackpoll, cerulean, golden-winged, and black-and-white warblers; summer tanagers, and even a few rose-breasted grosbeaks. They particularly like the coffee plantations, where the relatively low coffee trees are shaded by banana plants and higher forest trees. In this environment the North American visitors and their native cousins are kept busy eating the innumerable insects.

"When, in search of birds, snakes and other specimens, Mr. Holt and his party had moved over the crest of the coast range, they found themselves in a grassland country that has been made a little patch of Germany. German colonists settled in this region in 1840 and have been little affected by the Latin culture around them. Their architecture has been only slightly modified from that of the old fatherland, and only a few of the colonists have planted patches of coffee. Most of the farms are devoted to raising wheat, rye and peas, pigs and cattle. The women, kerchiefs tied about their heads, do the greater part of the field work. While most of the men have learned Spanish, practically all of the women speak only German.

Larks, Mocking Birds.

"In this unforested region meadow larks and mocking birds dominate the feathered life. These, however, are South American birds, not visitors from the states.

"Mr. Holt and his coworkers are making a careful study of the bird, reptilian and mammalian life of the various zones of Venezuela, and have collected thousands of specimens. These will be brought to the United States for use in research and museum material."

House Wreckers Dig Up Tomahawk on Old Farm

Fort Ann, N. Y.—While tearing down a part of the James Goodman homestead on the George Wray farm, two miles from this village, workmen unearthed a stone tomahawk which historians believe was used by the Indians before the Revolutionary war. The weapon was only a few inches below the surface and was discovered as the ground was being leveled.

The Goodman house is one of the largest farmhouses in this part of the state. It was constructed by Colonel Wray shortly after he arrived at Fort Ann, about 1777, and acquired a large tract of land. Colonel Wray was a slave owner and the old slave pens still are to be seen in the homestead. The present owner of the farm, James Goodman, is a direct descendant of Colonel Wray.

Must Buy Ticket to Park in Australia

Washington.—Out in Melbourne, Australia, the traffic cops don't give automobile drivers tickets. They collect them, and the tickets cost a shilling.

This sad portent of what conditions may be here if parking space continues to grow more scarce has reached the Commerce department from its Australian trade commissioner.

Melbourne motorists now park their cars only after presenting traffic cop collectors with colored pasteboards costing a shilling a day, five a week, one pound a month, and so on.

National Guardsmen Taught Patriotic Songs

Lowell, Mass.—With the indorsement of Congresswoman Edith Nourse Rogers, local National Guardsmen are receiving instructions in the singing of patriotic songs. Rehearsals are held weekly under the direction of Mrs. Frederick Bond, daughter of the first music master in Lowell public schools.

Plane Dining Service

Kansas City, Mo.—Airplane dining service has at last come. The Fred Harvey system has announced that beginning July 1 transcontinental airplane dining service will be inaugurated.

FARM STOCK

EAN QUARTERS ARE MOST VITAL

s Cannot Escape Parasites in Foul Pens.

robably there is no more common more serious parasite of domestic mals than the common roundworm swine. These worms, says R. F. rne of the veterinary division, Colo Agricultural college, ordinarily ur in the small intestines but are quently found invading the adjat organs, particularly the bile ducts the liver.

is practically impossible to raise free from worms in quarters ch have been used for hog raising years because the soil is polluted h millions of eggs passed by ani- s of previous years, each egg coning a live embryo ready to launch attack when ingested by the young

Because of this fact it is impor- that all farrowing pens be either ted on clean ground or that they horoughly scrubbed with boiling wa- and lye. Ordinary antiseptics do good in so far as destroying worm rae is concerned.

igs born into a clean environment kept free from contact with old ected pens escape the various hazs accompanying worm infestation. is desirable to move them from e clean pens into open fields or tures wherever this is possible to keep them away from infected rters until they are at least four five months of age. A good deal be accomplished by ordinary sani- measures in removing the filth ch accumulates in hog pens and in use of sanitary wallows.

emoval of worms from adult pigs best done by a qualified veteriian since no simple treatment as to be very effective.

ney in Raising Pigs by Saving Little Ones

he sure way to make money raispigs is to save them. Every litpig that is lost increases the cost hose saved. Very commonly one- to one-half the pigs farrowed before weaning time. A pig at owing time is worth or has cost roximately $3, and it pays well eep as many of them alive as pos- Aim to be on hand when the farrows to see that everything well and that the little pigs get first meal as soon as possible. , be sure they have a place to warm. Have a guard rail around pen or a protected corner with of the bedding in this protected e.

inkage in Weight of Shipping Steers

hen steers are shipped to market is always some shrinkage or in weight. By proper handling possible to reduce this loss. s which have been getting a full of corn and alfalfa hay should their grain somewhat reduced y or two before shipping and mostly prairie hay or fodder in of alfalfa. Steers which have getting a good deal of silage d be fed dry fodder before shipto market. Arrange to ship so the cattle will arrive at the yards during the night or early e morning so they can take on a efore the buyers bid on them.

Live Stock Hints

st men will do fairly well to keep rdinary supply of live stock in condition and, paying its way.

* * *

s year there is a nation-wide ment among sheep raisers to put docking and castrating campaign.

* * *

In the case of all other live care and attention are the main tials in producing good hogs for market.

* * *

ood hog oiler kept filled with old -case oil, diluted with coal oil, little coal tar dip added, will the lice in check and keep down e or scurf.

* * *

ce prevention is always the est remedy, all sheep should be ally dipped twice each spring, after shearing. The cost is small, enefit considerable.

* * *

the earliest possible age the colt d be fed oatmeal and bran, oilcorn and legume hay. He may be d at four to six months of age, ding on his condition.

* * *

ep will overeat of salt if it is ed only at intervals. Keep it benem at all times.

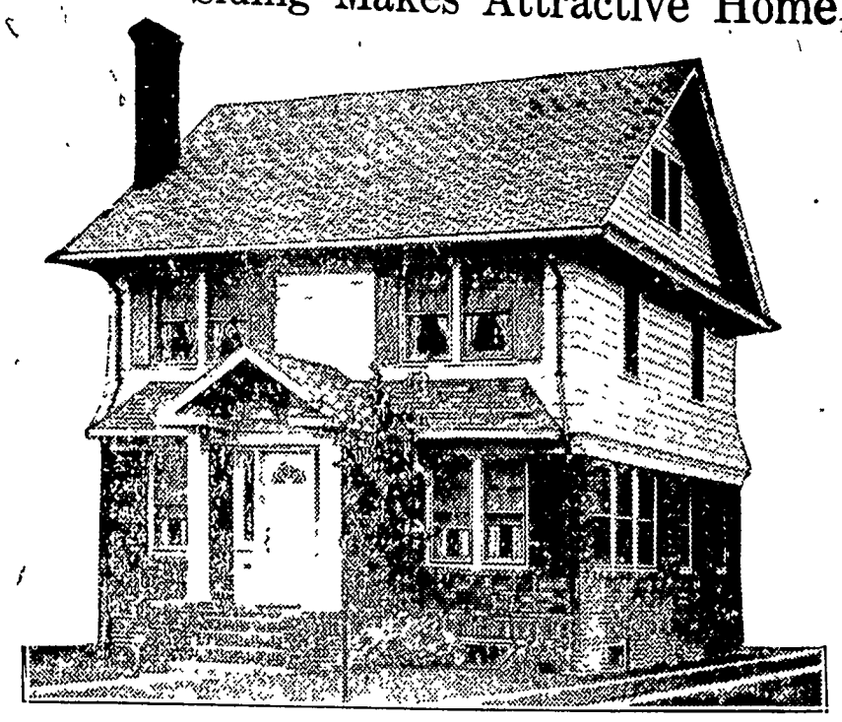
* * *

d beef calves that get a little in a creep along with their mothilk are being sold fat at weanne at $60 to $80 per head.

* * *

p pork comes with an abundf clean water of the right temre. Have fountains that prehe hogs from making a mudhole it. A healthy hog needs water to his feed.

Combination of Face Brick and Siding Makes Attractive Home

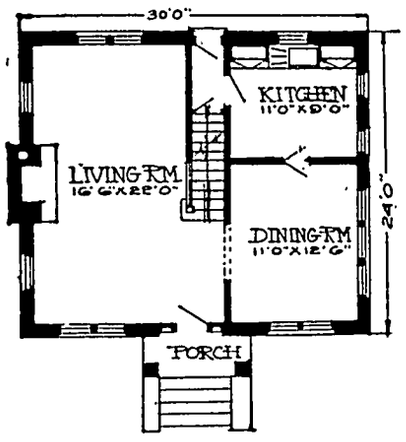


A beauty in a combination of face brick and siding. Notice the simplicity and harmony of each part with every other and study the unusual floor plans.

By W. A. RADFORD

Mr. William A Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

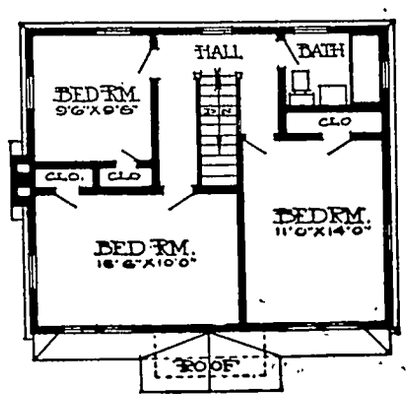
There are a great many different building materials which used alone make an attractive home. However, some people desire a combination of two materials, thereby securing an out-of-the-ordinary home. In the home building design shown in the accompanying illustration a combination of face brick and wood is used to good advantage. While the house



First Floor Plan.

is not large the brick walls up to the second floor still give it an air of solidity, likewise the contrast of the wood above helps to take this house out of the commonplace. The home is 30 feet long and 24 feet deep and contains six rooms, living room, dining room, kitchen downstairs and three bedrooms and a bath upstairs.

As will be seen by the floor plans which accompanies the exterior view, all of these rooms are of unusual good size. The entrance door leads directly into the living room, which is 16 feet 6 and 22 feet long. At the right



Second Floor Plan.

through a double-cased opening is the dining room which is a front corner room with five windows, making it a light and airy place for the family meals. Back of the dining room is the kitchen, 9 feet by 11 feet.

An open stairway leads out of one side of the living room to a central hall on the second floor. Off this hall opens three bedrooms, two at the front being large, one 11 feet by 14 feet, and the other 10 feet by 10 feet 6 inches. There is a small back bedroom which is 9 feet 6 inches square. The bathroom opens off the upstairs hall at the head of the stairs. One attractive feature of this home is the roof projection at the front over both the living and dining-room windows and the colonial type open porch with boxed pillars and a gable roof. The house is of frame construction and set on a concrete foundation with a single brick veneer wall below.

House Wiring Needs Services of Expert

When you push a button or turn a switch in your home and your lamps light, your flatiron or curling iron gets hot, your washing or sewing machine begins to move or your refrigerator begins to chill, you know what happens, but do you know why it happens?

Do you know how the electric current, one of the most frequently used home-making agencies brings heat and cold, light and motion all at the same time? Maybe if you understood it better you could use it better.

In this day when practically everything is being done electrically the tendency is to put heavier fuses in the circuit and attach on every kind of an appliance possible. This is in line with modern progress and very commendable, but a few precautions should be given before loading up a circuit too heavily.

When electric current passes through a conductor of any sort it heats it up. This is commonly noticed in the various heating appliances and the lights used in a home.

A flatiron will become very hot while the cord to it will become but moderately warm, due to the difference in resistance used. The more current that is passed through a wire the hotter it becomes. Large wires will carry more current than small wires without heating up as much.

The ordinary home, if wired a number of years ago, has rather small wiring, designed only to carry a light load of lights. If this system is taxed with a number of current-consuming devices such as flatirons, heaters and motors, the amount of current that these wires must carry is increased.

A few extra floor lamps or a small motor for a washing machine, etc., will not appreciably increase the lighting load, but the addition of a number of heating appliances, stoves and other things consuming large amounts of current should have the approval of an experienced electrician before installation.

Electric ranges installed in such old homes should have separate wiring installed. This can be done at a small expense.

The dealer who sells a new appliance can give the wiring of your home an inspection and advise you if additional wiring is necessary.

Tri-Ply Construction

A new monolithic method of building large and small homes, known as tri-ply construction, is said to be permanent and economical.

Tells of Methods to Prevent Leaky Roofs

Drippy leaks that come with every rain or snow storm irritate the nerves as well as cause damage to furniture, walls and floors. J. Paul Atwood writes of ways to prevent leaks of the roof in the People's Home Journal.

He advises the placing of a new flashing around the chimney or stand pipe on the roof to close a bad leak. "Buy some flashing," he says, "copper is best, but you may use lead, zinc or galvanized iron. Mark out a good-sized area around the pipe and carefully remove the shingles. Then fit a piece of metal around the vent pipe, as well as over the area that you have uncovered, and nail it down with good rust-proof nails. To prevent rain or snow from working its way down between the pipe and the flashing, get a threaded iron cap and screw this down. Next you must relay the shingles. Drive the nails in a few inches from where the old ones were.

"The most vulnerable portions of a roof," continues this writer, "are the valleys, the ridge, the gutters, and the slopes where chimney, dormer or other structure penetrate. A roof with a few angles, few penetrations and a good slope, is the best. The slope should never be less than thirty degrees with the horizontal and all projections should be kept away from the valleys. If they aren't, there is bound to be trouble, for the snow and water will not be able to flow off freely, and after a while it will back up, work its way under the shingles, continually forcing them further open until you have a good-sized leak."

Hard-Burned Common Brick Wall Charming

Where one has a brick house, a garden wall of hard burned common brick may surround this home and add a beauteous touch of color and artistry as well as contribute a sense of privacy to the grounds. Mortar which is used in the wall can be colored to harmonize with the brick in contrast to the foliage and flowers.

Charming House

The charming house is never easy to define or explain. It is seldom due simply to one or two outstanding beauties. The charming house is rather the result of a multiplicity of carefully considered details, combining to give the harmony, ease and shining cleanliness that is the goal of every home owner of good taste.

FARM POULTRY

CLEAN GROUND IS BEST FOR RANGES

One of Most Important Points in Growing Pullets.

Clean ground for ranging is one of the most important points in the growing of healthy pullets which will become vigorous and profitable layers, it is pointed out by the poultry husbandry department of the Ohio State university.

"A large percentage of the mortality in the growing flock, as well as in the matured laying flock, is caused either directly or indirectly by intestinal parasites," P. B. Zumbro, poultry specialist, says in a recent extension service publication. "These parasites, as well as many disease germs, are carried over from year to year in the soil."

Zumbro urges that chick ranges be on land on which no other chicks have been raised or old hens ranged, for at least two years. Alfalfa, he says, makes one of the best chick ranges. Clover is almost as good, and blue grass comes next.

"Many poultry men think an alfalfa or clover field is too valuable for rearing chicks. This is a mistake. Poultry grown on good range will give a return equal to that from any live stock, or better. Good results can be obtained by having two or more ranges, and a crop can be grown in the meantime. This method will provide clean range and will enable the owner to have the brooder house near the farmhouse, saving time in going to and from the house. When this method is used, one acre of land should be provided for each 500 chicks."

Wonderful Feats With Turkeys Are Reported

Really wonderful results with turkeys are reported from the Ontario government turkey farm in Norfolk county. Years ago this province used to raise turkeys by the thousands but disease got in and flocks have been diminishing to such an extent that each year thousands of birds are brought in from the West. The disease puzzled people and except where there was unlimited range the raising of turkeys languished. Even in the places where there was plenty of range, such as in the rocky districts on the edge of forest lands, difficulties in the shape of foxes and wolves were encountered. It looked for a while as if there would be practically no turkeys raised in Ontario. But Prof. W. R. Graham took hold of the thing and he soon found out that the disease came from the ground and the germs were so hardy that they could live over in the coldest weather. He adopted the plan of feeding everything in troughs and moving these troughs each day and his results have been unusually successful. Losses have been light on the experimental turkey farm and some excellent birds raised.

Poultry Notes

It pays to worm the poultry.

* * *

It requires 21 days to hatch hen eggs.

* * *

Care must be taken that chicks do not crowd in corners and smother.

* * *

Shut the sheep in at night, allowing them to bed in the corral or shed.

* * *

Coccidiosis usually occurs in young chicks from two to six weeks of age.

* * *

When the poults are about eight weeks old, they can be removed to the rearing ground.

* * *

Tapeworms have been named as the cause of death of 50 per cent of the chickens in some flocks.

* * *

Changing breeds every year has never yet been found a safe foundation for a profitable poultry business.

* * *

A month lost in growing out pullets means the loss of a month's production next fall when eggs are a good price.

* * *

Any variety of wheat is good for poultry. In fact, small undeveloped shriveled wheat if dry is even better than the fully developed kernel.

* * *

The farmer who produces eggs of uniform color, weighing an average of 23 ounces per dozen, and which are held in a cool cellar, can ship to eastern markets by express to advantage.

* * *

The profit from the farm flock depends to a large extent on the number of eggs the hens lay.

* * *

Hens cannot lay eggs without protein. Skim milk is one of the best forms of protein for use with all classes of poultry.

* * *

Mongrel geese plucked regularly yield one pound of feathers a year. Pure-bred geese yield twice as many and, besides the good prices of feathers obtained, the goose is worth as much as it ever was.

Delicious! this effective bran cereal makes it a pleasure to keep fit!

HOW

PHRASE IN COMMON USE MAY HAVE ORIGINATED.—It has been suggested, says the Mentor Magazine, and not without good cause, that the homely expression, "bringing home the bacon," may have originated in the ancient English ceremony called "The Dunmow Flitch," at which a gammon, or flitch (side or leg), of bacon was awarded to the couple that swore that for a year and a day they had neither had differences nor wished themselves unwed. The ceremony takes its name from the historic village where the custom originated, at Little Dunmow in Essex, forty miles from London.

The antiquity and origin of the Dunmow Flitch ceremony is obscure. Some think that it had an ecclesiastical beginning; that a gammon of bacon was first given by the prior as a reward to a "pilgrim" or novice, who after a year and a day had not repented of his "marriage to Holy Church," as it was called. Other historians suggest that the flitch was given when the church blessed, made permanent (and rewarded!) "handfastings;" i. e., irregular marriages that were tried out for a year and a day. The ceremony is supposed to have become more or less a jocular tenure even before the Fourteenth century, and the frequent revivals that have been made partly solemn and partly an excuse for merry-making.

For a long while the custom fell into abeyance, although there have been frequent attempts at revivals. Even to this day ceremonies are held in various parts of England, although it is many years since one was held in Dunmow itself.

How Windmills Used in Europe Are Operated

The typical Dutch windmill is composed of four long sails at right angles to each other, fixed on an axis inclining about 10 degrees to the horizontal and mounted on an inclosed tower of masonry or wood. Modifications of this type include six or more sails. The web of the sails is generally of canvas, but wood may be substituted. In the best forms of European windmills each sail is composed of arms or whips, 30 feet or more in length, attached at right angles to the sail axle. Transverse bars or rods are secured to the whip at intervals throughout its length and on these the sails are stretched. By setting the bars at varying angles with the plane of revolution of the whips a warped surface is produced. This is essential, because if the bars were all parallel to one another the pitch of those at the extremity of the arms would be much greater than that of those near the axle. The result of this would be that the wind would tend to turn the outer end of the arms much more rapidly than the inner end, which would simply drag. The sails are generally wider at the tips than at the hub.

How Thin Gold Can Be

The thinnest sheets known to have been made of gold mechanically are 0.00001 millimeters thick. This would indicate that if a cubic centimeter of gold could be hammered out to the same thickness it would cover 100,000,000 centimeters, or 100 square meters, equivalent to about 120 square yards. At this rate a troy pound of gold would cover about 235 square yards of surface. It is to be remembered, however, that this is figured on the basis of the thinnest possible sheet of gold to be made mechanically. Ordinarily, gold foil is 10 to 20 times as thick and would cover a correspondingly smaller area.

How Woodchuck Was Named

"When the first settlers came to New England," says W. Dustin White, in Forest and Stream, "they saw this little animal, fat and waddling, and were reminded of the pigs of their farmyards back in England and, since they had called their pigs 'chucks' or 'chuckies' it was quite natural that they would name this somewhat similar creature of the forests 'woodchuck.' So the name woodchuck means wood-pig or wood-hog, and this has been changed to ground-hog since the animal left his native woods and took up his abode in the open fields."

How Many Are a Few?

How many are a few? Nicer questions, such as how many angels can dance on the point of a needle, have been answered by authorities long ago. But it has remained for a London jurist, a justice on the king's bench, to rule precisely as to the number which may be called a few. A barrister sent word that he would be absent a few minutes. "How many is that?" asked the judge. The answer was twenty. "Twenty is more than a few," replied the judge. "I think seven minutes is the end of a few."—St. Paul Dispatch.

How to Clean Lens

To clean a lens, flick off the dust with a camel-hair brush, breathe on the lens surface in order to moisten it slightly, and then rub it gently with a clean, soft linen rag. Once the lens is clean, maintain it in this condition by keeping it covered up.

WHY

Milk Is of Highest Value as Nourishing Food

Only humans are foolish enough to get dog-tired. Dogs should not be blamed with this error in overwork or overplay, which is responsible for the phrase, according to Walter Camp.

The pressure of modern business, the rush from the time that breakfast is hastily bolted and the 7:18 is caught on the run, all through the rush and strain of dodging automobiles and meeting the demands of high-pressure business is enough to leave any human being dog-tired, says Miss Lydia Broecker of the national dairy council

Our main hope, since most of us have to work, is for use to keep our bodies well nourished so that they may throw off fatigue poisons. Among our restorative foods is milk, which not only helps give us energy for carrying on during the day so that we can do our work without becoming so tired, but is also relaxing and nourishing for the night-time drink.

Why Zero Is Accepted as Symbol for Nothing

"Zero" is the "nought" of arithmetic and, as pretty nearly the whole world knows, it means "nothing."

Directly "zero" is derived from the Italiar "ezoro," but for the origin of the cipher, indicating the zero, we must go back to Biblical days.

Thousands of years ago the ancient Hebrews, when they went through certain religious ceremonials, wore around their waist a sort of a girdle.

This girdle was never unbuckled, but always slipped on and off, so that it constantly remained spherical in contour.

The name of this article was "ezor." And in the course of time, because of its unchanging shape and its significance, it became incorporated into the symbolical writing of the entire civilized world for the cipher.—Kansas City Times

Why "Four-Flusher"

A four-flusher, in common parlance, is a bluffer, braggart, or cheat. The term originated in the popular American diversion known as poker. In poker a flush consists of five cards of the same suit. If a player gets four cards of one suit and one card of another suit he has a four flush, also called a bobtail flush. Sometimes a player with a four flush pretends to have a full flush and attempts to drive out an opponent by betting heavy. This practice is perfectly legitimate in poker, but such a play is known as fourflushing. If he succeeds the other players never know what cards he held; if he is called he must show his cards and his bluff is exposed.

Why He Bought Airplane

In order to be able "to admire his crops from the sky," a Serbian peasant recently bought an airplane from a French aircraft firm. The man had seen his first plane two weeks before when one flew over his fields near the village of Silba, and he was so impressed that he at once went to an airdrome near Belgrade and asked to be shown a similar machine and have its operation explained. "I am rich enough to buy myself an airplane and admire my fields from above," he told the director of the airdrome from whom he ordered the plane. A crowd of admiring neighbors gathered at his farm to see the plane delivered.

Why Shamrock Is Honored

The shamrock (trifolium repens of botanists) is worn in the hat almost everywhere in Ireland on St. Patrick's day because tradition has it that when St. Patrick was preaching Christianity to the pagan Irish he used the three-leaved plant as a symbol of the Trinity. The trefoil is called shamrakh in Arabic, and was held sacred as emblematical of the Persian Triads. According to the natural historian Pliny, serpents are never seen upon trefoil and it prevails against the stings of snakes or scorpions. This is interesting, considering St. Patrick's connection with snakes.

Why Game Is Increasing

The value of game preserves is shown by the experience of the rangers at Glacier National park. In recent years, poaching, once the main problem of the rangers, has almost disappeared. The hunters now realize the value of the preserves for the propagation of wild life and find that protection of the herds within the park increases the quantity of game that later finds its way out into unprotected land where the hunter holds sway.

Why Egg Did Not Hatch

"Don't count turtle eggs before they're hatched," John Toomey, keeper of the reptile house in the Bronx (N. Y.) zoological gardens, advises. Mrs. Buster, from the Galapagos islands, laid an egg, the first in twenty-three years, and the keeper laid it away to hatch. Eight weeks later he unburied it and found it bad, just as bad as any egg can be at the end of eigth weeks. It had been slightly cracked.

Why Called "Bourbons"

Bourbon used to be applied to the old-fashioned Democrats who were charged with acting unmindful of past experience, like the Bourbon kings of France. The term corresponded somewhat to the "Old Guard" in the Republican party. Nowadays the term is seldom heard.—Pathfinder.

WISE WHISPERS

There is no day without sorrow.

Attitude of mind is individuality.

The weakest booster is the boaster.

The love of self increases with the pelf.—Juvenal.

A man who gets what he deserves has his troubles.

Wise is the young attorney who peruses old books.

A new dress lasts a long time after it has been worn out.

The finest edge is made with the blunt whetstone.—Lyly.

Many an illiterate man is able to make his dollar mark.

No, Cordelia, the little dears are not seen at stag parties.

People who forgive their enemies may be accused of being afraid of them.

Wisdom is sought from the wise, and yet nonsense has the same customers.

Friendship is often used as a temporary cement for binding mutual interests.

If ignorance would admit that it were ignorant, it might be forgiven; but it never does.

If you want to do something wild, your lawyer will advise No as certainly as your mother.

Boys flunk examinations oftener because they are not interested than because they can't learn.

On the days that "everything goes wrong," you will find that about all that went wrong were trifles.

A single wrong brings to an end the friendship of a lifetime; to break one link is to sunder the chain.

To please the public, a rich man is expected to spend his money free-handedly, and yet keep his wealth

Laughs at Advancing Years and Blindness

A sixty-seven-year-old blind pastor, who must travel nearly 100 miles each session day to serve, is chaplain of the Connecticut senate. He is Rev. Edward P. Ayer of Branford, now serving his third term in the office. Despite his years and affliction Ayer is strong and active. In his youth—before excessive study robbed him of his sight, he was captain of the Amherst college from Yale Divinity school. The blind chaplain heads an organization known as the Society for the Handicapped, a group which seeks to alleviate the misfortune of the blind in Connecticut. During the World war he donned overalls and managed a sizable "war garden." In addition, he milked five cows, fed three yearlings, two calves and twenty-five hens and raised ninety-two chickens.—Indianapolis News.

Regular Crowd

In some manner a book agent accomplished a miracle and wormed his way into the presence of Director Tod Browning. "Are you Mr. Browning?" he asked and Tod was too busy at the moment to deny it.

"Well," said the agent, "I'm Little, Brown and company."

"Oh, good morning, good morning, good morning—good morning to each of you!" said Tod effusively and added—"also, good-by, good-by, good-by. And don't trip over one another as you go out."—Los Angeles Times.

Uncle Sam's Warships

United States battleships are named after states, cruisers after cities, destroyers after naval heroes or men who have been conspicuous in naval affairs. Submarines bear numbers and mine sweepers are named after birds. The two ammunition ships of the navy are the Nitro and the Pyro. Some of the more unusual names are the Umpqua, Tillamock, Oglala, Monocacy, Kidder and Koka.

Plan London-Paris Line

Construction of a railway line connecting Paris and London has been proposed in France. It would cost $945,000,000 to build. The proposed line would be of broad gauge, seven feet, and would pass through a 44-mile tunnel under the English channel.

Norwegian Tree Planting

Norway's forests are valued at approximately $250,000,000, three-fifths of the forest area being made up of pine and fir trees. Since 1906 Norway's Afforestation association has planted between 10,000,000 and 15,000,000 trees annually.

Millions Use Tunnel

More than 10,000,000 New York or New Jersey bound motorists, who piloted 7,650,713 automobiles and 1,750,000 trucks of all sizes and descriptions, paid $4,500,000 to use the Holland tunnel last year.

Practical Suggestion

"Where did you get this pie?"

"Why, I made it out of Mrs. Nabor's cook book."

"Next time try flour for the crust."

FIRST TRAFFIC LAW PASSED BY CAESAR

With a prospect of 25,000,000 motor vehicles on the roads in 1929, every United States municipality that boasts more than one Main street is giving though to the traffic problem.

To listen to our traffic experts, one would think they had something entirely new on their hands. Why, even Rome had the same question to tackle. The Lamp, published by one of the oil companies, has an interesting article on transportation in those days. The Appian way, it says, had become a veritable race course. In and out between the lumbering ox carts and stately litters, Roman youths used to drive their noisy chariots at a reckless pace. A jaywalker's only chance was to emulate his namesake and fly across. Finally, Caesar had to pass a law about it.

Early American travelers had their traffic troubles, too. Stage coaches used to whirl over the rocky roads at breakneck speed—sometimes going as fast as 15 miles an hour. But the passengers never complained. They were too busy keeping their respective vertebrae in proper alignment.

FOUND FLOATING

Virtue and happiness are twin sisters.

Fortune smiles at few and laughs at many.

Holding a convention doesn't stop its progress.

No one cares for your cheerful talk if it isn't also smart.

Happy is the wife who finds the heart her husband loses.

Fault is one of the things frequently found where it is not.

Wrinkles on the face indicate character—all kinds of character.

When a man speaks with a golden tongue all others are silenced.

Pride is usually too high in the instep to wear another man's shoes.

Sickness can change the whole character of a man. You'd be surprised.

Were plums really ever put into a "plum" pudding? It ought to be tried.

No brain "wears out"; it merely hardens and fails to respond to sensation.

If a woman marries a saint she loses all the enjoyment of reforming him.

A man is usually as anxious to get away from a baby as a woman is to get to it.

Every man knows a little of how the government should be run, but a good deal of how it shouldn't be.

However, reform is not what it was in ancient ages. If you refuse to reform, you are not decapitated.

Martian Transformer

A Brazilian inventor recently announced that he has perfected a device to make walking swifter and less tiresome. The apparatus, which he calls a Martian transformer, weighs about two pounds and is attached to the back. It is supposed to energize the nervous system, so that one may hike long distances over high mountains with a small expenditure of bodily energy. With a similar device weighing about 33 pounds, the inventor claims that one may take off in aerial flight like a bird. As yet, however, no practical demonstrations have been given.

Therefore—

Bob, age four, does not take kindly to the economical ways of living. One morning he took all the chairs in the dining room and moved them into the living room, to build a house. When the task was almost completed, his mother arrived on the scene. She was horrified to see her new overstuffed furniture being misused.

She angrily said, "Bob, don't you know that is mother's company room and she doesn't allow you to mess it up like that?"

Looking around the room with a very sober face, Bob replied, "Well, I don't see any company."

Love's Logic

He liked her for the way she flirted, for the trick she had of curling her lips into an irresistible pout, for the little plaited skirts she wore that showed her dimpled knees, for the way she whispered "darling boy."

So eventually they were married.

* * * * *

He divorced her for the way she flirted, for the trick she had of curling her lips into an irresistible pout, for the little plaited skirts. . . .—Kansas City Star.

Delicate Encouragement

"You have many times refused my marriage proposal," said the man. "Don't you like me?"

"Very much," answered Miss Cayenne. "I enjoy your visits and I want you to feel perfectly safe."

School Children's Sickness

Children lose about 4 per cent of the possible days of attendance at school on account of sickness, according to an article by Dr. Hugh S. Cumming of the United States public health service.

Camouflage Artist

"What do you do down at the movie palace, Georgie?"

"My job is to hide the people who are waiting in line so that they can't be seen from the street."—Life.

It's High Now

Bill—He's gathering material for his novel now.

Ed—Traveling around the world?

Bill—No, collecting waste paper.

LINE LONG POPULAR IS NOT M'CLELLAN'S

"All is quiet along the Potomac" originated during the first few months of the Civil war and referred to the state of military affairs in the vicinity of Washington. This and similar expressions frequently occurred in the official dispatches and newspaper articles of the time.

"All is quiet," "All is quiet today," and "All is quiet tonight," were favorite expressions in the telegrams sent to the secretary of war by Gen. George B. McClellan in 1861 and 1862 while he was in command of the Army of the Potomac.

For that reason McClellan is sometimes given as the author of "All is quiet along the Potomac." The expression was further popularized by Ethelinda Eliot Beers ("Ethel Lynn") whose poem entitled "The Picket Guard," was published in the issue of Harper's Weekly dated November 30, 1861. This poem was so popular that several persons claimed the authorship.

Mrs. Beers republished it in 1879 in a volume entitled "All Quiet Along the Potomac and Other Poems."—Pathfinder Magazine.

Potato Growers Hurt by Edict of Fashion

The countryman who innocently turned in a fire alarm when trying to mail a letter did not produce a more unexpected result than those fashion leaders who persuaded women that to be stylish and attractive they must be slender, svelte, willowy or what-you-may-call-it. The potato market was practically ruined as a result. Potato growers have suffered almost as much as the hairpinmakers before them. The idea is very widespread that potatoes are fattening, hence ladies tending toward rotundity eschew them—eschew them with the accent on the first syllable.

It is a sad thing. The poor dears would enjoy nothing more than a plate of hot, crisp fried, baked, mashed, rissole, saute or plain boiled potatoes. A longing for them wells up from their innermost being! And how they would "just adore" a reeking potato salad—on days of no company. Yet Dame Fashion's voice is imperious, and both the ladies and the potato growers suffer. It is to be hoped that the Dame will change her mind again soon and allow us to see more attractive curves, in both women and potatoes.—Exchange.

Philippine Coinage

Money coined for the Philippine islands first arrived in the Philippines from the Philadelphia and San Francisco mints in June, 1903, and was first placed in circulation in July, 1903. This was done in accordance with the provisions of a tentative law passed in 1902. On June 23, 1906, an act was passed to establish the standard of value and to provide for a coining system in the Philippine islands. From that time on the San Francisco mint, when requested to do so, has coined money for the Philippines. For the past few years the United States has not struck coins for the Philippines. The old dies are still in use.

What Do You Mean, "Aged?"

Speaking of Chief Red Fox, an article says, "Though nearing his sixtieth year he is wiry and active and able to engage in campaigns, were they necessary." Age is a relative matter. The young reporter in referring to any citizen past forty speaks of him as "aged." The other day we heard an elderly gentleman say, "Youth has no time for age. I called to take my niece, fifty-eight years old, out to lunch, but she told me she had a luncheon engagement, so I was compelled to lunch alone."—Houston Post-Dispatch.

Prefer Somber Bibles

Bright-colored Bibles are in demand in districts of South America, but in no other part of the world, declared Dr. J. H. Ritson, chief secretary to the British and Foreign Bible society, which sells 3,000 Bibles a day in 600 languages. This statement was made in reply to the question, "Why are Bibles so often not only printed poorly, but bound in mournful black?" propounded recently by the bishop of Southwark, England.

Too Much, if Any

The Spatts had been at it again.

"And furthermore," said Mrs. Spatt, concluding her long tirade, "you certainly aren't much of a husband."

"Well, my dear," her husband retorted, wearily, "I can truthfully say you are a lot of wife."—Tit-Bits.

Camera Making

One hundred and twenty-two manufacturing plants were engaged in 1927 in turning out $90,827,737 in cameras, camera parts, accessories and supplies in the United States. This was an increase of 15 per cent over 1925.

She's a Modernist

Blinks—We have to disconnect our phone at night.

Jinks—What's the idea of that?

Blinks—Our daughter is a somnambulist, but instead of walking in her sleep she always goes to the phone and calls a taxi.

Successful Marriage

Nell—Alice won't get much of a husband when she marries him.

Belle—No, but she'll get a nice hunk of alimony when she divorces him.—Cincinnati Enquirer.

Chinese Elm One of Hardiest of Trees

The Chinese elm, sometimes known as the desert elm, is one of the most valuable contributions to the imported flora of the United States made by the late Frank Meyer of the bureau of plant industry, United States Department of Agriculture, says the American Forests and Forest Life Magazine, official organ of the American Forestry association. Mr. Meyer found the tree growing in the vicinity of Peking, China, and was so impressed with its graceful form and general hardiness that he included seeds in his shipments of new plants from the Celestial Kingdom about the year 1914.

"The seeds," the writer continues, "were propagated at several of the plant introduction gardens of the Department of Agriculture and soon proved their adaptability to a wide range of conditions in America. One of the original trees growing near Chico, Calif., is now about forty feet high and its small leaves and the density and weeping character of its foliage combine to make a specimen of great grace and beauty."

Two-Thirds Majority Doesn't Mean That

A "two-thirds majority" is merely a popular way of saying that a candidate received two-thirds of all the votes cast in an election. Suppose, for instance, 3,000 votes are cast, and one candidate receives 1,000 and the other 2,000. The latter receives a two-thirds majority; namely, two-thirds of all the votes cast. In this case the actual majority over the other candidate is only one-third of all the votes, and literally "two-thirds majority" should mean that the difference between the two figures is two-thirds of the total number of votes. For instance, if one candidate had received 500 and the other 2,500, the difference—2,000—would equal two-thirds of the total. But the term is generally used to express the idea of two-thirds of all the votes regardless of the number received by other candidates.—The Pathfinder.

Fastest Thing on Legs

"The fastest thing on legs" is the title deserved by the whippet, the featherweight, long-legged racing dog that is rapidly becoming popular in America. Over a 200-yard course the dogs will outdistance a race horse reaching the finish in from 10 to 12 seconds. That is half the time the fastest man would require!

In the Farm Journal, Werner P. Meyer tells how the whippet originated in England. "The breed was built up," he relates, "chiefly by mixing the blood of the greyhound with the terrier family. The result of this interbreeding was a dog resembling the greyhound in physical features, but smaller and lighter of build; and to the speed and stamina of the greyhound were added the daring and gameness of the terrier family."

Gets His Revenge

A contractor received an inquiry from a surgeon who wanted preliminary bids on several different sketches, with alternates for all kinds of materials and finishes, relates a contributor to Architectonics Magazine. The contractor wrote back: "Am in the market for one operating for appendicitis, one, two, or five-inch incision with or without ether; also with or without nurse. Quotations must include putting appendix back and canceling the order if found unsound. Successful bidder is expected to hold incision open for 60 days. I expect to be in the market for an operation for gall stones, and I want to save the extra cost of cutting."

Oldest Road in America

The old Spanish road, built across Mexico in the Sixteenth century, is believed to be the oldest road in North America. It was built in the form of a letter "Y" with the lower part starting at Vera Cruz on the Gulf. The northern prong touches the Pacific at San Blas and the southern one at Acapulco. Because of this road west-bound convoy lines from the Philippines were spared the dangerous navigation around Cape Horn. There still is evidence that this trail was used by the Indians before the Spaniards broadened it from a pack-mule path to a highway.

Speed Hog

Armed with pencil and notebook, a reporter attended a certain meeting and took up a position below the platform.

He worked very quickly, and occasionally the speaker glanced at him rather nervously, afterwards speaking at greater and greater speed.

But the faster he spoke the quicker the reporter's pencil glided over the paper. Finally, the orator could stand it no longer.

"Not so fast," he shouted; "you're too fast! I can't keep up with ye."

Sympathetic Tree

A tree that died with its owner was the subject of a strange story told at La Grange, Mo. When William Quinn was born on a farm 71 years ago his father, Benjamin Quinn, planted a hard maple sapling. The tree thrived as the boy grew. William Quinn became devoted to it.

When Quinn died a few months ago so did the tree. To keep alive the memory of the spot the family placed a six-foot stump in cutting the tree. A maple. A vine was planted at the base.

NOTICE TO BIDDERS

aled bids will be received at office of the County Auditor, ner, Iowa, until 1:30 P. M., July 1929 for gravel surfacing and dental work on the Klemmeura road and the Goodell-Mesy road.

ids will be opened at the above ce promptly after the time for eiving same has closed.

certified check or cashier's ck, amounting to five (5%) per t of the bid, made payable to County Auditor, shall be filed h each bid, which in case of the der receiving the award, should fail to execute a contract and a bond within ten days after the eptance of his bid shall be reed by the County as liquidated mages.

The successful bidder will be reired to file a bond for seventy-e (75%) per cent of the contract ce executed by a responsible ety procured from a resident nt drawn to protect the County d sub-contractor and such as will approved by the Board of Supervors.

Specifications for the above work y be seen at the above office, or the office of the County Engin-, Garner, Iowa.

Payment will be made from the unty Road Fund.

Tender will be received on the llowing items:

Klemmc-Ventura Road

7500 cubic yards of gravel screen, load, haul, 1 mile.
48750 units of additional ½ mile haul.
3000 cubic yards of stripping pit.

Goodell-Meservey Road

8200 cubic yards of gravel screen, load, haul, 1 mile.
39750 units of additional ½ mile haul.
3000 cubic yards of stripping pit.

The gravel for the Klemme-Ventura road will be taken from the pit in the NW¼ of section 31, Ell Township.

The gravel for the Goodell-Meservey road will be taken from the pit in the SE¼ of section 20, Avery Township.

Work must be commenced by August 1, 1929 and must be completed by October 1, 1929.

Published by order of Board of Supervisors.

CHRIS JACOBS,
County Auditor.

Garner, Iowa, June 26, 1929.
(Publish June 27, July 4, 1929).

LADIES AID HAD NOVEL BAKE SALE PLAN

Bake Sale Basket Has Made Round nd Bank Opened

The Ladies Aid of the Methodist Church have been conducting a novel bake sale among themselves for the past few weeks. A basket and a small bank was sent from one to another and each member put money into the bank equal to what she figured was the value of the food in the basket which she received.

To start with, names of Aid members were drawn from a hat. Mrs. R. C. Ludeke benig the first drawn and so she was given the basket and bank. She then baked an article and sent the basket and bank and the baked article to the next on the list, who received the baked article and deposited money in the small bank, and in this way the basket made the rounds of all members and came back to Mrs. Ludeke who brought it to town and the bank was opened at the First National Band, and contained $10.30.

The Aid wishes to thank all the members for their co-operation. It was a real treat to all to enjoy the other persons cooking and baking. Many delicious pies, cakes, cookies, rolls, etc. were among the good things sent around.

Anyone interested are invited to join the Aid and get in on the next basket to be sent around. Visitors are cordially invited.

HOW

DUST MOTES CONTRIBUTE TO DOWNFALL OF RAIN.—Dust and sand play a more important part than is generally realized in bringing about rainfall, says a bulletin of the National Geographic society.

When water-vapor particles condense into water droplets, whether on their rise from the sea or after numerous cloud-making adventures, they not only grasp their nearest fellow molecules but they must find infinitesimal bits of floating material, such as dust motes—a sort of magic carpet—and crowd upon them.

Dust usually is present abundantly, thanks to the winds and to volcanoes; and in the thickly peopled regions of the earth thousands of chimneys throw into the air in their smoke millions of potential cloud nuclei.

Even over the center of the greatest ocean there are as many as 750 dust particles in a thimbleful of air, and over the streets and buildings of large cities perhaps 200,000. In one cubic foot of air in any of our great cities there are twice as many dust motes as there are human inhabitants of the earth.

Widely separated, the motes, with their vapor passengers, at first float about like asteroids in space, but gradually the cold of the upper regions causes more and more of the vapor molecules to jump out of their gaseous form and attach themselves to existing droplets until the latter are built into drops heavy enough to fall earthward.

How the Cacao Bean Is Employed in Commerce

The common beverages known as cocoa and chocolate are both prepared from the seeds or beans of a tropical tree, Theobroma cacao. In making chocolate the cacao beans are roasted, shelled and ground into a smooth fine-grained paste, which is run into molds and cooled in the form of cakes or bars. These cakes, which contain 50 per cent or more of the fat called "cocoa butter," constitute the chocolate of commerce. Sometimes, however, instead of cooling the chocolate paste and molding it into cakes it is subjected to pressure and part of the cocoa butter is extracted. The partially defatted press cake is pulverized and sifted, and the fine powder resulting is put in packages and sold as cocoa. Chocolate, then, is the ground and powdered cacao beans deprived of a large part of their fat. Frequently no sharp distinction is made between the beverages made from chocolate cakes and cocoa powder. In many restaurants a person who orders chocolate will get the same beverage that he would get if he ordered cocoa.—Pathfinder Magazine.

How to "Restore" Honey

Gleanings in Bee Culture says that pure honey is liable to granulate during cold weather and that it can be restored to its former liquid condition without injuring its flavor in any way by placing the container in a vessel of warm water and never allowing the temperature to go above 120 degrees. The honey will then become liquid and retain its delightful aroma. Honey is composed chiefly of two sugars, dextrose and levulose. Of these, the former crystallizes quite readily, while the latter does not. During cool weather the dextrose is liable to crystallize, while the levulose remains in solution, forming a coating of the dextrose crystals. This is what gives to pure honey when granulated its peculiar consistency, which is entirely different from that of the crystals formed in ordinary sugar.

How Inaugural Was Set

The Continental congress, on September 13, 1788, selected the first Wednesday in the following March as the day on which proceedings under the Federal Constitution should begin. On that day, which happened to be March 4, the terms of congressmen and executives began. As the terms of these officers were set for two, four and six years, it follows that they always begin and expire on March 4.

The period between election and inauguration was made as great as it is because of the time required for communication and travel in those days between such distant states as New Hampshire and Georgia and the Capital.

How Soot Is Measured

From measurements made with an interesting gauge at a London weather office, experts estimate that about six tons of soot fall on every square mile of the city's area in a year. The gauge consists chiefly of a funnel arrangement, through which rain water falls, and is collected into bottles. Once a month, the content of the bottles is subjected to a chemical analysis and from this examination, the total amount of soot is computed.

How to Cut Bakelite

To saw bakelite straight clamp it between two pieces of scrap iron held in a vise, with their edges along the line to be sawed. Keep the saw close to the bars with the teeth pressed against them. Remove any roughness on the edge with a flat file.

COOL RADIATORS IN HOT WEATHER

Common Summer Troubles Usually Due to a Lack of Forethought.

Most motor drivers find difficulty in keeping their radiators reasonably cool in the sweltering days of July and August. Service stations, in town and city, are practically filled, some days, with these panting iron horses with heat afflicted "innards." Overheating and other common hot weather troubles are usually due to mistakes that can be easily avoided. The main points which require attention are briefly outlined below.

Do you understand the motor's cooling system thoroughly? If not, now is the time to go over it carefully and find out all there is to know about it. See that the flow of water is not impeded by any sort of obstruction and that the overflow pipe is not bent below the level of the base of the radiator filler. Be sure that the overflow pipe is not clogged or flattened.

Clean Radiator.

Is the radiator clean? The front of the radiator should be free from dirt, license plates and signs. Also, the back of the radiator should be unobstructed so that nothing will impede the circulation of the air.

Does the fan turn freely and is the belt tension right? The fan should be clean and its bearings should be well greased. A good test is to turn the fan by hand with the engine shut off. If it is possible to slip the belt easily, but not possible to spin the fan, the tension is right.

Is the carburetor choke in proper repair so that it opens all the way? Better open the seasonal shutter on the hot-air tube. Is the float level correct? If too high slight flooding will cause on over-rich mixture.

Does the ignition system furnish a spark of sufficient strength? A weak spark due to excessive lubrication of the magneto, dirty breaker or distributor, or weak magnets, will have an effect similar to late spark timing and overheating will result.

Are the valve tappets properly adjusted? They should have from .008 to .010 inch clearance, which may be gauged by about the thickness of an ordinary postcard.

Are the cylinders free from carbon? If not, remove it.

Oil Reservoir.

Is the oil in the crankcase clean? Gasoline, dirt or other foreign substances will impair the quality of the oil in the crankcase, resulting in overheated parts due to insufficient lubrication. The oil reservoir should be drained every 1,500 miles, the walls thoroughly cleaned and a fresh supply of oil should then be put into the crankcase.

Are you using the right grade of oil? Because of the increased temperatures it is often advisable in summer to use a heavier grade of oil than in winter.

Are the exhaust pipe and muffler clean? Practically 40 per cent of the heat of combustion escapes through the exhaust. It follows, therefore, that if any part of the exhaust system is obstructed a part of this heat must be carried off by the cooling water, which will naturally raise its temperature.

Are the brakes free? A dragging break will cause overheating in hot weather that might not occur in cool weather.

Three Conditions Cause Gasoline Preignition

Preignition of the gasoline charge in the cylinder is something that the motorist may find more prevalent as the compression ratio of the engine is raised. Usually, one of three things is responsible for this condition which results in a diminution of engine power.

These are exceptionally hot exhaust valves, high temperature of the spark plug electrodes, or a bit of incandescent carbon on the cylinder head or the piston. Knowledge of the causes should facilitate the elimination of the trouble.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q.—What should be done when difficulty is encountered in shifting gears?

Ans.—Engage the clutch a few seconds while the engine is running, then disengage it and try again.

Q.—What should be the position of the left foot when driving?

Ans.—Not on the clutch. On the floor.

Q.—Will a clogged oil filter result in damage to the engine?

Ans.—No. The filter merely ceases to function and the oil is by-passed. Unless the filter is renewed after 10,000 miles it becomes necessary to change the oil every 500 miles, as against 2,000 with the filter in proper shape.

Q.—What causes a dirty bulb to burn out more rapidly than a clean one?

Ans.—The dirt prevents the radiation of heat as fast as is necessary, thereby shortening the life of the bulb.

Traffic Policeman "Lit Up Like Christmas Tree"

Motorcycle Policeman W. A. Schotter of police traffic bureau here, is shown "lit up like a Christmas tree" with a red light on shoulder strap and

Signals for Night Work.

green light on arm band as he tested human traffic signals for night work. The traffic innovation is said to be a great success.

Much Care Is Required in Adjustment of Plugs

Simple as it may seem, the job of adjusting the points of spark plugs is something requiring considerable care. The center point should never be bent. Adjust for proper clearance with the point that is connected to the grounded part of the plug.

A good average adjustment is a clearance the thickness of a thin dime, but a dime is not a handy tool to bend the longer point if the clearances are not just right. Not having a plug gauge, the next best thing is to use the blunt side of a thin penknife blade. Use it as a small lever to press the point the way you want it to go.

AUTOMOBILE HINTS

Pedestrians should be seen and not hurt.

* * *

The annual production of light trucks in the United States increased 45,000 since 1925.

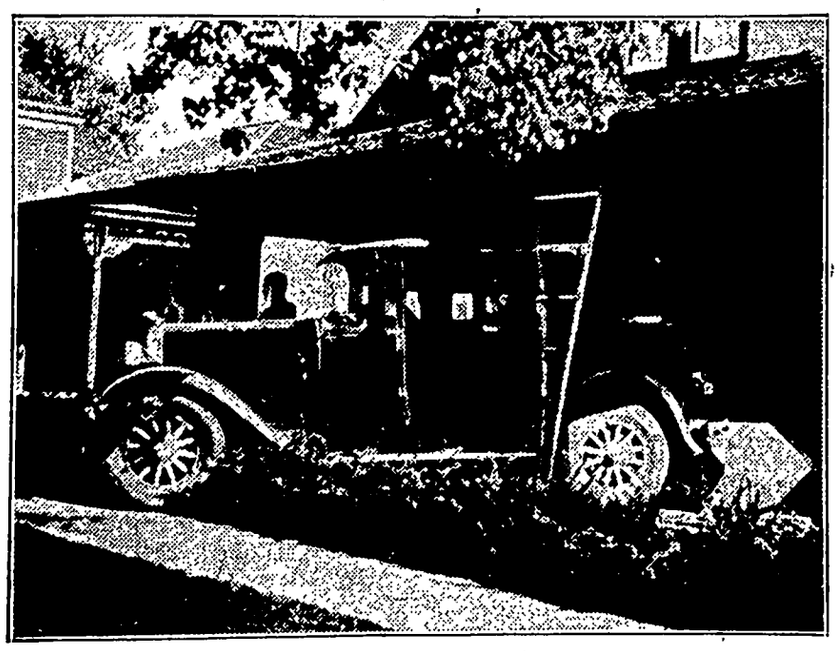
* * *

In a race to the crossing, between a locomotive and an automobile, there is no such thing as a tie.

* * *

A British woman, aged ninety, learned to drive an automobile in one half-hour lesson. Most women drive that way.

OBJECT LESSON IN AUTOMOBILE SAFETY



This picture graphically illustrates the danger of motorists parking their machines without locking. In this case the driver parked on a steep incline at Missouri Valley, Iowa, but failed to set the brake. An inquisitive little boy climbed into the driver's seat and let out the clutch with the result you see here. Fortunately he jumped before the collision.

1—Mrs. Hoover presenting the secretary of agriculture trophy to Helen Drinkwater of Henrico county, Virginia, as the typical 4-H club girl. 2—Thomas J. Harkins of Asheville, N. C., who may succeed Mabel W. Willebrandt as assistant attorney general in charge of prohibition cases. 3—Edison's original lamp factory at Mazdabrook, N. J., being turned over to Henry Ford for his museum at Dearborn, Mich.

NEWS REVIEW OF CURRENT EVENTS

Dawes Making a Fine Start in London—Progress of Disarmament Plans.

By EDWARD W. PICKARD

GENERAL DAWES, our ambassador to Great Britain, is hitting it off mighty well in London so far, conducting himself and the affairs of his high office with the dignity and good sense that would be expected of him. Wednesday the ambassador and Mrs. Dawes attended their first court in Buckingham palace, and the former settled the "knee breeches" question by appearing in full dress evening attire with long trousers, abandoning the precedent set by his immediate predecessors and reverting to what is truly the correct court dress for American diplomats. Mrs. Arthur Henderson, wife of the new secretary for foreign affairs, presented Mrs. Dawes to Queen Mary, who was escorted by the prince of Wales because of the illness of King George. The ambassador's wife in turn presented a number of American women to her majesty.

In another matter that may seem trivial Ambassador Dawes has done what practically all Americans will admit is the correct thing. He has announced that during his incumbency the American embassy in London will be dry, this being the rule in his own home since long before prohibition, although he does not claim to be a teetotaler. In many of the American missions abroad liquor is still served, but the State department does not permit its cost to be included in expense bills. Otherwise the department does not interfere in the matter.

General Dawes was the guest of the British Empire Service league at a banquet, being entertained as a representative of America's soldiers and of the American Legion. He said he found in the league's constitution, "named as one of the fundamental objects for its formation, a statement of purpose which I trust is uppermost today in the hearts and consciences of the peoples of the world. It is to further the ideal of comradeship as opposed to force as the arbiter between nations. Let me say that that phrase expresses my chief instruction received from the President of the United States as I left for London to take up duties as American ambassador and enter into official relations with two great English-speaking nations. That phrase expresses the intent of the Kellogg treaty."

Hugh Gibson, American ambassador to Belgium, held a long conference with Ambassador Dawes in London, on order of the State department, and then both of them called on Prime Minister MacDonald. The subject of the talks was the progress of disarmament negotiations, the next move in which must come from Europe. Mr. MacDonald was busy all week preparing the speech from the throne which, it was expected, would announce the place and time for the proposed meeting of the powers for consideration of the disarmament question. In Washington it was believed the naval reduction conference would be held in London in the fall and that the United States, Great Britain, France, Italy and Japan, would participate. The Italians, it is reported, are ready to enter the parley, and this fact will force France to come in, although the French have been clinging to the idea that all disarmament doings should be managed by the League of Nations.

DEBATES on the ratification of the French debt agreements will begin in the French parliament about July 14 and will keep Premier Poincare in Paris, so the meeting of the allies and Germany for adoption of the Young reparations plan, arrangement of evacuation of the Rhineland and cleaning up of other war matters is likely to be postponed until late in July. The United States will be invited to the conference, but so far as the proposed international bank of settlement and its operations are concerned, America will keep hands off. This is the decision of Secretary of State Stimson. He said there were no recent developments to change the government's position, which he stated on May 16 was that it does not desire to have any American official participate in the collection of German reparations through the bank or any other agency.

Foreign Minister Stresemann of Germany, in an eloquent speech in the reichstag, made it fairly certain that Germany will accept the Young plan if the allies agree to an early evacuation of the Rhineland, despite the hot opposition of the Nationalists.

RESUMPTION of diplomatic and trade relations with Soviet Russia will be one of the first acts of the Labor government of Great Britain. The Soviet regime was formally recognized by the former MacDonald government, but relations were broken off by the raid on Arcos house, headquarters in London of the Russian commercial mission, made by the Conservative government in May, 1927. MacDonald and his cabinet are seeking the co-operation of all other parts of the British empire in their Russian policy, though their approval is not technically necessary. It was said the cabinet would not renew the trade agreement by which Russia was allowed to maintain a trading organization in London with diplomatic immunity.

FORMAL approval of the Kellogg peace pact was given by the Japanese privy council, but politics entered into the affair to such an extent that the downfall of Premier Tanaka and his government may follow. The expression used by the original signers of the treaty, "in the names of their respective peoples," was explained by the privy council as not interfering with the supreme power of the emperor to make treaties, but Count Uchida, who signed the pact for Japan last August, resigned from the council, asserting he had initialed it thinking that the phrase meant merely "for the sake of their respective peoples." All of which is rather obscure to Americans. The fact is that the enemies of Baron Tanaka are using the treaty as a weapon to force his resignation.

NEWS of the accord between Mexico and the Catholic church was spread all over Mexico, by mail, airplane, radio and every other means, and was greeted with rejoicing by the people. Bells were rung, prisoners released and a general holiday enjoyed. Mgr. Pascual Diaz, who had just been made archbishop of Mexico, and Archbishop Ruiz of Michoacan conferred with the government officials and tried to make arrangements for the reopening of all churches on Sunday, the day of St. Peter and St. Paul. However the department of the interior said it would be impossible to complete the necessary inventories before about July 10 and that resumption of the normal functioning of the Catholic church throughout the country would not take place fully before that date. On Friday services were resumed at the shrine of the Virgin of Guadalupe, near Mexico City, the ceremonies being extremely impressive and magnificent. Priests who fled across the border during the troubles are fast returning.

HENRY P. FLETCHER, American ambassador to Italy, has sent his resignation to the President and it has been accepted. Mr. Fletcher, who will sail for home on August 3, has been in the diplomatic service for thirty-one years and has been our representative in Rome for five years. He says he will spend some months in his home in Greencastle, Pa., and that he has no other plans for the future. But it is thought in Washington he will be a candidate for the senate to fill the seat which so far has been denied to William S. Vare. Whatever action the senate takes in the Vare case, a successor to Vare will be elected not later than November, 1932, and maybe sooner if the seat becomes vacant. Mr. Fletcher accompanied Mr. Hoover on his South American trip and many thought he would be selected for secretary of state. It is said he wanted either that place or the ambassadorship to London or Paris. His work as a diplomat has been notable.

REPUBLICANS of Virginia seem to put themselves entirely in the hands of Bishop James Cannon, Jr., and his coterie of dry Democrats. They met in state convention last week in Richmond and nominated for governor the same Dr. William M. Brown of Washington and Lee university who was selected by the anti-Smith Democratic convention at Roanoke. Not only that, but they also named the entire state slate put up by the Cannon meeting.

Virginia's reorganized form of government, as put into effect under the administration of Gov. Harry Byrd, was denounced by Col. Henry W. Anderson of the Hoover law enforcement commission, the convention keynoter. The speaker urged the repeal of many laws, especially the ones dealing with elections and Democratic primaries. Professor Brown was put in nomination by C. Bascom Slemp.

MAJ. RAMON FRANCO and three companions, who started from Spain on a projected flight to the United States with a stop at the Azores, are now listed with the many victims of attempted transatlantic flights. After leaving Cartagena they totally disappeared. Immediate search for them was begun by the ships and airplanes of Spain, Portugal, Italy and Great Britain, the sea between Europe and the Azores being scoured. Several times there were unconfirmed reports of the sighting of airplane wreckage. The flyers had only a small supply of food and water, and their big seaplane could not be expected to remain afloat very long.

IF PLANS submited to stockholders are accepted, as it is not doubted, America is to have a great merger of aviation companies with assets of more than $70,000,000. The concerns to be amalgamated are the Wright Aeronautical corporation, the Curtiss Aeroplane and Motor company, the Keystone Aircraft company and nine or more affiliated concerns. The new company, which will be known as the Curtiss-Wright corporation, will embrace two separate groups of manufacturing companies, the Curtiss group, headed by C. M. Keys, and the Wright group, headed by Richard F. Hoyt, vice president of Hayden, Stone and company and chairman of the Wright Aeronautical corporation. Mr. Hoyt will be chairman of the board of the new company, and Mr. Keys will be president.

The company will have an authorized capitalization of twelve million shares of no par value stock of which two million shares will be class A stock, entitled to a preferential payment of $2 a share annually, and which will be convertible, share for share, into common stock and callable by the company at $40 a share. The remaining 10,000,000 shares will be common stock.

PRESIDENT HOOVER approved the promotion of Brig. Gen. Ralph H. Van Deman to a major general to fill the vacancy caused by the recent death of Maj. Gen. Harry A. Smith, commander of the Seventh corps area. Brig. Gen. Frank R. McCoy will be appointed a major general upon the retirement of Van Deman, September 3, at the statutory age of sixty-four. Col. George C. Shaw will fill the vacancy in the brigadier general list.

GOLD medals have been awarded to fifteen Boy Scouts who risked their lives to save the lives of others, according to announcement by the National Court of Honor of which Daniel C. Beard is chairman. The lads thus honored are:

Sidney Hershowitz, Washington, D. C.; Lawrence Bee, Provo, Utah; William Bennet, Dobbs Ferry, N. Y.; William G. Holford, Jr., Portland Ore.; Willie Evans, Rockford, Tenn.; Thomas Messader, Brooklin, N. Y.; Marlow White, Pensacola, Fla.; Lazorishak, Sharon, Pa.; Ted Derrick, Rockwood, Tenn.; William David Jordan, Park Ridge, Ill.; J. C. Acuff, Middlesboro, Ky.; William J. Martin, Brookfield, Mo.; James Lucas, Macon, Ga., and Wilson Schooley, Mercer, Wis.

A gold honor medal was sent to the parents of Scoutmaster James Tarwater Wright of Rockwood, Tenn., who gave his own life to save boys in his troops from drowning during the Tennessee and Alabama floods.

SUB ROSA

By MIMI

Program for the Busy Girl

THERE are two little lines of worry in the rather pretty forehead of one Amelia and they're growing deeper, day by day. She's a nice kid with a pretty good face on the whole and the two aforementioned lines aren't doing anything for her chances of an external schoolgirl complexion.

But she can't help them. She is in a state of rush, of nervous activity which produces the little frown, and produces with, it a certain shortness of temper, and acidity of disposition which are not endearing.

She's actually a busy girl. She works, she has a certain amount to do with taking care of her own clothes—she goes out in the evenings quite a lot, she dances, plays bridge, writes letters to an ever-increasing circle of friends—in short she lives the full busy life of a normal girl.

But she has no pleasure in it. The needless tasks which are part of every-day life pile up in front of her into a big black shadow from which she cannot escape.

Her's is not an easy-going temperament. She does not meet each minute with a serene confidence. She worries in advance of a situation, worries all the way through it about something still further ahead—and wonders why she isn't getting enough out of life.

There's only one cure for the nervous fidgety type who have a certain amount of work to do every day which cannot be avoided—that is to form a program and to stick to it.

The girl who calmly and efficiently does each day what must be done is never faced with gigantic problems all of a sudden. It's the nervous hurried Amelia type which is constantly having nervous breakdowns from overwork.

Amelia rushes through one task only to pause for a good hard worry over what she's going to do to the old black dress when she gets home. She sits puzzling over this problem and bewailing her lack of money until some precious time has speeded past and she's horrified to discover that she has not even completed the work before her, let alone solved the problem yet waiting for her.

That causes more worry and the work she thereupon proceeds to do is faulty and inaccurate because her mind is too crowded with doubt and worry to permit its working clearly.

You see what I mean. That kind of frail little thing must have a program of some sort if she's to keep out of sanitariums the rest of her life.

Otherwise she will spend her days in worrying over what she has to do—and the time will slip past and she will find at the end of the day she has twice as much to do.

Luxury of Cattiness

BREATHES there a damsel with soul so dead who has never murmured to a bosom gossip, "Now for a really good low-down on our friends," and therewith plunged into a nice catty discussion of acquaintances, intimate and distant?

There are very few gals in the world who won't own up, under pressure, to a perfectly natural human desire, ever so often, to criticize what in their friends they find unpleasant—and to do it thoroughly.

It doesn't seem exactly a vicious practice—this little pastime of raking all one's neighbors over the coals, but honestly it's the most costly luxury any little maiden can afford.

The girl who settles herself down comfortably to tell an interested audience exactly why Dorothy isn't as nice as she's supposed to be—is indulging herself—and at what an expense.

For the sake of a few precious moments of tongue-wagging over a delectable piece of gossip—she's endangering her own good reputation and friendship with her hearers.

Oh, yes, she is! Not that they're all silently despising her for gossiping—as they eagerly listen and press for more details. Not that at all.

But somewhere inside them they're making a mental note: "This girl Anne CAN be darned catty if she chooses. I wonder what she'd say about me if she got half a chance."

Of course, that isn't a really conscious thought with them at all. But the impression sticks, all the same, and it breeds distrust of Anne.

There aren't many high-minded young things in the crowd today who will actually refuse to listen to the low-down on somebody else. So that Anne will never receive open and violent rebuff for her story-telling proclivities. She will always be listened to with flattering interest.

But she will not be trusted as a loyal friend and confidante, no matter how well her gossip is received.

Even the Dumbest Dora is bound to get wise to the fact that if Anne tells such interesting and dirty details about Dorothy, Anne will be able to furnish just the same amount of interesting data, on any girl to whom she takes a sudden dislike.

Therefore even the Dumbest Dora is careful not to give Anne food for conversation. She doesn't exactly avoid the little story teller, but she avoids being conspicuously friendly or unfriendly.

PASSING OF TWO GREAT AMERICANS

"JEFFERSON STILL LIVES."

John Adams smiled serenely, closed his tired eyes, and ended his active career. None of the bedside watchers told him that Jefferson, his bitter opponent and dear friend, had died two hours before.

July 4, it was, fifty years after the two patriots had affixed their signatures to the Declaration: "That these United Colonies are, and of right ought to be, Free and Independent states; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved."

Strange that July 4, which stands for the birth of America as a nation, should also mark the death of the two sons who did so much toward her creation. "All men are created equal." Those had been Jefferson's words when he was thirty-five years old. It was he who framed the Declaration of Independence. It was Adams who had taken the most active part in the debates that preceded the signing. "The colossus of that debate," Jefferson called Adams. And fifty years later, both men died within two hours of each other.

Those sessions before the Declaration was read to the American people were bitter and stormy. Not all the delegates believed in breaking away from the mother country.

Opposing political views caused the two men to drift apart. Adams, like Washington, was a Federalist, who believed in a strong central government. Jefferson led the Anti-Federalist party. He believed that the government was an agent for the states, not their master.

In later years when both men had retired from politics the old friendship was renewed with more warmth.

July 4, 1826, was the fiftieth anniversary of the signing of the Declaration of Independence, a gala day for the United States. The people wanted Adams and Jefferson to partake of the festivities, but Adams was ninety-one and Jefferson eighty-three. They were too worn by their long battle for freedom to leave home. While the gayety was at its height Jefferson passed away. A few hours later Adams followed, with his friend's name on his lips.

Adoption of Declaration by Congress

(From Jefferson's Autobiography.)

In Congress, Friday, June 7, 1776. The delegates from Virginia moved, in obedience to instructions from their constituents, that the Congress should declare that these United Colonies are, and of right ought to be, free and independent States, that they are absolved from all allegiance to the British crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved; that measures should be immediately taken for procuring the assistance of foreign powers, and a confederation be formed to bind the Colonies more closely together.

The House being obliged to attend at that time to some other business, the proposition was referred to the next day, and the members were ordered to attend punctually at 10 o'clock.

Saturday, June 8. They proceeded to take it into consideration and referred it to a committee of the whole, into which they immediately resolved themselves, and passed that day and Monday, the 10th, in debating on the subject.

It was argued by Wilson, Robert R. Livingston, E. Rutledge, Dickinson and others—

That, Though they were friends to the measure themselves, and saw the impossibility that we should ever again be united with Great Britain, yet they were against adopting them at this time;

That the conduct we had formerly observed was wise and proper now, of deferring to take any capital step till the voice of the people drove us into it;

That they were our power, and without them our declarations could not be carried into effect;

That the people of the Middle Colonies (Maryland, Delaware, Pennsylvania, the Jerseys and New York) were not yet ripe for bidding adieu to British connection, but that they were fast ripening, and, in a short time, would join in the general voice of America.

* * *

On the other side, it was urged by J. Adams, Lee, Wythe and others, that no gentleman had argued against the policy or the right of separation from Britain, nor had supposed it possible we should ever renew our connection; that they had only opposed its being now declared.

That the question was not whether, by a Declaration of Independence, we should make ourselves what we are not, but whether we should declare a fact which already exists.

That, as to the people or Parliament of England, we had always been independent of them, their restraints on our trade deriving efficacy from our acquiescence only and not from any rights they possessed of imposing them, and that so far our connection had been Federal only and was now dissolved by the commencement of hostilities.

That, as to the King, we had been bound to him by allegiance, but that this bond was now dissolved by his assent to the last act of Parliament, by which he declares us out of his protection, and by his levying war on us, a fact which had long ago proved us out of his protection; it being a certain position in law that allegiance and protection are reciprocal, the one ceasing when the other is withdrawn.

* * *

It appearing in the course of these debates that the Colonies of New York, New Jersey, Pennsylvania, Delaware, Maryland and South Carolina were not yet matured for falling from the parent stem, but that they were fast advancing to that state, it was thought most prudent to wait a while for them, and to postpone the final decision to July 1; but, that this might occasion as little delay as possible, a committee was appointed to prepare a Declaration of Independence. The committee were John Adams, Dr. Franklin, Roger Sherman, Robert R. Livingston and myself. Committees were also appointed at the same time to prepare a plan of confederation for the Colonies and to state the terms proper to be proposed for foreign alliance. The committee for drawing the Declaration of Independence desired me to do it. It was accordingly done, and being approved by them, I reported it to the House on Friday, the 28th of June, when it was read and ordered to lie on the table. On Monday, the 1st of July, the House resolved itself into a committee of the whole and resumed the consideration of the original motion made by the delegates of Virginia, which, being again debated through the day, was carried in the affirmative by the votes of New Hampshire, Connecticut, Massachusetts, Rhode Island and Georgia. South Carolina and Pennsylvania voted against it. Delaware had but two members present, and they were divided. The delegates from New New York declared they were for it themselves and were assured their constituents were for it; but that their instructions having been drawn near a twelve-month before, when reconciliation was still the general object, they were enjoined by them to do nothing which should impede that object. They, therefore, thought themselves not justifiable in voting on either side, and asked leave to withdraw from the question; which was given them. The committee rose and reported their resolution to the House. Mr. Edward Rutledge of South Carolina then requested the determination might be put off to the next day, as he believed his colleagues, though they disapproved of the resolution, would then join in it for the sake of unanimity. The ultimate question, whether the House would agree to the resolution of the committee, was accordingly postponed to the next day, when it was again moved, and South Carolina concurred in voting for it. In the mean time, a third member had come post from the Delaware counties and turned the vote of that Colony in favor of the resolution. Members of a different sentiment attending that morning from Pennsylvania also, her vote was changed, so that the whole twelve Colonies who were authorized to vote at all gave their voices for it; and, within a few days, the convention of New York approved of it and thus supplied the void occasioned by the withdrawing of her delegates from the vote.

Congress proceeded the same day to consider the Declaration of Independence, which had been reported and lain on the table the Friday preceding and on Monday referred to a committee of the whole. The pusillanimous idea that we had friends in England worth keeping terms with still haunted the minds of many. For this reason, those passages which conveyed censures on the people of England were struck out, lest they should give them offense. The clause, too, reprobating the enslaving the inhabitants of Africa was struck out in complaisance to South Carolina and Georgia, who had never attempted to restrain the importation of slaves, and who, on the contrary, still wished to continue it. Our Northern brethren also, I believe, felt a little tender under those censures; for though their people had very few slaves themselves, yet they had been pretty considerable carriers of them to others. The debates, having taken up the greater parts of the 2d, 3d and 4th days of July, were, on the evening of the last, closed; the Declaration was reported by the committee, agreed to by the House, and signed by every member present, except Mr. Dickinson.

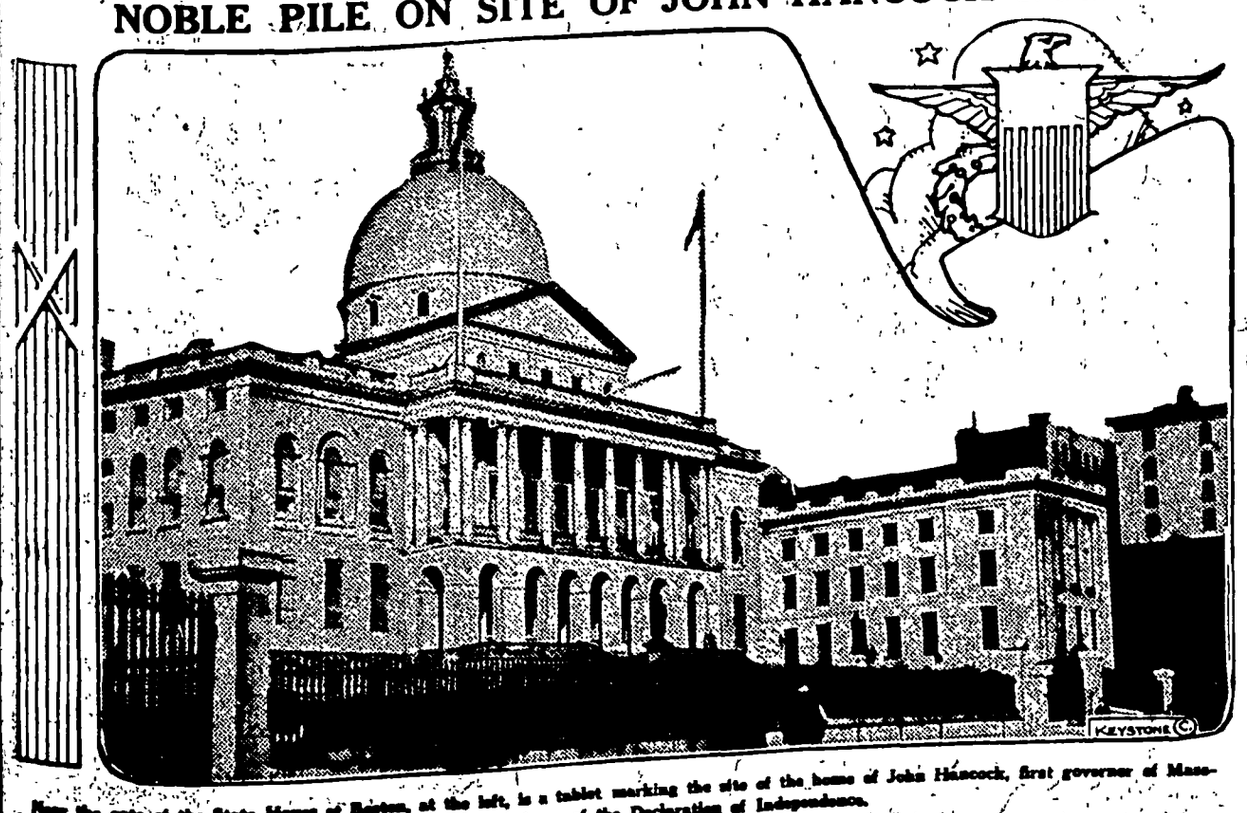
Fraunces' Tavern Relic of Revolutionary Days

Fraunces' tavern, in New York city, was once a meeting place for Revolutionists, later a warehouse, and still later a saloon, but now stands restored to its aspect as a tavern. The Sons of the Revolution in the state of New York bought the old building after it had descended to the status of a saloon. It has been reconstructed, and its interior and exterior conform as nearly as possible to the Fraunces' tavern of Revolutionary days.

John Adams and the delegates to the second Continental congress stopped overnight there on the way to Philadelphia. The Sons of Liberty and the Vigilance committee met there on April 22, 1774, and planned the attack on the London, New York's "tea party." In August, 1775, a shot fired from the British ship Asia struck the building. The New York provincial congress assembled there from May 18 to June 30, 1776.

During the Revolutionary war the tavern contributed its lead window weights to the manufacture of bullets. These bullets were used with effect at Forts Montgomery and Clinton. It also was the birthplace of the first chamber of commerce in America, in 1780.

NOBLE PILE ON SITE OF JOHN HANCOCK HOME



Near the gate of the State House at Boston, at the left, is a tablet marking the site of the home of John Hancock, first governor of Massachusetts and a signer of the Declaration of Independence.

Codling Moth Is Expensive Pest

Apple Growers Must Rely on Lead Arsenate to Destroy Them.

(Prepared by the United States Department of Agriculture.)

The codling moth is at present the most serious insect pest with which the apple and pear growers of the Pacific Northwest have to contend. Losses from the "worms" in some years average as high as 20 per cent of the total crop, or even as high as 50 per cent in individual cases. By the use of proper methods, however, many growers keep their losses well below 5 per cent.

Plan to Control.

In order to control the codling moth it is essential to understand its seasonal history under local conditions. There are two generations of the codling moth a season in the Pacific Northwest, and the various stages in these overlap. Except for a short interval worms are hatching and attacking the fruit from the latter part of May to October. Apple growers must rely mainly on spraying with lead arsenate from one to six times during the season, according to their locality and the prevalence of the pest there. A carefully worked out spray schedule must be used, timed to protect the fruit at certain definite stages of its growth and of the development of the worms.

Farmers' Bulletin 1326-F, "Control of the Codling Moth in the Pacific Northwest," by E. J. Newcomer, M. A. Yothers and W. D. Whitcomb, entomologists, has recently been revised. It describes the life history of the codling moth and contains a chart showing how and when the various stages of the pest develop. Spray schedules for both apples and pears are given. The importance of the calyx spray is emphasized, and it is urged that no other farm operations, such as irrigating, cultivating, or handling alfalfa in the orchard should be allowed to interfere with the spray program.

Fungous Diseases.

Two fungous diseases of apples, powdery mildew and scab, are controlled by spraying with lime-sulphur at approximately the same time that the spraying for the codling moth is done. It is often convenient to combine the materials used for the two operations and spray them together on the trees. Directions for doing this are included in the bulletin. Farmers' Bulletin 1326-F is free as long as the supply lasts. Write to the United States Department of Agriculture at Washington, D. C.

Potato Bugs Controlled by Using Lead Arsenate

Potato bugs can be controlled by using lead arsenate or Paris green applied either as a dust or a spray. If the arsenate is sprayed it is used at the rate of one pound to 50 gallons of water. If Paris green is used it is used in the ratio one pound to 100 gallons of water. The spray is more effective than the dust because it sticks on the plants better.

The dusting method is the cheaper and for that reason is preferred by many farmers. When lead arsenate is dusted, it is used at the rate of one pound with 10 pounds of flour or hydrated lime which act as carriers. The ratio for Paris green is one pound to 20 of the carrier. The dust can be applied by shaking through a can or from a porous sack.

The flea beetle, another pest of potatoes, is best controlled by using a 4-4-50 bordeaux mixture. This consists of four pounds of copper sulphate, four pounds of freshly slaked lime and 50 gallons of water. The flea beetle works on all garden crops. Its work can be identified by the shot-like holes in the leaves.

Agricultural Notes

Manure saved is money saved.

* * *

Dry years reduce the curculio attacks.

* * *

Canada bluegrass should never be planted where Kentucky bluegrass will grow.

* * *

The high price of oilmeal is making soy beans as a seed crop look profitable again.

* * *

Skim milk, a by-product of dairying, can be used most profitably by feeding it to hogs.

* * *

Manchu soy beans are the most commonly grown. The Dunfield bean is a new variety that is gaining quite rapid favor.

* * *

Soy beans are one of the easiest of all field crops to grow and also one of the surest crops to produce a satisfactory yield.

* * *

Roughages are usually the cheapest part of the dairy ration, but their value is very largely dependent on quality. Early cut, well-cured hay is vastly better than overripe, poorly cured hay.

* * *

The herd bull should not be confined to a small stall but should have room to exercise whenever he wishes. He may be kept in a lot that will be large enough to furnish grass during the pasture season.

Around Orchard

SPRAYING PLANTS MADE STATIONARY

High-Power Pump Pushes Liquid Through Pipes.

One of the present-day tendencies in spray equipment is the introduction of stationary spraying plants. From a central point at the source of water supply, pipes are run to all parts of the orchard. Hose may be connected to outlets spaced at intervals through the whole piped area. A high-power pumping outfit pushes the spray material through the pipes. It is necessary to have this high pressure at the plant because the friction of the small pipes rapidly reduces the pressure if the distance to the outlet is great.

The original investment in this type of spraying equipment is high. To be economical, it is essential that the orchard area be compact. If it is not compact, the piping cost becomes prohibitive.

A few growers in the Middle West are now putting in this type of spray equipment. They are very common in the far West, where the acreages are compact and usually not more than 40 acres in one unit.

There are several objections to this type of equipment in some sections. In Illinois many fruit farms are very large. This would require either several central plants or else one very large one with a great expense for piping due to the large size pipe that it would be necessary to use.

The water would have to come from ponds in most cases in Illinois. If the water in the pond which supplied the central plant gave out, the grower would face a very difficult problem indeed.

Naturally the large original investment would hinder its adoption by many growers, who might otherwise consider it applicable to their conditions.

From the way this system has been adopted in the Far West, there seems little doubt that it may be used in Illinois extensively before many years. At least it is a development which growers can afford to watch.

Several Insects Check Pests of Peach Trees

(Prepared by the United States Department of Agriculture.)

There are several insects that assist materially in checking multiplication of peach insects, says the bureau of entomology of the United States Department of Agriculture. Ladybird beetles are perhaps the most beneficial of these. They prey upon scale insects, aphids, and thrips. The twice-stabbed ladybird beetle is usually prevalent on peach trees that are heavily infested with the San Jose scale. It is jet black in color and has two orange or red spots on the back. Ladybird beetles take their nourishment by sucking scale insects dry. They also assist materially in checking infestations of the rusty-brown plum aphid or other aphids. The adult and young ladybird beetles are sometimes erroneously thought to be the parent of aphids on account of their close relation with these pests. Peach growers should encourage the multiplication of twice-stabbed and other ladybird beetles.

Syrphus flies, lacewing flies, tachina flies, ground beetles, and some of the assassin bugs and preying mantids are other insects that are beneficial to the peach grower. Predacious and parasitic insects give considerable aid in controlling peach insects, and without the help of these beneficial insects it would be very difficult to grow a crop of peaches, even though artificial control measures were enforced.

Horticultural Hints

Trees respond to cultivation just as corn and potatoes do.

* * *

Unsatisfactory results are more often due to poor spraying than to other factors.

* * *

Black raspberries perhaps stand next to strawberries in desirability and in adaptability.

* * *

The importance of thinning fruit in orchards in which the trees are overloaded cannot be overemphasized.

* * *

Thinning reduces the amount of breakage in an overloaded fruit tree and cuts down the expenses of propping.

* * *

The strawberry is adapted to a wide variety of soils, and is comparatively free from injurious insect pests and plant diseases. The plants rarely require spraying.

* * *

Fruit growers of experience who have studied their problems are getting beyond the fixed spray schedule. They have found that the spraying program may often give the best results if planned for particular varieties.

* * *

Deep plowing in an orchard is not advisable, especially in older orchards, because of the danger of injury to the roots. Any method that will break the crust and form a dust mulch is satisfactory. This mulch is necessary for the conservation of moisture.

Burroughs' Tribute to Beauty of the Winter

He who marvels at the beauty of the world in summer will find equal cause for wonder and admiration in winter. It is true the pomp and pageantry are swept away, but the essential elements remain—the day and the night, the mountain and the valley, the elemental play and succession, and the perpetual presence of the infinite sky. In winter the stars seem to have rekindled the fires, the moon achieves a fuller triumph, and the heavens wear a look of more exalted simplicity. Summer is more wooing and seductive, more versatile and human, appeals to the sentiments and affections, and fosters inquiry and the art of impulse. Winter is of more heroic cast and addresses the intellect. The severer studies and discipline come easier in winter. One imposes larger tasks upon himself and is less tolerant of his own weaknesses. John Burroughs.

Well, That's Different

"Is the manager in?"

"Yes, but he's taking dictation?"

"Taking dictation?"

"Yes—over the telephone."

A good business man regards well-borrowed money as an asset. He isn't afraid of it as a debt.

Injustice in the end produces independence.—Voltaire.

SAME PRESCRIPTION HE WROTE IN 1892

When Dr. Caldwell started to practice medicine, back in 1875, the needs for a laxative were not as great as today. People lived normal lives, ate plain, wholesome food, and got plenty of fresh air. But even that early there were drastic physics and purges for the relief of constipation which Dr. Caldwell did not believe were good for human beings.

The prescription for constipation that he used early in his practice, and which he put in drug stores in 1892 under the name of Dr. Caldwell's Syrup Pepsin, is a liquid vegetable remedy, intended for women, children and elderly people, and they need just such a mild, safe bowel stimulant.

This prescription has proven its worth and is now the largest selling liquid laxative. It has won the confidence of people who needed it to get relief from headaches, biliousness, flatulence, indigestion, loss of appetite and sleep, bad breath, dyspepsia, colds, fevers. At your druggist, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

Yourself and Your Neighbors --Items of Personal Mention--

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

Fred Bachman and family were Mason City visitors Saturday.

Miss Bernice Tanner is attending summer school at Cedar Falls.

Mrs. Anna Baack has been visiting her son in Wisconsin for the past month.

Mr. and Mrs. Clarence Kluckhohn and children were Mason City visitors Tuesday afternoon.

Mrs. W. F. Pavey and daughter, Juanita were Garner visitors Tuesday afternoon.

DO YOUR OWN DRY CLEANING by using our NAPTHA. For sale at E. F. Jacobs, Hardware 1tc

Miss Ethel Wellemeyer, who attends summer school it Cedar Falls, visited over Sunday with home folks in Klemme.

Elmer Johnson and family, of Waterloo visited Sunday with P. W. Johnson and family and with Mrs. Walter Lau and daughters.

Rev. and Mrs. H. E. Whyte were at Mason City Friday morning to visit Mrs. Sandry who recently underwent an operation.

Mrs. Paul Grange and son Dorance and Mrs. P. W. Johnson were at Garner on business Friday afternoon.

Wanted—Correspondent in Ell Township to furnish news of the neighborhood for The Times. Inquire or write, Times Editor.

A fine baby girl was born to Mr. and Mrs. Ben Goll Saturday night. They now have a nice family of three children.

Mrs. Lena Schroeder and daughter, Adella, were at Garner Tuesday morning to have dental work done at Dr. Specht's office.

Mrs. Will Kirkwood and son, Wayne, and Mr. and Mrs. George Stokesbary were Des Moines visitors Sunday.

Merle Anderson, of Des Moines, is spending part of the summer with his grandparents, Mr. and Mrs. Eniar Salling.

Miss Elvira Stille, who attends summer school at Cedar Falls, spent Sunday with her parents, Mr. and Mrs. Wm. Stille.

Emil Patet and son, Kenneth, have been busy this summer cleaning up the school house and repainting the outside.

Mrs. Lena Schroeder and daughter, Adella, returned from Rochester, Minn., Saturday evening where the former went through the clinic.

Miss Bertha Thorman and mother and Miss Gertrude Ely, of Belmond, visited at the Haupt, Missman and Day homes Tuesday afternoon.

Mrs. Henry Barz and children drove to Garner Saturday evening to meet Mrs. Lena Schroeder and daughter, Adella, who had been at Rochester, Minn., for a week.

Earl Josten came home Monday night from Harris, to visit his parents, Mr. and Mrs. John Josten, until Wednesday. Earl had to be at Harris the 4th to conduct his band.

The Auxiliary held their meeting Tuesday evening at the Legion Hall. Mrs. W. F. Lau, Miss Lydia Bock and Miss Bedice Schwichtenberk were the hostesses.

Mr. and Mrs. Ted Palmby, and family, of Waseca, Minn., have moved to Klemme and reside in the Joe Johnson place, just north of the Johnson residence.

Peter Josten, secretary of the Creamery, and his family will celebrate the Fourth at Clear Lake, as Pete says he hankers for a good boat ride.

Rev. and Mrs. Harry Whyte left in their car Tuesday afternoon for Cushing, Iowa, to spend the Fourth with Rev. Whyte's parents and other relatives. They expect to return to Klemme Friday.

L. G. Gimer, manager of the Klemme Co-Operative Grain Co. is on a two week's vacation. Joe E. Johnson is assisting Geo. Johnson at the elevator during Lew's absence. Mr. Gimer left Sunday.

The Campfire Girls held their regular meeting Monday evening at which time Marie Stille joined the organization. The girls will spend a week at Clear Lake beginning July 8th.

Mr. and Mrs. Carl Suckow and children of Garner, and Mr. and Mrs. Henry Suckow, of Klemme, drove to Alden Sunday to hear Rev. Suckow preach, and to spend the day visiting.

Miss Beatrice Busch, of Chicago, spent a few days the past week in Klemme visiting her grandmother, Mrs. Ernest Schuldt and other relatives. She is enjoying a vacation and visiting her parents at Mason City.

Mr. and Mrs. Edwin Josten are proud parents of a baby girl born to them Tuesday morning. Mrs. Chase, of Garner, is caring for mother and baby, who are getting along fine. Congratulations and by the way, Ed, our cigars are getting low!

Ed. Schoenwetter's eleven year old son underwent a mastoid operation at Mercy Hospital Sunday morning. Dr. Missman assisted Dr. Carlson in the operation. The latest reports are that he is getting along fine.

Next Sunday Mr. and Mrs. Art Kudje and children and Mr. and Mrs. Joe Johnson expect to leave on a two weeks vacation in northern Minnesota and Canada. Art and Joe will spend most of the time fishing and we expect to hear of some big catches.

At the Annual Meeting of the Klemme Co-Operative Grain Co., L. G. Gimer was again re-elected as the manager and George Johnson as the assistant. The report showed that the company had done an excellent business the past year. Mr. Gimer has now been manager for several years.

Mrs. John Josten was hostess to the W. F. M. S. of the Methodist Church Tuesday afternoon at which time the extension members of the society were entertained. Among the many good things to eat, homemade ice cream had a prominent place on the menu and was much enjoyed

Marlin Croner, accompanied by his daughte, mother, Mrs. Henry Schroeder and Grandma Schroeder, left Sunday morning for Chicago and Hammond, Ind. At the latter place Marlin and his mother will visit Marlin's brother. From there they will drive to St. Joseph, Mo., and to Garnett, Kansas where Mrs. Croner lives. Mr. Croner, Dorothy and Grandma Schroeder expect to return to Klemme in about ten days.

Mabel Griffen, drivin her father's Dodge touring car, and George Stokesbary, driving his Ford had a collision on the intersection at the First National Bank corner last Friday afternoon. The Griffen car was coming from the north, and Stokesbary was going west when the two cars met. The Dodge came out with a broken hub cap but the Ford got a little the worst of the encounter.

Miss Florence Stokesbary was operated on at Des Moines for appendicitis Tuesday morning. Mrs. C. A. Arnold and Mr. and Mrs. Geo. Stokesbary drove down Monday to be with her. She had been ill with flu a few days prior Mrs. Arnold and Mr. Stokesbary returned home Tuesday afternoon and reported that Florence was evidently getting along alright. Mrs. Stokesbary remained in Des Moines to be with her for a few days. Florence is employed at the Bell Telephone Co., at Des Moines.

Mr. and Mrs. L. O. Deal and son James were called to Woodbine, Iowa, by the death of Mr. Deal's mother, Mrs. J. H. Deal, who died Friday. Funeral services were held Sunday and burial was made at Modale, Iowa.

BAYSIDE PARK BATHING BEACH GREATLY IMPROVED

Special Roped Off Section Makes Safe Place For Children

The bathing beach at Bayside Park, Clear Lake, Iowa, has been greatly improved the past week. The entire beach has been raked and cleaned, new equipment has been installed and another elevated diving board has been erected. The new diving board stands 15 feet above the water. The play equipment at Bayside Park includes a toboggan slide, the only one on the lake. A part of the lake front at the Park has been roped off for the use of the children and posts have been set in at various places to show the depth of the water. The Bayside beach is now in excellent condition and many think it is the finest on the lake. Mr. Ritz, park operator, recently purchased 200 new bathing suits and numerous improvements have been made about the bath house.

Will Play Off Tie Game Sunday

Next Sunday July 14, Cedar Falls will meet the Bayside Cubs on the Bayside daimond at 3:00 o'clock. Two weeks ago the Cubs beat Cedar Falls and July 4th the Cedar Falls team beat the Cubs. Next Sunday the tie will be played off and a real battle is expected.

Other Entertainment Sunday

Band concerts, vaudeville on the open air stage, roler skating and the many fun concessions will entertain the many visitors expected at Bayside Amusement Park Sunday.

WILL START GRADING ON THE KLEMME ROAD THIS WEEK

County Will Do Their Own Work With County Road Machinery

The Times this morning was informed that the work of grading the short stretch of county road into Klemme will be under way this week, and the machinery will possibly be moved onto the grounds today, according to men from the County Engineer's Office who were in Klemme this morning.

Trees along the right of way were blasted out the other day and the road made ready for grading.

Surveys for this road were made last week.

AVERY 4- HCLUB GIRLS HAVE INTERESTING MEETING

Demonstrations And Timely Talks Part Of Program

The Avery 4-H Club Girls met at the home of Marjie and Avis Andreason, July 2nd. The following numbers were given:

TROOP 56 ALL SET FOR C. R. WEEK

KLEMME SCOUTS GO TO CAMP NEXT TUESDAY

Expect To Accomplish Much Work At Camp Roosevelt

Klemme Boy Scouts in Troop 56 are counting the days now when they will enter Camp Roosevelt on the shores of Clear Lake next Tuesday morning, July 16th for a week of real outdoor Scouting and work along special lines, such as leather engraving, tooling and lacing, belfast belt cording, leather braiding and stamping, tent pitching, camping, instructions in beginners and advanced swimming and life saving and other specialties. It will be a busy week for all Scouts who go as each day is cram full of useful activity ad knowledge, as well as time for games and fun at the evening camp fire. Scouts at Camp Roosevelt are busy from 6:20 a. m. until taps sounds at 9:00 p m. when all are in bed.

Troop 56 Well Advanced

Every Scout in Troop 56 has completed all requirements and has advanced to a Second Class Scout and will complete tests toward First Class advnacement. One Scout in Troop 56 has advanced from First Class to Star Scout and he expects to devote much of his time in camp in Merit Badge Swimming and Life Saving work, to advance to the degree of Life Scout. The next degree is the Eagle Scout.

Leaders of Troop 56 expect to spend more or less time in camp next week.

Parents Are Welcome At C. R.

Next Tuesday night at 8:00 o'clock the ceremony of the opening Camp Fire for the fith period will be held. Parents and friends of Klemme Boy Scouts are invited and especially urged to attend this program. It is a ceremony well worth attending. Other events which are of special interest are, the Court of Honor on Sunday afternoon, when Scouts receive advancement badges and merit badges, and other awards earned in camp. The closing camp fire on Monday night is a ceremomy that parents will enjoy. Officials of Camp Roosevelt have extended an invitation to Klemme people to attend these special events.

If you have never visited Camp Roosevelt, you should by all means do so; if you have visited the Camp you will want to visit it again while Troop 56 is in camp.

GRAVEL CONTRACT LET ON THE KLEMME-VENTURA ROAD

Eighteen Contractors Bid On This Graveling Job Tuesday

One of the men from the County Engineer's office informed the Times this morning that E. H. Walh, of Victor. owa, was the successful bidder on the graveling contract for the Klemme-Ventura road.

Mr. Wahl was the lowest of the eighteen contractors who were bidding on the job, and the figure was one of the lowest ever submtited in this county.

If we are correct the figure bid was 20.5 cent for load, haul, one yard first mile, 5c per yard for each mile beyond 10 cents per yard for stripping.

The county wil do their own spreading.

Work on this road must begin by August 1st.

Rev. Grosshuesch Will Preach In Minnesota, Sunday

Rev. Calvin Grosshuesch will be in Bongards, Minnesota to preach at a Mission Feast Sunday. His father, Rev. J. W. Grosshuesch of Plymouth, Wisconsin, will conduct the services at the Klemme Reformed Church Sunday.

FRUITS ESSENTIAL TO HEALTH DECLARE 4-H GIRLS

Crafty-Canning Club Held Meeting At Home Of Henrietta Nelson

The members of the 4-H "Crafty Canning Club", eager to gain new ideas along the line of canning, held a special meeting at the home of Henrietta Nelson, Tuesday afternoon, July 2nd.

During the business part of the meeting the girls decided to give a program at the Farm Bureau meeting Thursday, July 25th. They also decided to sell ice cream and cake.

Estella Griffen gave an interesting talk on the importance of fruit in one's diet. She stressed the necessity of obtaining sufficient vitamin and minerals through the eating of fruits. These food elements are essential to good health.

Greens Are Also Important

Winnifred Hampel gave a talk on nature's leafy tonic. Few Club Girls realized that we have access to so many greens; there are over eleven types of plants that can be used as greens. Even the legume, alfalfa, can be converted into an appetizing dish of greens.

Miss Johnston Met With Club

At three thirty Miss Myrtle Johnston came to meet with the girls Few of the girls had met her and every one thought she was a very charming personage. She discussed canning very thoroughly, explaining how to prepare products for exhibit and how to select a demonstration team.

During her conversation Miss Johnston spoke very highly of the Club Girls' leader, Mrs. Chas. Griffen. She said, "She is noted through out the county as a very efficient leader, and that visitors from nearby counties have noticed and praised her accomplishments in Club Work. The girls are always ready to help their leader and appreciate her work.

It was at an unusual late hour when the Club meeting came to an end by the serving of refreshments. All girls present had their 4-H spirit greatly increased and will try to live up to the 4 H's: To make their Hearts better; to use their Hands more efficiently; to use their Heads to a better advantage; to improve their Health.

The next meeting will be July 24 at the home of Lydia Pearson.

—By a Club Member.

FAMILY GATHERING HELD AT SCHWICHTENBERG HOME

Event Also Celebration Of Mrs. Emma Schwichtenberg's Birthday

A family gathering was held Sunday at the home of Mrs. Emma Schwichtenberg. The occasion being a family gtahering and also to celebrate Mrs. Schwichtenberg's birthday.

Those present for dinner were: Mr. and Mrs. Roy Joneson and family from Harvard, Illinois; Mr. and Mrs. W. F. Nuehring and family of near Rockwell, Iowa; Mr. and Mrs. A. W Tanner and family; and Mr. and Mrs. David Schwichtenberg and family.

In the afternoon the following people joined the party:

Mr. and Mrs. Charlie Krause; Albert Kraus, Mr. and Mrs. Karl Kraus and daughter, Lucile; Mr. and Mrs. Mart Bachman and family; Mr. and Mrs. Will Kraus and Mr. and Mrs. Will Gast of Garner.

Mrs. Schwichtenberg received many fine and useful gifts, and the day will be long remembered by all who were present.

ELL TOWN CHURCH HAD PICNIC JULY FOURTH

The Ell Town Reformed Church north of Klemme, held a Sunday School picnic on the church grounds July Fourth which was attended by a large crowd.

A program was given in the morning followed by games and sports of various kinds, a ball game and a tug of war.

The picnic dinner at noon was enjoyed by all and was a feature of the celebration.

NEW PAPER MONEY PUT IN CIRCULATION

SMALLER SIZE DOLLARS HAVE REAL BUYING POWER

Klemme Merchants Have Specials For This Saturday

The long awaited new and reduced size paper currency will be introduced into general use in Klemme this week, as well as the nation. The First National Bank here has had samples of the new bills in the smaller denominations on display for some time, and will receive large quantities in the first release by the government. The large size is "off the market" and the transition from old to new will require several months time.

In preparation for the change-over the government has printed an average of $26 in bills for every man, woman and child in the country foh the first releaso. Aside from the change in size, the oustnading feature of the new currency is the standardization of design and colors of all bills of the same denomination. All the new bills, regardless of denomination, are black ink on the face and green ink on the back.

Denominations of the issue run from $1 to $1000 and include $1, $2, $5, $10, $20, $50, $100, $500, $1,000, $5,000 and $10,000. The picture of George Washington appears on all dollar bills, of Thomas Jefferson on the $2 note, of Abraham Lincoln on the $5, Alexander Hamilton on the $10 and Andrew Jackson on the $20.

The new bill is 1⅛ inches shorter and seven-sixteenths of an inch narrower than the present issue. They are the same thickness, and the paper i practically the same with a slighty different ditsribution of silk threads. The principal advantage of the new currency is a saving of $2,000,000 annually by the government on account of the samller size, and the added difficulty of counterfeiting and raising bills.

Klemme business men say that, though the new dollars are smaller in size, they have greater buying power than ever, and invite holders of either the new or old currency to try its value in Klemme Saturday when they are featuring special new $.100 values. Read the ads and see what the merchants have to tell you regarding the new money.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

All services Sunday will be according to the regular schedule.

It should be noted that the evening church service will be discontinued after Sunday until the 1st Sunday in September. This matter was considered and voted on at the last official board meeting.

The Epworth League devotional meetings will run along continuous thruout the summer. It is hoped that the good attendance we have been having will keep up. A gorup of ten or twelve from our League will attend the Summer Institute at the Methodist Camp Grounds at Lake Okoboji next week.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

10:00 a. m. German Service:
Prof. J. W. Grosshuesch, Plymouth, Wis., will conduct our service Sunday morning.
11:00 a. m. Sunday school.
8:00 p. m. Tuesday. Young Peoples Bible Class.
7:30 p m. Saturday, Junior Choir
8:15 p. m. Saturday, Senior choir.

Band Concerts

The band concert given by the Duncan Band last week was especially good and many good selections were given on the evening's program. The Duncan band will give a concert in Klemme every Wednesday night during the summer.

KLEMME AUXILIARY GIVES REPORT ON MEETING

For Third Time Local Auxiliary Is On State Citation Roll

The Klemme Auxiliary held their July meeting last week with seventeen members present.

Mrs. David Schwichtenberg was elected a delegate to the Iowa State Convention at Iowa City to be held August 21, 22, and 23: Mrs. Paul Grange was elected alternate.

The Auxiliary voted to send $1 for National Defense to the State Department as this is one of the Citation points.

Win Citation For Third Time

This year will be the 3rd year that the Klemme Auxiliary has won a State Citation, the points of which are:

1. Membership Quota. Klemme Unit also will be presented $5.00 at the Staet Convention for having 30 members (quota) by Jan. 15. The membership of the local Unit is now 39.
2. Poppy Sale. ($62.00)
3. Community Service. Showing Motion Pictures is the main Community service for the local Unit.
4. National Defense. (Contribution of $1.) and Americanism—purchasing of History Books for the Klemme High School.
5 Buying of Iowa Legionaire for President to be used by the Unit.

Mrs. Johnson reported that the Layette had been purchased and sent to a member of the Auxiliary.

Lunch was served by Mrs. Lillian Lau, Bill and Lydia Bock, and Berdice Schwichtenberg.

EARLY FOURTH OF JULY BLAZE CAUSES NEAR $8,000 DAMAGE

Entire Equipment And Buildings Of Hatchery Lost In Flames

Fire of unknown origin destroyed the Klemme Hatchery and its entire equipment early on the morning of July 4th.

Arley Blickenderfer, proprietor of the Hatchery and who resides jst east of the plant was awakened at about 2:45 a. m. by a crackling noise; the flames then were shooting high and were even coming up close to his house as a westerly wind wa blowing and embers were falling on the house roof. He rushed to the fire station and turned in the alarm.

The Hatchery was beyond hope of even checking the flames and the fire company devoted their efforts to prevent the blaze from spreading to the house.

In a check up of the loss Mr. Blickenderfer states that the loss will be between $7,500 and $8,000 He carried $5,000 insurance on the plant. The plant was housed in a frame building 22x32. and another small building, 12x20, used as a store room was also destroyed.

The equipment lost consisted of three large, steam heated, electric circulating Buckeye incubators with a total capacity of 34,000 eggs; 3 brooders; 300 chick boxes; 50 egg cases and various other equipment was lost. Besides this 8,045 eggs in the one machine and 500 baby chix were likewise destroyed.

The fire started sometime after 1:00 a. m., at which time Blickenderfer was at the Hatchery to see that all was well, as is his custom when the machines are running and before he retires for the night. At that time he did not notice any smoke in the building.

He intends to rebuild the Hatchery within the next month and will perhaps build of brick or hollow tile. He will again install three large Buckeye machines and a complete equipment to handle a large business.

AIRPLANE TO DELIVER GOODS TO KLEMME SATURDAY

John L. Graves Co., Mason City To Deliver Package To Day's Store

The Eagle Rock airplane Jonell, piloted by Archie Peterson, Mason City, will fly over Klemme Saturday and drop a package in front of the J. N. Day store, express from the John L. Graves Co., Mason City, manufactures of Men's furnishings.

This is the first time that express will be delivered into Klemme by airplane.

1—View of the parade with which the German city of Meissen celebrated its one thousandth birthday, the bust on the float being of Samuel Hahnemann, founder of homeopathy. 2—The Little Mayflower, luxurious 40-foot launch that is used by President and Mrs. Hoover on warm days for cruises on the Potomac. 3—Felix Hebert, the new senator from Rhode Island.

NEWS REVIEW OF CURRENT EVENTS

Huge Treasury Surplus May Bring About Another Cut in Federal Taxes.

BY EDWARD W. PICKARD

SECRETARY of the Treasury Mellon announced that the treasury surplus for the fiscal year ending June 30 was $185,000,000. Actual reduction in the public debt during the year was $673,000,000. The surplus would have warranted a total reduction of approximately $735,000,000, the additional amount being carried temporarily as an increase in the net balance in the general fund.

The surplus was accounted for largely by the unexpectedly large income tax receipts in March and June of this year based on abnormal profits from stock speculations during the year 1928. The huge 1928 earnings will be further reflected in the September and December income tax payments. The surplus for the calendar year 1929 may easily exceed $300,000,000, unless it is greatly cut down by loans under the farm relief act, for which $150,000,000 already has been appropriated.

Following Secretary Mellon's statement, President Hoover made it known that "careful study" was being made of the question of further reduction of federal taxes, and it was inferred that he probably would recommend another cut in his December message to congress. Three things, he said, must first be determined. These are the effect of legislation during the last twelve months which has increased expenditures far beyond the budget; how far the expenditures of the government in other directions can be reduced, and how far the increase in revenue is due to the temporary stock exchange activity.

The President evidently believes that it will not be necessary to wait until the March, 1930, tax returns are available before determining whether income tax revenues may be expected to continue at their present volume. The administration program for tax reduction is likely to include a greater deduction for earned income and a reduction in the tax on corporation earnings.

ALEXANDER Legge of Chicago, president of the International Harvester company, has accepted appointment as a member of the federal farm board and will be its chairman for the first year. Other members selected by President Hoover and who have accepted are James C. Stone of Kentucky, representing tobacco cooperatives; C. C. Teague of California, fruit co-operatives; C. B. Denman of Missouri, president of the National Livestock Producers' association, and Carl Williams of Oklahoma, editor of a farm paper and identified with wheat and cotton co-operatives. W. S. Moscrip of Minnesota, an official of dairy co-operatives, was offered a place on the board but at the time of writing had not accepted.

Mr. Legge, according to the President, is making as great a sacrifice as any citizen who ever entered the public service. He is surrendering a salary of more than $100,000 a year to accept a place that pays $12,000 yearly. It is believed he will resign after one year and return to private business, but in the meantime, Mr. Hoover hopes, he will have worked out the solution of the farm problem. During the war Mr. Legge was vice chairman of the war industries board and manager of the allied purchasing commission, doing invaluable work.

IT WAS officially announced at the White House that President Hoover will call a national conference within the next year to discuss the health and protection of children. Dr. Ray Lyman Wilbur, secretary of the interior, with the co-operation of Secretary of Labor James J. Davis, will direct the work of the conference. Dr. Harry E. Barnard, former state health commissioner of Indiana, has been selected as executive secretary. The cost of financing the conference will be paid out of a $500,000 fund placed at the disposal of the President from private sources.

According to Mr. Hoover's statement, "the subjects to be covered embrace problems of dependent children; regular medical examination; school or public clinics for children; hospitalization; adequate milk supplies; community nurses; maternity instruction and nurses; teaching of health in the schools; facilities for playgrounds and recreation; voluntary organization of children; child labor and scores of allied subjects."

RUMORS spread all over the country to the effect that Seymour Lowman, assistant secretary in charge of customs, prohibition and coast guard operations, and James M. Doran, prohibition commissioner, had been or soon would be asked to resign at the instance of President Hoover. This was vigorously denied at the White House, and Secretary of the Treasury Mellon said in a signed statement: "There is no truth in these reports, and there are no facts to justify the circulation of rumors of this character, which do an injustice to two gentlemen who are performing a difficult task with a high degree of ability and devotion, and who have in full measure my confidence and support."

The American Automobile association at its annual convention in Buffalo took cognizance of the methods of quick-trigger enforcement agents which, its members said, were endangering the lives of innocent automobile tourists along the Canadian border. President Thomas P. Henry of Detroit and others dealt with the matter in their addresses.

Representative Tinkham of Massachusetts in a letter to Attorney General Mitchell demanded the prosecution of the board of temperance, prohibition and public morals of the Methodist Episcopal church for viloation of the federal corrupt practices act, asserting that the board is a political organization as defined by that act and that it has failed to file itemized statements of its expenditures for the last four years. Deets Pickett, research secretary of the board, denied there was a basis for its prosecution. He stated that no expenditures had been made which he felt were reportable under the corrupt practices act, and declared that the act was not intended to curtail the right of free speech. He also reported that the board had spent less money in 1928 than the average annual expenditure of the five years preceding.

BOBBY JONES, the eminent amateur golfer of Atlanta, is again the national open champion. In the tournament at the Winged Foot club, Mamaroneck, N. Y., he fell into a bad streak of playing—that is, bad for him—and was tied for first place with Al Espinosa, professional. Each of them took 294 strokes for 72 holes. In the play-off at 36 holes Bobby had regained his form and Espinosa was at his worst, so the Atlantan won easily with 141 to 164. This is the third time Mr. Jones has captured the national open championship.

KING GEORGE'S speech from the throne, read to the British parliament by Lord Chancellor Sankey and of course representing the program of the new Labor government, was not at all startling and was far from extremely radical. The most important promises made by the MacDonald regime were that efforts would be made toward disarmament, that there would be diplomatic recognition and resumption of trade relations with Soviet Russia, that unemployment conditions would be improved and that numerous industrial ills would be investigated. The address mentioned favorable conclusions of the reparations conference and preparation for a second conference of governments which may climax its work with arranging for evacuation of the Rhineland. It then said of disarmament:

"Conversations have commenced with the ambassador of the United States of America on the subject of naval disarmament in consequence of which it is the earnest hope of my government to insure in co-operation with my governments in the dominions, the government of India and the governments of foreign powers, an early reduction of armaments throughout the world."

One of the most important announcements was that the MacDonald government intends to tackle the liquor problem, at least by investigation, and has decided to appoint a commission at an early date to examine the whole field of legislation relating to sale and supply of intoxicating liquor. The only suggestion of real socialism in the message was a hint that the nationalization of mining royalties might be proposed after an inquiry.

FOR reasons that are decidedly obscure to Americans, Baron Tanaka and his ministry in Japan have been forced to resign after carrying on successfully for a considerable time. Yugo Hamagachi, leader of the Liberals, was summoned by the emperor to form a new cabinet. Premier Tanaka's downfall was attributed chiefly to alleged mishandling of the Manchurian situation last year and to the government's failure to protect Marshal Chang Tso-lin from assassination at Mukden. In Tokio it is asserted that the general staff and the elder statesmen demanded that he quit after his management made a necessary severe discipline of the Japanese officers concerned in guarding the railway crossing where Chang was killed, and thus lowered Japan's military and international prestige. Lieut. Gen. Chotaro Murakoa, who commanded the Japanese army in Manchuria at the time of the assassination, has just been relegated to the reserve list without being promoted to the rank of a full general; he was succeeded by Gen. Eitaro Hata.

Tanaka also was blamed for bad handling of the ratification of the Kellogg peace pact, which was accomplished a few days ago. It was said he permitted too much opposition to develop. Just before resigning Tanaka and some of the cabinet members were decorated with honorary imperial orders.

CHINA is planning to make itself a sea power of considerable importance and will develop a modern naval base on the Chekiang river. The Nationalist government announces that it has signed an agreement with Great Britain providing for the training of Chinese naval cadets in England and has engaged a British naval mission to assist in the development of its navy. It is understood that British shipyards will receive contracts for the building of Chinese warships. Most of China's war vessels were bought from England and Germany 20 years ago, but she has lately built a good-sized fleet of light craft in her own shipyards. In 1927 President Chiang Kai-shek said it was China's intention not to be bound by any agreements pertaining to naval limitation which the powers might make.

DESPITE strict censorship, reports are coming from Italy indicating that Mussolini and his Fascist regime are having difficulties in various districts. Provincial party secretaries have been changed, and two members of the chamber of deputies have been suspended without announced reason. The Fascist police are reported to have arrested 36 former leaders of Italian Masonry following the recent decisions of Masons in Paris to reestablish contact with the Masons in Italy. The country has an adverse trade balance and in consequence economic conditions have become unsatisfactory. Premier Mussolini summoned a meeting of the cabinet for July 15 and there may be a general shifting of officials.

SPAIN'S government is taking measures to check the fall of the peseta and pave the way for a return to the gold standard. Among the relief measures are: Formation of a national council to encourage consumption of home products and thus limit importations; regulation of foreign machinery imports, particularly for public works; restrictions of imports which currently enjoy reduced customs duties; stimulation of home production of tobacco, wheat, cotton, and corn, and protection for the Spanish automobile industry.

DREAM VILLAGE SOLD AT AUCTION

Proceeds of Sheriff's Sale Go for Taxes.

Pawhuska, Okla.—The doleful rap of an auctioneer's hammer has started the small village of Herd in Oklahoma's vast Osage district toward a place in the realm of "ghost cities."

Virtually the entire town, twenty-five miles north of here, has been auctioned off on the steps of the county court house. Behind the sale is a story of a shattered dream of "Old Bill" Easely, territorial rancher and landowner who envisioned the village.

Hardly had the echo of cattle's hoofs died away than the then new Oklahoma town sprang into existence The Santa Fe promised a railroad through the vast Easely ranch. The road agreed tentatively to build a station on a section of the proposed townsite.

Visioning a city on his ranch, Easely mortgaged his land and invested a small fortune in the town of Herd. He induced a few grocery stores, a lumber yard and other businesses to locate there.

But railroads are no respecters of individual fortunes and plans were changed. The road never came through.

A detailed survey by the Santa Fe disclosed that Herd had been built on a grade which would be costly to cut through.

Easely became embittered toward the railroad company. He fought the building of the right of way through his ranch at all. Armed with a rifle, he guarded fences on his ranch from workmen. He was jailed for violation of a court order.

Three years ago the ranchman died. His property was mortgaged, taxes were not paid and the village had become a place of empty buildings

The sheriff's sale was to satisfy mortgages and collect taxes. A Sedan (Kan.) bank took five whole blocks, twenty-five scattered lots over the town and an undivided half of a land allotment, which Easely had owned, for its assessed valuation when no other bidders made an offer.

The 415 acres which had composed Easely's home estate was purchased by a Pawhuska man at $5 an acre. Thirty-two other lots went to scattered bidders at prices ranging from $1.50 to $7 per lot.

Mexico Imports Faculty for Its Summer School

Mexico City.—Savants from several points of the Americas will participate in the faculty of the summer school of the National university of Mexico, the university authorities have announced. The United States, Chile, Costa Rica and Ecuador are among the countries which will send professors to give instruction and lectures.

Waldo Frank, author of "Our America," "Virgin Spain" and "The Rediscovery of America," will lecture on the "The United States, Spain and Spanish America."

Dr. Gonzalo Zaldumbide, minister of Ecuador in the United States and a noted sculptor, will lecture on "America and the League of Nations."

Pedro Prado, Chilean novelist and diplomat, is to speak on Chilean literature and "The Political Action of America."

Teller Tricks Bandit With Mutilated Bills

London.—A lone gunman escaped with $1,100 in mutilated bills from the main branch of the Bank of Montreal at 10:45 a. m. the other day after presenting a note to a paying teller S B. Dunn, demanding cash. Dunn pushed the packet of bills toward the robber. The teller's presence of mind in utilizing the mutilated bills saved the bank several thousands of dollars which he had in his cage.

A customer made a clutch at the fleeing bandit but failed to hold him.

Prisoners Pick Berries

Cassville, Mo.—With the strawberry season in the Ozarks in full swing, Judge Emery Smith released three prisoners from the city jail to pick strawberries.

Plans Plane to Fly 600 Miles an Hour

London.—Breakfast in London and lunch five hours later in New York—such will be the speed of modern air transport if W. D. Verschoyle's gravitation conquering air machine will work.

The inventor has just applied for a British patent on an invention which he claims will make possible the construction of a machine capable of flying 600 miles per hour, or from London to New York in less than five hours.

Briefly the theory behind his invention is that gravitation is similar to magnetism and is therefore controllable by electricity.

If Verschoyle is able to control gravitation his air machine will arise and descend vertically, thus dispensing with large and unfrequent landing fields There will be no planes, gasbags or helicopters, the motors being able to attain a speed of 600 miles an hour after conquering gravitation

FRANCE ALARMED BY CRIMES OF YOUTHS

Ghastly Murders Committed by Children.

Paris.—The number of crimes committed by young people in France in the last few months has given rise to serious alarm, since if events continue as now the prisons will soon be full of juvenile murderers.

Hardly had the padlock been placed on the cell of two boys, one aged twelve and the other thirteen years, who had slain an old woman at Vaucresson, at the gates of Paris, than the newspapers were occupied with a new sensation—a butcher's boy at Franconville had battered in the head of an elderly widow, copying exactly the deed of the youths of Vaucresson.

While alarming enough in themselves, these crimes have stirred French public opinion doubly because they follow upon a sequence of other brutal outrages by young folk, apparently inspired by both blood lust and callousness.

Douraud Guillotine.

Some months ago, an example was set for other youthful murderers when young Douraud's head fell under the guillotine at Caen for the shooting of a French army officer in a train from the Riviera. But instead of striking terror to the boyish heart of France, the crime was imitated soon after by Adolf Steffen, aged eighteen. A student at Paris, he boarded the express train for Nancy one morning and during the journey climbed along the footboard and shot dead the guard in his compartment.

After a gruelling examination in jail, Steffen confessed. He is now awaiting trial and it is almost certain he will follow the youth he imitated up the steps of the scaffold.

The fate which will befall the children who committed the Vaucresson crime will be more lenient, although they have shown themselves the most cold blooded of recent murderers. According to their own confession, they mounted by means of a ladder to the bedroom of the old woman whom they had selected as victim with the intention of killing her if she refused to hand over the money.

One boy, Le Guel, held a lamp while the other, aged thirteen, battered in the old woman's head with a steel bar while she slept. A few days afterward they re-enacted the murder in the bedroom for the benefit of the police and were completely unmoved.

Can't Be Guillotined.

Under French law, any one under eighteen years cannot be guillotined, therefore Le Guel and his accomplice will be kept in a penitentiary until they reach the age of twenty-one, when they will be drafted for service as conscripts in a regiment serving abroad. After the period of service they will be required to report their movements to the authorities, but their crime will be considered as practically expiated in law.

The latest recruit to the youthful criminal gang—Marcel Morice—was arrested by gendarmes after a chase through a forest near Montigny, in the department of the Orne. He had delivered meat to the widow whom he made his victim, battering her head with a brick.

He returned to his master's store, took about $20 from the cash register and fled.

Among many high medical opinions evoked by these repeated crimes by children, most constructive is that of Doctor Heuyer, director of the Clinic of Infantile Neuropsychiatrics. He considers that the educational system is wrong.

He urges that the German method of re-education of children should be copied. Under this method, children suspected of nervous debility with tendencies towards crime are removed to special observation schools supervised by mental experts who treat them and educate them according to their mental peculiarities.

"There are eighty-three such schools in Germany," Doctor Heuyer points out, "which should be sufficient proof that there is need for the same thing here in France, where there are only three nonspecializing schools."

Woman Refuses Salary; Causes Political Stir

Annapolis, Md.—Mrs. Ethel Lorentz had a job with the city delegation in the general assembly, but she had no work to do. So she turned down her salary and it has no place to go.

Speaker E. Brooke Lee announced that the $5 a day that Mrs. Lorentz was supposed to get for her work as a clerk or secretary to the city delegation was paid to her by check, but the checks were returned unendsed and there was nothing for him to do about it.

The money will remain where it is—wherever that is—until the end of the session and then, according to Speaker Lee, it will be turned over to the Maryland general treasury.

There it will go right in with the other money with no special ceremonies, just as if it didn't enjoy the distinction of being the first salary to be turned down by anyone on the legislature's pay roll.

Mrs. Lorentz accepted employment, she said, not for the money but for the "legislative experience."

Poked; Wants Decree

Warsaw.—Alleging his wife beat him with an iron poker and a meat fork, Elmer Johnson, Warsaw, has filed suit for a divorce from Katherine Johnson, Rensselaer, Ind.

DR. CALDWELL'S
THREE RULES

Dr. Caldwell watched the results of constipation for 47 years, and believes that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation is a mild vegetable compound. It can not harm the most delicate system and is not habit forming.

The Doctor never did approve of drastic physics and purges. He did not believe they were good for human beings to put into their system. Use Syrup Pepsin yourself and members of the family for constipation, biliousness, sour and crampy stomach, bad breath, no appetite, headaches, and to break up fevers and colds. Get a bottle today, at any drugstore. To observe these three rules of health: Keep the head cool; the feet warm, the bowels open. For a free trial bottle, just write "Syrup Pepsin," Dept. BB, Monticello, Illinois.

Thus Has Man Played at Cards Through the Ages

Lancelot
Tune of Down in the North Country sung by Lyddat.
What Gudgeons are we Men!
Every Woman's easy Prey.
Though we have fully Stock'd them
We lye and they betray.
The Bird that hath been trapt,
When he hears his calling Mate.
To her he flies, again he's clapt
Within the wiry Grate.
Flute

1. A Hindoo playing card.
2. Chinese money playing card.
3. A French card of the Napoleonic era.
4. Back of a Korean playing card, showing the arrow feather.
5. Japanese flower gama cards.
6. A patriotic playing card of the World war period.
7. One of the earliest known playing cards of Europe, printed from wood blocks in Provence about 1440.
8. An early French playing card.
9. A card bearing one of the songs from the Beggar's Opera, 1728.
10. One of the playing cards made in England in 1678 by L. Hewson, son of Cromwell's general, "Hewson the Cobbler."

By ELMO SCOTT WATSON

DO YOU remember "way back when" your parents would have been horrified if they had found playing cards in your possession because "the devil lurked in a pack of cards?" How surprised they would have been if you had told them that to play cards was not a thing of evil but a perpetuation of an ancient rite as old as the history of mankind. For that would have been perfectly true.

Primitive man was accustomed to resort to the making of magic to determine what course he should pursue in a world filled with bewilderment and superstitious fears. Arrow divination was a favorite kind and to make this magic a circle was drawn on the ground with the proper rites and incantations and divided into the "Four Directions." Then with more mystic ceremonies arrows were cast into the ring and upon the manner of their falling depended the future. A survival of this rite and these instruments is shown in the card game of the Koreans in which an arrow feather appears upon the back of the playing card. (Figure No. 4.)

In fact it was among the Asiatic peoples that the beginnings of card games and playing cards, as we know them now, took place. Marco Polo, the famous traveler, returning to Venice late in the Thirteenth century, told among other wonders, how the great Chan in far-off Cathay had paper money made from the bark of the mulberry tree. The Chinese had been making this paper money since the Sixth century. At first a game was played with the paper money itself but later cards in the form of paper money were made, using the old money symbols, a coin, a string of coins, a myriad string of coins and tens of myriads of strings of coins, which are the names of the Chinese suits today. The form of the Chinese playing cards is shown in Figure No. 2.

The Japanese as early as the Eighth century were making prints from wood blocks and pilgrims to the shrines in the monasteries were given these prints as souvenirs of their journeyings. These prints were used then, as now, to play the flower game, founded on legends which date back to the beginning of the Japanese people. The Hindus also have a card game but their cards were thin painted disks of wood or ivory or cotton fiber paper. In their game there are 12 cards to a suit and the number of suits to a pack vary—sometimes eight and sometimes ten. The court cards (king, queen and jack) always picture one of the incarnations of Vishnu.

It was probably Chinese cards, however, which found their way into Italy in the Fourteenth century and which soon afterwards became known in every European country. The gypsies, after long wanderings through Arabia and Egypt, from their homes in India also brought into Europe cards which carried in their strange designs, parts of the myths and legends of these countries. Gradually there evolved from all of the sources a game called "tarots," late in the Fourteenth century. These tarot cards were made for the nobles and were painted with the greatest care. They were so costly that the poorer classes of people could not afford them but eventually another card game sprang up in which common cards made with stencils were used. Johannes, a monk at Buefeld, writing in 1377, describes this new game which "men call a game of cards." The pack consisted of 52 cards with three court cards to each suit just like those of today.

It is believed by some authorities that the earliest wood-block prints made in Europe were playing cards, made about the middle of the Fifteenth century. By this time playing cards were common in all parts of Europe. Germany especially was making great quantities of them not only for use in th t country but in Italy, Sicily and other countries. In fact, in 1441 the cardmakers of Venice protested to the Doge against the importation of these German products "by which our art is brought to total decay."

The earliest German cards were very large and were painted by hand. The designs on them reflected the early German fondness for hunting, since the suit signs were deer, dogs, falcons and ducks. In contrast to the German cards were the beautifully decorated Italian cards with raised borders, which were sometimes dotted or checkered. Then, too, the suit signs on the Italian cards were very different from those of any other country. They were long curved swords or scimitars, standing for the nobility; cups for the clergy; danari, or money, for the citizens; and bastoni, or clubs, for the peasants.

In fact it seems that there was no uniformity in the matter of suit signs in any one country. Since most of the playing cards were made for the nobles on special order, the makers often placed on them such designs for suit signs as would best please their patron. Sometimes he chose them himself an in other cases figures from his coat-of-arms were taken. Reference has already been made to the prevailing suit signs in the cards made by the Germans but these hunting symbols were not uniformly used in that country. One set of round cards made in Cologne had suit signs of flowers, parrots and rabbits. Another used lions, monkeys, parrots and peacocks.

The suit signs of today—spades, hearts, diamonds and clubs—originated in France and made their first appearance early in the Fifteenth century. They were called coeurs (hearts), piques (spades), trefles (clubs) and carreaux (diamonds). The suit of coeurs stood for the church, or clergy; the carreaux was symbolical of the arrow-heads of the vassals (the class from which the archers and bowmen were drawn); the trefles, or clover, signified the husbandman, and the piques, or the points of lances represented the knights. It was about this time, too, that the court cards were first named and these, too, we owe to the French. The earliest known cards printed from wood blocks which are preserved to this day are six cards from a set made in Provence in 1440. Four of these are in the British museum and two are in the museum of the United States Playing Card company in Cincinnati. (Figure 7). They are the knaves, or valets, as they are known in France, and bear the names of famous knights, Lancelot, Hogier and Valery. It is interesting to note that during the French revolution when the house of Bourbon was dethroned, the kings and queens disappeared from playing cards also. Instead there were substituted philosophers (for the kings), emblematic personages (for the queens) and sansculottes or the revolting workmen (for the knaves).

Playing cards came into England early in the Fifteenth century, during the fighting in Normandy and Touraine, Anjou and Poitou. English soldiers brought back French cards with them and these served as the models for English card makers. In spite of the fact that paper was not made in England until the end of the century, in 1463, upon the petition of the English craftsmen, the importation of playing cards was forbidden. By 1484, card playing had become an important part of the Christmas festivities, at least among the nobility, and it spread so rapidly to the lower classes that Henry VII in 1495 issued an edict forbidding their use to servants and apprentices except during the Christmas holidays.

Although the French gave to us the familiar suit signs and the figures on the "picture cards," the queer costumes which we see on the kings, queens, and jacks, when we pick up our hands, are English of the time of Henry VII. The queer-looking lappets over the queen's ears are the same kind as were worn by the ladies of Henry's court, although the wearing of their crowns far back on their heads did not become common until Queen Elizabeth's time. The knaves with their flat caps "broade on the crowne like the battlements of a house" are like the figures which we see in the paintings and tapestries of that time. Incidentally, the meaning of the name for this card has changed greatly through the years. In those days the term of knave was used in the same way as the French varlet or valet and meant merely a son or young servant. Later it came to mean a rogue and from that meaning our present term, jack, is supposed to have come. It was probably jackanapes, originally, which was derived from Jacka-naipes, "naipes" being the Spanish word for cards.

Card playing grew in great favor in England during the reign of Henry VII and the king himself was an addict. Among his private expenses are several entries for money at cards. His daughter was also a fan and of James IV and his bride it is written; "the Kynge came privly to the said castell and entered within the chammer with a small company where he found the Queene playing at Cardes." When English royalty was overthrown and the commonwealth came into power cardplaying fell under the stern displeasure of the Puritans. But under the gay rule of Charles II it was again in favor. Moreover, besides the playing cards with the conventional suit signs we find many other early English cards bearing curious pictures, political satires of the day which served much the same purpose as the cartoons and comic strips of the present time. In view of the recent revival of the Beggar's Opera in this country it is interesting to note that one pack of English playing cards was adorned with songs from that famous composition. (Figure No. 9.) It is also curious to find that, despite the Puritan disapproval of playing cards, one of the well-known card makers of that period was L. Hewson, who was a son of Cromwell's general "Hewson, the cobbler."

The practice of printing upon the cards many other things besides the figures of the various suits had a great vogue in Europe during that time. For instance Cardinal Mazarin, in an effort to interest the young prince, who later became Louis XIV, in his studies, arranged for several sets of playing cards, each bearing some geographical or historical information. One set was illustrated with the pictures of famous queens and short biographical sketches and another with symbolical figures of the different countries and a short description of that country. There was also a heraldic series illustrating the various coats-of-arms of the nobility, another illustrating the famous military operations of the period and another adorned with various mythological figures. Among the English cards of this period were some in which the different suits bore the portraits of kings and queens of various countries. Another was devoted to illustrated proverbs; another to Aesop's fables, another showed scenes from the Monmouth Rebellion and still another scene illustrative of the reign of Queen Anne. This practice continued down to the Nineteenth century. One set of French cards made in 1814 reflected the war-like spirit of the Napoleonic era (Figure 3), being illustrated, pictures of soldiers upon whose banners appeared the suit signs and numbers. Another set of 1830 bore the music of famous dances of the time and still another of that period showed the work of famous caricaturists. The same thing was being done in England where the playing cards bore such designs as money tables, the multiplication tables, maps of the various countries, the signs of the Zodiac, portraits of all the kings of England and various other educational features.

Since England became a card-playing nation within a comparatively short time after playing cards were introduced into that country, it was only natural her colonies should follow the lead of the mother country. So America, too, has become a card-playing nation, perhaps the greatest in the world. The reason for that statement is this: last year there were printed in this country 52,000,000 packs of cards. This means 1,000,000 a week! All down through the ages man has played at cards. So America is simply following the tradition and in this as in many other things, she leads the world!

POULTRY

GET CHICKS OUT OF WET HOUSES

Muddy Runs and Yards Encourage Parasites and Ills.

Get the chicks out of the mud.

Long-continued sloppy weather, muddy runs and yards, furnish ideal conditions for the parasite which causes the disease coccidiosis, as well as making things unpleasant around the brooder houses for the owners who take care of the flocks.

"The brooder houses ought to be moved to grass sod," says E. L. Dakan, head of the poultry department of the Ohio State university. "Even if the chicks are moved only 50 feet, from bare, muddy soil to grass, they will miss a lot of the infestation of parasites which have made their homes in the old runs where the grass has been destroyed."

Coccidiosis or white diarrhea results from the activities of a parasite which will infest the soil where chickens have been kept for a year or more. Sanitary measures which include moving the flocks away from the infested soil, have been found more satisfactory control measures than trying to treat the disease with medicine after it has started in a flock. Under the conditions which have existed for a month or more, the parasites have been flourishing.

For late chicks which are showing signs of rickets because it has been impossible on account of weather conditions to get them outdoors as much as they should have been, should have their cod-liver oil ration increased to 2 per cent of their feed, Dakan says, in order to counteract the lack of sunlight.

Quality Eggs Can Be Produced on Any Farm

Eggs unfit for food cost farmers from one to three cents per dozen. Approximately 17 out of every 100 eggs marketed are unfit for human consumption, according to the United States Department of Agriculture. This means a loss of about $4,000,000 annually to farmers. An egg buyer of Clinton county, Indiana, recently reported to Purdue university that one-half of the eggs delivered to him were not good enough to eat.

Two principal causes for the large volume of inedible eggs are as follows: Improper care of eggs at the farm, and neglect in marketing them more frequently, according to E. R. Menefee of Purdue.

Quality eggs can be produced on corn belt farms if producers will follow the suggestions which he makes.

Remove all the males from the flock immediately. Males are not necessary for egg production and fertile eggs will not keep their quality in warm weather.

Remove all broody hens from the nests promptly. The body temperature of a hen is 106 degrees and will reduce the quality of the egg in a few hours' time. Gather the eggs twice a day in hot weather and place them in a cool room promptly. A basement or cellar if not moldy or containing any peculiar odors furnishes about the best place on the farm for holding eggs.

To Distinguish Sex of Guineas Is Hard

There is no sure way to tell the male guinea fowl from the female by looks. Usually the wattles of the male are a little larger than the female's, but this is not always noticeable—nor is it true in every case.

But their cries are different, and will reveal which is which. The female has a two-syllable cry which sounds like "buckwheat, buckwheat," or to some folks "pot rack, pot rack." Anyhow it's a two-syllable cry. But the male has only a one-syllable sort of shriek. Sometimes too, he makes a chattering noise and often says "quit, quit, quit."

But don't try to tell the two apart when they're frightened or excited. Both the male and female then make the one-syllable cry.

Oats Cause Trouble

The use of ground whole oats containing an abundance of indigestible fiber has caused many losses among young chicks when such material has been included in the home-made starters. A laying mash containing a lot of ground oat hulls has less feeding value than a mash without so much fiber. There should be a good demand for hulless oats for chicken feed if they can be raised as economically and are as good feed as oats which have been hulled.

Remove Litter Daily

Daily removal of soiled litter from the henhouse is important. If the dampened litter is left on the floor, ideal conditions are created for spreading of disease. The soles of shoes that have come in contact with such litter should be disinfected. Contamination is easy unless every caution is used. This risk can be greatly reduced by wearing a special pair of rubbers and by having a pan of disinfectant outside the brooder house to use when entering and leaving.

It May Be *Urgent*

When *your* Children Cry for It

Castoria is a comfort when Baby is fretful. No sooner taken than the little one is at ease. If restless, a few drops soon bring contentment. No harm done, for Castoria is a baby remedy, meant for babies. Perfectly safe to give the youngest infant; you have the doctors' word for that! It is a vegetable product and you could use it every day. But it's in an emergency that Castoria means most. Some night when constipation must be relieved—or colic pains—or other suffering. Never be without it; some mothers keep an extra bottle, unopened, to make sure there will always be Castoria in the house. It is effective for older children, too; read the book that comes with it.

Fletcher's CASTORIA

Surprising the Waiter

"For the first time since I've dined at this restaurant the charge is reasonable," said the guest.

"Reasonable?" echoed the waiter, surprised. "I had better have another look at the bill. There must be some mistake."—Inverness Courier.

MRS. JOHN SANDERFELT DIED WEDNESDAY MORNING

Funeral Services Will Be Held On Saturday Afternoon

Mrs. John Sanderfelt, aged 57 years, died at the home of her son, Karl east of Klemme, Wednesday morning at 6:00 o'clock, following a brief illness. She had a stroke on Sunday and gradually became weaker until death relieved her suffering. Her husband preceded her in death about three years ago.

Funeral services will be held on Saturday afternoon at 2:00 o'clock at the Reformed Church.

She is survived by the following children, as well as many other relatives and friends:

Karl Sanderfelt; Mrs. William Jurgemeyer; Mrs. Henry Linne; Mrs. John Swalve; Mrs. Herbert Dickhuis and Miss Laura, at home.

Interment will be made in the Ell township cemetery.

KLEMME LOCALS

Today Gracka Quandt is fifteen years old and Mrs. Quandt is going over to Clear Lake and stage a big surprise party on the Camp Fire Girls who are enjoying a week's outing.

Doris Carson returned last week Thursday from her visit at Kamrar. She was accompanied home by her grandparents, Mr. and Mrs. H. H. Carson who are visiting at the Geo. Carson home for a few weeks.

Mr. and Mrs. C. F. Keraus and Mr. and Mrs. Fred Kluckhohn returned Saturday noon from Traer, where they had been visiting for a few days with the Wm. Keraus family.

Ed. Weisbrod and family and E. R. Schlei, of Fenton visited at the Edwin Josten home and with other relatives Tuesday. The main purpose was to see the fine new baby at the Josten home.

Carl Heiden, accompanied by his sister, Mabel, mother and another lady stopped in Klemme a short time Tuesday. They were on their way for a three weeks visit with relatives in Michigan.

A charivari gang met at the Mrs. Rosendahl Monday evening to serenade Mr. and Mrs. Carl Kropp, the newly-weds. Mr. Kropp is a brothe of Mrs. Rosendahl. The merry makers were treated to ice cream and cake.

Mr. and Mrs. Oscar Schuldt, of Chicago, acompanied by Le Roy Baman, came Friday for a short visit with his mother, Mrs H. Schuldt, and other relatives Mrs. Dick Baman and twin boys expect to come to Klemme soon.

Mr. and Mrs. John Josten accompanied their son, Earl to Harris, and Armstrong last Wednesday to hear Earl's band play. They all returned to Kleme again the same evening. Earl left again Thursday to resume his duties. He has bands at Harris, Armstrong and Estherville and also gives many private lessons.

Thanks! Just phone that item of news to The Times. Phone 1-2.

Let Us Drain Your Car And Fill With POLARINE

Phone 96, Klemme, Iowa

POLARINE is made in different grades—there is one made specially for YOUR car. If you use Polarine and drain the crankcase every 500 miles you are assured your engine is thoroughly and adequately protected.

Trust Your Engine to Polarine!

It's the best lubrication money can buy. Polarine is made by the Standard Oil Company [Indiana]—is one of its major products in fact—has helped to build its reputation!

In manufacturing Polarine the latest and most advanced refining practices are employed.

The result is a wonderful lubricant that cushions every moving surface with oil—keeps your car running smoothly—protects the motor from wear and tear and adds miles and miles to its life.

Only because of the *large volume* produced is it possible to put Polarine on the market at anything like the low price you pay for it.

And only because Polarine gives such satisfactory service is such a large volume *demanded*. Hundreds of thousands of motorists in the Middle West demand Polarine because it gives them the *best* lubrication for the least money.

Try this money-saving, car-saving motor oil today! Ask any agent of the

The Sunday school picnic of the U. B. Church has been postponed until some time next week. No definite date has been set.

Mrs. Ivan Baker and children, Mrs. Leo Ahrenkeil and children, and Marjorie and Stanley Christenson attended the circus in Garner Friday.

Mr. and Mrs. Jay Griggs and Nellie and Kenneth were Garner callers Friday.

Miss Daphne Houghton of Belmond spent the week end with her sister, Mrs. Conlan.

Vogal Christensen returned home after a three weeks visit with relatives and friends in Waterloo.

Harve Christenson drove to Waterloo Tuesday on business.

Mrs. Mae Thompson and daughter Ethel of Belmond, visited at the Arthur Ruka home Sunday.

KLEMME LOCALS

Mrs. P. M. Wilson went to Clarion today where she will attend a re-union of her old school girl chums who are having a gathering at the home of Mrs. Young. The program will consist of a dinner at the Country Club and a house party at the Young home.

Mrs. R. W. Elder, Mrs. Lew Lewis, Mrs. Chris Gram, Mrs. Ben Coobs, Mrs Stooldryer, Mrs. Marvin Barr, Mrs. Will Kirkwood and Miss Viola Freie, Mr. and Mrs. Albert Johnson, and Mr. and Mrs. Levi Klotzbach were hostesses at the Rebeccah lodge meeting at Garner on Tuesday night.

Mrs. C. A. Arnold's class of Sunday school boys acompanied by Rev. and Mrs. Whyte and Mrs. John N. Day enjoyed a big time at Clear Lake Tuesday. The mothers had prepared a lot of good things to eat and a fine picnic dinner was enjoyed. The boys also enjoyed swimming and playing games.

Rev. and Mrs. A. W. Gauger nad sons, Harlan and Stanley, of Holstein, Iowa, enjoyed dinner at the J. N. Day home Friday noon on their way home. They were on a short vacation trip, having left Holstein on Tuesday and driving to Dows where they visited William, who works for a relative there, Mr. Chester Warden. Miss Marie Gauger, who had been visiting there, then joined them and they drove to Rudd where Carlyle Gauger is again working on a farm for his uncle, Mr. Barz. Miss Marie remained there for a visit. They then came to Garner and visited Thursday with Mrs. Gauger's mother, Mrs Minnie Josten, and then on to Klemme to visit friends here.

Dr. Zinn and Fred Henschen put in the day celebrating the Fourth. They drove to Duncan in the morning and took in the Bohemian celebration and then dropped in on the Reformed celebration at Ell town in time for the picnic dinner.

ALL-YEAR TOURING ON PACIFIC COAST

A Bus With Tourists Emerging After Passing Through the Famous Wawona Big Tree in Yosemite National Park.

Figures on winter and summer gasoline consumption in Western states indicate the continuous use of motor vehicles, especially on the Pacific coast. Summer brings increased motor touring, but fall and winter are not far behind, according to these figures, which are reported by the California State Automobile association as follows:

The average amount of gasoline consumed in the 12 Western states is highest in California, where each car owner uses 601 gallons, while Oregon ranks second with 535 gallons, Texas third with 532 gallons and Washington fourth with 529 gallons. New Mexico, Arizona and Wyoming all are above the 500-gallon mark, with the remainder of the Western states consuming from 493 to 418 gallons, the lowest being for Idaho.

Idaho has the highest percentage of spring and summer gasoline consumption, with 61 per cent, while Montanans use 60 per cent of their fuel during the more clement seasons. Texas has the nearest approach to an even division, with 51 per cent in summer and 49 per cent in winter.

TAKING CARE OF BIG FARM TRUCK

One of the Main Things Is Not to Tinker With It—Inspect It Often.

(By DAN SCOATES, Editor Farm Mechanics Department, Professor Agricultural Engineering, Texas A. & M. College, College Station, Texas.)

The truck is coming to the farm very fast. It is going to be a part of every farm's equipment before very many years.

There are a number of things of vital importance in taking care of any piece of farm machinery and it is particularly true of the truck as well as the automobile because they are very fine pieces of machinery.

One of the things that should be firmly fixed in one's mind relative to taking care of the truck is—not to tinker with it. Leave well enough alone. Some folks, you know, just have to be working with a piece of machinery all the time. They just must be tearing it up and seeing what it is made of and endeavoring to make it run better than the people who built it. The result of this is that it always runs worse. Do not make any major repairs on the truck until it is necessary, but be sure to make them at that time.

Make Inspections Often.

The important thing to do along this line is to go over the truck frequently and at definite intervals in order to inspect it thoroughly, tighten up the bolts and nuts, and that sort of a thing. Keep it washed and well greased; change the lubricating oil at the times the manufacturer instructed you to. Do not forget that there is a rear end to the truck and that it needs oiling and greasing. Watch the fan belt and keep it tight and do not overlook that the radiator needs water as well as the battery. Air up the tires, not once a year, when you have a puncture, but once a week.

I am a great believer in having a time to do a certain job and then doing it at that time. Our automobile runs every day and we have a rule that it is to go to the filling station every Saturday, at which time its oil is checked, the gasoline tank is filled, water is put into the radiator, the battery is checked up and the tires are all aired. At this same time the car is washed and cleaned—if it needs it.

Grease Every 500 Miles.

Every 500 miles the cylinder oil is drained and the car is greased.

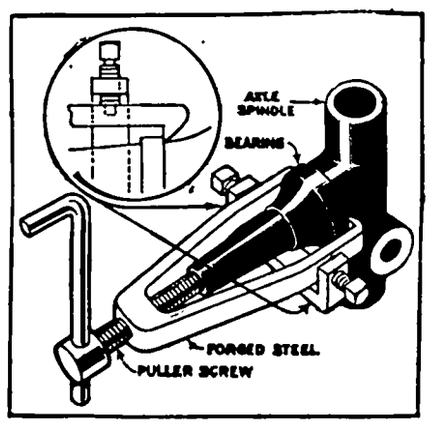
Of course, it depends on how much use the truck is given as to how frequently this inspection should be given to it. It is certain that during the time of the year when it goes on heavy duty it should be looked after with greater care than at other times. But regardless of how much it is used, it should be kept in good shape at all times. And not the least duty is to keep it well washed and clean.

Comparing Accessories Before Purchase Urged

The motorist who is contemplating the purchase of an accessory to give the car greater comfort or efficiency can make good use of his friends' cars to compare various types of, say, shock absorbers or other devices. For instance, if one is unable to decide between two shock absorber makes on the salesman's merits, usually one will find cars among his friends or acquaintances which are equipped with both types. Try them out by actually riding in or driving the cars in question.

Tool Removes Bearings From Car Axle Spindles

Force-fitted bearings on the front-wheel spindles of autos are difficult to remove, and the usual gear pullers are not serviceable for this work, as the bearing rests close to the shoulder of the spindle and only the edge can be gripped by the puller. Where much of this work is done, it will be found worth while to make a special puller like that shown in the illustration. The body is a steel forging having hook jaws to engage the edges



Tool for Pulling Force-Fitted Bearings From Auto-Axle Spindles.

of the bearing. A clamp is provided to straddle the jaws of the tool to prevent them from spreading. Setscrews are used to hold the clamp to the jaws, small depressions being drilled in the latter to receive the ends of the setscrews. The body of the tool is drilled and tapped for a puller screw to which a small crank is attached. Turning the crank causes the tool to pull the bearing off with very little effort and without distorting the ball races.—G. A. Luers, Washington, D. C., in Popular Mechanics Magazine.

THE MOTOR QUIZ

(How Many Can You Answer?)

Q.—Does driving with fouled spark plugs waste gasoline?

Ans.—Yes. About 20 or 25 per cent of gasoline used is wasted for every plug that is out of use. Plugs should be replaced at the first sign of a miss, and inspected at least once a year.

Q.—What happens when a driver races the engine to warm it up?

Ans.—This often causes burned out bearings. When the oil is cold it does not circulate immediately and the engine is raced on dry bearings. If this is done every morning over a cold snap, bearings will soon have to be replaced.

Q.—Is sunlight hard on tires?

Ans.—Tires should not be given unnecessary sunlight. They enjoy the dark.

Q.—Is it harmful to park a car in a puddle of oil?

Ans.—Yes. Oil eats rubber.

AUTOMOBILE NOTES

The horse had one advantage over the automobile. It didn't become obsolete a year after you bought it.

* * *

At the beginning of 1929, Sweden had more than 126,000 motor vehicles in operation.

* * *

The most discomforting thing about dodging an auto is the dirty look the driver gives you for escaping.

* * *

Figures from the Department of Commerce show that there are 4.81 motor vehicles to every mile of highway in the world and 59.91 persons to every automobile.

Young Dewberry Promising Crop

Plant Is Favored Because of Its Resistance to Many Diseases.

(Prepared by the United States Department of Agriculture.)

The Young dewberry, named for B. M. Young of Louisiana, who originated it more than twenty years ago, is now becoming an important sort in both the eastern and western parts of southern United States, according to George M. Darrow of the United States Department of Agriculture, whose trials with this dewberry a few years ago showed it to be promising for the South.

Centers of Production.

The largest centers of production at present, he says, are in southern Alabama and southern California, though there are extensive plantings near Wilmington, N. C., and Houston, Texas. Evidence at hand indicates that it is hardy from Norfolk, Va., south and west to include eastern North Carolina, South Carolina, Georgia, and the states west of Texas, including Arkansas and parts of Tennessee and Oklahoma. In California, Oregon and Washington it is apparently adapted to a somewhat greater range of conditions than is the loganberry.

Resists Disease.

The Young dewberry is favored because of its resistance to anthracnose and leaf-spot diseases, the vigor and productiveness of the plants, and the high dessert quality of its fruit. Recent tests indicate that the fruit is well adapted to freezing for sale in the winter season, and its usefulness after freezing for preserves, pies, and the table suggests this outlet as one of the most important for this berry.

No planting stock is available from the department, Mr. Darrow says, but prospective growers will find the Young dewberry listed for sale by a number of Southern nursery establishments.

Equipment Needed for Creosoting Fence Posts

The only equipment needed for the open tank method of creosoting fence posts is a tank which can be heated. A good outfit is a galvanized iron tank three feet in diameter and four feet high. The creosote may be heated over an open fire with the tank on a temporary foundation. The posts should be thoroughly seasoned before treatment. The lower half of the post should remain in hot creosote (190 degrees F.) for a period of two to four hours. The posts should then be allowed to remain in the creosote as it cools. The tops of the posts such as cottonwood and willow should be dipped in the creosote for a few minutes. A penetration of one-half inch in the portion of the post coming in contact with the ground will give good protection.

Increase Continues in Production of Oats

Oats production continues to increase in the United States despite the fact that the number of horses and mules on the country's farms is declining. That the demand for oats has been adversely affected by the substitution of mechanical power for animal labor on farms is indicated by the post-war trend in oats prices. Oats since the war have brought prices about on a level with those prevailing before the war. In comparison with the price position of other feed grains and most other agricultural commodities, this is an extremely unfavorable situation. Farm commodity prices generally have averaged about 40 per cent higher since the war than before.

Agricultural Hints

Rape pasture taints cows' milk.

* * *

Co-operation is not a sentiment—it is an economic necessity.

* * *

If conditions are favorable, rape will make a good pasture crop five weeks after seeding.

* * *

On soils containing sufficient lime the most productive grazing crop known today is sweet clover.

* * *

The home gardener may extend his growing season in the fall by the use of hotbeds and cold frames.

* * *

By treating their seed carefully grain growers can save hundreds of thousands of dollars, which are lost annually through plant diseases.

* * *

Lime can be spread and disked in ahead of oats, corn or soy beans, or it can be applied after the corn or soy beans come through the ground.

* * *

Sudan grass belongs to the sorghum family and for that reason is a hot weather plant. It should not be seeded till the ground is well warmed up.

* * *

Prepare for the control of insects by having on hand spraying and dusting equipment together with such insecticides as arsenate of lead, nicotine dust, and nicotine sulphate.

* * *

Besides conserving moisture and keeping down weeds, cultivation tends to break up the harbors of mice, add plant food to the soil, and make more available the plant food already in the soil.

"I Never Worry when they're in the Whippet"

This low-priced car has every modern feature for driving safety and dependable performance

ADVANCED, modern engineering throughout the entire chassis of the new Superior Whippet is responsible for smoothness and reliability of performance, consummate ease of handling, and maximum driving safety.

Whippet's big four-wheel brakes are of the positive, mechanical type—acting quickly and surely. Both the Whippet Four and Whippet Six have considerably greater braking area than any of their competitors. Other important Whippet advantages include extra long wheelbase, oversize balloon tires, full force-feed lubrication, silent timing chain, "Finger-Tip Control," higher compression engine, invar-strut pistons, and, in the Six, a heavy seven-bearing crankshaft.

Why try to interest a man in s conversation? If he isn't intere stop talking.

POST TOASTIES

The Wake-up Food gives you new energy Quick

NO wonder it's called the Wake-up Food! This crisp, good-to-eat breakfast cereal, Post Toasties, turns so quickly into fresh, abundant energy to start the new day. There's rich energy stored up in those toasted flavory flakes, energy so easy to digest that your body quickly gets this rich supply of new vigor.

And *energy* is just half the reason why people eat it! The flavor is so delicious. The sun-mellowed sweetness of choice white corn delicately flaked and toasted crackling-crisp.

Try it with milk and berries tomorrow morning! Don't forget—there's just one way to get the Wake-up Food. Ask your grocer for Post Toasties—in the red and yellow wax-wrapped package.

Right Word to Describe This Artistic Little Bungalow Home

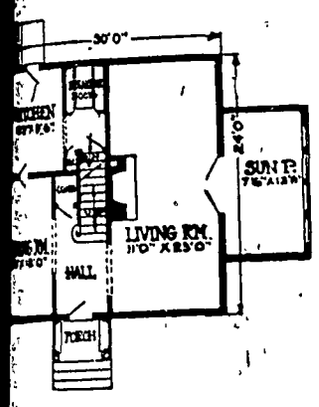
" seems just the word to describe this little bungalow home. The ables and dormers effectively break up the low roof expanse and nate wide and narrow shingle courses make most pleasing outer walls.

By W. A. RADFORD

illiam A. Radford will answer and give advice FREE OF all subjects pertaining to home building, for the readthis paper. On account of his perience as editor, author and turer, he is, without doubt, the authority on all these subdress all inquiries to William ford, No. 1827 Prairie avenue, ll, and only inclose two-cent reply.

er to get the best effect with e, its design should be such fits in with its surroundings. tance, where there is plenty bery and some trees a house to that one in the accompanyration blends itself admirably surroundings. This bungalow exterior appearance of the which is built in the woods. set on a lot where there is a end of trees or enough trees round it, it makes a most desmall home.

" sems just the word to dethis bungalow. The snubbed and dormers effectively break

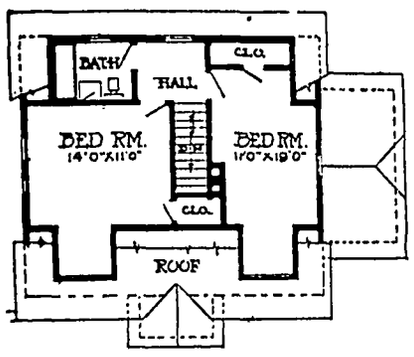


First Floor Plan.

e low roof expanse and the alle wide and narrow shingle es make the outside walls most ing.

e house is small, being 30 feet and 24 feet deep, and contains rooms beside the sun porch and room. It is of frame construction with the outside walls covered with shingles.

The central entrance leads to a hall at one side of which is the living room, which extends the depth of the house and is 11 feet wide and 23 feet long. On the opposite side of the hall at the front is the dining room, 10



Second Floor Plan.

feet 6 inches by 12 feet, and back of that is a large kitchen 12 feet 3 by 9 feet 6 with the breakfast nook adjoining. On the side wall of the living room is an open fireplace and directly opposite on the outside wall are double french doors which open into a sun porch, which is 7 feet 6 by 13 feet.

Out of the entrance hall run the stairs to the second floor where there are two large bedrooms, one being 11 feet by 19 feet and the other 14 feet by 11 feet. Both of these bedrooms have alcoves at the front made possible by the dormer windows set in the roof. There is a large bathroom opening off the hall at the head of the stairs.

An examination of the floor plans which accompany the exterior view of the home show the arrangement of the rooms and the size of each one.

This is a very fine design for the family which wants a small cozy home of artistic appearance and will be unusually attractive set on a lot where there is an opportunity for planting of shrubs and flowers and where there are some trees.

uld Design House to Fit Surroundings

ery year new homes by the hunds of thousands spring up in city, n and country all over America—thousands of them, while they may beautiful in themselves, appear to discerning eye like an evening n at a picnic, or like knickers in wing room, because they are enly unrelated to their surroundings.

e blame for this widespread inruity must be placed on those e builders who, with all the archire of the Old world and the New choose from, have selected what admired most without regard for climate, topography or foliage of sections in which they build. Conently we have dignified colonial tions sitting stiffly uncomfortable board western plains where low lings and graceful curves are in , and we have Spanish type es equally out of place in the New land landscape.

e point is to realize that modern builders to realize that architectural styles the past were developed over a period of time and naturaly came conform to their natural surroundit is pointed out in Good Housekeeping Magazine, where Frank J. ter, widely known architect, dis- the subject. Builders of the unable to ship stone, brick and ber great distances, also were pelled to adapt their construction the materials near at hand, he s.

For example, in our early New land architecture, while of course ck and stone were occasionally emyed, clapboards and shingles were materials chiefly employed be- wood was plentiful and close at nd," he says. "Local stone in comation with wood was the predomnt building material in the Dutch onial architecture of New York, w Jersey and Pennsylvania, while southern colonial houses were ally constructed of brick, with od for general trimming and for the columns supporting the porticos. cco on a base of brick or adobe as used by the early settlers of Calirnia, and stucco is still the most pular and appropriate material in t section.

"In the semi-tropical sections of the ntry, particularly Florida and Calirnia, Spanish and Italian architecture are very appropriate. They need uriant foliage and brilliant skies bring out their beauties. In more rtherly latitude neither type is so ccessful. There our native colonial yles or the architecture of northern ance or England are more at home."

Heating Installation Requires Great Care

In a testing laboratory certain differences can be shown as to the efficiency of various heating systems with respect to the consumption of coal and the delivery of heat, but these differences may be entirely wiped out in the home by reasons of peculiarities, plans and exposures and by the ways in which the fires are run.

Heating plants often fail to give satisfactory service and proper economy in consumption of coal through faulty installation.

It is just as important to have fine workmanship when the mechanical devices are installed as it is in the carpentry and masonry work and the other fine work through the house.

In fact, no heating system will work properly if it is installed in a haphazard fashion by a careless or uninformed person.

It is generally desirable to follow the manufacturer's instructions quite explicitly in the installation of the heating system and then to have the system operated according to the same manufacturer's direction.

Small Home Improves in Its Conveniences

The small home in America is improving in convenience and in general appearance and is becoming more comfortable and more attractive for all members of the family.

This improvement is encouraging to all who are interested in the welfare of the home life of our nation. A generation or so ago it was possible for a family to maintain its unity in what we now consider inconvenient and unattractive quarters. At the time there were relatively few things which tended to destroy the family's interest in the home.

Today, however, varied activities and contacts keep people away from their homes for a great part of their time. This makes it especially necessary that the home be comfortable and attractive.

Base for Stucco

Stucco is only a wall veneer or covering not more than one inch thick. It is important, therefore, to look behind the stucco and to select carefully the reinforcing base or background to which the stucco is applied. This base must clinch the stucco in a grip that never loosens; this base must be designed to overcome contraction and expansion—stucco's most deadly enemies.

Orchard Information

PROMISING KINDS OF SMALL FRUITS

Latham Red Raspberry and Howard Strawberry Best.

Two of the most promising small fruit varieties included in the varietal trials of the horticultural department of the Colorado Agricultural college experiment station are the Latham red raspberry and the Howard of Premier strawberry.

Definite information concerning the results of these trials of small fruits will be published as soon as it is available.

One of the most important factors in the successful production of small fruits is the proper selection of varieties, Mr. Lott points out. The most desirable variety is naturally one that combines to a greater extent than any other variety, vigor, hardiness, resistance to disease and productiveness of high quality fruit.

The Howard strawberry, usually catalogued as Premier, is an early berry of the type of the Dunlap, a lighter red, more productive, the picking season is longer and the berries are larger. The plants are perfectly flowered and described as being vigorous, healthy, productive and good plant makers. The fruit is early, ripens over a long period, holds up in size, and the berries are large, of good quality and an attractive glossy red, juicy and firm.

The Mastodon is the most popular variety of ever-bearing strawberry now grown. Its popularity is due to its unusual vigor, healthfulness, and high production of large, attractive berries. The plants bear a partial crop during the late summer and fall of the year they are set out, a full crop the following June or July, and a good-sized crop in the fall of the same year.

The Mastodon does not have as high quality as some other ever-bearing sorts but is usually grown on account of its vigor and productiveness, in which respects it is far superior to the other ever-bearing varieties. Anyone desiring a high-quality ever-bearing variety of less size and productiveness should plant the Champion."

The Latham raspberry is a cross between the King and Louden varieties, and has performed excellently from New England to the Pacific coast. An authentic experiment showed the following comparative variety yields in a three-year-old field: Latham, 10,860 pints per acre; Herbert, 7,296; Cuthbert, 7,200. This is nearly 50 per cent more than the Herbert and over 50 per cent more than the Cuthbert.

Latham is described as having hardy plants, unusually vigorous and productive; large, bright red fruit that is very firm, medium juicy, good to very good quality; medium to late season and fruits that ripen over a long period.

Orchard Soil Fertility Needs Right Attention

Without spraying and sometimes without pruning it is useless to waste money on fertilizers, according to R. S. Marsh, of the University of Illinois. There are several different ways of fertilizing orchards. The straw mulch at a depth of four to six inches and the application of 150 to 200 pounds of some good commercial fertilizer are very good. Clean cultivation with about one-half of the above fertilizer works well where late cover crops are used.

The sod and sod mulch seem to be the most popular. This method adapts itself to rolling ground better than the other methods. Manure applied at the rate of 400 to 600 pounds per tree is recommended. Nitrate of soda or ammonium sulphate can be used at the rate of one-fourth pound for each year the tree is old. This is applied in the spring as the buds are swelling or bursting. Legume cover crops and legume mulches give the cheapest means of maintaining soil fertility.

Materials for Spraying Apples Well Established

At present the materials for apple spraying are pretty well standardized. Lime-sulphur, either homemade or commercial, liquid or dry, is recognized as the outstanding fungicide. Bordeaux being used only in localities where blotch, phoma spot or frog-eye are problems. Arsenate of lead and nicotine sulphate are given the preference as insecticides. Oil sprays at the dormant period are coming into favor, both emulsions and miscible oils being used, the recognized standard at present being 4 per cent oil content.

Success With Peaches

To have a very successful peach orchard it is necessary to begin building up the ground before planting out the orchard. The best way to do this is to put the prospective site in sweet clover for a few years. This builds up the supply of nitrogen, increases the humus content of the soil, and thus increases the water holding capacity. It improves the physical condition of the soil generally. The soil becomes a better work shop for the manufacture of plant food

Good-bye, Flies and Mosquitoes!

Unless you're a Flit user, you have no idea how soon you can rid your home of every fly and mosquito. Flit kills quicker, and is easier to use, in the handy Flit sprayer. Spray into cracks and crannies to kill roaches, bed bugs, ants. Flit vapor does not stain. Try the quicker Flit method today!

In Daily Use

over all the world

THOUSANDS of women have come to regard Cuticura as the true natural aid to a lovely skin and attractive hands and hair. Regular daily use of Cuticura Soap, assisted by Cuticura Ointment when required, purifies and beautifies the skin, cleanses the scalp and keeps the hair live and glossy.

Soap 25c. Ointment 25c. and 50c. Talcum 25c. Sample each free.

Address: "Cuticura," Dept. B6, Malden, Mass.

Cuticura Shaving Stick 25c.

Pardonable Mistake

Irving Berlin said at a reception at the Ritz in New York:

"Melody is coming back. Jazz is still popular, yes, but we have melodic jazz now, whereas in the past—"

Mr. Berlin laughed and went on:

"A young man and a girl were feasting on lobster and champagne at a supper club.

"'Oh, what heavenly jazz!' said the girl. Let's dance.'

"'That wasn't jazz,' said the young man. 'Major Lush upset his table.'"

How Fast Life Changes

An airplane honeymoon recalls the time that has elapsed since the lad assured his "Daisy," "You'll look sweet upon the seat of a bicycle built for two." A tandem bicycle was rather prosaic. Sky transportation has intensified romance.—Washington Star.

Treat 'Em Rough

Perhaps if your bees haven't been doing so very well it's because you have been treating them too tenderly. The latest bulletin from a well-known bee expert says: "Don't coddle your bees."—Kansas City Star.

"First Catch Your Goat"

Uncle Sam has one debt that is somewhat embarrassing. He owes 25 goats and can't pay because he can't find the goats. Two years ago an agreement was entered into between the federal government and the state of Washington whereby the state was to ship 25 live elk to Alaska in exchange for a similar number of Alaskan mountain goats for stocking the Olympic range. The northwest elk have been sent to the north as a nucleus to future herds. But to date Uncle Sam has been unable to catch a single goat.

Perils of India

Despite huge bounties for snakes and wild animals on the part of the government of India, more than 20,000 persons are killed annually. Last year snakes killed 18,724, wild animals, 1,985.

New Woman Really New

The "new woman, who is neither young nor old, neither a girl nor a married woman, neither a bud nor a spinster, is something new under the sun.—Woman's Home Companion.

Got Away With Derrick

Five years ago an oil company erected a 90-foot derrick on its lease a few miles from Coalinga, Calif., and for some reason never used it. The derrick weighed several tons and was valued at $5,000. The company lately decided to sell the unused derrick and found that it had been stolen.

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

Cases of recurrent constipation, due to insufficient bulk in the diet, should yield to Post's Bran Flakes with other parts of wheat. If your case is abnormal, consult a competent physician at once and follow his advice.

EFFECTIVE! DELICIOUS!

—a combination that makes it America's favorite bran cereal

MILLIONS of people now eat Post's Bran Flakes every day to avoid constipation. It gives them the bulk they need for healthful regularity and zest for living. And its delicious flavor makes it accepted as a matter of course on the breakfast menu. Here are bran flakes in their most appetizing form—and no less effective for being tempting.

Try them every morning for the next two weeks. See for yourself how beneficial they are—how delicious. Fine with cream or fruit, in muffins or bread. And always ready to serve, crisp from the package.

ME BOYS AT MP ROOSEVELT

56 ENJOYING WEEK CAMP ROOSEVELT

Are Taking Special Work At Summer Camp

veral months Scouts in Klemme, have looked for- the time when they would ttle and head for Camp on the south shore of Lake, for a week's outing of and Scoutcraft.

e boys are in Camp this from Klemme and are a part 72 boys there representing troops. The activities of the re carried out on the troop trol system. Wayne Pavey p Cabin No. 1 and Byrnes Cabin No. 2. Kenneth hn, a White "R" Scout is ead of "Lost and Found" de- t. The Troops at Camp are the supervision of Scoutmast- are at camp for the period. Jorgenson is the S. M. of No. of which the Klemme boys wo patrols.

day night there were a lot of at Camp for the opening remony, one of the most im- e ceremonies at Roosevelt.

first day in camp is usually perfecting the working or- ion and not much actual t is attempted. At this however, Camp Roosevelt is swing and all Scouts are from 6:25 a. m. until 9:00 p.

of the outstanding crafts at Roosevelt this year is the craft Work conducted by E. W. Lilly. Here the boys how to tool and engrave all of designs on leather pursse, folds, handbags, key purse, d knife heaths, etc., as well mping designs and leather Leather thong plating is ught in this department and ork turned out by the boys is marvelous.

ther most valuable activity is ater front activities conducted rold (Doc West, dm which the an avail themselves of expert ction in both beginning and ced swimming courses, life- , boating and canoeing, and badge swimming.

ial classes are conducted for tests in Firt Aid, Cooking, ing, Nature Study, etc.

ing thi period there are three ght Troop Hikes so that all p will learn all about tent g and ditching, hiking, and cooking, what to take, what to e, etc. The Klemme boys are led for an over night hike to- (Thursday.)

op 56 Scouts are all working to get as much out o fcamp as e this period which will fit to do better work im their troop meetings during the year in scoutcraft work of ds.

ents and visitors are welcome mp Roosevelt any evening af- :00 p. m. and on Sundays.

best times to visit Camp are turday nights, which is stunt Court of Honor on Sunday noons at 3:00 o'clock, the clos- amp fire on Monday evening, the opening camp fire on Tu- evenings. Wednesday, Thurs- and Friday nights are not de- ights to visit camp as only scouts are in camp, the others on hikes. Thurday night is night and is not open to visi-

to visit the camp while the me boys are in camp. If you visit them, plan to do so at other convenient time.

ARRIAGE LICENSE ISSUED

marriage license was issued on 10th by Chris J. Johansen, of the District Court, to Vir- Price and Iola McEldoon, both on City. Justice H. V. Reed arger performed the marriage ony.

OBITUARY OF MRS. WILHEMINE SANDERFELD

Funeral Services Were Held Here Saturday Afternoon

Wilhelmine Ernstaine Sanderfeld was born May 4th, 1872 in East Prussia, Germany and in her early years was baptized and confrimed in the Lutheran Church. Her mother died when she was quite young and she came to America with her grandmother at the age of 9 years and settled at Homestead, Iowa. It was in the Lutheran church at that place where she was confirmed at the age of 16

Mrs. Sanderfeld's father started for America but the ship on which he was a passenger was wrecked at sea and all on board perished and were never heard from.

On June 21, 1871 she was united in marriage to Mr. John Sanderfeld, who preceded her in death three years ago. They lived at Homestead for several years and later moved to Benton County, Iowa wherethey farmedfor several years, movingto Hancock County in 1913, where they livedon their farm two miles east of Klemme

A short time before Mr. Sanderfeld's death they moved to Klemme, having retired from farming.

Eight children were born to Mr. and Mrs. Sanderfeld; two children died in infancy. The children are: Mrs Anna Jurgemeyer, Carl, Mrs. Martha Dickhuis, Mrs. Alvina Linne, Mrs. Minnie Swave, and Laura.

Since the death of Mr. Sanderfeld she lived with her son Carl on the farm east of Klemme.

Mrs. Sanderfeld was ill but a short time before her death, suffering a stroke on Sunday and passing away on last Wednesday morning.

Funeral services were held in the Klemme Reformed Church Saturday afternoon

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

Next Sunday our Congregation will celebrate its annual Mission Festival, the program for the day as follows:

10:00 a. m German service by Rev. Walter Grosshuesch of Madison, Wisconsin.

11:00 a. m. Sunday School Missionary talk in English

2:15 p m. German Service, Rev. J. Schom, Buffalo Center.

English service, Prof. H. Schom, Germarl Valley, Illinois.

8:00 p m. English service, Rev. Walter Grosshuesch.

Offerings for Mision and Benevolences will be lifted at all of the above services. A cordial invitation is extended to all to spend the day with us.

—Calvin Grosshuesch.

FOURTEEN AWARDED BIBLE SCHOOL DIPLOMAS

The following received their Bible School Diplomas last Sunday at the Reformed Church. These students will be admitted to the Sneior Class of the Confirmation School:

Mitchel Bock	Wayne Kirkwood
Ronald Barz	Leon Lemke
George Beek	Louise Rosendahl
John Kaduce	Norma Baack
Alvin Keeper	Marie Albers
Melvin Buseman	Mabel Thiemann
Francis Buseman	Lida Griffen

Ten Cent Movies Are Popular

The ten cent movies on Saturday nights, which have been made possible through the co-operation of the Klemme business men and the Auxiliary, have proven popular, and a large crowd has been present at each performance.

The ten cent movies will continue throughout the summer months.

A couple of young men were arrested in Klemme Saturday night, for striking a too close acquaintance with Mr. John Barley Corn. Their ambitions were somewhat cooled off after a session at the Hoosegow and their visit also enriched the Town treasure chest. Celebrations of this nature are expensive in Klemme, and besides the people of this little town are not keen for such entertainment.

J. C. UNDERWOOD ADDRESSES LOCAL MASONIC CLUB

Club Will Have Annual Picnic At Clear Lake, Sunday, July 28

A meeting of the Klemme Masonic Club was held last Friday evening at the Legion Hall to take up regular business and to plan for the annual picnic.

Mr. J. C. Underwood, Sout Executive of Mason City was present and addressed the club on the Scout Movement, and the work being done in the North Iowa Council. Mr. Underwood is a forceful speaker and his talk was greatly enjoyed.

Following Mr. Underwood's talk, regular business was taken up and the annual Masonic Picnic was planned and the date set for Sunday, July 28th and will be held at Camp Roosevelt.

All members of the Masonic and Eastern Star orders in this community and their families or their friends are cordially invited to attend the picnic.

At the regular business meeting R. A. Jorgenson was elected president, and C. G Waterman, secretary and treasurer.

John Day, John Lemke and Sumner Trumbell were appointed on the "feed" committee for the picnic.

J. C. Thomas, W. F. Pavye and Paul Grange are on the entertainment committee for the picnic.

As a comunity project the Club gives its support to the Boy Scout Movement and has pledged itself to aid financially. Klemme's share of the North Iowa Council expenses is $100 and the club will give a large portion as a gift to the local Boy Scout Organization. The balance is to be raised in the community.

The Boy Scout Movement is a community project and should be supported by the entire community. The club is the sponsoring organization for the local Troop. According to the National rulings each Troop in a comunity must be sponsored by a permanent organization and the local Masonic Club has assumed this responsibility.

It was further voted to have regular monthly meetings of the Club beginning in September.

All members of the Masonic order are cordially invited.

WORK HAS STARTED ON KLEMME ROADS

County Grading Machinery Began Operations Tuesday

It will be only a matter of a very short time until roads leading into Klemme will be classed as the best in the county.

The County's machinery, consisting of a big excavator, caterpillar tractor and other machinery began the construction of the short piece of road leading into Klemme from the west Tuesday. Work on this stretch wil be completed very soon

The gravel pit just southwest f Klemme is being stripped and put into shape to haul gravel on the six mile strip of county road leading into Klemme from the east. Work is to begin soon on this gravelling.

With the completion of these two stretches of county roads, Klemme can be reached on gravel from several directions.

JACOBS REBUILDING WAREHOUSE AT REAR OF STORE

New Structure Being Built Of Brick And Hollow Tile

A gang of men are at work tearing down the old warehouse at the rear of the Jacobs Hardware Store.

The warehouse is being rebuilt; the old wooden sides or walls being taken down and in their place a concrete foundation is laid to support brick and hollow tile walls. The roof of the old warehouse was in good condition and will be used on the new building. The roof has temporary supports to hold it in place while the walls are being built under it.

When the building is completed Mr. Jacobs will have a good warehouse, practically fireproof for the storing of various items in his line. It makes a good improvement to his business property.

WATCH BURIED 20 YEARS IS RETURNED TO OWNER

Whereabouts Of Owner Located By Interested Friends

Some weeks ago the Times carried the story of how Peter Merkel, while planting corn on his farm found a gold Elgin Watch which had been lost nearly twenty years ago by Ben Miller, who at that time farmed the land. Neighbors helped Mr. Miller in hunting for the watch at that time, but in vain.

At the time the sotry was published the weherabouts of the original owner were not known here.

However, thru the Times, the owner was found, and the following letter received by Peter Merkel is self explanatory:

Fertile, Iowa, July 12, 1929

Through the honesty and good will of mankind in general I am now in possession of a watch that I lost nineteen years ago, and which I long since had dispaired of ever seeing again, and I feel very grateful to all the good people who so kindly remembered me when the lost watch was found.

Especially do I want to thank Mr. Peter Merkel who actually found the watch, and Mr. Schlawin, who was my near neighbor when the watch was lost, and remembered the circumstances when it was aagin found; and Mr. and Mrs. Knisely of Rockwell, Iowa, through whom I first learned that the long lost watch was found.

Friends, I thank you.

Sincerely,

BEN MILLER.

Mr Miller came to Klemme a few weeks ago and was given the watch. He learned of tho finding of the watch through Mr. Knisely at Rockwell, a Times subscriber, who sent Mr. Miller a clipping of the paper. The watch is of special value to Mr. Miller as it was his father's watch and was given to him by his mother when Mr. Miller was a boy thirteen years old.

The Times is happy to know that it served as the connecting link in the story of locating the owner.

CAMP FIRE GIRLS ENJOYED A GOOD OUTING LAST WEEK

Klemme Girls Spent Week At Clear Lake Cottage

Lloyd Lau drove to Clear Lake on Sunday evening with his truck to bring home the Klemme Camp Fire Girls, who with their leader, Miss Marie Blank, had spent a week at a cottage there.

The girls were a happy, but tired, sunburned and tanned bunch as they arrived in Klemme and unloaded baggage from the truck.

The girls report they had a fine time and enjoyed ever yminute of their annual vacation at the Lake.

GARNER-KLEMME C. T. A. HELD TOUR AND PICNIC

Picnic Dinner Enjoyed At Old Concord South Of Garner

The annual tour and picnic of the Cow Testing Association, Garner-Klemme, was held last week Thursday, July 11. Ted Besh of the Extension depart. was there for the day. The following is the schedule:

9:30 a. m. E. G. Beier farm, 3 miles west and ½ mile south of Klemme. Judging a class of aged cows and calf club work there.

10:15 a. m. Fred Kothenbeutel farm, 1½ miles south and 1 mile west of Beier's farm.

11:30 a. m. M. T. Love farm in Old Concord just south of Garner. Judking class of aged cows and a poultry culling demonstration and talk on poultry work.

Picnic dinner held at Old Concord near Love farm.

2:30 p. m. Vocational Agriculture plot just north of Geo. Lawhorn residence north of Garner.

Walt Weiss, Agricultural Teacher of the Garner High School was on hand to explain the work being accomplished.

3:15 p. m. Garner Cooperative Creamery where Mr. Conway explained the work.

Howard Horne is the tester for the asociation and had charge of the program.

WILLIAM BECKER DIED TUESDAY

FUNERAL SERVICES TO BE HELD FRIDAY AFTERNOON

Mr. Becker Had Resided Here For Nearly Sixty Years

This community was shocked to learn of the sudden death of Mr. William Becker, who passed away at his home east of Klemme about noon Tuesday. Although Mr. Becker was well advanced in years, he enjoyed unusually good health and was a frequent visitor in tonw and regularly attended church, his death was unexpected, as he had not complained of being ill.

Mr. Becker was one of the pioneers of this section. Shortly after he came to this country he purchased the farm where he lived for fifty three years. He went through the many trials of the early settler and could relate many interesting stories of the early days. Mr. Becker was a progressive man, dronest and hard working. His farm is one the well improved farms of this section and he took a great pride in it.

He retired from active farming about ten years ago when he turned the business of farming over to his sons, William and Ed. who are at home, as well as his three daughters Mary, Rosa and Anna, who kept house since the mother died in 1913.

Funeral services will be held at the Reformed Church on Friday afternoon at 2 00 o'clock.

Following is the obituary:

William Becker was born on the 29th day of April in the year of our Lord 1847, at Dannstadt, Bavaria, Germany. He was baptized and confirmed in the Evangelical Protestant Church of Dannstadt. During his childhood days he visited the the schools of his home and later worked on his father's farm.

In February 1875 he was united in marriage to Miss Barbara Haas. One month later the young couple came to America where Mr. Becker became owner of the farm which has remained the home of the family ever since. Mr. and Mrs. Becker were among the early settlers of this community. Both of them took a whole-hearted interest in religious work. They were charter members of the Ell Town Reformed Church. Later when a Sunday School was organized at Klemme Mr. Becker was elected Superintendent. This Sunday School, and later preaching services were held at the Klemme school house. In the year 1895 the 23rd of May the Reformed Church of Klemme was organized an dthe present church building erected For a long number of years Mr. Becker continued his Sunday school work. During the last years he was still a regular and faithful member of the Adult Bible Class.

In our community Mr. Becker enjoyed the respect of all who knew him. In his township he served as Trustee for several terms. He will no doubt, be remembered as a quiet, true and loyal father who endeavored to live the life of a Christian.

Twelve children were born to Mr. and Mrs. Becker, of whom five preceded their father in death. Mrs. Becker died October 26th, 1913.

His daughter, Mrs. Lydia Haberkamp died Dec. 14, 1925 and his daughter, Minnie, April 17, 1928.

In spite of his age Mr. Becker was in fairly good health to the very day of his death. Last Sunday he was at his regular place in Church and Sunday School and even shortly before his death he enjoyed a hearty meal

He died suddenly Tuesday noon, July 16th, 1929 at 12:30 o'clock at the age of 82 years, 2 months and 17 days. The cause of his death was apoplexy of the heart.

Surviving him and mourning his death are his children: Mrs. Peter Josten, Mary, Anna, Rose, William, Edward and Fred; four grand children and one great grand child.

Fumeral services will be held Friday afternoon at 1:30 o'clock at the Reformed Church with Rev. Grosshuesch in charge. Burial will be amde in the Klemme Cemetery.

Owen F Conwell and R E Coursen Referees to Frank Quigley, Senior. Referee's Deed date 6-27-29, $37.440.00, N½ sec 24-94-24.

Herman Bums and wife to Independent School District of Woden Wty Deed date 7-2-29, $225.00. Lot 8, block 16 Original Woden.

BAYSIDE DANCES HELD FRIDAY AND WEDNESDAY NIGHTS

Dances are now being held at the Bayside Amusement Park, at Clear Lake every Wednesday and Friday night in the dance pavillion. The Mississippi Six Orchestra has been engaged by operator Ritz to furnish the music. At the Bayside dances the park plan, 10 cents a dance, is in effect.

Next Sunday, July 21, a good ball game at 3 o'clock will be played, band concerts, vaudeville, roller skating, swiming and fun concessions.

Families are invited to use the picnic grounds and tables and the playgrounds for children.

NOTICE OF APPOINTMENT OF ADMINISTRATRIX

Notice is hereby given, That the undersigned has been duly appointed and qualified as Administratrix of the Estate of Robert Percy, late of Hancock County, State of owa, deceased. All persons indebted to the estate are requested to make immediate payment; and those having claims against the same will present them, duly authenticated, to the undersigned, for allowance, and file in the oice off the Clerk of the District Court.

Dated July 16th, A. D, 1929.

D. M. Kelleher, Atty., Fort Dodge, Iowa.

Chris J. Johansen, Clerk of the District Court.

HATTIE PERCY,
Administratrix.

(Publish July 18-25, Aug. 1, 1929)

RADIO RECEIVING SETS INSTALLED

Beauty of Car Will Not Be Marred by New Equipment.

Motoring over smooth stretches of highway to the tune of your favorite jazz band is a dream which will be realized within the next 12 months, Si. Mayer, vice president of the American Motorists' association and president of the Automobile club of Illinois, predicted in Washington the other day.

"A few months ago a prediction that automobiles of the future will be equipped with radio receiving sets would have been considered extravagant," Mr. Mayer declared. "At the present time, however, such is not the case, for already one company has announced that it is ready to go into the production of receiving sets specially constructed for automobile installation.

Many Uses of Radio.

"The uses of radio seem to be without limit. By signals, transmitted over radio waves, airplanes are dispatched, ships communicate with other ships and with the shore, passengers on moving railroad trains speak directly with their homes or offices, and policemen patroling large cities in moving cars are given notice from their headquarters of the commission of crimes. These are actual accomplishments.

"Engineers have found a way to shield the receiving set from the interference of ignition systems in automobile and airplane engines and have also discovered a method of overcoming noises generated by the moving car or plane through the use of a filter. Not even the beauty of the car will suffer through the radio installation; for engineers have found that it is possible to place the antenna in the roof of the car with the loud-speaker concealed in the framework of the body."

Distract Driver's Attention.

"There is one serious objection, however, to the installation of radio receiving sets in automobiles," Vice President Mayer points out.

"The driver might become engrossed in some entrancing melody or soothing lullaby and neglect his duties at the wheel. It can hardly be expected that the installation of radio sets in automobiles will proceed unchallenged by law for this reason."

THE MOTOR QUIZ
(How Many Can You Answer?)

Q.—What should be done if the ammeter does not register "charge" when the engine is running at normal speed?

Ans.—Consult the repair man immediately.

Q.—Why should a car be cleaned underneath?

Ans.—To remove dirt which causes wear and prevents proper lubrication.

Q.—How has the oil filter helped the motorist to economize on oil consumption and car maintenance cost?

Ans.—The oil filter has made it possible to use the oil longer, and as it removes foreign matter from the lubricant, engine wear is minimized.

Q.—When a spark plug insulator becomes covered with dry black soot, what should be done to remedy it?

Ans.—Clean or replace the plug. If sooting is habitual, change to a hotter plug; also have carburetor inspected, and be sure the choke hasn't become stuck.

Rubber Acreage Now in Philippines Unlimited

According to Manuel L. Quezon, former president of the Philippine senate, there are now about 100,000 acres of land under development in the islands, and about half of it is producing rubber. He declares that there is almost unlimited acreage which can be devoted to rubber growing, as soil and climatic conditions are ideal for that industry. He thinks it will be only a matter of time before the Philippines will assume a controlling influence on the development of the rubber industry, and that the islands can be used for its manufacture as well when the demand from the Orient becomes great enough to warrant it.

Second Car Needed for Outdoor Sports

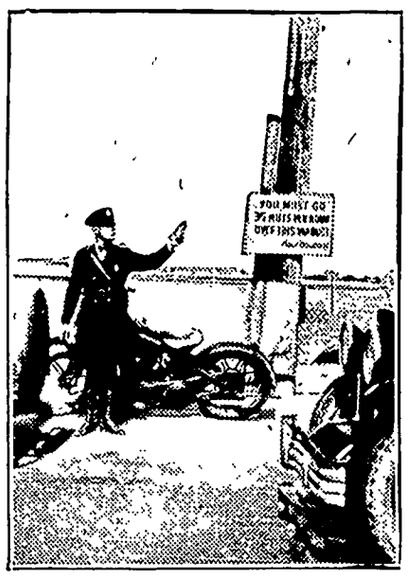
American enthusiasm for golf and other outdoor sports has been one of the major factors in placing two or more automobiles in thousands of American homes.

Few golfers care to ask a member of their household to accompany them to the course and return for them after the game is over. Two cars to the family eliminate this situation and add materially to the transportation convenience of any family.

Pet Skunk Excellent as "Watchdog" for Motor

A new and unique use for that aromatic but valuable fur bearer, the skunk, has recently come to the attention of the biological survey of the United States Department of Agriculture. The superintendent of road construction of the Coconino National forest in Arizona had been having trouble, because of pilferers, to keep anything of value in his car when he left it parked. The situation had become so irritating that he was at a loss as to what measures to take to stop these petty thefts. A little skunk, which the superintendent had found when a kitten and tamed until it had become an interesting pet, proved to be the solution of the problem as an effective deterrent against marauders When he left his car for any length of time the superintendent would also leave the skunk chained to the wheel. Strange to say, nothing further came up missing, and the little animal proved as valuable as any watchdog.

Speeders Encouraged



Anything less than thirty-five miles per hour across Miami's viaduct is considered offensive by Miami coppers, who prefer charges against motorists who refuse to step on it. Photograph shows one of Miami's police in front of the new signs on the county causeway.

European Crossings Are Given Right Protection

Only 8 per cent of the grade crossings used by motorists in the United States are protected, as compared with 80 per cent in France. Great Britain makes an even better showing in the percentage of protected grades. The 26,000 protected grades in France have real gates as well as day and night watchmen. The same is true of Great Britain. On the other hand, of the 27,000 grades in the United States 7,902 have crossing gates. 5,710 audible and visible signals, and 1,602 just visible signals.

AUTOMOBILE FACTS

A fortune awaits the inventor of Neversqueak brakes.

NEWS REVIEW OF CURRENT EVENTS

Flight of Yancey and Williams Across Atlantic—Big Postal Deficit.

By EDWARD W. PICKARD

ONCE more the Atlantic ocean has been conquered by American aviators. Capt. Lewis A. Yancey and Roger Q. Williams were the heroes of this achievement, having flown from Old Orchard Beach, Maine, to the vicinity of Santander, Spain. Though they fell short of their destination—Rome—by 900 miles the flight across the ocean was considered a great feat. It was made in the Bellance monoplane Pathfinder in 31½ hours and except for about two hours the airmen were unable to see the water because of dense fogs. Head winds exhausted their supply of gasoline and they were compelled to land on the Spanish coast just a little beyond the place where the French transatlantic plane Yellow Bird was forced down recently.

Spanish officials and citizens gave them a hearty welcome and hunted up a supply of gasoline with which, next day, they completed their flight to Rome. They landed at the Littorio field there and the officials and people greeted them uproariously. Even Premier Mussolini was at the field to meet them, but as they were late in arriving he had left just before they landed and soon afterward received them at his residence. They were made the guests of the Italian government and treated royally.

The Chicago Tribune's amphibian plane 'Untin' Bowler, which started from Chicago to blaze a route to Berlin via Greenland and Iceland, was held up for days in the Hudson Bay region and on the tip of Labrador by unfavorable weather conditions. As its pilots were in no especial hurry they wisely declined to take long chances. At Port Burwell the work of refueling was exceedingly difficult, and the plane was in constant danger of being demolished by floating ice.

Two air-rail services between New York and Los Angeles were inaugurated last week. One carries passengers by the Pennsylvania railroad to Columbus, Ohio, and thence by plane to the California city. The scheduled time for the trip is 48 hours. The other route is by the New York Central to Chicago, by the Santa Fe or the Alton to Kansas City, and from there on by airplane to Los Angeles, with a scheduled time of 46 hours. The services started from both ends of the routes.

DORNIER works in Germany has just completed a seaplane so huge that it makes even the Germans gasp in amazement. It is designed to carry 100 passengers and is said to be three times the size of the big American NC-4. It has three decks and a navigating bridge for the crew. The pilots, according to Doctor Dornier, the designer, will have nothing to do with the motors, but simply sit on the glass encased bridge carrying out the captain's instructions. The mechanics will be directed by the chief engineer. Should half the motors fail simultaneously the plane can continue its flight with the crew repairing the damage while the pilot calmly remains at his post. The constructors are convinced the ship, with its inch thick sides, will be able to ride indefinitely in the heavy Atlantic sea.

DURING naval maneuvers in the Irish sea the British submarine H-47, a small vessel, collided with the big submarine L-12 and sank in 300 feet, carrying all but two of the crew of 23 men. Two men were lost from the larger craft. Of course steps to rescue the imprisoned men were undertaken at once, but the depth and bad weather made them unavailing. The wreck was located and another submersible dived and tried to communicate with the crew of the H-47 by code signals with a bell, but no response was heard.

PROTESTS against the rates proposed in the house tariff bill have been received from 38 nations and have been submitted to the senate finance committee, which is laboring over the measure during the congressional recess.

Denmark's protest centers principally on the new rates on hides, skins, and natural flint; Belgium's on glass, cement, bricks, leathers, and chemicals; France's, on the general tariff situation and the balance of trade; Italy's, on virtually every commodity imported from that country; Netherlands', on diamonds, bulbs, strawboard; Spain's, cork and peppers; Switzerland's, watches and embroideries; Great Britain's, wool and glue; Mexico's, live stock and vegetables, and Uruguay's, meats.

"HAVE you one of these?" was the query heard all over the country on Wednesday, and the questioner would display one of the new small-sized bills, the issuance of which began on that day. Some of the recipients of these little bills objected to them, and for a time the bank employees had trouble with the currency until their fingertips became accustomed to it. Treasury officials hope the new bills will be found more convenient and will reduce the danger of counterfeiting. Of those that have been put out, the $1 bill bears the portrait of Washington; $2, Jefferson; $5, Lincoln; $10, Hamilton; $20, Jackson, and $50, Grant. In each case the back embellishment is appropriate.

PRESIDENT HOOVER is said to be considerably disturbed by a report from Postmaster General Brown indicating that the Post-Office department faces the possibility of a deficit of $137,000,000 for the year 1929. The annual losses have risen from $13,000,000 in 1924 to this huge sum, which includes $42,000,000, which the department must pay to railroads as the result of a decision of the court of claims. Mr. Hoover has ordered an exhaustive survey of the entire postal service to determine the causes of the big losses.

One step which could be taken by the President without legislation and in advance of completion of the survey would be a reduction in the contract price for transportation of air mail and a relative increase in air mail rates. In other quarters it was said he would be urged to consider the contention that modernization of the Post-Office department's accounting methods would wipe out a large portion of the deficit.

Under the present system, the Postal department is required by law to handle hundreds of thousands of tons of congressional "franked" and departmental "free" mail matter annually. All of it must be accorded first-class handling and the system does not permit the department to take credit for the free service in its accounting.

PREMIER POINCARE'S great battle for political life began with the opening of the debate in the French parliament over the ratification of the debt agreements with the United States and Great Britain. If the chamber of deputies refuses to ratify, as Poincare demands, the government must resign. The premier insists there must be no reservations, but the foreign relations committee voted for the insertion of a declaration that France never should be called on to pay more than she receives in reparations from Germany. The opposition also favors a reservation providing for a moratorium whenever the capacity of France to pay is not equal to the installments due under the debt accord. The ultra-nationalist group in the chamber, the strongest foe to ratification in any form, refused to delegate Louis Marin, who has been their leader, as their representative in the discussions, and this was taken to mean that they had decided to support Poincare. In that case, it was predicted, the premier would be able to muster a small majority and the ratification would be signed by August 1.

Premier Poincare aims at ratification outright by decree, thus maintaining the principle of France's good faith in paying up its debts. Then he hopes to get the chamber's approval for a separate bill embodying reservations, the principal among which is the clause making France's payments to America dependent on Germany's payments to France.

France has replied to England concerning the plan for a conference on August 16 to put into operation the Young plan for reparations, guardedly approving the British view that there should be but one conference at which the ministers and experts could deal simultaneously with all political as well as economic and financial issues. But France still thinks the conference should not be held in London.

Hugh Gibson, American ambassador to Belgium, had another conference in London with Ambassador Dawes on the subject of naval disarmament, but no further announcements were made. The British Labor government, it was said, intends to make severe cuts in the naval program adopted by the last government, possibly discontinuing work on the construction of six submarines and other war vessels.

RUMANIAN officials uncovered a plot to overthrow the present government of that excitable country and possibly to establish a military dictatorship. Numerous arrests were made and documents were seized that, it was said, were signed "In the name of his majesty, King Carol II," indicating that the exiled prince was aware of the conspiracy and had given his consent to it.

RUPTURE between Nationalist China and Soviet Russia is seen as the certain result of a renewal of the old feud concerning control of the Manchurian unit of the Trans-Siberian railway system. The governor of the district of Harbin arrested 174 Soviet officials and employees of the Chinese Eastern railway and promptly deported 37 of them across the Siberian border. Chinese directors replaced the Russians. Among those arrested were the Russian vice director of railways and the director of the trading commission. All Russian banking and trading operations in Harbin were closed. This action by the Chinese logically follows the recent raid on the Russian consulate general at Harbin which uncovered evidence that Russian unions and other Soviet agencies in northern Manchuria were spreading Communist propaganda designed to disrupt Chinese unity.

SOMETHING of a sensation was created when customs officials in San Francisco seized and broke open the baggage of Mrs. Ying Kao, wife of the Chinese vice consul in that city, on her arrival from China, and took opium valued at a million dollars from her seven trunks and four suitcases. The search of the baggage, which Mrs. Kao's attorneys said violated diplomatic rights, was conducted by permission of the State department. At this writing it has not been decided what action to take against the woman and her husband.

Mrs. Kao said the contents of the trunks were the property of friends in China, who influenced her to use her diplomatic privileges to bring baggage into this country. She understood at the time, she declared, the baggage contained "presents" for friends of her friends in this country.

NEW ORLEANS has been struggling with a bad street car strike. In riotous clashes with the police several of the strike sympathizers have been killed and many hurt, and cars and other property have been destroyed. The street car company obtained a federal court injunction against the strikers and the United States marshal swore in and armed 250 deputies to guard the company's properties. Both government and civic conciliators were busy trying to settle the affair. The men offered to return to work if the company would recognize their union and new contracts were made, and the company said the workers could have their jobs as individuals.

GOSSIP in Washington concerning President Hoover's selections for ambassadorships is revived. The latest is that of John N. Willys of Toledo, automobile manufacturer, will be given the post in Rome. It was admitted at the White House that Dr. Hubert Work, retiring chairman of the Republican national committee, has been offered the place of ambassador to Japan, and no one doubts that Senator Edge of New Jersey is to be ambassador to France. There are no guesses as to who will be sent to Madrid and Berlin.

BUSY WOMAN WHOL WORKS IN HER TOW

Does About Everythi There Is to Be Done.

South Platte, Colo.—With the ga fishing season just getting into swing in Colorado, Mrs. Charles W brecht, one of the busiest women the West, is preparing for one of most active years of her thirty summers as this town's ruling pow

Mrs. Walbrecht is a pioneer of West, and as such her only enjoym is derived from hard work.

Since the death of her husb several years ago, Mrs. Walbrecht "carried on" and run this haven fishermen to the satisfaction of eve body. She occupies every office fr mayor to marshal.

South Platte, 65 miles by highw from Denver, is on the junction the north and south forks of the Sou Platte river and is in the heart of trout fishing territory.

Runs the Hotel.

It has a hotel capable of caring 25 guests. Mrs. Walbrecht is the p prietor. She does the bulk of housework, much of the cooking a serving of meals.

A typical day for Mrs. Walbrec starts before dawn when she coo breakfast for the early fishermen. S then prepares the outgoing mail, she also is the postmistress and h been for years.

With the arrival of the narro gauge train that puffs its way up t Platte bringing sportsmen, come ne guests to be cared for. Mail then distributed by the postmistress in t little picturesque post office, a 10 12-feet affair, one of the smallest the state.

Then she sells tickets to outgoi travelers, for she also is the dep agent and "baggage smasher."

After milking the cows and tendi other live stock, "the busiest woma takes a hand at the churn, for s makes butter for the hotel "in h spare time."

By the time the hotel is "straigh ened" there is lunch to serve for t fishermen and guests who are n casting in the waters for the elusiv trout.

Shot by Bad Man.

What part of the afternoon is n spent in cooking, more cleaning, fee ing the chickens and live stock, Mr Walbrecht is making the wives of fis ermen who lounge on the front porc "feel at home."

Then after it is too dark to fis the dinner hour has past, Mrs. Wa brecht mingles with the crowd in he Log Cabin inn, a small recreation ha where men play pool and cards.

If a town needed a chief of polic old-time residents avow Mrs. Wal brecht would be the chief for "she jus runs the town and must be busy."

But since South Platte burned 2 years ago the town has been tranquil Mrs. Walbrecht bears scars of th memorable burning of the town. John Bleu, stage driver, endeavored t shoot up the town when drunk. When Mrs. Walbrecht interfered she wa shot and severely wounded.

Soviets May Use Ships to Quarter Children

Moscow.—A number of "floating homes" for homeless children are being planned as part of the effort to turn these vagrants into useful citizens.

It is proposed to use old ships on the Black and Caspian seas and on the Russian river highways for this purpose.

One of the chief problems in dealing with the homeless youngsters has been that many of them run away from schools and colonies where they are placed. The ships, it is argued, will satisfy the roving disposition of such children.

Yale Students Barred Use of Motorcycles

New Haven, Conn.—The roar of the untamed motorcycle which normally reverberates from one end of New Haven to the other during the "student season," soon will be heard no more. The motorcycle which had done so much to make the native New Havener alert and quick to jump, will be almost extinct as the dodo when Yale convenes in September. Effective September 24, operation of motorcycles in or about New Haven by students is forbidden. Forbidden to drive automobiles, hundreds of students had operated motorcycles.

Former Soldier Acquires Religion, Returns $20.43

Washington.—The United States government is richer by $20.43 because a former buck private saw the error of his ways in the light of recently acquired religion.

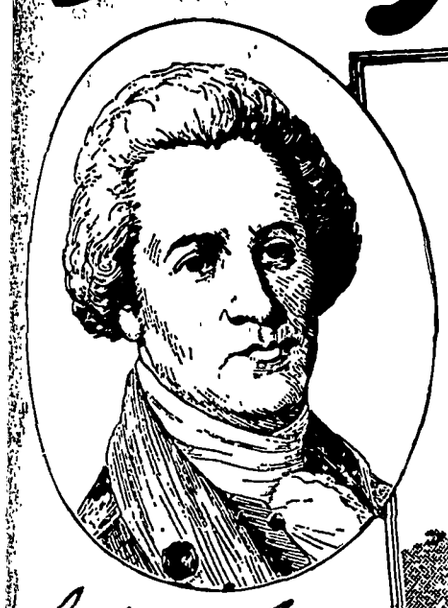
A letter to the War department related a war-time incident in which the soldier pilfered several pairs of army shoes.

"The light I now have proves to me that this department must be paid," said the letter, enclosing a money order.

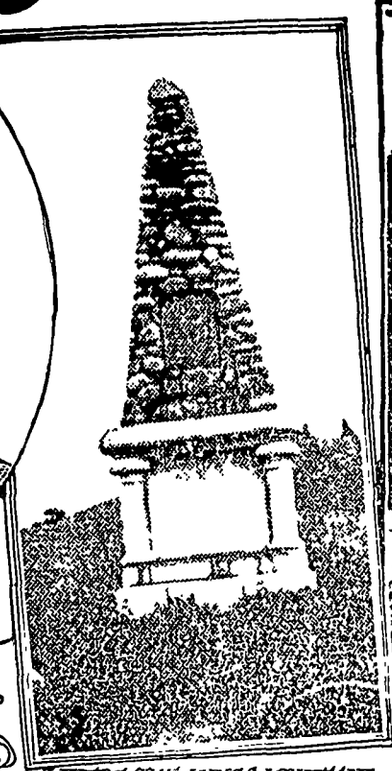
Unhurt in Wreck

Kenosha, Wis.—Adolph Spetzer drove on to the tracks near here just as a train came along. There was a crash; his car was hurled 150 feet, the train was stopped and the crew hurried back to give first aid if needed. They met Adolph on the way. He was uninjured and was wailing, "Where's my car?"

"Nolichucky Jack" and His "Bonny Kate"

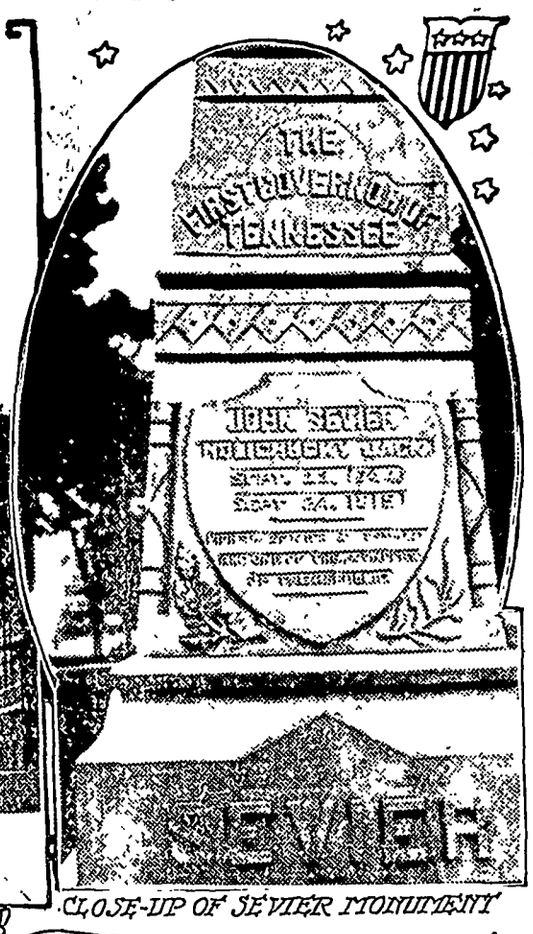


John Sevier



WHERE THE KINGS MOUNTAIN MEN RALLIED

SEVIER MONUMENT IN KNOXVILLE



CLOSE-UP OF SEVIER MONUMENT

By ELMO SCOTT WATSON

NEAR the courthouse at Knoxville, Tenn., stands a tall white obelisk. As you walk along one of the shady paths in the courthouse yard and approach the towering stone these words meet your eye: "The First Governor of Tennessee—John Sevier, 'Nolichucky Jack,' September 23, 1744; September 24, 1815—Pioneer, Soldier, Statesman and One of the Founders of the Republic."

You've never heard of "Nolichucky Jack"? Then you've missed knowing one of the really great characters of the American frontier and one of the most picturesque figures in all our history. Walk around the monument and read this inscription: "Governor of the state of Franklin; Six terms governor of Tennessee; Four times elected to congress; A projector and hero of King's Mountain; 35 battles—35 victories; His Indian war cry was: 'Here they are! Come on, boys, come on!'"

Thrilling as is the story which those words suggest, it is not complete until you read an inscription on still another side of the monument. Here it is: "Katherine Sherrill Sevier, 'Bonny Kate,' came when a girl with her parents to Tennessee from North Carolina. Married John Sevier August 14, 1780, when she was twenty-six. She became the mother of eight children and died October 7, 1836, aged eighty-two. Moved from Russellville, Ala., and reinterred here July 22, 1922."

And set in the brick walls of the courthouse nearby is a still more interesting memento of this great frontiersman and his pioneer wife. There you will see the original tombstones of Sevier and his "Bonny Kate" which were erected over their graves in Alabama and moved to their present location nearly 100 years later. One bears the simple inscription "J. Sevier Died September 24, 1815." The other reads "Catharine Sevier (Notice the difference in spelling), Wife of Governor John Sevier of Tennessee. Died October 7, 1836. Aged eighty-two years." These had been erected over their graves in Alabama, where they spent their last years. For history, you see, had not yet given their people the proper perspective of time through which to view their part in building the nation and it was not until nearly a century later that the Tennesseeans reclaimed them as their own and paid to them in enduring stone the honors due their greatness.

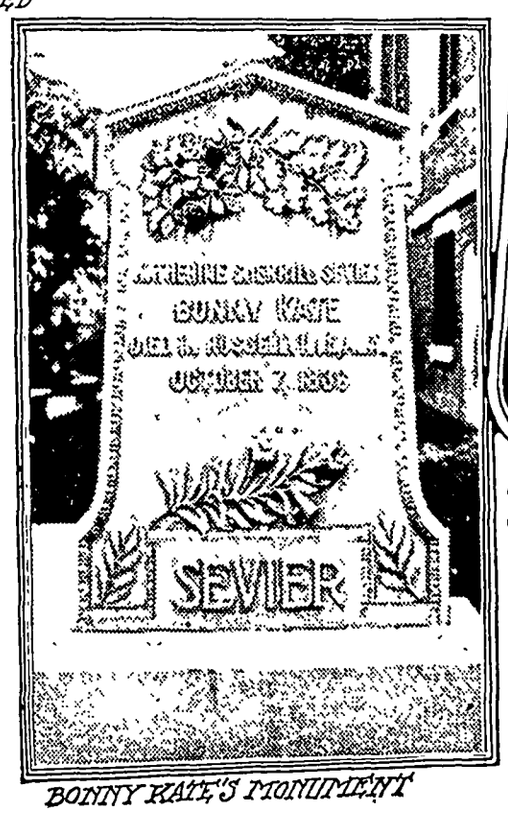
For this John Sevier is characterized by one historian thus: "The organizer of the first, free and independent government on the continent, The leader of a great commonwealth; an Indian fighter whom few have ever equalled; a soldier who could meet the finest troops on the continent, in the field and with inferior numbers win success from adverse circumstances; an administrator who could conduct the affairs of his fellowmen under circumstances of the greatest difficulty; a statesman who takes rank not far behind those colossal men who watched the travail pains and facilitated the delivery of the new nation to be."

Of him, too, another historian has written, "The most daring spirit. . . . was the young John Sevier of French Hugenot family (originally spelled Xavier) born in Augusta county, Va. It was from Millerstown in Shenandoah county where he was living the uneventful life of a small farmer that he emigrated in December, 1773, to the Watauga region (in eastern Tennessee). With his arrival there begins one of the most fascinating and romantic careers recorded in the varied and stirring annals of the old Southwest. In this daring and impetuous young fellow, fair-haired, blue-eyed, magnetic, debonair—of powerful build, splendid proportions and athletic skill—we behold the gallant exemplar of the truly heroic life of the border. The story of his life, thrilling in the extreme, is rich in all the multi-colored elements which impart romance to the arduous struggle of American civilization in the opening years of the Republic."

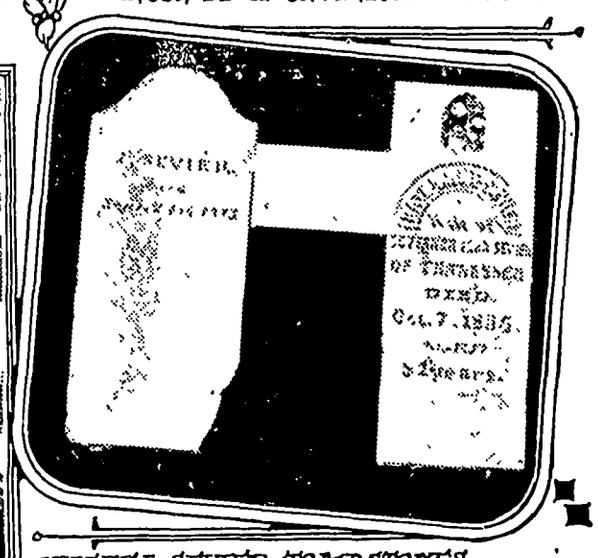
The Watauga settlement had been made in 1769-70, by James Robertson and a party of North Carolinians, who had climbed the mountains and built their cabins in a fertile valley on the other side. The young Virginian, who was a man of wealth in those days, soon became a leader in the settlement and for the next 43 years he was the one outstanding figure in that part of the frontier country. For it was not long after his arrival that he had an opportunity to demonstrate his qualities of leadership in the troubles with the Indians which started during the Dunmore war of 1774 and continued after the outbreak of the Revolution. During the Revolution Sevier more than once broke up the plans of the British for launching the savages upon the borders and thus delivering a fatal stroke against the colonies who were revolting against the mother country.

One of the first of the British attempts was in 1775 when a war party attacked a rude palisaded inclosure built on the banks of the Watauga, near Sycamore Shoals. The fort was closely besieged for some 40 days and during this time there occurred the romantic episode which has made famous the story of "Nolichucky Jack" and his "Bonny Kate." Despite warning some of the people in the fort, growing tired of the confinement, had gone outside the walls. A party of savages suddenly appeared and tried to cut them off. At the first alarm Sevier sent his men to the walls to cover the flight of the terror-stricken fugitives by a sharp rifle fire which would hold off the Indians until all had reached safety. One young girl, Katherine Sherrill, in her terror, leaped to the top of the palisade and fell over the walls into the arms of the commander. She seemed to have leaped into his heart also, for they were married soon after.

During this siege of the fort, Sevier and his men inflicted such heavy losses upon the Indians that Oconostota, the great war chief of the Cherokees, withdrew his warriors. But the genius of Sevier was not shown so much in defensive tactics as it was in the tactics of attack. Time and again he led the borderers on swift expeditions to surprise an Indian village and drive them into headlong rout. Then after destroying the village and the crops he withdrew to the Watauga settlement. In fact long before there was a Napoleon, "Nolichucky Jack" adopted the Napoleonic idea of a small, mobile, concentrated body, hurled swiftly upon a superior, but scattered force. And this policy of audacity and speed soon broke the spirit of the Cherokees and their allies and prevented their being used by the British in a rear attack on the colonies who were engaged in their desperate struggle on the Atlantic seaboard.



BONNY KATE'S MONUMENT



ORIGINAL SEVIER TOMBSTONES

Katherine Sherrill

"Indians! Indians! Run, Girls, Run!"
A keen-eyed lass at the fort gate cried
To the women who milked the cows outside.
They ran, a whoop and a gun's report
Speeding their steps as they fled to the fort.
Farthest of all from its sheltering wall,
Latest to catch and heed the call,
Was Katherine Sherrill, fairest of maids
In all Watauga's forest glades.
Hearing, she sprang like a startled deer
And fled on feet that were winged with fear.
But the call had come a moment late:
The redskins cut her off from the gate,
And while the rifles blazed away
Rushed yelling and gloating to seize their prey.

At the gate of the fort bold John Sevier,
Statesman and warrior and pioneer,
Was grasped by a dozen hands and stayed
As he tried to rush to the fleeing maid;
Grasped, held back, and the great bar dropped—
It was certain death if he were not stopped,
And better a girl be captive led
Than the foremost man of the West lie dead.

The Indians rushed to seize their prey,
But she whirled aside and sped away—
Away from the gate, but toward the wall.
Eight feet it stood. The maid put all
Her strength in one great leap and flung
Her arms across the top and clung
One instant, trembling, out of breath;
Then over the top and away from death
Strong arms had caught and drawn her clear—
The eager arms of John Sevier.

Such is the story; so it was told
To our fathers by theirs in the days of old;
So will our children the tale repeat
To children clustered about their feet.
For as long as beauty is loved, and youth,
And deeds of valor, and manhood's truth,
Will a place be kept in the heart of the State
For John Sevier and his Bonny Kate,
For the hero brave and the bride he won
And the love that lived till their lives were done.

—E. E. Miller.

In fact, long before the fort was built, Sevier had been a leader in the Watauga settlement. He had been one of the first to settle there and had been elected to the North Carolina legislature. He was a member of the committee which drew up the Watauga articles of government, the first written constitution in America. He was also a member of the first court ever held in the Watauga region.

At the close of the Revolution the North Carolina legislature, without consulting the settlers' wishes, ceded the Watauga region to the federal government with the provision that it must be accepted within two years. During the two years congress debated the matter and finally rejected the gift. While the discussion was going on in congress, North Carolina withdrew her courts and militia and the settlers awoke to the fact that they were under the protection of neither the state nor the federal government. And from neither could they gain any help in repelling the attacks of the Indians, who were again becoming troublesome. Although they were still subject to federal government taxes they were receiving nothing in return for them. Finally angered by being thus deserted by the state and nation which they had served so well during the trying times of the Revolution, the frontiersmen decided to establish a state of their own. And in 1784 there came into existence the independent state of Franklin, a commonwealth unique in American history. The leader to whom they turned was "Nollchucky Jack" Sevier and during the stormy history of that commonwealth, he, as before, was the outstanding leader of the east Tennessee frontiersmen. For North Carolina, after withdrawing the act of cession, attempted to assert her authority over that region again. As a governor of the commonwealth and a man whose forceful personality naturally made enemies for him, Sevier was singled out for punishment. He was treacherously betrayed, captured and afterwards tried at Morgantown, N. C., for high treason. Immediately 1,500 of the trans-Allegheny borderers assembled for the rescue of their beloved "Nolichucky Jack." For awhile a civil war seemed imminent. Then, aided by some of his old comrades-in-arms, Sevier made a spectacular escape, whereupon the people of the Watauga country promptly elected him to the North Carolina legislature. There was some protest about his taking his seat but eventually he was allowed to hold the office. When North Carolina ratified the Federal Constitution, and became one of the sisterhood of states, one congressman was to represent the North Carolina district beyond the mountains. It goes without saying that Sevier was unanimously elected.

When Tennessee became a territory, he was made general of the militia and when she became a state, he was chosen governor without opposition. He was elected to that position for three successive terms and then, under the constitution, being ineligible for a period of two years, he was thereafter elected for three more successive terms, after which he was sent back to congress, and three times re-elected. "Nolichucky Jack" died as he had lived, in the harness, and in the field. The end came in 1815, in a tent on a surveying expedition for the government, surrounded by his soldiers. His wife lived on for more than a score of years and was buried first in Alabama where she died. But in 1922 her body was brought back to Tennessee and there in the very heart of the country where this pioneer couple saw history in the making, and helped make it, "Nolichucky Jack" and his "Bonny Kate" are together.

ORCHARD GLEANINGS

THINNING PEACH HELPS QUALITY

Increases Marketable Sizes and Improves Color.

Good results followed the thinning of peaches in several demonstrations conducted last year in typical North Carolina home orchards.

"Thinning increased the percentage of fruit of better marketable sizes and was responsible for better color of the peaches, although the total yield per tree was reduced in our demonstrations last year," says E. B. Morrow, extension horticulturist at the North Carolina State college. "With the Elberta varieties, however, the thinning did not pay because there was a heavy drop subsequent to the thinning."

As to the results to be obtained from thinning, Mr. Morrow gives a report of a demonstration in the orchard of J. A. Winfree of Anson county. On one tree, the fruit was thinned to six inches apart; on another to four inches and on a third, was left unthinned. The first tree produced 1⅞ bushels of which 84 per cent would grade fancy for color. There were 273 peaches in each bushel. The second tree, where the fruit was thinned to four inches apart, produced two bushels in total yield with 80 per cent grading fancy for color and 309 peaches per bushel. On the third tree where the fruit was not thinned, 2½ bushels were produced with only 50 per cent grading fancy in color. It took 415 of these peaches to make a bushel.

The results obtained in this and other demonstrations last year, indicate that thinning will pay in better quality of fruit but that for the Elberta variety, this work should be done probably later than is recommended for other varieties.

Spraying Fruit Trees Discussed by Nebraska

Barrel sprayers are generally more satisfactory for use in the farm orchard of 250 trees or less. A hose of 25 feet in length is probably adequate to reach all parts of the trees satisfactorily, according to specifications given in the new station circular 36, "Spraying Fruit Trees," which may be obtained free from the Nebraska College of Agriculture, Lincoln, Neb. Large power outfits, spray guns, dusters, and rods are discussed in detail giving the merits of each and the advisability of using them in doing the spraying job. Since it is absolutely essential to spray with the right material at exactly the proper time it is a good plan for every fruit raiser to have the equipment ready for use when the pests appear, was the opinion expressed by C. C. Wiggins, of the horticulture department at the Nebraska College of Agriculture.

Cortland and McIntosh Fertilize Each Other

Cortland and McIntosh will fertilize each other. Whether other new seedlings of McIntosh will also cross-fertilize each other cannot be said until experimental proof determines the point. Barring one or two exceptions it is safe to assume that one variety of apple will fertilize another. The notable exception in Northern apple growing sections is the Baldwin apple, which is a poor pollenizer for anything. Red Astrachan, Oldenburg, Grimes and Delicious, on the other hand, are among the best for this purpose. Delicious blooms more nearly with McIntosh than with Northern Spy.

Horticultural Facts

Use spraying equipment capable of doing the work required.

* * *

The record of strawberry production compares very favorably with the production of other crops.

* * *

Trees well cared for and kept clean will be larger and bear fruit sooner than those neglected, of the same age.

* * *

Anthracnose of raspberries can be controlled by spraying the bushes with lime-sulphur four times during the growing season.

* * *

Don't forget to anoint the currant bushes with a good dose of tobacco insecticide to check the spread of green plant lice.

* * *

Weigh or measure carefully all spraying materials and use them according to directions. If it is desired to experiment, do it in a small way.

* * *

Water, lime sulphur, and arsenate of lead is the standard combination for spraying apple, cherry, and plum trees. On a five-gallon basis use a pint of liquid lime sulphur and about three ounces of arsenate of lead.

* * *

The young orchard should be kept clean cultivated the first part of the season and a cover crop sown later on. This cover crop, on being turned under, will add organic matter and plant food to the soil and assist in obtaining good growth. Strong growth in the young tree is very essential.

Negro Jews

There are enough negro Jews in New York city to maintain a Hebrew synagogue where services on Friday, Saturday and Sunday are conducted in the Hebrew language by a colored rabbi.

Why does the human race quarrel so when in a century all of it now living will be in the cemetery?

Talkative children may be very bright—a quality that seldom deserts them as they grow older.

Are You Ready

When your Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you can be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner done than Baby is soothed; relief is just a matter of moments. Yet you have eased your child without use of a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the crueler pangs of colic, or constipation or diarrhea; effective, too, for older children. *Twenty-five million bottles were bought last year.*

Fletcher's CASTORIA

If you like outings, you don't care much whether or not they have any particular destination of purpose.

CAN'T PRAISE IT ENOUGH

Lydia E. Pinkham's Vegetable Compound Helped Her So Much

Kingston, Mo.—"I have not taken anything but Lydia E. Pinkham's Vegetable Compound for 18 months and I cannot praise it enough. I weighed about 100 pounds and was not able to do any kind of work. My housework was done by my mother and my out-of-doors work was not done. I have taken four bottles of the Vegetable Compound and now I am well and strong and feel fine. I got my sister-in-law to take it after her last baby came and she is stronger now. I cannot praise it enough."—Mrs. Hattie V. Easyn, R. 1, Kingston, Missouri.

SEAS NOT COLORED AS NAMES INDICATE

Tourists who have returned with stories of how red was the Red sea and what a lovely coal color was the Black sea should listen to French philologists and historians who have just discovered that the seas in question are neither red nor black. It appears that the word for major in Turkish is the same word as black, according to Dr. Jean Brunhes, member of the institute. Minor and red are also the same word. Furthermore, the maps that Marco Polo used were all marked Major sea and Minor instead of Black sea and Red sea. Of course certain brilliant red fish are netted daily in the Red sea and likewise there is in the water of the Black sea a carboniferous deposit which makes it look a little black. The Turks who gave these seas their names were to a large degree subject to Mongolian or Chinese influence. The old Chinese used to consider black as symbolic of north and red symbolic of south. Except for the fish and the aforesaid deposits, the tourists are not left with a leg to stand on.

Gladly Offered Life to Save Commander's

A young sailorman, Reuben James, after whom a United States destroyer is named, saved the life of Stephen Decatur, widely known naval officer. The incident occurred in a gunboat action in the war with the pirates of Tripoli. During the encounter young Reuben James stuck close to his commander's side, warding off the attacks made on Decatur from behind. When his right arm was disabled by scimitar cuts he shifted his cutlass to the left and fought on. Soon this arm was useless, too, and the weapon dropped from his hand. At that moment he saw a pirate lift his scimitar to strike Decatur's head as he lay on the deck locked in a death struggle with the Tripolitan captain. As both Reuben James' arms were useless, he deliberately put his own head in the way and caught the stroke aimed for Decatur. It was a mighty blow but the hard-headed sailor was back at his post in three weeks and lived to a ripe old age.

Drop in Meat Eating

The average American ate about 5 pounds less meat last year than he did the year before, and 8 pounds less than in 1926, a summary prepared by the Department of Commerce indicates

There has been a steady decline in the amount of beef and veal consumed, while pork has climbed but insufficiently to balance the loss in beef products. Lamb and mutton have held about even. Beef consumption has dropped from a per capita figure of 63.0 pounds in 1926 to 51.7 in 1928. while pork has risen from 05.7 to 73.9. Lamb and mutton have stood at approximately 5½ pounds and veal has dropped from 8.2 pounds to 6.8 pounds

Kill Devil Hill Shifts

Though the tablet to the first successful flight of an airplane recently unveiled at Kitty Hawk, N. C., is supposed to mark the scene of the Wright brothers notable exploit, Kill Devil hill from which they launched their plane on that memorable day twenty-five years ago has shifted a mile northward from its position at that time The strong sea winds which play over the sand dunes of that region are responsible. However, the site is near enough for the purpose of honoring the cradle of aviation.—Pathfinder Magazine.

Welcoming the Missionary

A serious-looking stranger called upon Mr. Biggs, shook his hand limply and remarked: "I am representing the Association for the Suppression of Profanity. I want to take the evil language clear out of your life." "Come here, Maria!" yelled Mr. Biggs, "here's a man wants to buy our car." —Duluth News-Tribune.

Sail Used as Landing Field

Tests with a large sail dragged by a moving ship and used as a landing place for hydroplanes are reported to have been successful in Germany. A plane repeatedly started and landed on the sail, which gave a smoother area than the water itself.

People Will Talk

Stern Father (to son going back to school)—Don't let me hear any bad reports about you.

Son—I'll try not to, dad, but you know these things will leak out.—London Answers.

For the Rainy Day

Uncle—I suppose you two are putting something by for a rainy day?

Young Wife (brightly)—Oh, rather! We're saving up hard for a closed car.—London Opinion.

An Accessory

"Why don't you put on the brake when you park the car?" asked the instructor.

"But they told me the car was fully equipped!"

No Multimillionaire

Enthusiastic Salesman — We are selling these cars by the hundred.

Prospective Motorist—I don't think I'd care for that many.

Doing Well

"Don't these doctors who prescribe
rt your business?"
m getting $10 a dozen for
" the druggist replied.

WHY

Dining Places Use Name "Pig and Whistle"

Every little "Greenwich Village" has its "Pig and Whistle"—in fact, the number of "Bohemian" restaurants, both in America and England; which call themselves "Pig and Whistle" is legion.

Just why this should be so is a curious illustration of how two such apparently unrelated and meaningless terms should be applied to a place of eating.

The fact is that the expression "Pig and Whistle" is a corruption of the original language, which read "Bowl and Wassail" and "Wassail Cup and Wassail."

In old English "Wassail" was a sort of salutation used in drinking with the raising of the cup. It was the near equivalent of our "To your health."

Also, in old English, the "pig" was a small cup or mug.

So "Pig and Wassail," in reality meaning "Drink hearty," achieved a wider and perfectly logical use as a name of identification for a place in which to dine and toast one another's health.—Kansas City Star.

Why Teardrops Are of Value as Antiseptics

Although we cry when we are sorry, teardrops chemically are a blessing. Tears are composed of a chemical called lysozyme, probably the most powerful germ-killer in the world.

During experiments with human tears it has been found that one teaspoonful of the pure chemical contained in them has antiseptic powers equal to more than 100 gallons of salty water against certain eye bacteria.

The same substance can be found in the white corpuscles of the blood, which continually wage war on destructive bacteria invading the body. It may be possible to extract the powerful chemical in sufficient quantities from animal bodies for general use as a non-poisonous antiseptic.—Exchange.

Why Union Jack Is Flown

Much discussion has been given to the Union Jack that is flown from the men-of-war of our nation, while at anchor. It is composed of the blue field of our national ensign, stars without stripes. Ordinarily flown from a staff in the bow, it has another use. When hoisted to the starboard yardarm of a vessel it denotes a court-martial in session. It derived its name from the Union Jack of England, composed of the flags of England, Ireland and Scotland, probably because of the fact that the king of England signed his name "Jacques." Various handbooks refer to the starry field as the jack, and while the stars in our flag represent the Union, it is denied that our flag, or jack, should be known as the Union Jack.

Why Glass Turns Purple

The Bureau of Standards says that glass frequently changes color on exposure to sunlight and the surface may weather or decompose slightly on exposure to certain types of atmospheric conditions. The color change is generally from the initial color of the glass to a purplish tint. This is thought to be the result of the action of sunlight on the manganese which was used to decolorize the glass. The weathering produces a scum on the surface of the glass and renders it less transparent, but does not, in general, change its color.

Why Tower Does Not Fall

The fact that the Leaning Tower of Pisa stands depends on the law of statics which insures the stability of the leaning building whose parts are firmly bound together and whose center of gravity does not project beyond the limits of the supporting foundation. The leaning tower has a spiral stairway within, which is built with increased height on the sides of the lean and decreased height on the sides opposite the lean, thus throwing a greater weight of masonry on the side opposed to the lean.

How Icebergs Are Located

There is an international ice patrol maintained by the United States coast guard which patrols the Newfoundland coast and locates the icebergs on ocean routes. The location of such icebergs is communicated to the hydrographic office of the Navy department, which in turn passes on the information to the different steamship companies. All nations subscribe to this safety measure and remunerate the United States for performing this service.

Why Scraped Ice Whitens

Ice becomes white when scraped because the scraping leaves a multitude of small irregular surfaces which reflect the light in all directions, giving the white appearance

Why Word "Won't" Is Good

The word "won't," universally considered a contraction of "will not," is a contraction of an old form, "woll not."

Why Dead Birds Disappear

The Department of Agricuture says that birds' bodies disintegrate rapidly. Dead birds are eaten by predatory animals and insects.

Why Abbreviation "Cwt."

The "C" is the Roman symbol for 100 and "wt." is a shortened form of "weight."

BRIEF HUMOR

His Own Fault

"Ma, they slammed the door in my face." "Well, I told you not to keep your mouth open."

Would Be Nice

"How'd you like to live on Easy street?" "I'd be satisfied with a contract to pave it."

Huh?

"This poet says the world is a masquerade" "He must think some people have rented funny faces."

Favorite

Her Hub—What book do you discuss at your literary club?

His Wife—Hoyle.

Sitting in the Parlor

"Art is long."

"You realize that while waiting for a girl to get ready for the theater."

Fashion Item

"Baa, baa, black sheep, have you any wool?" "No, I just had it bobbed." —Farm and Fireside.

Not Necessarily

"She is always ready to pay a compliment."

"But she usually likes a receipt."

A Pessimist

Harrington—Jones is a gloomy sort of fellow." Carrington—"Yes, his face is always at half-mast."

Bright

Smartlee—I've invented a machine to tell fresh eggs.

Smarter—Tell them what?

Potter's Field

Asker—Is there any field for new poets?

Teller—Yes; potter's field.

Between Nurses

"Oh, Alice, my patient has just proposed to me."

"Had another delirious spell, did he?"

Mason and Dixon Line Only Divided States

The Mason and Dixon line was the boundary line between Pennsylvania and Maryland, as surveyed in 1767, and popularly accepted before the Civil war as the dividing line between the free and slave states. If that line were to be extended due west it would divide such northern states as Ohio, Indiana and Illinois and leave Kansas in the south. As a matter of fact, the states south of the Mason and Dixon line which are generally regarded as southern states are Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Mississippi, Arkansas, Texas, Louisiana, Oklahoma, Kentucky, Missouri, Maryland and Delaware. Cumberland, Maryland, is south of the line. The slave-holding states just before the Civil war included all of those mentioned above except Oklahoma, which was not then a state. Slavery had been abolished in the northern states before that time.

New Aircraft Metal

A wonderful new metal, one-third lighter than aluminum and with most of the valuable properties of steel, will soon be placed on the market Assuming that its cost is not prohibitive, its use will greatly reduce the weight of airplane engines, and providing its price eventually becomes low enough, it may also be largely employed in automobiles with vast reduction in weight. The name of this new metal is beryllium, a chemical element, like iron, copper, aluminum and lead—Popular Mechanics Magazine.

Cotton in Natural Colors

Scientists are experimenting in crossing natural-colored cotton to produce any hue desired. Cotton grown in Egypt has a brownish tint, that from India a gray, that from Peru a reddish shade and that from China is yellow. The plants breed true to type and the colors are fixed and do not change with variations in soil or climate, so that it may be possible to eliminate dyeing.

Fair Exchange

While the indignant mayor of Limoges, France, assisted by scores of citizens, was raiding the haunts of thieves and gangsters, the gangsters raided the city hall, stole all the money in the drawers, and got away with the safe, after having raised havoc with the interior of the building.

Useless Attainments

First Explorer (indicating gesticulating native)—Can you understand what he's saying?

Second Ditto—Not a word.

First—Darned lot o' good you are with your university education.—Passing Show.

Radio for French Farmers

A group of members of parliament representing agricultural districts of France have decided to appeal for special funds out of which to advance loans to farmers desiring to install good radio sets.

Not Injurious

"There is a rumor that some women, after taking gas, think they have been kissed."

"It doesn't hurt business any," declared the dentist.

LIBERTY TOWNSHIP NEWS NOTES

(By Special Correspondent)

Wayne Lemke spent Sunday with home folks

Helen Lemke is at Lake Okoboji this week attending the Epworth League Institute Camp.

Lyal Schoenwetter was able to return home after his recent operation at the Mercy hospital. He got along fine from the first and is well on his way to recovery.

The Standard Bearers ice Cream social that was to be held last Friday evening was postponed on account of bad roads and will be held sometime between harvesting and threshing.

Mr. and Mrs. Herman Gast and children, Mr. and Mrs. Elmer Schaefer and children, Mr. and Mrs. Q. Stille and children, were dinner guests at the J. J. Stille home Sunday.

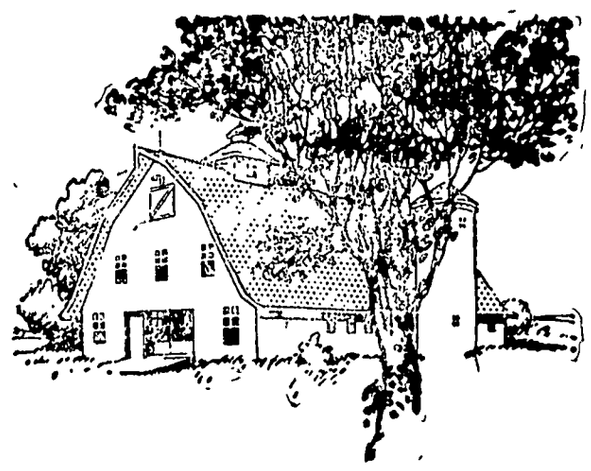
Alvin Kalka, the young man who has been working for J. J. Stille, was severely injured Sunday. He and his brother Henry, drove to Elkader, the home of their parents to spend the day and he was injured while there. He will be unable to take up his work at the Stille farm for some time.

Last Tuesday evening Mr. and Mrs. Floyd Franklin had as their guests Mr. and Mrs. C. J. Franklin and son, Mr. and Mrs. Geo. Franklin and family of Garner, and Mr. and Mrs. Gorenson and family of Rockford, Ill., and Mrs. Moline and son of Joliet, Illinois.

Next Sunday the evening services in Liberty Church will held Inst of in Klemme. After the you people hold their League Servi Rev. Whyte will show slides a the Standard Bearer Girls will g their reports on the recent conv tion held at Lake Okoboji. A tha offering will be taken for that ciety.

The Garner-Klemme C. T. A. h their annual tour and picnic Thursday. They started at the E Beier farm where they judged H stein cattle. From there they went the Fred Kottenbeutel farm judged Guernsey cows, and fr there to hte Love farm in Garn where the picnic dinner was he followed by a ball game, cull demonstration and more judgi The one who received first prize judging gets to go to the Ca Congress at Waterloo.

Dr. Durant says the day will co when men will do only mental w —that means there will be a lot unemployment.



Two gallons of barn paint in a one-gallon can

Here's how you can paint your barn at a great saving. To each gallon of LOWE BROTHERS DERBY RED BARN PAINT add a gallon of pure linseed oil. This makes two gallons of tough, wear-resisting paint.

Don't take chances on cheap paints loaded with gasoline, mineral oil, rosin, etc. Get Derby Red when you paint your barn. It's *all* paint—and double thick! It contains plenty of linseed oil when mixed according to directions. Low in price, too.

Before you paint, see us

E. F. JACOBS

GOODELL AND VICINITY ITEMS OF INTEREST

(By Special Correspondent)

Mr. and Mrs A C Carpenter were in Des Moines one day last week

Mr. and Mrs. J. J Cook were Mason City shoppers Thursday

Mr. and Mrs. W. L Sherwood were Britt callers one day last week.

Ivan Baker and family moved to Garner Monday. Mr. Baker has a barber shop there.

George Mickesh of Hickory Grove has been suffering from blood poisoning in his hand.

Mr. and Mrs. Lloyd Carpenter are the parents of a baby boy born Tuesday of last week.

Jay Griggs and Joe Byers of Clear Lake were in Minneapolis on business Wednesday.

Mr and Mrs. Arthur Lowenberg and little son were Klemme callers Wednesday.

Mr. Metgorden of the Ford Garage, Kanawha, was a business caller here Thursday.

Miss Daphne Houghton of Belmond spent the week end with her sister, Mrs. Conlam.

Mr and Mrs. Claude Alley entertained relatives from Rowan, Sunday.

Mrs Arthur Lowenberg is entertaining her sister, Miss Ann Nolan of Graettinger thi week.

Dorothea O'Krueg who has been attending Christian Endeavor Convention at Cedar Falls, returned home Sunday.

Miss Lela Griggs, employee of the Bell Telephone Co, in Des Moines, is spending a week's vacation with her parents, Mr. and Mrs. J. Griggs.

A number of friends gathered at the Kruise home south west of town and charivaried Mr. and Mrs. Detman. Mrs. Detman was formerly Miss Annie Kruise.

Miss Olsen, of Forest City, intermediate grade teacher, has resigned her position here. Miss Brown of Livermore has been selected to take her place.

Mrs Tanner, formerly Miss Leona Cashman and her brother, Carol and wife visited with the mother, Mrs Julia Cashman last week. They returned to their homes in Chicago Sunday.

Rev. and Mrs. Scott and daughter Harriet of Miller Memorial Church, Des Moines, spent the last week visiting with Goodell friends. They left Sunday for Cedar Falls where they will get their sons, Floyd and Vernon who were attending the Christian Endeavor Conference, after which they went to their old home at Mt. Vernon.

Notice!

Central States Electric Company desires to make known to the stockholders and the investors who may contemplate placing orders for our securities that such orders may only be accepted by the registered agents of the Company in accordance with the new Securities Law that became effective on July 4, 1929.

Any one interested in investing in our Company should iquire at the office headquarters of the division in which they reside for the authorized agent, or if more convenient orders may be sent by mail to to the Securities Department, Central States Electric Company, at 515 Merchants National Bank Building, Cdar Rapids, Iowa.

All orders are subject to acceptance and confirmation by the Company.

Information concerning the Company, its securities, and how to place orders will be available at the several offices of the Company.

Hoping that present stockholders will increase their holdings of the 6 per cent preferred stock, and that other customers and invstors will invest in this satisfactory Security, we are, thanking you

Respectfully,

Central States Electric Company

Wave Speed Difference Gives Strange Effects

Sound travels through the air at the rate of one mile in five seconds. Ether waves have a velocity a million times greater. This difference causes some strange effects.

Big Ben, London's famous clock, can be heard to strike four miles from Westminster. Owing to the difference between the speed of radio and air waves, in many parts of London it may be heard to strike 22 times when the 11 o'clock signal is being broadcast from Daventry—through a loud speaker and through the air. There is an interval of four and one-half seconds between each stroke of Big Ben.

At one mile, the first two strokes by radio would be heard before the first by sound waves, and after the last by radio two would arrive through the air. At four miles, five would be heard by radio before the first by sound-waves, and the last by radio would be followed by five carried by air waves.

Heroics of Olden Days Are No Longer Possible

Days when a brave woman could earn the applause of the country by yanking off her red petticoat and flagging a train just as it neared a broken rail are over, mostly because broken rails are rarer and red petticoats extinct. The New Jersey farmer who saved a train by waving a flag and a burlap bag, the other day, recalled those heroines of the past generation to mind, and, being given to idle speculation, we tried to picture the situation if a modern woman should come across a broken rail. If she removed a garment (any garment) to use as a flag, with the probabilities against her finding one large enough to be seen, the chances favor a horrible wreck, because a really modest engineer could do no less than close his eyes and speed past. Engineers, no doubt, favor a return of the good old days, in the interest of safety. —Columbus Dispatch.

Old Companions

One's delight in an elderberry bush overhanging the confused leafage of a hedgerow bank, as a more gladdening sight than the finest cistus or fuchsia spreading itself on the softest undulating turf, is an entirely unjustifiable preference to a nursery-gardener, or to any of those who are free from the weakness of any attachment that does not rest on a demonstrable superiority of qualities. And there is no better reason for preferring this elderberry bush than that it stirs an early memory; that it is no novelty . . . speaking to me merely through my present sensibilities to form and color, but the long companion of my existence, that wove itself into my joys when joys are vivid.—From "The Mill on the Floss," by George Eliot.

Just a Detail

In battle the duke of Wellington overlooked nothing. Baron von Neumann of the Austrian embassy at London in 1840 tells in his recently published diary of an account given by the Iron Duke of the Battle of Vittoria:

That "after the whole of the French infantry had been routed, all the artillery, consisting of 300 pieces of cannon, and all the baggage had been abandoned, the English army considered the battle ended, when the duke stopped the forward movement of the troops and said: 'The battle is not yet won. There is a corps of 10,000 cavalry still intact,' and they thereupon disposed of them."

Legion of Honor

The Legion d'Honneur in France is an order of merit, both military and civil. As at present organized, it consists of five classes—chevaliers, officers, commanders, grand officers and grand crosses. The president of the republic is grand master. In ordinary circumstances 20 years of military, naval or civil service is necessary for eligibility to the rank by chevalier, and promotions can only be made after definite service in a lower rank. Extraordinary service admits to any rank. The word "chevalier" means "knight."

Spellbound

Ten-year-old Mary had won a scholarship, and was telling her mother about the papers.

The subject for essay had been, "How I spend my Saturday morning," and after discoursing on minding the baby, helping mother wash up, and so on, Mary ended with the amazing statement, "and then I play a game of chess with my brother."

"Chess! But you can't play chess!"

"I know. I wanted to put dominoes, but I couldn't spell it."

Utilizing the Heat of Passion

The Barn Boss—Was there much trouble on the line about the cold cars?

The Conductor—Not much. It seemed warm enough for 'em. Every one who spoke to me about it was het up over it.

Past Hurt

Mrs. Helleflinder was attending her first football game. "Oh, isn't it awful," she cried. "Why, they will kill the poor boy underneath."

"Don't be silly, mother!" exclaimed her daughter. "He doesn't mind it—he's unconscious by this time."—Pathfinder.

SCINTILLATIONS

Glory paid to our ashes comes too late.—Martial.

The smallest errors are always the best.—Moliere.

Be charitable. A tight fist is likely to get rheumatism.

They are able because they think they are able.—Virgil.

A dismal, universal hiss, the sound of public scorn.—Milton.

Let no one be willing to speak ill of the absent.—Propertius.

A girl who is silly and has lots of money is called vivacious.

Let us draw upon content for the deficiencies of fortune.—Goldsmith.

A great deal of sympathy is utterly wasted on henpecked husbands.

When a man takes a girl out to dinner he is annoyed if she skimps her order.

Was one of the inalienable rights overlooked in the list—that of being a fool?

He has carried every point who has mingled the useful with the agreeable.—Horace.

Our knowledge is the amassed thought and experience of innumerable minds.—Emerson.

General admiration for what is called the he-man doesn't prevent the other kind from multiplying.

At a certain age the fast and furious liver says to the giddy world: "Begone, with your thrills!"

Adversity tries men; but virtue struggles after fame regardless of the adverse heights.—Italicus.

PRIMITIVE MAN WAS OF GIGANTIC SIZE

A man powerful enough to engage in battle to the death with a huge buffalo of a size and type now extinct is considered by authorities to have been traced by a discovery reported from the Transvaal. The bones and skull of a primitive man were found lying near the fossilized bones of a giant buffalo, whose head measures 12 feet across.

"This appears to be evidence of a race of men, earlier than the negro, in South Africa, for whom search has been made for a considerable time," said Sir Arthur Woodward, former keeper of the geological section of the British museum. "If this is so the discovery is of great importance.

"In the absence of more information it is impossible to give even an approximate date when this type of man may have lived, but the bones are probably not older than some specimens in the British museum. It is quite likely that this man died in fighting the buffalo and that he was a normal man of his time."

Mile-Deep Diving

Dr. William Beebe, famous ichthyologist of the American Museum of Natural History, recently told of a new diving device which would enable one to descend a mile below the surface of the sea. It consists of a large steel cylinder, built to withstand a pressure of five tons to the square inch. Water pressure at the depth of one mile is about one ton to the square inch, so that the device would give its users a maximum margin of safety.

The Road to Success

Senator Shortridge said at a dinner in San Francisco:

"Millionaires and multimillionaires never run for President. They know they'd be defeated."

"Why is it," a lady asked, "that the people wouldn't accept a millionaire President?"

"Because, madam," said Senator Shortridge, "on the road to success few keep to the right."

Oh, Man!

"How do you suppose it feels to wake up and find one's self famous?"

"I imagine about as glorious as it does to wake up and find it isn't time to get up yet and you can roll over and sleep for another hour."

Quite True

Friend Husband—Here's an item in the paper that says there will be no more rain after two million years.

Friend Wife—Gee, I'd like to live till then. We wouldn't have to be saving for a rainy day.

Setting 'Em Up

Mother—What do you think, children—your father has ordered a new automobile.

Children (in chorus)—I want to bust the first fender!—Life.

Been Caught

"Pa, what is dignity?"

"Dignity, my boy, is what you think you possess until the boss says: 'What is the meaning of this?'"—Dublin Opinion.

Cheerful Donation

Charity—Will you donate something to the Old Ladies' home?

Generosity—With pleasure. Help yourself to my mother-in-law.—Dallas News.

How Dust Creates Beauty

The more dust, the more sumptuously the clouds are bathed in rose and gold and fiery red. Storms that raise tons of dust into the skies in arid regions sometimes seem a trying cross for the people to bear. But there is a wonderful compensation. High in the air the tiniest dust grains atone for the sins of their coarser fellows. Nowhere else do the skies burst into such a glory of color at dawn and sunset, nor does the approach of twilight cast such magical, soft-hued shadows that can transform bare, rugged mountains into fairy lands.—National Geographic Society Bulletin.

How Famous Rose Got Name

The original name of the American Beauty rose was Mme. Ferdinand Jamin, and it was introduced by Ludechaux in 1875. It was renamed in America in 1886 from a specimen in George Bancroft's garden, from which the original label had been lost.

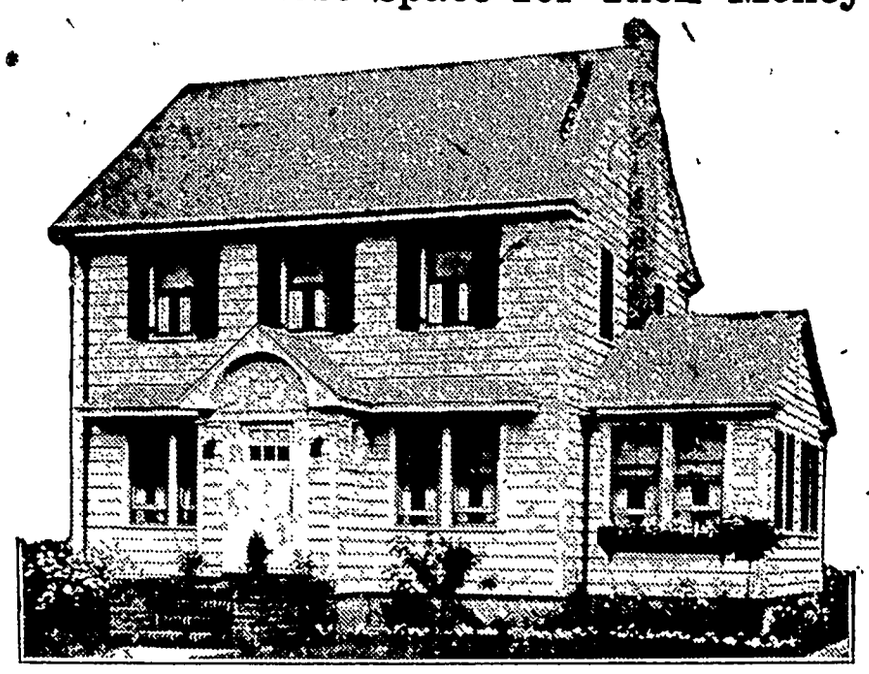
Good Design for Those Who Want to Get Most Space for Their Money



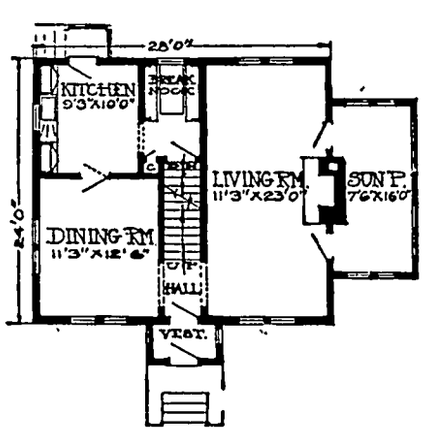
We are sure you will agree that this is a fine example of the colonial design. Don't overlook the floor plan with its center hall and large sun room off the living room. The entrance is one of our best colonial designs.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

There are many variations of the colonial type home, but the one shown in the accompanying illustration is about as near the true colonial as it is possible to get. The only variation from the colonial in this home is the addition of the sun porch at the right. Without this porch this home is exactly the type that will be found in so many New England villages.

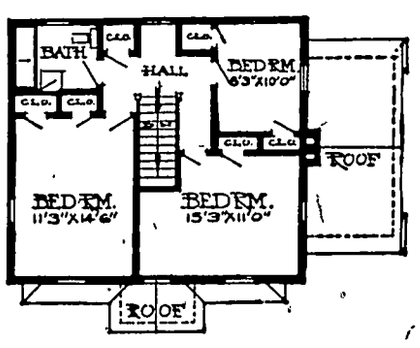
This is a two-gable, rectangular house, 28 feet by 24 feet. On the first floor are the living room, dining room



First Floor Plan.

and kitchen, and on the second floor three bedrooms and bath. The entrance door is directly in the center of the house, with the living room at the right of the hall and the dining room at the left. The true colonial balance is retained in this house, there being two windows on either side of the entrance with three windows on the second floor in perfect alignment.

The living room at the right of the hall extends the depth of the house and is 23 feet by 11 feet 3 inches. Connected with this through french doors on both sides of an open fire-



Second Floor Plan.

place is the sun parlor which is 7 feet 6 inches by 16 feet deep. To the left of the entrance hall is the dining room, the same width as the living room and 12 feet 6 inches deep. At the back is the kitchen, 9 feet 3 inches by 10 feet with a breakfast room adjoining.

Colonial stairs run out of the entrance hall to the second floor. There are three bedrooms, two at the front and one at the back and a bathroom, all opening off the hall.

The house is built of frame set on a concrete foundation with a basement of the dimensions as the house proper. An attractive feature of the home is the entry way which is enclosed. The platform and steps of brick lead to it.

For prospective home builders who want to get the greatest amount of space for their money, this design is good. At the same time there is no more attractive house than the colonial.

Sound Muffling Now Demanded in Residence

Proper house construction will go a long way toward solving the problem of children and grownups living together comfortably.

This problem occurs in every household of which children are members. When guests are being entertained, the children usually are sent upstairs and are warned to be absolutely still lest the guests be annoyed by the sound of footsteps on the floor above. Even more distressing is the mother's attempt to keep her guests distracted, while water is being drawn for baths or while the plumbing is being flushed in the bathroom overhead.

Even if guests are not present, when father comes home with nerves all on edge from the racket of a day's work in office, store or factory, the children's noise is unwelcome disturbance. The maxim that children should be seen but not heard often is carried so far that they must be scolded and repressed into quiet.

So for the sake of the kiddies as well as of their elders, sound muffling is becoming part of the standard definition of livability. Up-to-date homebuilders now demand qualities of construction which their parents would not have thought of requiring. Thorough insulation is the first of these qualities, and sound deadening is the second.

How to Eliminate Cracks in Ceiling

Nearly every home owner has seen joist streaks on a ceiling or plaster cracks. These mean a lot of mental discomfort to the owner and financial discomfort to his pocketbook when the redecorating bills come in.

A combination nail and furring device is offered which spaces the lath half inch from support and claims to protect contact of back side keys of plaster with joists. This assures free circulation of air back of plaster, uniform condensation of moisture over entire ceiling, and aids thereby in the elimination of streaks.

These can be used on new or old ceilings. They consist of a metal clip and headless nail with collar. Furthermore, their manufacturers claim for them that, not pulling out and penetrating joists a full inch, they insure a uniform thickness of plaster over entire ceiling and eliminate the weak sections under joists which too often result when lath is nailed direct to plaster.

Plan Home for Cold Days as Well as Warm

Every home-minded individual should set aside two days for the planning of the home.

If a house is planned on these two days sight will not be lost of the primary purpose of a home.

The first day is the hottest day of summer when rooms resemble ovens and when sleep is next to impossible. The second is the coldest day in winter, when the breath can be seen in the north bedroom and when the coal heap is the only thing that melts. For years we have been paying too much attention to generating heat and too little to keeping it where it belongs.

Only in the last few years have scientists found the solution by applying to buildings the principle of heat insulation around which household refrigerators are built.

It simply consists of placing in the walls and roof of a house a material which is a natural barrier to the passage of heat. In winter the insulation keeps out the cold, in summer it keeps out the heat. In terms of household comfort insulation means uniform temperature throughout the house every day in the year.

Choosing Proper Site Home Builder's Task

The home builder will economize in the long run if he first decides what sort of house he wants and then picks out the lot best suited for it, especially if the house he is about to build is small and the capital for building it is limited.

He should first plan it out in his own way in relation to the size of his family and its needs. Then he should ask an architect to harmonize the various requirements of the ideal home as he sees it into a design that is practical, beautiful and economical.

Thus all elements will be brought together in a house that "fits" the family that is to live in it.

Wall Paper

In small rooms most people think it necessary to select tiny wall paper patterns, but this is not always wise. Small close patterns with almost no background, shut in a little room, making it seem even smaller than it is. A good-sized pattern in light clear colors, with plenty of light background showing will do much to make a tiny room seem larger. Small scenics with perspective in the drawing are an ideal selection.

BRINGS HOME THE BACON

(© by D. J. Walsh.)

IT WAS late spring and the jack-oaks were in full leaf. In the shaded and mossy places violets were blooming modestly. The air was a soft haze that purpled the tops of the higher hills, and in the grasslands the meadow larks were whistling.

But it was not the beauties of nature that called forth the admiration of practical Dar Jackson. He had no time to waste on green hills and tumbling streams. His satisfied smile was all for the great Poland China hog, Champion Rex IV, who panted in the road before him. One end of a long rope was clutched in the gnarled fist of the heavy-shouldered farmer. The other end tethered the sharp-hoofed hind leg of the 300 pound hog.

Champion Rex IV had, with the perversity of his hog mind, deserted the succulent alfalfa shoots and wandered into the timber searching for last year's acorns. Placidly, but pantingly and with many stops, he was being led back to the home pastures. During every pause for breath Dar Jackson caressed with gloating eyes, the sleek sides and fat hams of the great Poland China.

Around the bend behind man and hog came the staccato bark of a speeding car. Dar Jackson lifted his gaze apprehensively.

"Durn fool city drivers," he mumbled, "gallivantin' over the hills thirty miles a hour 'thout no thought fer other folks' rights."

With a crooked stick for a goad he hurried the grunting hog from the graveled road into the hill trail. The noise of the approaching car became momentarily louder. Dar Jackson could even distinguish the rattle of the fenders and body above the cough of the motor.

Down the road zipped a stripped-down flivver. The farmer distinguished a goggled man behind the wheel and another at his side. Then without warning the little car swerved into the branch trail. Dar Jackson howled a warning, but too late. A thud, sickening in its implication. A squeal of anguish and fright, abruptly terminated. A stifled curse. Then quiet.

Dar Jackson held the end of a slack rope. One the other end was a dead hog—now simply 300 pounds of pork. A stripped-down flivver lay overturned at the side of the road. One man, face down in the soft loam at the roadside. Another sitting by his side, head in hands. Dar Jackson cursing fervidly. A picture strongly out of harmony with the lazy spring day.

Dar Jackson's face was black with rage. He could excuse the dust and the noise of careless drivers. He could even occasionally overlook the death of a wayward chicken in the path of the cars, but Champion Rex IV was worth all of $1,500 and the pride of the farmer's heart. And this was not a Rolls-Royce—not even a good truck—simply an old flivver that was not worth one of Champion Rex's hams.

"Ought to take this club to 'em—and finish 'em off," he snarled to himself as he glowered at the men on the ground. "I'll take 'em down to Judge Duffy, that's what I'll do. Sue 'em for damages—and take the judgment outs their hides."

He drew his jackknife from his pocket and cut the rope from the dead hog's leg. Then with a heavily shod foot he rolled the unconscious driver to the edge of the road near his dazed companion. Tightly he tied the right wrist of one to the left of the other using a short length of rope cut from the coil. Then either end of the remainder he fastened to the free wrists. When the men regained their senses they were hitched like a team of horses and Dar Jackson held the lines with a practiced fist.

He flourished his goad and jerked on the rope, kicking aside a battered Gladstone bag that had been thrown with the men from the car.

"Giddap, you team of hog killers. Git goin'! We're headed for town."

"Say, you long-whiskered hick," snarled the one who had piloted the wrecked car, "think ye can get away with tyin' us up this way? Better loosen this rope if you don't want a slug of lead in yer gizzard." He reached toward his pocket and had his arm nearly dislocated for his trouble.

"Don't try nothin. like that," warned Dar. "Make another pass like that and I'll jerk that arm clean off of you. Git goin' now!"

"Better do what the hick says," warned the other from the corner of his mouth. "We'll watch our chance an' gang him."

Dar Jackson and his strange team turned down the road toward Madison. As the driver passed the Gladstone bag that he had so unceremoniously kicked his natural thriftiness asserted itself and he picked it up. They had gone no more than 100 yards before the team was well broken as to gait and rein sense, thanks to the heavy goad and the well-trained driving hand. With curses and blows Dar hurried his team at half-trot.

As they neared the first bend there came to them a confused sound of shouting and the crunch of running feet. As with a single impulse the hitched men turned and dived toward the brush at the side of the road. Dar Jackson dropped the bag, planted his feet firmly, and his team sat smartly back on their haunches.

Around the bend streamed a motley array of men armed with rifles, shotguns and clubs, Marshal Tom Jones in the lead. As they approached Dar Jackson and his prisoners they came to an abrupt halt.

"Where did you git them, Dar?" panted the perspiring marshal. "It's a durn wonder they didn't plug you. Did you git the loot, too?"

For a long minute Dar Jackson remained silent and puzzled. He had no inkling of the meaning of Tom Jones' questions, but he was too shrewd a trader to let it be known.

"Got 'em down by the forks. Why?" he asked.

Marshall Jones stooped and looked squarely into the faces of the prisoners. Then he straightened. "Yep, it's them, all right. This one here is 'Soup' Malone who cracked the safe, and this little shrimp is 'Jersey Bill' Ginser."

Then turning to Dar Jackson he patted the farmer on the back. "Dar old boy, you've done captured single-handed two of the slickest and wickedest safe-blowers in the state. There's a $2,000 reward out for them and another thousand if you've got the loot. Cracked the safe of the Beeville bank last night and made away with fifty thousand in bills. We got word they was headed this way. Figgered they might turn into the hills at the fork. We were just high-tailin' it up that way to head them off. How did you git 'em, anyway?"

Dar Jackson handed the lines to the marshal. Then he picked up the black bag. "Reckon here's the loot," he stated. "I got 'em easy enough. Heard 'em comin' up the road. Figgered there was somethin' wrong. When I seen they was both wearin' goggles I knew it. Only one way to stop 'em. I shoved Champion Rex in front of their car and he just naturally wrecked the works. Poor old Champion Rex. He's deader than a herrin', but this here reward'll buy a couple of hogs as good as him."

Found His "Ego" Change With Advancing Years

When Charles Gounod, the composer of the opera "Faust," was about fifty years old he met a young musician with whom he talked over his own artistic position. "The greater your experience in our art," he said, "the greater is your respect for the masters of the past. When I was your age I spoke of I. When I was twenty-five I spoke of I and Mozart, and when I was forty I said Mozart and I. Now I whisper in all reverence, Mozart." Mozart himself had a similar respect for the older musicians, though music was not so far advanced then as in the days of Gounod and his respect was paid, therefore, more to the elders of his own day, his own father, his teacher, Joseph Haydn, and the brother of his teacher, Michael Haydn. Nowadays, composers more often than not think first of their own works and, a long way after, of that of Mozart and his predecessors. And some of them think that composers who, a few years ago were considered the great musicians of all time, are unworthy of their respect.—Montreal Family Herald.

Hard to Read

Early editions of the Bible were not divided into chapters and the small divisions which we call verses. There was even no perceptible space between the words, says an article in the Pathfinder Magazine. The author of these divisions in the Old Testament is not known. Ezra Abbot, an eminent American Biblical scholar, in his Critical Essays, says:

"The first edition of the New Testament divided into our present verses was printed by Robert Stephens at Geneva in 1551, in two volumes, 16mo, the Greek text occupying the center of the page, with the Latin version of Erasmus on one side and the Vulgate on the other." This scheme was adopted by William Whittingham in his translation of the New Testament printed in 1557 and it was followed in the famous Geneva or Breeches Bible of 1560.

Shorthand Long Used

The stenographer's art is an old one. Evidence that shorthand existed more than a century ago has been found in Spanish textbooks at the University of Texas library.

One text, published in 1811 by its author, Don Guillelmo Atanasio Xramillo, relates that it was a modified form of a shorthand book he once studied. Reference to a public examination indicates that shorthand was of somewhat general importance.

Another text, written in Spanish and published in 1821 by Don Francisco de Paula Marti, says there were more than fifty methods of shorthand in French and English at that time.

Sailors Fear Mistral

The "mistral" is a treacherous wind that blows at times over the southern coast of France and in other parts of the Mediterranean region, according to the New International Encyclopedia.

This wind is like the cold strong northwest winds of the United States. During the first few hours it seems to come in descending violent gusts; afterward it becomes more moderate, but continues strong. When it descends over mountain slopes on the water as it does along the coast of France, Italy and Austria, it makes navigation difficult and even dangerous to small craft.

A Slick Dad

"How did you get rid of that objectionable suitor your daughter was so determined to marry?" asked the old friend.

"I sent him all the bills I've paid for her during the last six months," grinned the father.

WALLOW WILL GIVE PROTECTION

rs Need Shade and Cool Water in Hot Season.

there is nothing esthetic a hog wallow, there is satisfac- for the hogs—and protection for owner. In hot weather the hog, than most other animals, is li- overheating, likely to be at- by very high mortality. Plenty de and cool water, together freedom from any disturbance, reventatives against this source es in the hog lot.

the John Brown farm near Me- sburg, Ohio, there is a hog wal- of concrete which pretty well the ideas of J. W. Wulchet, an- husbandry specialist at Ohio university, as to what a hog w should be.

out 25 feet square, the sides of wallow slope very gradually to- a drain in the center. In one there is an automatic drinking tain, the overflow from which directly into the pool. Over the , there is a roof supported on . All four sides are open.

capacity of the wallow is high- astic, since every hog which his way into the water, dis- his own volume in water and the level of the pool. The hogs in the pool, the more

surface of the water in the carries a floating film of crude which keeps down insect pests on hogs and also checks mange g them.

dium Chlorate May Cause Cattle Losses

Tests made in the division of vet- ary medicine at University farm that sodium chlorate, a weed troying chemical, will cause sick- of cattle if taken in small unts and death if taken in large ntities.

herefore, when the material is d in pastures for weed eradication necessary to fence off temporarily areas where it is to be applied, A. C. Arny of the farm crops ion of the Minnesota experiment tion. "Even if chlorates were not rious to cattle," he says, "the ing off of areas to be treated is isable from the standpoint of the chemical to the best ad- ntage. Grass to which the chlo- e has been applied is eaten greed- by cattle. Any chlorate they may is lost as far as bringing about ed eradication is concerned.

"Continued satisfactory use of these emicals depends on the avoidance accidents in making the applica- ns and of injury to animals after e applications are made. In no case ould a person apply the chlorates ithout having full directions for eir use. These directions should be llowed in detail whenever the emicals are handled."

aluable Supplement to Corn in Feeding

Soy beans are a very valuable sup- ment to corn in feeding steers and gs. They are about equal in feed- g value to either linseed meal or ttonseed meal and can be substi- ed for the mill feeds to balance n when feeding steers or hogs. om 2.5 to 3 pounds per head per y should be fed.

However, soy beans are very rich oil and this will have a tendency throw both hogs and steers off feed the beans are fed for a long time. hogs follow steers that are fed y beans instead of linseed or cotton- ed meal the hogs should have some ntage in addition.

Knowledge is power in the control swine diseases.

* * *

Remove sow at weaning time. Al- w no other hogs in the pasture.

* * *

Preventive measures to control pig eases should begin before the lit- s are farrowed.

* * *

Lack of exercise causes weak lambs, one should be sure the ewes receive little exercise each day.

* * *

Like feeding, breeding is not the ly thing to be considered in hand- g live stock; both must go hand in nd if the best results are to be ob- ined.

* * *

Pigs of all classes respond to good orage. It is especially valuable in e ration of young, rapidly growing igs.

* * *

Pregnant ewes require a rather lib- al supply of protein for developing e foetus and producing wool as well for body maintenance.

* * *

Spring pigs that are to follow cattle feed in the fall and winter should e full fed prior to this time, as become too fat and inactive to be suited to the feed lot.

Sanitation Urged for All Sections

Clean-Up of Fallen Fruit and Destruction of Dumps to Kill Pests.

(Prepared by the United States Department of Agriculture.)

Discovery of the Mediterranean fruit fly in Florida and infested Florida citrus fruit in several other states recently has centered the attention of officials of the United States Department of Agriculture on wide-spread clean-up measures in orchards and fruit packing houses.

A Clean-Up Is Necessary.

Clean-up of fallen fruit and destruction of fruit dumps and rejects is particularly necessary this year not only because of the fruit fly but also because of other common pests, according to Dr. C. L. Marlatt, chief of the plant quarantine and control administration.

Such clean-up of orchards and safe disposition of packing house culls is probably seldom made, Doctor Marlatt says, but the necessity is clearly apparent and he has urged all department inspectors to give wide publicity to the need for the practice and if possible to secure its general adoption.

The reports of finding infested Florida citrus fruit received from other states mention only the finding and destruction of such fruit, Doctor Marlatt says, and make no mention of any clean-up of storage places and premises. Doctor Marlatt is anxious that fruit handlers, dealers, and the public generally realize the necessity of thoroughly cleaning and disinfecting cars, storage rooms in refrigerating plants boxes and other containers, and the immediate surroundings in shops or other places where such fruit has been kept.

Reduce Risk of Spreading.

Risks of spreading the fruit fly and other pests can be very much reduced, Doctor Marlatt says, by making sure that all boxes and other containers are thoroughly cleaned, followed by very careful sweeping up of all dirt, dust, and trash which may be beneath the boxes. Such sweepings should be carefully taken up and burned

Applications of oil, boiling water, or steam to all places likely to be infested with the larvae of the fruit fly are advisable.

Quantity of Grain to Be Fed During Summer

One of the greatest problems in pork production is that of determining the quality of grain to be fed during the summer to growing pigs. The most common practice is to limit the grain to the amount that will allow for a slow rate of growth, as it is assumed that with concentrates high in price the cost of grains on a full feed will not be economical. In summer, pastures are a cheaper source of nutrients than are other feeds. More efficient use of pasture crops is made by hungry pigs than by those having plenty of grain, consequently limiting the allowance of grain is logical if one of the main considerations is to get as high a return as possible per acre of pasture.

Make Money Raising Pigs by Saving Them

The sure way to make money raising pigs is to save them. Every little pig that is lost increases the cost of those saved. Very commonly one-third to one-half the pigs farrowed die before weaning time. A pig at farrowing time is worth or has cost approximately three dollars, and it pays well to keep as many of them alive as possible. Aim to be on hand when the sow farrows to see that everything goes well and that the little pigs get their first meal as soon as possible. Then be sure they have a place to keep warm. Have a guard rail around the pen or a protected corner with most of the bedding in this protected place.

Agricultural Notes

Mow the lawn with the blades set high and sharp.

* * *

Don't expect to cut asparagus from a newly set bed. Let it grow and establish itself.

* * *

See that vegetables are thinned properly all over the garden. Too thick stands ruin the crop.

* * *

It must be remembered that sweet clover is a biennial and if it is to be used for pasture, some should be sown each year.

* * *

Selection of seed corn in the field from healthy, vigorous plants, is the first step in the control of corn ear, stalk and root rots.

* * *

Sweet clover seed for spring seeding should be secured early so that germination tests may be made and the need for scarification determined. If it contains more than 50 per cent hard seed, scarification will be profitable.

* * *

Whenever a farmer begins applying needed limestone and growing legumes in his regular rotation he not only is guaranteeing a higher average yield in his succeeding grain crops, but also is dodging, in a large measure, the bad-weather jinx.

POULTRY FACTS

TURKEYS PAY IF GIVEN GOOD CARE

Attempt to Keep Them With Chickens Causes Failure.

Turkey raising is passing from a general farm side line to a commercial enterprise, as more farmers begin to specialize in the business.

"The coastal and mountain sections of North Carolina are rapidly becoming centers of an important specialized turkey-growing industry," says C. F. Parrish, extension poultry specialist at the North Carolina State college. "These two sections are taking the lead in production. The growers are finding that where they handle the birds with care, excellent profits may be made. One of the greatest reasons for failure is that some growers attempt to keep the turkeys with chickens and usually do not provide the turkeys with a home, with feed and care."

To begin with, the turkey grower must get started right, says Mr. Parrish. He needs to use only strong, healthy birds as breeders and to place these on clean, well drained, dry soil, where chickens have not been kept. Turkey eggs may be hatched in an incubator, under the turkey hen or under a chicken hen. Where the hen method is used, the mother bird must be dusted with sodium fluoride to control lice. This dusting should be given during the first week and again in ten or fourteen days. Use only a small pinch of the material for each hen or serious results may follow with the poults.

When the poults hatch, they should not be fed until forty-eight hours old, a little milk and green feed, such as short tender grass, lettuce or onion tops might be given. When feeding begins, the poults must be fed often, as much as five times a day in small amounts. The scratch grain is given when the poults are about one week old. Feed the mash, scratch feed and greens until the young turkeys are three weeks of age, generally increasing the scratch and getting it finally to two good feeds each day.

Early Roosting Habit Is of Great Benefit

Chicks that get the roosting habit early in life will usually grow into better chickens than those that are allowed to cuddle in crowded houses throughout the summer. Early roosting used to be considered the cause of many of the crooked breastbones in chickens. Results of proper feeding have shown that this trouble is more often caused from a deficiency of minerals in the ration or from a lack of sunshine.

With this false notion of crooked breastbones out of the argument, practically all of the benefits lie with the early training of the chicks to roost. Such chicks will be easier to handle in the fall when they are put into laying houses. They will also be less apt to crowd and become overheated, in addition to being easier to care for.

In training chicks to roost, it is a good plan to have the roosts low. Often it is necessary to place the chicks upon the roosts once or twice. Soon they will find that such roosts are much more comfortable than muddling around the hover, and they will quickly adopt the roosting habit.

Poultry Notes

Keep house and yard clean.

* * *

Build a good house or shelter.

* * *

Provide roosts and dropping boards.

* * *

Grow some green crop in the yard.

* * *

Keep the hens confined to your own land and off the road.

* * *

Don't keep a male bird. Hens lay just as well without a male.

* * *

Kamala is a good remedy for tape worms in poultry and nicotine sulphate a good remedy for other intestinal worms.

* * *

Unless eggs are produced by healthy hens under sanitary conditions, the chicks produced will be liable to the diseases of the present flock.

* * *

If you cannot get your cockerels on the market early enough to get the top broiler prices for them, caponize some of them and see what they will bring you next spring as capons.

* * *

Bright green alfalfa is a very valuable addition to the mature ducks' ration and they will relish a little of it.

* * *

Keep the hens confined to the houses when the yards are muddy; this helps to keep the hens' feet clean. Gather eggs often.

* * *

What is a fresh egg? Strictly speaking, an egg is considered fresh until it has been in storage at a temperature of 300 degrees F. at least 30 days. However, the best prices are paid for the newly laid eggs.

A Wise Kid

Office Manager—Yes, I'm looking for a young lad to learn office work. Is your boy honest?

Mrs. McJill—Oh, yes. But he knows well enough that business is business.

WHEN damp days, sudden changes in weather, or exposure to a draft makes joints ache, there is always quick relief in Bayer Aspirin. It makes short work of headaches or any little pain. Just as effective in the more serious suffering from neuralgia, neuritis, rheumatism or lumbago. No ache or pain is ever too deep-seated for Bayer Aspirin to relieve, and it does not affect the heart. All druggists, with proven directions for various uses which many people have found invaluable in the relief of pain.

BAYER ASPIRIN

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

Very Simple

Lady—I am returning the clock you sold me because it does not keep correct time.

Clerk—It iss a good time-keeper, madam. Ven de liddle han' iss on four, an' de clock strikes twelve, it iss always nine o'clock.

Fate is a female who gives men the laugh for believing in her.

Isn't dyspepsia a food product?

OLD FOLKS SAY DR. CALDWELL WAS RIGHT

The basis of treating sickness has not changed since Dr. Caldwell left Medical College in 1875, nor since he placed on the market the laxative prescription he had used in his practice.

He treated constipation, biliousness, headaches, mental depression, indigestion, sour stomach and other indispositions entirely by means of simple vegetable laxatives, herbs and roots. These are still the basis of Dr. Caldwell's Syrup Pepsin, a combination of senna and other mild herbs, with pepsin.

The simpler the remedy for constipation, the safer for the child and for you. And as you can get results in a mild and safe way by using Dr. Caldwell's Syrup Pepsin, why take chances with strong drugs?

A bottle will last several months, and all can use it. It is pleasant to the taste, gentle in action, and free from narcotics. Elderly people find it ideal. All drug stores have the generous bottles, or write "Syrup Pepsin," Dept. BB, Monticello, Illinois, for free trial bottle.

Points of Difference Between Man and Crow

James Speyer, the philanthropist and financier—he has just given half a million to complete the building fund of the New York museum—was talking at the Manhattan club about summer vacations.

"The strenuous vacation is pleasant to remember," Mr. Speyer said, "but it isn't so pleasant while it is actually going on.

"A young chap was on a walking tour in New England. As he plodded under his heavy ruck-sack along a blazing country road on a terrible August afternoon he met a farm hand.

"'How far is it to Croyden Four Corners, friend?' he panted, as he drew his sleeve across his red, wet face.

"'Four miles, as the crow flies, stranger,' said the farm hand.

"'But suppose,' said the tourist, 'that the crow's got a blister on each heel, and a 30-pound bundle to carry, and has to walk besides—how far is it then?'"

Perfect Miniature Railroad

The Locomotive Engineers' Journal says that one of the novel exhibits at the model engineering exhibition, held recently in London, England, was the smallest working scale model railway in the world, made by J. J. Landridge of the Wimbledon and District Model Railway club. It is a perfect scale model, made at the scale ratio of 2 mm. to 1 foot. It is only half an inch at the tallest part of the engine—i. e., the cab—and the rails it runs on are ¾ inch gauge. The engine, carriage and trucks can easily be stowed away in a 50-size cigarette box. It works by electricity from a small motor housed in the tiny engine.

Beneath His Notice

Rogers Hornsby told a baseball story at a banquet in New York.

"A Sunday school teacher," he said "asked one of her boy pupils:

"'Willie, who defeated the Philistines?'

"Willie had been gazing out of the window in a dream. He gave a start and answered:

"'I dunno, teacher. I don't never foller none o' them small league teams.'"

Silverware for Brides

The bride is the keystone of the American silverware manufacturer's fortune. A survey just completed shows that 7 per cent of the silverware sold is purchased by and for young couples under thirty years old, while jewelers are unanimous in the estimate that the first purchases are made before the age of twenty-four.—Smart Set Magazine.

No, the Shock Jumbled It

Hubby (reading paper)—Just think, an earthquake has destroyed the entire town of Piszlkykisky in Poland.

Wife—Was it spelled the same way before the earthquake?

Modern Schedule

For girls the period of innocent childhood has been shortened about five years. The period of bridehood as been postponed nearly ten years. —Woman's Home Companion.

The Vital Question.

Mrs. Benham—He has been disappointed in love.

Benham—How long has he been married?

Pretty Good One

Howell—That's a pretty bad cold you have.

Powell—I thought it was up to the usual standard.

Many businesses are not looking for talent. They are satisfied to dub along.

Fine brains direct the world, but average brains carry it on.

Give a kid toys, but let him make a few of his own.

One is born to be his brother's keeper, but he shouldn't know it.

Barberism

"Paw, what does the word barbarism mean?" asked little Willie.

"Barber, of course," answered the father, as he absent-mindedly stroked his chin.

POISON IVY

Hanford's Balsam of Myrrh

Money back for first bottle if not suited. All dealers.

College Fraternities

There were in 1927, 1,961 American college fraternity buildings. These included men's, women's, professional, local men's and local women's fraternities; in all 246 societies, with a total membership of 683,844, and with 3,429 active chapters in the United States.

Arrowroot, a valuable source of starch, is produced commercially only in the island of St. Vincent in the West Indies.

Science is always willing to admit its shortcomings.

Acidity

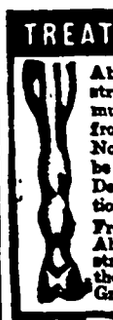
The common cause of digestive difficulties is excess acid. Soda cannot alter this condition, and it burns the stomach. Something that will neutralize the acidity is the sensible thing to take. That is why physicians tell the public to use Phillips Milk of Magnesia.

One spoonful of this delightful preparation can neutralize many times its volume in acid. It acts instantly; relief is quick, and very apparent. All gas is dispelled; all sourness is soon gone; the whole system is sweetened. Do try this perfect anti-acid, and remember it is just as good for children, too, and pleasant for them to take.

Any drug store has the genuine, prescriptional product.

PHILLIPS Milk of Magnesia

TREAT SWOLLEN TENDONS



Absorbine will reduce inflamed, strained, swollen tendons, ligaments or muscles. Stops the lameness and pain from a splint, side bone or bone spavin. No blister, no hair gone, and horse can be used. $2.50 at druggists, or postpaid. Describe your case for special instructions. Interesting horse book 2-S free.

From a race horse owner: "Used Absorbine on a yearling pacer with strained tendon; Colt all over lameness, though for a time, couldn't take a step. Great stuff."

Mr. and Mrs. C. C. Schaefer of Marble Rock, Mrs. J. Gruetzmacher and Mrs. P. M. Griesemer were visiting at the Emery Schaefer home Friday evening.

Dr. W. F. Missman drove to Hampton Tuesday to attend the abnquet and meeting of the Austin-Flint-Cedar Valley Medical Association meeting.

Mr. and Mrs. George P. Merton of Garner, Miss Lilliam Merton of Minneapolis and Elmer Merton of Milwaukee spent Tuesday afternoon at the Arthur Wellemeyer home.

Emery Schaefer's name should have appeare om the cream check list last week. Emery is one of the good dairymen of this community and is a regular man on the honor roll.

Mr. and Mrs. C. C. Schaefer of Marble Rock, Mrs. John Gruetzmacher an Mrs. P. M. Griesemer visited with Mrs. Frank Schuldt and Mr. an Mrs. George Gruetzmacher at Garner last week Friday.

There were a lot of people in town Wednesday night to hear the band concert. Cars were parked on Main Street solid and several blocks on either side The Wednesday evening band concerts are greatly enjoyed.

Miss Gertrude Ely of Belmond spent Sunday evening and Monday at the W. F. Missman home. Monday, Miss Agnes Ely, of Racine, Wis., another sister of Mrs. Missman, came for a visit with her, and with her parents at Belmond.

Mr. and Mrs. A. D. Gimer and son, Thomas and daughter, Thelma, drove to Abbott, Iowa, Saturday afternoon for a visit with relatives. Mr. Gimer's father and mother, Mr. and Mrs. W. T. Gimer came home with them for a visit.

Mr. and Mrs Eniar Salling eft in their car this morning for a short vacation trip to Wisconsin. They will visit at Oakfield and Sheboygan and will visit the Dells. They expect to retunn home the fore part of the week.

Mr. and Mrs. Arthur Wellemeyer drove to Garden City. Minn., Sunday for a visit with the Albert Yahnke family. Ruth and Nora Wellemeyer and LaVohn Larsen came back with them. These girls had been visiting the Yahnkes for two weeks.

Fred Schmidt broke one of the bones in his leg, near the ankle, when he fell Saturday morning as he was running in the yard getting cattle to the barn. Fred is limping around with the assistance of a pair of crutches.

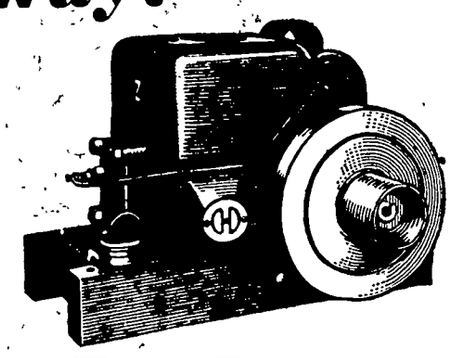
Irma Olm, accompanied by Mrs. August Untlet and daughter, Florence of Stratford, Wis., came last Thursday for a visit at the Rev. C. Grosshuesch home. The two latter left Sunday morning, but Irma remained for a longer visit.

Clarence Elder left Monday morning for Minneapolis to begin work in the circulation department of "Farmers Wife," a Webb Publication. Clarence recently completed a four year course in Agricultural Journalism at Ames, and this coupled with his former experience in the Times Office should fit him to handle his new job in fine shape. Clarence is a fine young man, and we know he will make good. Here is wishing him much success.

Quite a number of Klemme people visited Camp Roosevelt Tuesday evening for the opening camp fire ceremony. Those who we saw on the camp grounds were: Mr. and Mrs. Clarence Kluckhohn and son, Eugene and Mrs. Metzgar; Mr. and Mrs. Frank Kluckhohn and family; Mr. and Mrs. Leonard Sampson and children; Mr. and Mrs. C. G Waterman and Marian; Mrs R. A Jorgenson and Buster and Mr. T. Davis; Mr. and Mrs. John Day; Mr. and Mrs Wm Smith and Miss Mabel; Mr and Mrs. Wallace Pavey and Juanita; Marlin Croner and Dorothy; and Walter and Dannie Johnson.

New and different every way!

The NEW *Self-oiling* "Z" engine 1½ hp.



It's here!

Come in and see it!

Never will you find an Engine that will come so close to your *ideal* of a 1½ hp. power plant as will this one. And most remarkable of all, is its low price, explained by the huge production and universal distribution which holds down the price of all Fairbanks-Morse products.

Don't fail to come in and see this engine. Note its remarkable design, its compactness—unlike anything you've ever before seen. Note how it is completely enclosed and self-oiling—protection against dirt and weather conditions. Then start up the engine—with the famous F-M Type "R" Magneto!

This is the way to get a good idea of what this *engine* is! You'll surely want to see it. Easy terms. Come today.

KLEMME SCOUTS MADE GOOD RECORD AT CAMP

Wonderful Progress in Swimming And Leather Craft Work

Scouts of Troop 56, Klemme, returned home Tuesday morning after a most successful week spent at Camp Roosevelt, Boy Scout Camp of the North Iowa Aera Council on the shore of Clear Lake.

Klemme Scouts devoted much of their time to swimming and leather craft work and made wonderful progress in these major camp activities.

Nearly All Are Now Swimmers

When the boys went to Camp but one Scout (Byrnes Missman) was classed as a swimmer. After a week at Camp all boys but one passed the beginners class, or fifty feet, and of this number five Scouts, Wilbur Arnold, Kenneth Kluckhohn, Paul Swanson, Dorance Day and Clarence Kluckhohn passed the first class of fifty yards. Out of this group two or three boys again took the 100 yard test and passed it for the Red Seal. Byrnes Missman entered the Merit Badge Class but did not quite complete all tests.

The record made by the boys in swimming was very satisfactory and several Scouts are well on the way to receive a First Class badge.

In Leather Craft our Scouts all showed a keen interest and many nice pieces of leather was turned out including bill folds, key purses, cigar cases, coin purses, neckerchief slides, knife sneaths and lanyards. All leather work is hand tooled and raised, and laced.

For points the Klemme Scouts received their share of Camp R's. Wilbur Arnold, Wayne Pavey and Floyd Klotzbach won their White R; Kenneth Kluckhohn and Byrnes Missman tied their last year record for a White R; the balance of the troop all tied their last year record for a Red R.

Troop Committeeman C. G. Watterman and Scoutmaster R. A. Jorgenson spent the greater part of the period in Camp with the local troop. Committeemen J. N. Day and Dr. W. F. Missman were also Camp visitors at different times.

All of the boys feel that the week was well spent and much valuable knowledge was gained. Parents of the boys were frequent visitors in Camp and all were well pleased with the work being done.

Troop 56 is laying plans for extensive scouting programs for the coming year and the knowledge gained at Camp will be put to good use during the coming months.

JUNE REPORT OF GARNER KLEMME C. T. ASSOCIATION

John Bock's herd of 11 grade Holsteins lead the Association with an average production of 36.7 lbs. butterfat per cow.

Fred Kotbenbeutel's herd of 14 grade Guernseys was second with an average of 36.4 pounds of butter fat.

The high cow in the Association was a grade Guernsey belonging to M. T. Love, Garner. She produced 38.8 pounds of butterfat. The second high cow belonged to Fred Kotbenbeutel and she produced 62.3 pounds butterfat.

There was a total of 270 cows on test and the average butterfat production for the month of June was 27.9 pounds.

Howard Horne, Tester.

NO SERVICES SUNDAY AT THE REFORMED CHURCH

There will be no services at the Klemme Reformed Church Sunday as the pastor and his family are absent for a short time.

All of the services at the Mission Festival were well attended last Sunday. The offering for Msisions and benevolences amounted to $217.75.

KLEMME BOYS INJURED IN CAR WRECK SUNDAY

Pete Merkel's New Car Smashed In Accident Near Cornelia

The Ford sedan belonging to Mr. Peter Merkel and driven by his son, Lester, along with Otto Smid and Leonard Swanson was wrecked last Sunday afternoon when it struck an embankment southwest of Lake Cornelia.

The Klemme boys were going toward Clarion from the lake when the accident happened.

The story was related about as follows. As the Merkel car was traveling along at about forty miles per hour the Klemme boys were passed up by a De Sota and a Ford car who were racing. This caused a great cloud of dust on the road and as the racing cars came to a corner the De Sota slid and turned around in the road several times but did not tip over; the Ford driver, knowing of the corner slowed down, but the Klemme boys were unaware of the corner and on account of the dust did not see it and so hit the embankment on the corner instead of going around the corner. Otto Smid suffered the worst cuts when the impact threw him against the wind shield with such a force that four or five of his teeth were knocked out and he received two bad cuts, one splitting his lower lip and the other cutting his chin besides a smaller cut on his forehead. Swanson received a cut below his knee, while Merkel was only slightly bruised. Smid was taken to the Clarion hospital for attention and it took sixteen stitches to close his lip cut and six stitches on his chin.

The Merkel car was somewhat wrecked. Both front wheels were broken off, the windshield broken, the bumper torn off and the engine knocked loose from its frame

L. O. DEAL AND FAMILY MOVING TO SANBORN, MINN.

Will Manage Telephone Company At That Place

Mr. L. O Deal, manager of the Iowa Union Telephone Company here for the past two years has been notified that he will be transfered to Sanborn, Minnesota, and with his family will leave for that place on Sunday.

The transfer comes as a substantial promotion for Mr. Deal and he will receive an increase in salary. His official duties at Sanborn will be that of both wire chief and manager of the Minnesota Union Telephone Co, being the Minnesota division of the Company he is now with.

Mr. Deal is an expert on re-building telephone systems and that will be largely his work at Sanborn. During the two years he has been in Klemme he has rebuilt the entire system here and the service the Company now gives Klemme and vicinity is very satisfactory.

The Deal family have made many friends here who will regret having them leave but wish them happiness in their new home.

L. H. Lampkin, who has been in Klemme for the past two months assisting Mr. Deal, will manage the local Company for the present.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Our Sunday morning worship services have thus far been well attended, and it is hoped that the same interest will continue thruout the summer.

The subject for next Sunday morning worship will be "Divine Forgiveness."

The Epworth League service for Sunday evening will be held at 7:30 o'clock and will be open to everybody as the delegates of the Okoboji Institute will be in charge and will give their reports. You are invited to attend.

A group of the Liberty young folks who belong to the Standard Bearers are holding an Ice Cream Social at the Liberty Church Friday evening of this week. If you like home made ice cream do not fail to be there.

MRS. LAU ENTERTAINS FORCE OF IOWA UNION TEL. CO.

Party Given In Honor Of Mr. And Mrs. L. O. Deal Who Leave

Tuesday evening Mrs. W. F. Lau, chief operator at the Iowa Union Telephone Co. office here entertained the force of the local company in honor of Mr. and Mrs. L. O. Deal and son who are leaving for Sanborn, Minn.

The people connected with the local office whom Mrs. Lau entertained are Mr. and Mrs. Lampkins, Mr and Mrs. L. O Deal and son, James, Carl Reynolds, Glen Bridges and Valeria Koerner, and Mrs Lau's two daughters, Jean and Elise.

The party first enjoyed bathing at Clear Lake and then enjoyed a dinner at one of the Clear Lake Cafes. After the meal the party drove to Mason City and took in a show.

All reported a fine time and that Mrs. Lau is a royal entertainer.

The telephone force presented Mr. and Mrs. Deal with a beautiful blanket as a remembrance gift.

CREAM CHECK LIST NEXT WEEK

Peter Josten, secretary of the Creamery wishes to announce that the cream check list will be published in The Times next week. On account of a rush of work it was impossible to get the list ready for the paper this week.

TWO VAUDEVILLE ACTS AT THE BAYSIDE PARK SUNDAY

Two sensational acts will entertain visitors at Bayside Park both o Friday evening, July 26 at 8:00 p. m., and Sunday, July 28, at 2, 5 and 9:30 p. m. LaVine and Mae will delight with a novelty slack wire act. They will do acrobatic stunts, juggling and rope spinning. Vivian and Walters will entertain with slow-motion hand-to-hand and head balancing and the seal roll will be featured. These two acts just finished a vaudeville contract and after their Bayside appearance they wil appear at county and state fairs

The other regular features of Bay side will be in full swing Sunday.

NOTICE

Please send in your news letters, locals and adverticing early next week as we plan to print early in order to take a few days vacation.

Get your items into the office on Monday if possible. —Editor.

FESTIVAL OF BALLOONS WILL FEATURE AVERY MEETING

Public Is Invited To Attend Farm Bureau Carnival

The Avery Township Farm Bureau announces a "Festival of Balloons," at the home of Mrs. C. A. Arnold, Friday evening, August 2.

Living statuary, folk dancing, a trip through Chinatown, jinrikishas and a Chinese pageant will be features of the evening's entertainment.

Doughnuts, coffee, cake, pie, popcorn, and ice cream will be offered for sale.

The public is cordially invited to attend this out-of-door meeting.

GOODELL AND VICINITY ITEMS OF INTEREST
(By Special Correspondent)

GOODELL AND VICINITY

Mr. and Mrs. W. L. Sherwood and family spent Saturday and Sunday wtih relatives in Iowa Falls.

The U. B Sunday school picnic was held on the school gronuds on Thursday.

J. J. Cook has a new Chevrolet sedan.

Mier Wolf of Mason City delivered furniture near Goodell Friday.

Chas. Conklin and Mr. McGinnis went to Des Moines Sunday to attend the aeronautics exhibit.

Funeral rites were held for Mrs. Geo. Christie Friday at the U. B. Church. nterment was made in the Amsterdam cemetery. Mrs. Christie was a pioneer resident of this ocmmunity and was well known around Goodell

Mr. and Mrs. Howard Wiles and daughter, Marjory, and Mrs. Sarah Behringer of Waukesha, Wis., and Mrs. Elmer Fuller and daughter, Mayis, of Des Moines, visited relatives here Saturday.

Miss Lela Griggs returned to Des Moines Sunday after a weeks vacation with her parents, Mr. and Mrs. Jay Griggs.

Mr. and Mrs. Graber of Belmond were Goodell callers Friday.

Mr. and Mrs. Hans Nelson were entertained to Sunday dinner at the Mat Avery home.

John Costello was in Klemme on business Thursday.

Miss Mae Griggs went to Sioux City Tuesday for a visit with some friends.

Word has been received here that Miss Dorothy Olsen of Forest City, who taught the intermediate grade room here last year, was recently married.

Mrs. Rose Houghton of Marshalltown visited the first part of the week with her daughter, Mrs. Conlan.

The Avery Township Farm Bureau meeting was to be held at the home of Mrs. C. A. Arnold Friday night has been postponed until Friday night next week.

FIFTY PEOPLE AT FAMILY REUNION

HARBERTS FAMILIES ENJOY A REUNION AT EAST PARK

Over Fifty People Were Present At Family Gathering Sunday

Sunday the Harberts family reunion was held at East Park, Mason City, with about fifty relatives present. who gathered at the beautiful park and enjoyed a big picnic dinner together and also celebrated the birthday of Mr. Herb Harberts. He was presented with three birthday cakes which had been baked by his neices.

Those prsent at the gathering at East Park were the following: Helen, Herb and John Harberts; Mr. and Mrs. George Harberts; Mr. and Mrs. Theodore Bonte and family; Mr. and Mrs. Harm Braner and family; Mr. and Mrs. Ranke Meinders and family; Mr. and Mrs. Adolph Meinders, and Louis Meinders, of Belmond.

Mrs. Jennie Buss and family; Mr. and Mrs. Harry Buss and family; Mr. and Mrs. Harvey Harberts and Avenn, of Klemme.

Mrs. Adolph Meinders, Sr., and Mr. and Mrs. Lambert Menke and family of Mason City.

Mr. and Mrs. Hio Harberts and family of Goodell.

Mr. and Mrs. Sylvan Johnsom and family of Clear Lake; and Mr. and Mrs. Ranke Buss and family of Alexander.

All expressed the good time that was enjoyed and all are looking forward to the annual re-union next year.

Card Of Thanks

We wish to thank our neighbors and friends for their kind help and sympathy and for the flowers given in our recent sorrow, in the death of our father, William Becker.

Mary, Anna, Rosie, William and Ed. Becker; Mr. and Mrs. Peter Josten; Mr. and Mrs. Fred Becker.

NOTICE OF APPOINTMENT OF ADMINISTRATRIX

Administratrix.

(Publish July 18-25, Aug. 1, 1929)

ALBERT WHITE'S CAR IN WRECK LAST WEDNESDAY

Albert White's Ford Tudor sedan turned over two or three times on the highway about a mile north of Klemme last Wednesday evening and was badly wrecked.

Besides Albert, the car was occupied by Miss Erma Tompkins of Minneapolis, Lucille Kraus and Mabel Schuldt, with Miss Tompkins at the wheel. The accident happened when the Ford turned out to pass a car ahead and begna to swerve and in trying to straighten the course the car turned over.

No one was seriously injured, the occupants being bruised slightly in the mix up.

Mrs. W. F. Lau left today for Forest City where she will join some ladies and together they will drive to Minneapolis for a few days visit with friends and enjoy a few days of vacation.

LIBERTY TOWNSHIP NEWS

Mr. and Mrs. Frank Ward and children and Mr. and Mrs. Emil Beier and Billie were dinner guests at the Ben Ridder home Sunday.

Mr. and Mrs. Albert Borchers of Garner spent Sunday at the Herman Gast home.

Mr. and Mrs. J. J. Lemke were Mason City visitors Thursday.

Mrs. Rose Tanner, Florence and Francis were visiting at the Lew Abele home Sunday.

Lew Griffen and family are enjoying a new Chevrolet sedan.

Miss Lydia Beier and Grandma Beier were pleasantly entertained at the Art Schoenwetter home Sunday.

Mr. Charley Bredlow and children and George White and Will Stuckow family enjoyed the day Sunday at West Bend.

It might be news to many to know where Milton Schaper is located. He finished his course at Moody Institute recently and is now preaching at Aurelia, Ia., about fifteen miles from Storm Lake.

Red Carlson, Glen Lange, Kenneth Gast, Irene Carlson and Fern Stille drove to Okoboji Sunday and spent the day.

Mr. and Mrs. Aug. Ridder were visiting at the Beier home Monday.

Mrs. Martha Pruel Jensen of Ackley visited at the home of her sister Mrs. J. J. Stille the latter part of the week.

Mr. and Mrs. Floyd Franklin attended a party given in Garner on Monday evening complimentary to Mr. and Mrs. Nick Brear. Mrs. F. Franklin was one of the hostesses

Mr. and Mrs Ralph Carolus and family visited at the Albert Carolus home Sunday.

An ice cream social will be held in the Liberty Church Friday evening. Home made ice cream, candy, pop corn balls and cake will be sold.

The W. F. M. S. will hold their regular monthly meeting next Wednesday afternoon at the Church at which time the Kings Heralds will honor their mothers by some special entertainment. They are requested to hold a meeting some time during the year in their honor.

In the W. F. M. S. Convention hld recently at Emmetsburg the Liberty church was put on the map by receiving the highest honors for having the most merits and in appreciation the district raised ten dollars to allow this society to elect a district life member at the last meeting. Lois Riemer was chosen to represent Liberty. Mrs. Beier can be given credit for the wonderful work this little band of children have been doing the past year. Amelia Kahler and Arthur Swamley were elected life members of this society.

A large family gathering was held at the Will Lemke home Sunday in honor of Grandma Lemke, it being her seventy-eighth birthday Saturday. After a big picnic dinner the afternoon was spent socially. Those present were Mr. and Mrs. Will Beier, Goodell; Grandma Lemke; Mr. and Mrs. Eric Clark and Richard, of Garner; Mr. and Mrs. Otto Lemke, Wayne and Clarence; Mr. and Mrs. R. R. Lemke; Walter, Meta, Reuben and Irene and Mr. and Mrs. J. J. Lemke and Jonas Priestley.

The visiting ministers at the Reformed Church Mission Festival on Sunday were: Prof. J. W. Grossheusch, Plymouth, Wis.; Rev. Walter Grossheusch, aMdison, Wis.; Rev. G. Schoon, Buffalo Center; Prof. H. Schoon, German Valley, Ill.; Rev. D. Plesscher, Kanawha, and Rev. C. Schmid, Garner.

Miss Mildred Wheatman, former Klemme teacher, underwent an appendicitis operation last Tuesday at the Decorah hospital. No doubt she would appreciate cards from her pupils. Cards or letters sent to her in care of the Decorah Hospital will reach her.

Mrs. Lena Schroeder and daughter Adella have enjoyed quite a lot of company the past week. Tuesday Mr. and Mrs. Henry Lau came from Tracy, Minn. Wednesday evening Mr. and Mrs. Axmier and 4 children came and visited until Monday. Mis Adella roomed with them while she was at Keswick.

Erick Josten was visiting with Earl Josten at Harris Saturday.

The "Iron Horse's" 100 Years

FROM TOM THUMB (1828) TO "U.P. 7500" (1929)

Photo by Underwood & Underwood

The above photograph shows C. A. Lehman, a teacher in the Long Beach (Calif.) schools and the marvelous collection of locomotive models he has made. Starting with the model of Tom Thumb of 1828 used by the Baltimore & Ohio, the models are as follows. De Witt Clinton, built for the Mohawk & Hudson in 1831; Pioneer, first engine used by the Chicago & Northwestern in 1848; typical locomotive of 1850; Falcon, Central Pacific engine which met the Union Pacific No. 119 in Utah in 1869; fast passenger type of 1880; passenger type of 1895; Atlantic type used by the Pennsylvania in 1905; heavy Pacific type of 1910; Mallet-Compound locomotive of 1918, and the latest three-cylinder passenger Union Pacific which has a speed of 80 miles an hour.

By ELMO SCOTT WATSON

THE "iron horse" is 100 years old. On August 8, 9 and 10 the citizens of Honesdale, Pa., will observe its birthday with a celebration commemorating the first successful operation of a steam-driven locomotive on the Western Hemisphere. The locomotive was the Stourbridge Lion. It was built in England and shipped to this country in February, 1829, as the property of the Delaware & Hudson Canal company, and on August 8 it was put into operation on a three-mile stretch of track near the scene of the company's operations at Honesdale.

The first trial run of the locomotive demonstrated conclusively that steam transportation was practical and that the Lion would operate, but officials of the company found that the wooden rails, covered with a thin strip of iron, could not stand heavy duty and the Lion was never used for practical work.

But even though the Lion was not kept in service, to its trial trip belongs the honor of being the first time a practicable locomotive ran upon a permanent railroad track in America and to Horatio Allen, who operated it, goes the distinction of being the first American locomotive engineer. So at the Honesdale celebration a monument to the locomotive will be dedicated and a transportation parade, depicting all modes of travel from oxcart to airplane will be held.

The development of railroads in the United States is another story of American magic. From those three miles of track near Honesdale has grown a network of nearly 250,000 miles of steel rails which penetrate to every part of the country. The progeny of this first "iron horse" now number more than 70,000. Whereas their ancestor weighed only 8 tons and puffed along at the rate of three or four miles an hour, some of these "colts" are giants, weighing more than 300 tons and they roar across the country at the rate of 80 miles an hour. A century is a comparatively short time in the history of a nation, yet the past 100 years of railroad history in the United States has seen such marvelous changes as to make its story sound like a tale from the Arabian Nights.

To appreciate fully its marvels, we must turn to the early days of railroading and in the volume "The March of Commerce" in the "Pageant of America" series, published by the Yale University Press, one may read the following interesting account of the "iron horse's" beginnings:

For fifty years after Watt gave the world his steam engine in 1773 other inventors toyed with the idea of making a steam engine move itself. Among Americans who experimented with steam road wagons or steam locomotives were Oliver Evans, Benjamin Dearborn and John Stevens. Many British inventors, including Richard Trevithick, also experimented with the problem. The weakness in all their machines was that they could not produce steam as rapidly as they used it, nor did their engines have enough power to move quickly or to pull more than their own weight.

In 1829 the progress of British invention justified a competitive trial held by the Liverpool & Manchester Railway. At this test the Rocket, an engine invented by George and Robert Stephenson, father and son, was the victor. The Rocket combined two features which enabled it to eliminate the faults of its predecessors and competitors; it had a tubular boiler and a forced draft. Stephenson's boiler exposed the maximum of heating surface to the burning fuel, and the forced draft occasioned by turning the exhaust steam from the cylinders into the stack fanned a fire fierce enough to produce steam faster than it was used. Thus, although Stephenson alone is not to be credited with the invention of the locomotive, he was responsible for setting forth a practicable combination of known principles by which for the first time the machine desired by other inventors was obtained. Consequently his fame is deserved. . . . With the winning of the Liverpool & Manchester railway prize of 500 pounds, Stephenson became, and for the rest of his life remained, the most successful locomotive builder in Great Britain and all Europe.

Our interest in this English inventor lies in the fact that it was an English-made locomotive, rather than an American product, which made the historic run whose centennial is being celebrated in Pennsylvania this year. The "Pageant" narrative continues:

English engines came to America through the action of the proprietors of the Carbondale railroad, the coal tramway of the Delaware & Hudson Canal company. Through their civil engineer, Horatio Allen, whom they sent to England, they ordered three locomotives, one of them with riveted flues of large size from Foster, Rastrick and company, of Stourbridge and the other two with tubular boilers from Stephenson and company of Newcastle-on-Tyne. The Stourbridge Lion was operated at Honesdale by Horatio Allen on August 9, 1829. The locomotive proved so heavy (8 tons) that it was pronounced unsafe on the frail bridges and trestles of the Carbondale railroad and was discarded. This trial, however, was the first time a practicable locomotive ran upon a permanent railroad track in America, and Allen, although it was the only time he ever ran an engine, has the distinction of being the first American locomotive engineer. The Stourbridge engine received its name from a painting of a lion's head on the front of the engine's boiler. The Lion, stored in a shed by the Carbondale railroad, was picked to pieces by souvenir hunters and what was too heavy to carry away was eventually sold by the railroad for old iron. Later the historical value of this engine caused a search for its parts, some being recovered. The two engines built by Stephenson and Company, arrived somewhat later. They were stored in an iron warehouse in New York City, exhibited occasionally, but never used. These engines were similar to the Stephenson Rocket and if they had been given a trial at once they would have had the historical place now assigned to the Rocket itself, for the latter did not make its famous trip until October 14, 1829.

The first railroad constructed in America with a definite aim of carrying passengers and freight was the Baltimore & Ohio. It was chartered in 1827, and the laying of the rails began on July 4, 1828, Charles Carroll, the only living signer of the Declaration of Independence, lifting the first shovelful of earth. The first section of 13 miles, from Baltimore to Ellicott's Mills, was opened in May, 1830. The promoters experimented with various sorts of power. One was a flat car fitted with a treadmill operated by a horse. Upon its trial trip this contrivance was upset by a stray cow on the tracks and the device was condemned. Another experiment was made with a sailcar, the Meteor, a sailboat on wheels.

Peter Cooper was the next inventor to offer ideas to the Baltimore & Ohio railroad; he was influenced in part by the fact that he owned some land value of which would be enhanced if this railroad proved a success. Cooper built a tiny steam locomotive with a boiler about the size of those that now stand by the kitchen stove and with flues constructed with gun barrels. Other parts were proportionately small and crude. This engine was called the Tom Thumb. With it, Cooper made a few trial runs upon the partially finished railroad in 1830.

With the data secured from his small model, Cooper reconstructed the Tom Thumb and operated it again on August 28, 1830, over the full 13 miles of the road, attaining a speed of four miles an hour, pushing a car with 24 passengers. A few days later there was a challenge race between the Tom Thumb and an horse-drawn car over the double track from Ellicott's Mills to Baltimore. The gray horse led at the start but the locomotive caught up with it and passed it; then a belt slipped and the horse reached Baltimore first. During the following year horses served as a motive power on the Baltimore & Ohio.

Although the gray horse had defeated Tom Thumb, the Baltimore & Ohio officials believed that the steam locomotive was worth further trial. Accordingly they offered a prize of $4,000 for the best engine which should be delivered to them for trial, by June 1, 1831, and a prize of $3,500 for the second best engine. The winner of the competition was a watchmaker named Phineas Davis of York, Pa. He called his locomotive the York. But the B. & O. men, because of its appearance, called it the grasshopper. Another engine which Davis built for the Baltimore & Ohio, similar to the York, was called the Traveller and it has the distinction of being the first used for freight service.

Among the other historical "firsts" should be listed the Charleston & Hamburg railroad, chartered by South Carolina in 1829, which from its beginning was planned for the use of steam power. So to it rather than to the Baltimore & Ohio, goes the honor of being the first railroad in America constructed for steam. In 1830 this railroad contracted with the West Point foundry of New York city for a steam locomotive capable of making the astonishing speed of 10 miles an hour. This engine was called at first The Best Friend of Charleston, but it was usually referred to more briefly as The Best Friend. It had its first trial in November, 1830, and promptly ran off the track. After some changes had been made it proved able to make 30 miles an hour without a load and 21 miles an hour when pulling four loaded passenger cars. It was put into service in January, 1831, and in June of that year it figured in the first locomotive accident in America. Its fireman was a negro who did not like the sound of steam escaping from the safety valve. So he sat on the valve, whereupon the boiler promptly blew up, breaking the negro's thigh and teaching him some things that he had never before suspected about the power of steam. To avoid a recurrence of such accidents the Charleston & Hamburg railroad, when it put its second locomotive, the West Point, into service, placed between the locomotive and the passenger coaches a car piled with cotton bales and another occupied by a negro brass band. The theory was that the music would tend to divert the passengers' minds from the possibility of an explosion and if an explosion did occur the cotton bales—and the negroes—would get the benefit of the blast.

The next famous "iron horse" to make its appearance is described in the "Pageant" narrative as follows:

Under a charter granted by the New York legislature in 1826, the Mohawk & Hudson Railroad company built in 1831 its original line from Albany to Schenectady, a distance of about 17 miles, the primary link in the present New York Central system. The road was at first operated with horse-drawn cars, but the success of the southern railroad with locomotives, led to the ordering from the West Point foundry in April, 1831, of a locomotive to which was given the name of the De Witt Clinton. The first public trial of the engine, pulling a train of cars, was on August 9, 1831. The engine employed wood fuel and the passengers were showered with sparks from the stack, so that some had their clothing burned in spots, while others put up umbrellas to ward off the fiery rain. The cars were coupled with heavy chains about three feet long, and, when they started and stopped, the venturers were jerked off their seats as the chains' slack was taken up or the cars crashed together. The passengers themselves cut fence rails and wedged them between the cars to reduce the hazards of the journey.

The Baltimore & Ohio, the Charleston & Hamburg and the Mohawk & Hudson were the leaders in experimental railroad construction. The practicability of the new form of transportation needed no further proof to encourage a number of other railroad projects and as soon as the smallest link was ready for traffic it was open to the public. Thus by 1835 people and goods were moving by rail over the completed portions of the New York & Harlem railroad in New York, the Camden & Amboy railroad in New Jersey, the Philadelphia & Germantown & Norristown railway, the Columbia railroad, the Philadelphia, Wilmington & Baltimore railroad and the Reading railroad in Pennsylvania. In New England by that time, three railroads radiated from Boston, one north to Lowell, one west to Worcester, and one south to Providence. In the same year the original railroad, the Baltimore & Ohio, with about 70 miles of track carried about 100,000 passengers. By 1835 the steam railroad was an accepted fact in the United States.

Under Palestine's Sands

One of the objectives of Prof. Flinders Petrie, in his excavation work in Palestine is to discover the headquarters of King David's army. He hopes to reclaim the military despatches recording the victory of the Israelite arms over the hostile tribes who wished to remain in possession of the land flowing with milk and honey. After what he and others have found in Egypt, anything seems possible. The civilization of the shepherd-kings may become as familiar to us as that of the Pharaohs is. He might even discover more Psalms.

Self-Winding

Herman E. Meyer, a Jersey City barge hand, claims to have discovered a method by which a spring may be made to wind and rewind itself indefinitely. The spring is first supplied with power by winding and then started. As one side of the rotating apparatus unwinds, the other side is wound automatically. The same principle, he says, may also be applied to other forms of power production. His device has been patented.

Religious Statistics

The number of religious denominations in the United States listed in the 1926 census is 213. Churches reporting number 231,983 with an active membership of 54,624,976. The expenditure for the year 1926 is $814,371,529 and the value of church edifices listed is $3,842,577,133.

What Will you do

When your children Cry for It

There is hardly a household that hasn't heard of Castoria! At least five million homes are never without it. If there are children in your family, there's almost daily need of its comforting. And any night may find you very thankful there's a bottle in the house. Just a few drops, and that colic or constipation is relieved; or diarrhea regulated. A vegetable product; a baby remedy meant for young folks. Castoria is about the only thing you have ever heard of doctors advise giving to infants. Other stronger medicines are dangerous to a delicate baby, however harmless they may be to grown-ups. Good old Castoria! Remember the name, and remember to buy it. It may spare you a sleepless, anxious night. It is always ready, always safe to use; in emergencies, or for everyday ailments. Any hour of the day or night that Baby becomes fretful or restless. Castoria was never more popular with mothers than it is now. Every druggist has it.

Fletcher's CASTORIA

A Give-Away.

"I don't wonder the new gardener does not know his work. He has been a clerk."

"How do you know?"

"He wanted to put the hoe behind his ear."—Faun (Vienna).

POULTRY

COCCIDIOSIS ONE CAUSE OF LOSSES

Protect Pullets From Parasites and Various Ills.

(By M. A. SEATON, Extension Poultryman, Kansas State Agricultural College.)

Young pullets will develop into efficient egg machines if precautions are taken to protect them from parasites and diseases during the summer months and if proper feed is supplied for their development.

Coccidiosis is one of the enemies that must be conquered. It usually appears when the chicks are five to ten weeks old. Symptoms are blood in the droppings. Upon internal examination, the blind intestines are enlarged and filled with a grayish, bloody exudate. Often the liver is spotted. This disease is caused by an organism that tends to destroy the lining of the intestine. It is passed out in the droppings and carried over from year to year in the buildings and ground.

To prevent coccidiosis, move the brooder houses each year and brood on clean ground or use a sanitary platform and keep the chicks confined on the platform until ten weeks old. Keep the young and old stock separated. These precautions will usually prevent the disease.

In outbreaks of coccidiosis, the best-known treatment is to move the brooder house if possible, clean the house often, and feed large quantities of milk. If an all-mash system of feeding is being used, remove the meat-scrap from the mash and substitute 25 per cent dried buttermilk or dried skim milk. Feed this for about two weeks. Large quantities of milk solids in any form will be beneficial.

Value of Sulphur and Charcoal for Fowls

Sulphur is a medicine, and not a food. True, small quantities of it may be found in all our grains, as well as in some other articles of feed. But sulphur as found in grain is combined with some other substance which counterbalances it.

There are times when sulphur is beneficial if judiciously administered, writes Michael K. Boyer in the Farm and Ranch. It must not be recklessly given, and never during wet or damp weather, as its use at such times is apt to cause rheumatic troubles or a stiffening of the joints.

Sulphur is a blood purifier, and often wards off disease and invigorates a run-down system. In such cases a teaspoonful, once a week, mixed with the mash, for about twenty hens, would be about right, but even so small a quantity as this should be given only during a dry period.

Charcoal consists almost entirely of carbon. It is prepared by heating wood so as to expel all the gaseous matter it contains. Ammonia is a gaseous compound-alkaline like potassa, and is often termed spirits of hartshorn.

When charcoal is properly treated there will not remain sufficient ammonia to be injurious to animal life. Any impurities that charcoal might contain would be absorbed through atmospheric conditions.

Do Not Force Pullets Into Premature Laying

It is usually considered better not to force pullets into premature laying by feeding large quantities of mash. Instead, limit the mash until pullets are quite ready to lay and, by feeding a greater amount of grain, to get them fat. Such a ration emphasizes the fat making material and, by withholding the egg-making materials, removes the danger of a too early maturity. Mash should not be entirely eliminated, as it contains materials needed for building up the muscles of young fowls. Too much of it, however, may precipitate egg laying before it is desirable. Give the developing pullets all the grain they will eat during early fall and after they come into normal laying, gradually decrease grain with a corresponding increase in mash feeding.

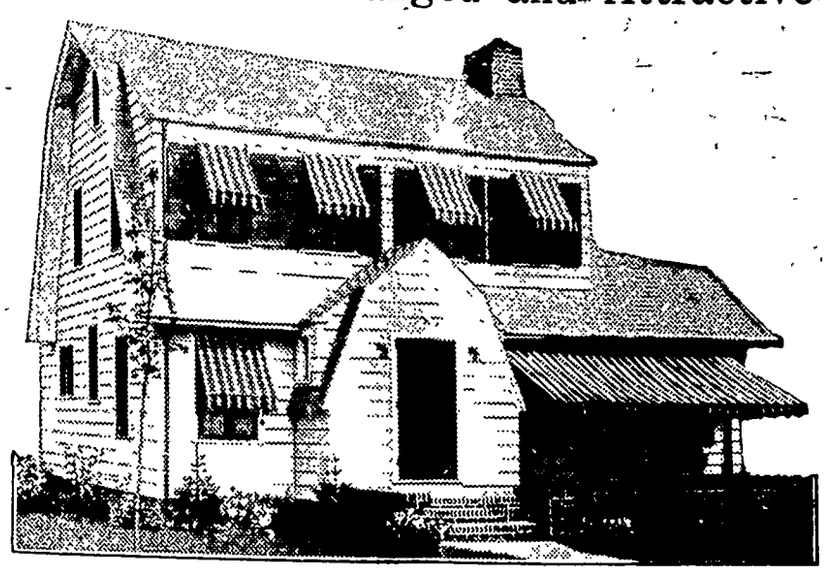
Turkey Production

The most important discovery in turkey production has been on the line of sanitation. If the turkeys are kept on ground that has not been used for poultry for a year or more, they will likely escape without any trouble similar to the old blackhead disease. Chickens are known to be carriers of the insect that causes blackhead. If you keep your turkeys away from chicken yards and where turkeys have not been the year before, they will not cause you any trouble.

Gains for Chicks

Chicks make the cheapest and most rapid gains when they are young. It is therefore essential that an ample amount of good wholesome food be kept constantly before the birds. Mash hoppers should be of sufficient size so that a large majority of the chicks can eat at the same time, thereby avoiding the constant fighting for room to eat. The outdoor mash hopper of ndequate size is very desirable for developing the young stock. All feeding utensils should be kept clean.

Modified Dutch Colonial Home Well Arranged and Attractive



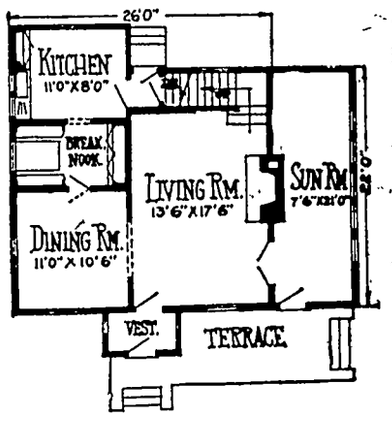
By W. A. RADFORD

Mr William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

There is no excuse for anyone who plans to build or is building a new home to have other than an attractive house. Designs for modern homes have been brought to a point of excellence where exactly the right number of rooms to meet the family needs and their arrangement can be had in a home that is good to look at and one of which the owner may be proud.

Take, for example, the modified Dutch colonial home shown in the accompanying illustration. Added to this rectangular house are an enclosed vestibule, an open terrace and a sun room. These give the exterior of the home an appearance of size much greater than its dimensions and add to its comfort and attractiveness.

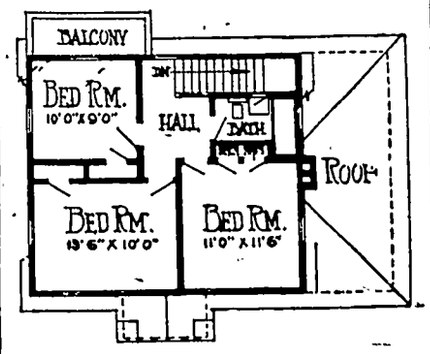
This house is designed for the farm family or a family living in town that requires three fairly large bedrooms. It is 26 feet wide and 22 feet deep, exclusive of the sun room at the end and the terrace at the front. The



First Floor Plan.

home contains six rooms. The living room is 13 feet 6 inches wide and 17 feet 6 inches deep and in the center of the wall which separates it from the sun room is an open fireplace. The sun room is reached through double french doors at the front of the room. An open stairway with one turn leads out of the back of the living room to the second floor.

The dining room is connected with the living room by a double cased opening which gives the effect of two rooms being one spacious room. The dining room is at the front and on the corner which permits windows on two sides for light and ventilation. Between the dining room, which is 11



Second Floor Plan.

feet by 10 feet 6 inches is a breakfast nook where the less formal meals may be served and the work of the homemaker made easier. The kitchen is 8 feet by 11 feet.

Stairs to the basement are under the stairs to the second floor and are reached through the kitchen.

The sun room is a good feature of this house. It is 7 feet 6 inches wide and 21 feet long and has a door leading into it from the terrace as well as the double doors from the living room. There are a window at the front, five windows at the end and two windows at the back which in summer are screened and make the sun room a very attractive semi-indoor sitting room. In the winter these windows are closed, and by extending the heating plant so that this room will be heated it makes a warm, sunny place in the cold weather.

Upstairs there are three bedrooms and a bathroom. All these rooms open off a center hall. Each of the bedrooms is a corner room and each has a good sized closet.

This is a most desirable home building design, and because of its low cost will appeal to a great many prospective home builders who want a pretty house that contains plenty of room for a family of six persons or less and is arranged so that the homemaker can take care of it with a minimum of labor.

First Plaster Was Mud; Now It's Delicate Item

Mankind, in all probabilities, used mud as its first plastic material, applying the mud over a framework of woven reeds. Then, further along in the world's history, the burning of lime and the calcimining of gypsum were discovered.

Up until about 30 years ago lime was the standard plastering material. But lime plaster, because of its chemical composition, takes a long time to reach its ultimate hardness. And it is dangerous to apply a decorative material over a lime-plastered wall until the plaster has completed the chemical process known as the "set."

Here's why: While still in the process of "setting" lime is liable to blister or to burn through a decorative material.

Gypsum plaster, on the other hand, "sets" so rapidly that retarder—material to slow up the process of "setting"—has to be introduced. Thus the "setting time" is actually controlled and gypsum plaster that "sets" in two hours is shipped to those cities where a two-hour "set" is required; a plaster that "sets" in four hours is shipped where a four-hour "set" is required, etc.

Both gypsum and lime plasters are incombustible, and thus add to the fire safety of a structure in which they are used. Often a lime-putty finish coat is used over base-coats of gypsum plaster. In this case, the lime is "gauged" with gypsum gauging plaster to prevent shrinkage and to give the lime an initial set.

Such a lime finish coat is thinly applied. Because of this thinness the lime-coat can get enough carbon dioxide out of the air to complete its "set" within a reasonable length of time.

House Need Repair? Fix It, Advice of Experts

It might be difficult to convince some people that bad architecture is a significant violation of housing standards. There are few, however, who would deny that, other things being equal, a house is better when it is pleasing to look at from the outside, and that whatever the architecture, it should be maintained in a state of good repair.

Every Room in House Has Undergone Changes

Every room in the American home, with the exception of the kitchen, has been changed within the last decade.

The sitting room is a living room now. The lowly backyard has become a sunken garden. The porch is a terrace. The basement is a recreation room. The sunroom reappears as a solarium. But it is impossible to disguise or hide a stove or a sink, and so, in these days of super-efficiency in the home, the only kitchen change possible is to find additional uses for the room.

"Fifty-four per cent of this country's 26,000,000 housewives live in rented homes, and so the changes they desire in their kitchens must be made by themselves," says the household research bureau of Peoria.

"The land's 90,000 builders and building contractors and its 18,000 architects do their utmost, but in hundreds of thousands of homes addition of fold-away wall tables is about the only construction change possible."

Oak Floor Is More Sanitary Than Carpet

Safeguard the family health. Why wear yourself out sweeping and cleaning a carpeted floor? Such a floor is never sanitary, and, of course, you are never satisfied, though you sweep as much as time and health will permit. The thing to do is to lay oak flooring right over the old softwood floor. Then dirt tracked in by playing children is easily removed, there are no cracks to collect dust and disease germs. Your rooms will always look fresh and neat with the least possible attention.

Bathroom and Kitchen Most Neglected Rooms

Too often, in planning a home, the bathroom and kitchen are neglected. Yet these rooms, almost more than other places, should possess an air of refinement and sanitation which will leave its impress upon every one who enters them. You perhaps have admired and envied bathrooms and kitchens in the homes of friends, but did not realize that equally artistic and practical effects could be secured in your own home at comparatively little cost.

Horticultural News

SEXUALITY FOUND IN STRAWBERRIES

Blossoms of Some Varieties Not Able to Fertilize.

The question of whether this or that variety of strawberry will fruit if planted alone, often comes up in the minds of those selecting varieties of strawberries for their gardens or fields. The chances are few of getting a variety that will not fruit when planted alone, because these imperfect flowered varieties are few, at least very few are offered in nursery catalogues.

The reason why some varieties will not fruit when planted alone is because their blossoms are not capable of fertilizing themselves, consequently no fruit will develop, writes B. W. Keith in Michigan Farmer. The parts of the flowers wanting are the stamens, the parts bearing the pollen or male part of the blossom. Varieties having blossoms of this kind are termed "Imperfect" or "Pistilate," and are indicated in catalogues with the abbreviations "Imp," or "P." In order for an imperfect variety such as the Warfield, Haverland, or Sample to set and produce berries, its blossoms must be fertilized by pollen from perfect flowered varieties, set close enough so that bees and other blossom-visiting insects will work from one variety to the other, carrying pollen from the perfect to the imperfect blossoms.

Most of the varieties offered by nurserymen today have perfect blossoms and are termed as "Perfect" or "Stamenate" varieties and are abbreviated as "Per." or "S." The perfect blossoms differ from the imperfect in that they have stamens, the flowered parts bearing the pollen or male parts of the blossoms. Pollen consists of small cellular bodies or grains found in the pollen sacs, which will be noticed on little upright stems at the base of the petals or white parts of a strawberry blossom. At a certain stage during the blooming stage, generally when the blossoms are wide open, the pollen sacs burst open down the side and out comes the pollen grains. When these pollen grains come in contact with the moistened or jelly-like top of the pistils, they begin to send down pollen tubes to the immature seeds and fertilize them. The berry will then develop into a perfect specimen, providing the fertilized seeds are evenly distributed over the surface of the berry. If they are not, the berry will be ill shapened, because that part of the berry where the seeds were not fertilized will not develop.

Missing Grapevines Are Very Easy to Replace

The ordinary method of replacing missing grape canes is to replant the vacant places with one or two year old canes. In too many cases, this results in failure—due to lack of cultivation or by being smothered by strong growing neighboring canes.

It is an easy matter to replace missing canes by saving one of the long canes from a neighboring plant. This cane should be ten or twelve feet long. Cut away all of the side branches on it, then train out on the lower wire. Make a shallow trench where the missing plant stood. Pin down with a forked stick and cover. Draw the end of cane straight up to the trellis above.

If the cane is the strong fruiting kind, it may produce some very fine fruit the first season, after layering. Do not sever the cane from the old plant until it has had two seasons' growth.

One can replace grapevines across the cultivated space between rows, but here it will be necessary to dig a six-inch trench and lay the cane down in it so that it will not interfere with cultivation, or be destroyed by the shovels of the cultivator.

Necessity of Spraying All Foliage and Fruit

Spray injury to both leaves and fruit is of rather common occurrence and appears in many instances at least to be correlated with improper handling of the gun. The spray should not be allowed to strike young leaves or fruits with too much force. Injury often is found on leaves which have been previously injured by fungi and in general is more noticeable on trees which have been sprayed during periods of high temperature and high humidity. Several severe scabs have recently shown even the most skillful growers the necessity of covering every part of the fruit and foliage in a thorough and careful manner at every application.

Buying Fruit Trees

When you purchase apple trees, or any other varieties of fruit trees, buy them from a good, responsible nursery, and you are sure to get what you buy, as it is a great disappointment to wait several years for a young tree to come into bearing and then find that you have some other kind of apple than what you paid for. It pays in the end to deal with responsible nurseries and to buy the best trees. Scrub trees like scrub animals are not profitable.

A NEW set of Champions every 10,000 miles restores new car performance. They cost you nothing as they quickly save their cost in gas and oil.

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition—correct it with a spoonful of Phillips. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose. No household should be without it.

Phillips is the genuine, prescriptional product physicians endorse for general use; the name is important. "Milk of Magnesia" has been the U. S. registered trade mark of the Charles H. Phillips Chemical Co. and its predecessor Charles H. Phillips since 1875.

Independence

You know, of course, that independence was the foundation on which this great nation of ours was built. Independence has made the United States the foremost country of the world, and our independence must, of necessity, be safeguarded through the centuries to come.

May we suggest that independence is as vital to the individual as it is to the nation? And, finally, may we point out that saving is the shortest route to independence?

Dr. R. W. Specht, Dentist, Garner, Iowa. adv

Fred Mufselt is painting the Wilson Drug Store building this week.

Levi Klotzbach and family visited Camp Roosevelt Friday evening.

Marie Blank and Gracka Quandt left Friday for Utica, Ill. for a visit.

Clarence Elder, of Minneapolis, spent the week end at home.

Hilda Keeper is spending a few weeks at the Albert Hippen home.

Henry Schroeder of Chicago was in town a couple of days last week.

Mrs. Lena Schroeder and Adella were at Mason City Monday.

Edith Haupt was at Garner on business Thursday.

Lew Suckow of Mason City visited at home Sunday for dinner.

Mr. and Mrs. Wm. Ax of Swaledale visited here Thursday.

Mr. and Mrs. Alvin Stogesbary and children were guests at the C. A. Larsen home Sunday.

Herb Bailey came from Sioux City Friday and visited until Sunday at the C. A. Larsen home.

Milo Patet came Sunday from Chicago to spend a week's vacation visiting home folks

Ruth Johnson of the Mercy hospital came home Saturday for a short visit.

Florence Stokesbary came home Thursday from Des Moines to recuperate from her recent operation.

Enid Harvey came from Mason City Friday to visit her grandparents, Mr. and Mrs. Fred Ridder.

Mr. and Mrs. Lyman Drake and children and his parents drove to Goldfield Sunday for a picnic.

Milton Lenz, of Spooner, Wis. was calling on Klemme friends Tuesday.

Mr. and Mrs. C. F. Keraus were at their cottage at Ventura Tuesday and Wednesday.

Mrs. Leach and daughters, Mary and Marie, of Dows, visited at the Elder home Friday.

Mrs. Jack Poort and son Orvis of Lake City visited at the John Larsen home the first of the week.

Miss Miidred Johnson's Sunday School class enjoyed a party at the Parish House Wednesday afternoon.

The young people who attended the Institute at Lake Okoboji, returned home Sunday afternoon.

Mrs. Paul Mueller and baby drove to Truman, Minn. last week. Miss Magdeline and Bertold Mueller returned home with her.

Paul Mueller and family visited the Cliff Schwartz family at Ventura Monday evening to see their new baby who has been named Orvadean

Gale Ridder of Watertown, S. D., is spending his sumer vacation visiting his aunts, Mrs. C. A. Arnold and Minnie Lenz.

About fourteen ladies enjoyed the Royal Neighbors Picnic held at the Lake Tuesday afternoon. They report fine eats and a big time

The W. F. M. S. of the Methodist Church will meet Thursday, Aug. 1 at 2:30 p. m. at the home of Mrs. E. J. Arnold.

Mr. and Mrs. Martin Jensen and sons Melvin and Elmer and daughter Eva Mae, were visitors at the Albert Carolus Sr. home Sunday.

Mr. and Mrs. W. C. Keraus and son Verle of Traer, were entertained at the Frank Kluckhohn home for dinner Sunday.

Mrs. R. A. Jorgenson and Buster, Mr. T. Davis, Mrs. C. G Waterman and Marian and Mrs C F Keraus took in "stunt night" at the scout Camp Saturday night.

Mrs. W. F. Pavey and Juanita were Mason City callers Wednesday.

Mrs. P. M. Wilson and Mrs. R. W. Elder were shopping at Mason City Thursday afternoon.

One of the infant twins of Mr. and Mrs. Henry Linne died Wednesday morning. The baby had not been well and the hot weather was more than it coul stand.

Miss Agnes Ely, who has been visiting with her parents, Mr. and Mrs. Ely and Miss Gertrude, at Belmond, and with her sister here, Mrs. W. F. Missman, left Sunday evening for her home at Racine, Wis.

Frank Kluckhohn and family enjoyed a visit Sunday from Mr. and Mrs. Palmer Ostby and three children of Forest City, and Mr. and Mrs. Sherwood and children of Iowa Falls.

Miss Irma Olm who has been visiting at the Grosshuesch home, left Monday for Des Moines for a visit with Miss Stella Bock. She expects to return to Klemme next week.

Mrs. John Day and Mrs. C. F. Keraus were hostesses to the Ladies Aid Thursday p. m. and served a delicious lunch of chicken, homemade ice cream, angel food cake, and other food fit for kings.

Mr. and Mrs. Harry Gibbs and Harriet and Roland; Mrs. C. A Arnold and Minnie Lenz visited Camp Roosevelt Saturda ynight to enjoy the stunts put on by the Scouts and the Rusty Hinge Quartet.

The Wilson highway is being egraveled from Wenz's corner north to Garner. Trucks are at work graveling east from Klemme and the grading of the county road both on the east and west sides of Klemme has been completed.

Mr. and Mrs. Jake Ter Hark and daughters, Dorothy and Anna Mae; Mr. and Mrs. Fred Ter Hark and daughter, Janice; Mr. and Mrs. R. Carolus and sons, Junior and Clarence, were visitors at the Albert Carolus, Sr. home Sunday.

Ted Palmby and family are enjoying visits from relatives this week. Ted's parents, Mr. and Mrs. Dan Palmby and Avonell of Iowa Falls are here; and his uncle and aunt, Mr. and Mrs. Ernest Palmby of Canada are also here.

Rev. C. Grosshuesch and family, accompanied by his brother, Walter, of Madison, Wis., and his parents, Mr. and Mrs. J. W. Grosshuesch of Plymouth, Wis., left Monday morning for Menno, S. Da., where they will visit Mrs. Grosshuesch's parents.

Elmer Johnson, who works for Ed. Buentenbach, was overcome by heat Monday; and Ted Palmby who works for C. A. Larsen, suffered a like experience while working in the oat field. Monday was about as hot a day as we have had this summer. Both men are making a good recovery.

An Achievement Day has been planned and will be held at Garner on Aug. 19th. A demonstration team composed of Winnifred Hampel and Emma Goll, representing the 4-H club of Ell township will put on some work. The 4-H club girls will give a program and will serve refreshments at the Farm Bureau meeting Aug 2 at the Louis Weaves school house.

Ole Peterson, of Britt, was a visitor in Klemme Monday.

YS AND GIRLS TO STAGE SHOW

W BUREAU 4-H CLUB TO HOLD ACHIEVEMENT SHOW

s Being Completed For Show August 20, 21 At Garner

lans are rapidly progressing for Farm Bureau 4-H Club Achment show to be held at Garner August 20 and 21. This will be of the big projects of the year the Farm Bureau is putting h every effort to make this a show.

The Garner Commercial Club is ting forth every effort to give 4-H Club Members a royal enainment. The Commercial club bers are to be complimented their activities in this line.

While definite outlines have not made as to show classes, the will consist of exhibit of the s and girls club work of Hanck County.

Sixteen Girls Clubs In County

The girls clubs have already ted preparations for this show. ncock County has 16 girls clubs, in each township with a total mbership of approximately 250 ls. Their project this year is ing. Each one of these clubs ll put on an exhibit at this show. health contest will be conducted. e girls will compete in a Music mory contest. One of the big tures of the girls club activities ll be the demonstration contest the selection of the county mpion demonstration team who ll represent Hancock County at e State Fair.

Boys Wil Show 100 Head Stock

The boys club show will consist exhibits from the Baby Beef, iry Heifer, Colt, Fat Lamb, Ewe d Lamb, Sow and Litter and Mart Pig clubs. Approximately 100 ad of livestock will be shown.

There are 20 members in the by Beef club and they will exhit 29 head of fat calves consistg of 12 Angus, 9 Shorthorn and Herefords This will make a y fine show as the boys have e good calves.

Many Other Stock Exhibits

In the Dairy Heifer club, there e 17 members and they will exhit approximately 22 head of daitattle consisting of one, two, and ee year old stock. Eight of the ifers will be Guernseys and four- of them Holsteins. Both pured and grades will be represented the Dairy Heifer show.

The Colt club has 11 members rolled and this show will consist the mares and colts which, proding they all show, will be twentwo head. This would make a ger horse show than has ever en shown at the County Fair for number of years.

The Sow and Litter club consistg of five members will exhibit the oice 4 pigs of their litters.

The Market Pig club consisting eight members will exhibit the ults of their club activities in ding pigs for market. There will obably be about 10 pigs shown in is class.

Four members in the Ewe and mb club will exhibit their ewes d lambs.

Seven members in the Fat Lamb b will exhibit the results of their ding activities.

This club show is being put on the boys and girls of Hancock unty and the entire program will arranged with this in mind.

Klemme friends of Miss Adella hlman will be interested to know at she will begin work Aug. 22 as erator on the telephone exchange Forest City. Miss Kuhlman is at esent visiting with her parents at mboo, South Dakota.

NOVEL SCOUT MEETING PLANNED FOR NEXT MONDAY

A Swimming Hike Will Take Place Of Regular Meeting Next Week

Scouts of Troop 56, Klemme, are back from Camp and held their regular meeting Monday evening in the Parish House. On account of the heat the meeting was turned into a game period and cut short.

This is contrary to the regular proceedings as special work holds an important place in all meetings. After a brief explanation of some merit badge subjects and tests the Scouts were idsmissed.

Will Have Swimming Meet

During the council meeting following the regular meeting a program wa planned for August 12, to feature first class signalling and to conduct tests in that branch of Scouting and to conduct another class in Nature Study and Stars.

Plans were the nmade for the next meeting, Aug. 5, and it was planned to go to the Scout Camp at Ventura for a swimming meet. Parents and friends are invited to come along. The Scouts will leave from the Times Office at 6:00 p. m. All are to bring a light lunch to eat after swimmi g.

It is planned to have a good time as well as to instruct in swimming. Scouts who are proficient in swimming will be used in helping others to learn more about swimming.

After the swim lunch will be eaten and the Scouts will return home.

This will be the first meeting of this kind held by the local troop and if it proves successful more such hikes may be planned for the purpose of instruction and passing the swimming tests.

Klemme Scouts made fine progress in Camp last week.

It is the goal of Troop 56 to have every Scout a first class swimmer before indoor work begins

---

AVERY TOWNSHIP GIRLS STUDY METHOD OF CANNING

The Avery Ambitious Aristocrats met at the home of Leona Prelipp on July 23rd A demonstration of tin-canning was given by Mrs. H. C. Barger, Mrs. C. Wendel and Mrs. H. Rief. A gasoline stove was furnished by Mr. C J. Wendel. Each of the girls canned a pint of beans or peas The next meeting will be at the home of Iris Sherwood.

Miss Pearl Johnson and Gaydon Jordan of Ventura spent Sunday at Cedar Falls and Waterloo visiting friends.

METHODIST CHURCH NOTES
H. E. Whyte, Pastor

Last Sunday quite a good number attended the open meeting of the Epworth League which was in charge of the Institute delegates. The meeting was conducted a systematic and masterful way, and the reports were interesting'y and force fully given.

The worship service next Sunday morning will be according to the regular schedule, except at Liberty where the Catechism which has just completed its course of study, will have a part in the opening service. Awards for the highest grades will also be given out at this time.

GIMER RELATIVES GATHERED AT EAST PARK SUNDAY

Enjoyed A Picnic Dinner In Mason City's Beautiful Park

East Park, Mason City, makes an ideal place for family gatherings and to enjoy picnics.

Another large family gathering was held their Sunday when the Gimer relatives met there to enjoy a big picnic dinner. The following were present Sunday:

Mr. and Mrs. A. D. Gimer, Harl, Blanche, Thomas and Thelma; Mrs C. E. Johnson, Robert and Babara Ann; Arthur Johnson and Mr L. G. Gimer, all of Klemme.

Mr. and Mrs. W. T. Gimer; Mrs. Cora Homan and Woodrow, of Abbott, Iowa

Mr. and Mrs. H. R. Fouts and sons Herbert and Edward, and daughter, Lucille, of Riceville, and also a daughter, Mrs. Chas. Heaney and children Eilean and Charles Jr. of Chicago, Ill.

Mr and Mrs. R. J. Gimer and daughter, Gladys, of Wellsburg, Iowa.

Mr. and Mrs. H. C. Gimer and son, Charles; Clifford Gimer and Miss Kreimeyer, of Ackley, Iowa.

All present report that they had a most enjoyable time and are already looking forward to the next family gathering.

The Times Office is in receipt of a card from Mrs. Mary Waterman, showing a natural bridge in the Black Hills. She, in company with friends have made one trip to see the beauty of the Hills and will take several more before returning to Iowa.

Isaac Sweigard of Garner was a visitor at the Times Office Friday.

FUNERAL FOR TWIN BABIES HELD LAST FRIDAY MORNING

Funeral services were held Friday morning for the twin babies of Mr. and Mrs. Henry Linne, who reside northwest of Klemme. The infants were but about six weeks old and had never been very strong. The little boy died last Wednesday and the little girl on Thursday

Funeral services were held at the home, conducted by Rev. Whyte and interment made in the Klemme cemetery.

The sympathy of the community is extenedd to the parents in their sorrow.

Card Of Thanks

We wish to thank our friends and neighbors, and the Klemme Legion and Auxiliary, for their help and kindness, and floral offerings in our recent sorrow.

Henry Linne and Family.

GIFT FROM KLEMME SCOUTS IS ACKNOWLEDGED

Some months ago the Scouts of Troop 56, Klemme, gathered together a large number of books and packed them in a box a which were shipped to Land O'Lakes, in northern Wisconsin to be used there in a Community House.

Mrs. C. W. Warren, one of the workers at the Community House has acknowledged receipt of the books and wishes to thank the Boy Scouts and people of Klemme for the books.

The boks are greatly appreciated and especially in the winter when that part of Wisconsin is snowed and many long days and evenings must be spent indoors.

REFORMED CHURCH NOTES
Calvin Grosshuesch, Pastor

Services For Sunday, Aug. 4

10:00 a. m. English service.
11:00 a. m. Sunday school.
8:00 p. m Tuesday, Young Peoples Bible Class

The Reformed Church of Garner will celebrate its Mission Festival Sunday, with services in the forenoon, afternoon and evening. Our members are invited to attend the services.

We will have our regular service in the morning and spend the rest of the day in Garner.

MUSIC IS BROADCAST AT THE BAYSIDE PARK

Novel Arrangement Of Loud Speakers Floods Park With Music

The broadcasting of music at the Bayside Park, Clear Lake, by the use of a microphone and loud speakers is proving very popular with the Bayside visitors, acording to operator, Charles Ritz.

The dance music furnished by the nine-piece Mississippi Six Orchestra on Monday, Wednesday and Friday nights is broadcast all over the park thru the use of five loud speakers installed at various points.

The latest Victor records are also played each afternoon and evening and the music is broadcast for the benefit of the Park visitors.

Next Sunday, ugust 4th, the Bayside Cubs will play Armstrong, an all-salaried ball team, at 3 o'clock on the Bayside diamond. Armstrong has a fast aggregation and a lagre crowd of Armstrong boosters is coming with the team. The nine-piece Mississippi Six Orchestra will entertain Park visitors next Sunday afternoon and evening. They will play several popular programs on the out-door stage and the music will be broadcast at the ball park, the roller skating rink, fun house and at the roller coaster. This popular orchestra is furnishing the music for the Treat Dance every Monday night and for the park plan dances on Wednesday and Friday nights of each week. Vaudeville will also entertain Bayside visitors next Sunday.

During tne past week the picnic grounds and children's playgrounds have been improved and made more desirable for families picnicing at Bayside. New tables have been placed to the east of the roller coaster and more play equipment has been installed for the children.

SEVENTY PICNIC AT CAMP ROOSEVELT

KLEMME MASONS AND FAMILIES ENJOYED PICNIC

Annual Picnic This Year Was Held At Camp Roosevelt

The Masons of Klemme and vicinity and their families all-gat ered at Camp Roosevelt south of Ventura last Sunday for their annual outing and picnic. There were between sixty five and seventy people present.

The picnic dinner was held at the mess hall at the camp. There was fried spring chicken and many other good things on the menu as well as lemonade, coffee and ice cream and berry pie. Mr. J. C. Underwood, Boy Scout Executive of the North owa Area Council provided the coffee and ice cream. "J. C." stands high in the estimation of the club and they thank him for his liberality in providing an important part of the menu.

The day was spent in visiting the Scout Camp, taking in the Court of Honor and many enjoyed a swim at the scout beach.

The day was quietly spent but was nether-the-less greatly enjoyed by all.

Plan For Picnic In The Fall

Many present expressed their desire of holding another picnic early in the fall again when the weather is cooler so that games may be enjoyed. Plans will be made for such and outing which will probably be held at the State Park at Clear Lake about the middle of September.

THRESHING BEGAN IN THIS PART OF COUNTY MONDAY

Many Threshing Rigs Are Now In Operation Here

Quite a number of threshing rigs are now in full operation in this part of the county. We observed several fields Monday which were being threshed, and at the same time saw a couple of fields of late oats just being cut.

The oats crop looks good, but we have not heard how it weighs out

Corn Looking Very Good

As a general rule Hancock County corn is looking very good this year. Most fields are well tasseled out and many fields show ears well formed. There are but very few poor fields of corn in this community. At this time the prospects are very good for a bumper corn crop in Hancock County.

Hay And Pasture Above Average

As to the hay and pasture lands they are the best this year we have had for several years. Every farm will have an abundance of roughage for winter feed.

This part of owa, at least, will fare well this year with good production of all crops.

You fellows in California have nothing on Iowa. Read this and weep!

BARZ RELATIVES HAD PICNIC AT CLEAR LAKE PARK

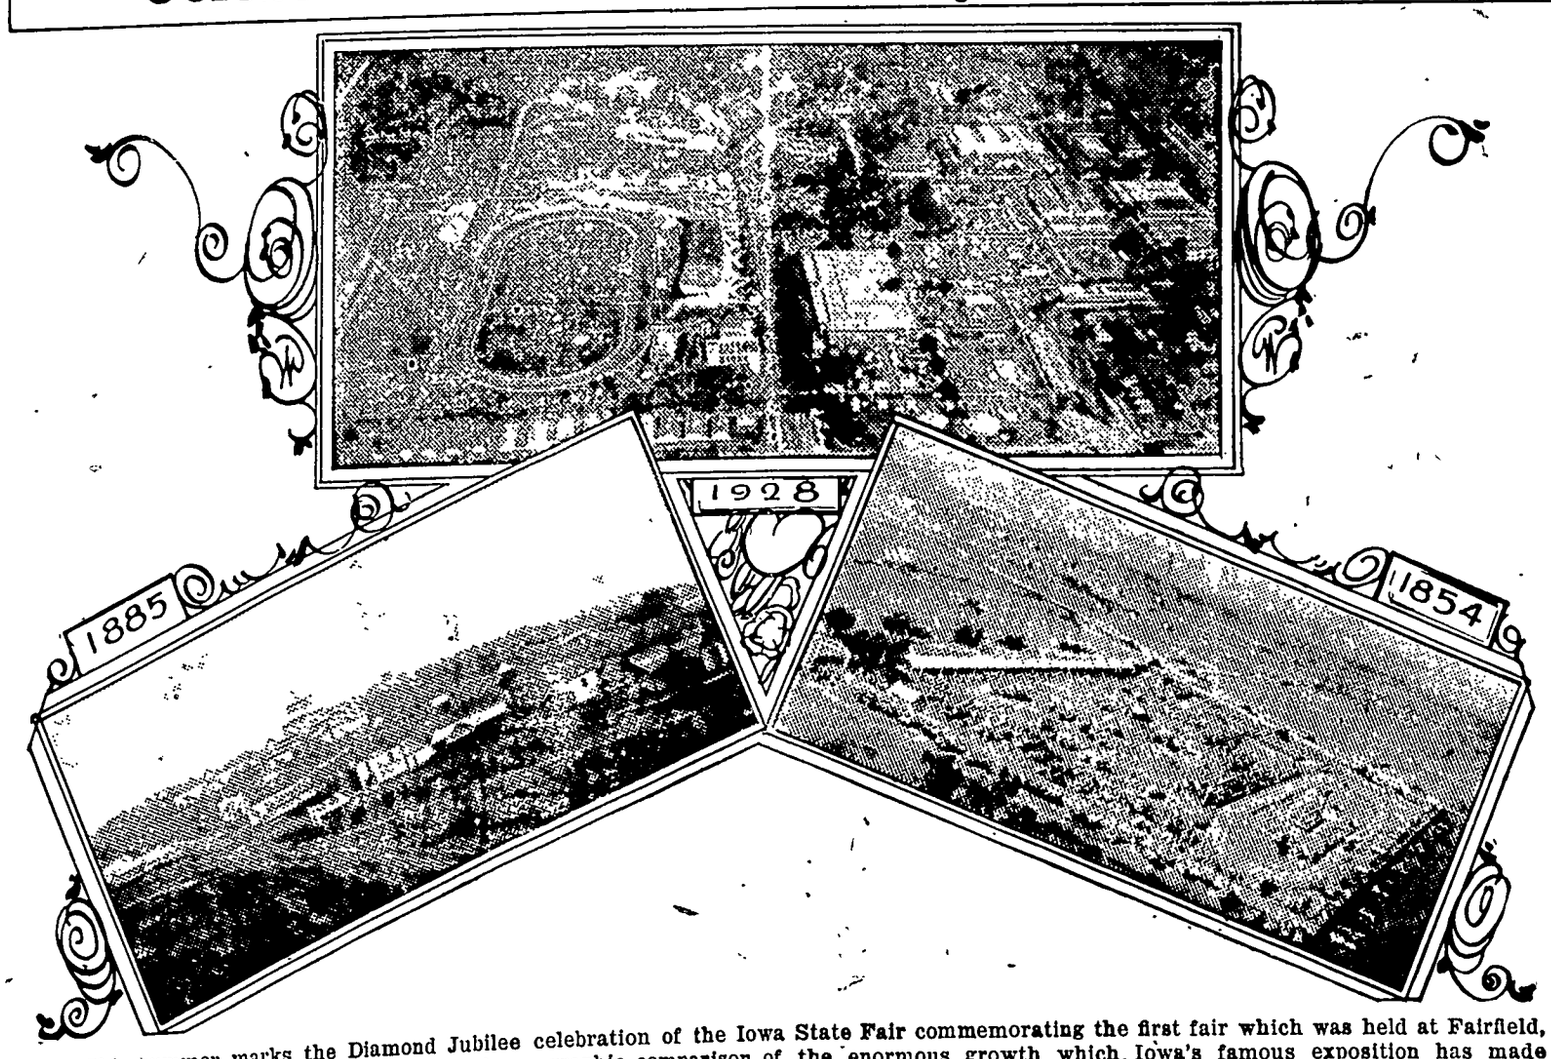
State Park At Lake Scene Of Family Gathering And Picnic Sunday

The Barz families and relatives of this community enjoyed a family gathering and picnic at the Clear Lake State Park Sunday. The following were present:

Mrs. Lena Schroeder and daughter, Adella; Grandma Schroeder and Dorothy Croner; Mr. and Mrs. Albert Barz and family; Mr. and Mrs. Fred Barz and family; Mr. and Mrs. Henry Barz and family; Mr. and Mrs. Walter Rosendahl and baby; Mr. and Mrs. Tim Waddingham and family; Mr. and Mrs. Art Brouwer and family; Mabel Brouwer; and Mr. Emil Barz and son, Max.

All report that they had a fine time and greatly enjoyed the picnic dinner.

Celebrate 75th Anniversary of State Fair



This summer marks the Diamond Jubilee celebration of the Iowa State Fair commemorating the first fair which was held at Fairfield, Iowa, in 1854. The above three pictures give a graphic comparison of the enormous growth which Iowa's famous exposition has made during these seventy-five years. Today it is the largest agricultural and livestock fair in America, and enjoys the largest paid attendance of any eight-day fair in this country. The entire week of August 21 to 30 has been set aside as Diamond Jubilee Week. Scores of historical features will be combined with a mammoth exposition program to provide eight days of continuous entertainment for the more than 400,000 visitors who will take their vacations at the State Fair this summer.

1—Senate finance committee laboring over the tariff bill while the rest of congress is on vacation. 2—General Gouraud of France, guest of the Rainbow division, laying wreath on Tomb of the Unknown Soldier in Arlington National cemetery. 3—David Hunter Miller of New York, appointed editor of treaties by Secretary of State Stimson.

NEWS REVIEW OF CURRENT EVENTS

China and Soviet Russia Near War—Wickersham Stirs Wets and Drys.

By EDWARD W. PICKARD

CHINA and Russia came to the verge of war, and whether they would push each other into the gulf was an open question. Surface indications pointed to an armed conflict in the immediate future, but optimistic individuals, like former Secretary of State Kellogg, believed a peaceful solution of the trouble would be reached, inasmuch as both nations signed the Kellogg pact outlawing war.

Russia, enraged by the seizure of the Chinese Eastern railway in Manchuria and the expulsion of numbers of Russians, sent an ultimatum to China demanding that within three days the Nanking government arrange for an amicable settlement of the crisis, immediately release the citizens of the Soviet republics and cancel all "illegal orders." Unless this were done, Moscow threatened, the Soviet union would resort to other means to defend its rights. In response China said an envoy was being sent to Moscow to discuss matters, and also demanded that the Soviet release all Chinese imprisoned in Russia and adequately protect Chinese nationals in Russia from aggression and repression.

The Soviet government, declaring the Nanking note was unsatisfactory in content and hypocritical in tone, announced that all its diplomatic and consular official and commercial representatives would be recalled from China at once, all means of reaching an amicable settlement having been exhausted. It placed the entire responsibility for all consequences on the Chinese government.

During this exchange of notes, and indeed before it began, both nations were concentrating large bodies of troops along the Machurian-Siberian border, canceling the leaves of their army officers and otherwise preparing for armed conflict. With these Chinese, on border duty, were the former Russian imperialist White Guard forces. Dispatches from Nanking quoted a member of the central executive committee of the Nationalist party as saying that the Chinese government would resist to the very end any Russian threats growing out of the taking over of the railway in Manchuria. And President Chiang Kai-shek was reported to have told a gathering of party leaders that the seizure of the railway was only the first stage of the Nationalist policy toward Russia. He was quoted as adding: "After this first stage we will go further. The Imperialist powers are greatly excited over our coup against the Russians and fear that their interests may be involved. But so long as we Chinese are united, we need not fear oppression from the outside."

Aside from the quarrel over control of the railway in Manchuria, the row between these two huge nations is directly traceable to the everlasting urge of the Russians to spread their Red Communistic doctrines in other lands by means of insidious propaganda. They seem convinced that they are right and determined that all the world shall be turned to Sovietism. Only last week 26 of their agents were sentenced to prison in Turkey for disseminating Communist propaganda and attempting to undermine the existing government.

SOME idea of the prevailing confusion of mind among American citizens concerning prohibition enforcement may be gained from the response to the suggestion which George W. Wickersham, chairman of the Hoover law enforcement commission, made to the conference of governors in session at Groton, Conn. In effect the Wickersham proposition, made in a letter to Governor Roosevelt of New York, is that the prohibition laws be changed to turn "wholesale" enforcement over to the federal government, and "retail" enforcement—against saloons and speakeasies"—to the states. Both wets and drys both praised and denounced the suggestion. In the governor's meeting the notably dry executives sought to have it indorsed as a move toward greater co-operation of the states with the federal government in fighting the demon rum; and the drys, led by Governor Ritchie of Maryland, rallied to prevent such indorsement. Senator Caraway of Arkansas said in Washington that Mr. Wickersham's letter was the "worst blow" ever leveled at prohibition, branding the Volstead act as unenforceable and lending encouragement to the criminal world, and he insisted that Mr. Wickersham should resign from the chairmanship of the commission. Wet leaders generally agreed with Caraway that the letter was an admission that the dry law could not be enforced, and consequently chuckled contentedly. But representatives of the W. C. T. U. and other dry organizations took the view that it was really a call to duty on the part of such states as have been remiss in aiding in the enforcement of the Eighteenth amendment.

Among the week's developments was a statement from Prohibition Commissioner Doran that he would issue to all prohibition administrators a drastic order barring the employment of armed volunteers in liquor raids conducted by federal agents. This is a result of the killing of two Oklahoma farmers allegedly by a volunteer aid of a dry agent.

WHAT promised to be an exciting airplane race across the Atlantic, from Paris to New York, ended in tragic death and failure. The Polish plane Marshal Pilsudski managed to reach the Azores and, making a forced landing on the small island of Graciosa, overturned, rolled down an embankment and exploded. Maj. Ludwik Idzikowski was burned to death and his co-pilot, Maj. Casimir Kubala, was badly injured. Kubala said their motor failed them. The French plane Question Mark, piloted by Dieudonne Coste and Jacques Bellonte, slowed up by dense clouds and strong head winds that forced the consumption of too much gas, flew almost to the Azores and then turned back, reaching Paris in safety.

Williams and Yancey flew to Paris from Rome last week, saw the sights of the gay capital and then crated their plane and started for home by steamship.

'Untin' Bowler, the Chicago Tribune's amphibian plane that was trapped by weather conditions on Hudson strait on its way to Greenland, Iceland and Berlin, came to grief when ice floes broke up, carrying the plane out to sea where it sank. The crew was safe ashore.

WITH all but one member appointed, the federal farm board was started on its way toward agricultural relief with an address by President Hoover at its initial meeting. In his charge to the board the President said its chief task was the creation of farmer-owned and farmer-controlled marketing agencies. He continued:

"I am deeply impressed with the responsibilities which lie before you. Your fundamental purpose must be to determine the facts and to find solutions to a multitude of agricultural problems, among them to more nearly adjust production to need; to create permanent business institutions for marketing, which, owned and controlled by the farmers, shall be so wisely devised and soundly founded and well managed that they, by effecting economies and giving such stability, will grow in strength over the years to come. Through these efforts we may establish for the farmer an equal opportunity in our economic system with other industry."

After this first meeting Chairman Legge expressed the belief that, while the board was created to deal with the whole agricultural situation, it was probable the wheat surplus, generally considered the most urgent phase of the question, would receive the board's immediate attention.

Next day following an executive session Mr. Legge announced that the board would do everything possible to work with existing co-operative organizations and to build up new farmer groups for co-operative marketing. By effecting a better organization of farm marketing facilities and bringing the farmer in more direct contact with his market, Mr. Legge said the board feels that increased profits will accrue to the producer without placing too great a burden on the consumer.

Later Mr. Legge gave out the statement that the board would not attempt to displace private banking institutions and the federal intermediate credit banks in financing co-operatives engaged in marketing farm commodities. The board expects the co-operatives to exhaust the lines of credit which may be obtained at reasonable rates from other institutions before calling on the board for assistance. For the present no loans will be made out of the board's funds, though a great many applications already have been received.

The ninth member of the board, not yet named, is to represent especially the wheat growers.

Incidentally, reports of severe crop losses in the American and Canadian Northwest sent wheat prices on the boards of trade up in great leaps and bounds, and other grains advanced sharply in sympathy.

TWENTY-THREE banks in the part of Florida around Tampa closed in two weeks, fifteen of them on one day last week. The Atlanta Federal Reserve bank sent $5,000,000 to Tampa with the promise of one of its officials of "all the money needed to meet the situation," and this helped the Florida bankers and business men to restore public confidence. The state controller said the failures were caused primarily by "unnecessary withdrawals, propaganda and a financial depression through the state, which has been accentuated by the effect of the Mediterranean fruit fly and quarantine."

LOUIS B. SELTZER, editor of the Cleveland Press, and Carlton K. Matson, the paper's chief editorial writer, were sentenced to serve 30 days and pay fines of $500 each for contempt of court in printing an editorial denunciation of Common Pleas Judge F. P. Walther, of Cleveland. The judge himself brought the charges, heard the case and pronounced sentence. Newton D. Baker, former secretary of war, defended the newspaper men and filed an appeal and they were released on bail after an hour in jail. The case will be watched with great interest by all members of the journalistic fraternity, for it involves the freedom of the press and the privilege of criticizing public officials, according to Mr. Baker.

OLD times on the river were revived, to the delight of thousands of spectators, when the veteran paddle wheelers, Betsy Ann and Tom Greene, raced 20 miles up the Ohio from Cincinnati to New Richmond for the championship won many years ago by the Betsy Ann. The steamers ran neck and neck for most of the distance, but young Tom Greene finally pushed his boat ahead and won the exciting race by a scant five feet.

DURING a terrific storm on the coast of Chile the Chilean army transport Abtao was sunk off the port of Valparaiso and all but two of the crew of 43 were drowned.

A Rock Island passenger train westbound from Chicago, plunged through a weakened bridge over Landsman creek near Stratton, Colo., and one of the pullmans was submerged. The loss of life was reported to be nine.

Floods in the Trebizond district on the Black sea have taken a toll of perhaps a thousand lives. Many villages were engulfed and 50 square miles of crops destroyed.

KING GEORGE of England underwent another operation, and for a few days his subjects were very anxious. But he came out of it well and was reported to be recovering rapidly. The surgeons found it necessary to remove parts of two ribs to facilitate drainage of the abscess on his majesty's lung.

VETERANS of the Rainbow division, A. E. F., held their annual meeting in Baltimore and their parade was reviewed by President Hoover, General Gouraud, war-time commander of the Fourth French army, with which the division fought in France, French Ambassador Claudel and other notables. General Gouraud is honorary president of the division's association and came over especially for the reunion

BOTH WORE STARS OF GOLD

(©, by D. J. Walsh.)

TRENTON had always stood more or less in awe of Mrs. Mortimer. She had lived for thirty years in the big brick house set back in the velvety green lawn on South Main street; she had driven regularly through the town first in her carriage, and later in her closed car. She had attended the Episcopal church and had contributed freely to all worthy benefits. Trenton had helped bury her husband with all the pomp and respect due the "town's richest man" when Andrew Jr. was two years of age, and yet Trenton did not know Mrs. Mortimer.

It watched with interest when she closed her house each summer and left for the seashore; the mountains; sometimes Europe. It watched with equal interest the preparations for her return. It had watched Andrew Jr. grow up and go away to college. Andrew was much more democratic than his stately mother. He had attended the Trenton schools and had got into as much mischief as the rest of the Trenton boys; his first automobile had been a source of much worry to the townspeople. He returned from college at regular intervals and Trenton was always glad to welcome him home.

He was just twenty-four when he came home that spring of 1917 from training camp, resplendent in his tailored khaki and Sam Browne belt, two bars on his shoulders, and his mother had been brave when he waved goodby to her and to Trenton from the rear platform of a troop-filled train. It was then that Trenton came to know Mrs. Mortimer better. She opened her big house and the women daily spent hours there rolling bandages, cutting, sewing, knitting, packing. Mrs. Mortimer moved about the rooms quietly, regally. She talked about Andy. A blue star on a white background hung in her window.

And then in September, 1918, that blue star turned to gold! Trenton was stricken. Fine young Andrew Mortimer had fallen in the Argonne. They tried to convey their love and sympathy to his mother, but grief-seared, she shut them out of her life. She would not talk; she would not listen.

The following summer she went to New York and brought Andy's body home, draped with the stars and stripes. Trenton turned out to do him honor. The business houses were closed; the flag at half-mast, and every lad who had gone across acted as military escort as they bore Andy from the railroad station to the cemetery to place him beside his father. Trenton wept unashamed when that salute was fired across the open grave.

Mrs. Mortimer again went into seclusion. The war had brought her out—it had taken her back—she was bitter.

She regularly left for her summers at seashore and mountains. She never went to Europe again. She spent two months each winter in Florida. And then back to the lovely, lonely big house on Trenton's main street.

It was three years after the war that the minister came to her.

"Mrs. Mortimer, there is a woman in town who needs work. She came here a month ago. A splendid untiring worker, earnest and faithful. I have come to know and like her. She needs money—seems to be all alone in the world. Wonder if you wouldn't help her by giving her something to do?"

Mrs. Mortimer toyed with the string of black beads about her neck.

"I will be glad to help her, of course, Doctor Dykeman. Send her to me tomorrow. Of course, all my housework is efficiently cared for by my servants, but—

"Margaret Murphy is not asking for money, Mrs. Mortimer. She wants work. Unless you have work for her—"

"I can arrange for some, Doctor Dykeman. I will expect her tomorrow."

Margaret Murphy came into the great living room of the Mortimer house almost on tiptoes the next morning. She eyed the rich-toned rugs in genuine admiration. She looked about her with shining eyes, a smile on her broad Irish face. Evidently Margaret Murphy knew and loved beauty. Then—over the mantel she saw the white flag with the gold star in the center, and below the picture of young Andrew Mortimer, Jr.

"Oh!" she whispered. "It's her boy. God bless 'im."

Mrs. Mortimer came in and Maggie turned, her round rosy face framed with graying hair, radiant in health and good nature. She met the cold gray eyes of Mrs. Mortimer and the smile faded.

"I have arranged with Mrs. Black, my housekeeper, to turn the washings over to you, Mrs. Murphy. And once a week—on Fridays—I want you to come and help clean while Elfreda—my second maid—is visiting her mother. Will that be of help to you?"

"It will indeed, Mrs. Mortimer, and I thank you kindly. I'll try to please you—and I thank you."

She turned to the picture on the mantel.

"Your boy, Mrs. Mortimer—I heard—I'm sorry."

Mrs. Mortimer nodded shortly. "Yes, my son—Andrew."

Margaret Murphy wiped her eyes. "You gave something big, Mrs. Mortimer—you gave something wonderful to America."

Mrs. Mortimer cut her short. "Mrs. Black will have the laundry ready for you. Good morning, Mrs. Murphy."

For three years Margaret Murphy gave two days a week to Mrs. Mortimer and at the end of that time she did not know her any better than she did the morning they had stood together before the gold-starred flag over the mantel, but Margaret Murphy continued to smile and sing over her work.

Then the company's homecoming day, when Trenton was gay with flags and bunting. Margaret Murphy went to the cemetery with her arms full of flowers. She wended her way among the graves until she stood in the shadow of the granite shaft that bore the name of Andrew Mortimer, Jr.; the date of his birth and death; the company with which he served. She knelt and carefully arranged the colorful blossoms about the little flag that waved in the morning breeze. She was about to rise to her feet when some one came and stood near her. It was Mrs. Mortimer.

"This is kind of you, Mrs. Murphy; very kind. I have noticed fresh flowers here regularly. Have you brought them?"

Margaret Murphy nodded.

"But why, Mrs. Murphy, why do you do this when I—"

"I—I can't go to my own boy's grave. Mrs. Mortimer, and I want to show my love and my pride by placing flowers on another's grave—perhaps one of his—what did they call them, buddies? Anyway, another who gave his life for the same cause—America!"

Mrs. Mortimer's gloved hand fell on Margaret Murphy's sleeve.

"Your boy! Did you say your boy?" she faltered.

Margaret Murphy nodded and turned back the lapel of her coat. A tiny gold star shone there.

"Timmie died in the Argonne, too."

"O-h-h," breathed Andrew Mortimer's mother. "And you never told me!"

"You never let me—but I understood," and Margaret Murphy smiled winsomely through the tears. "I'm saving my money and I'm going to his grave on Armistice day, ma'am."

"Where is Timmie buried?"

"In Arlington, ma'am."

Mrs. Andrew Mortimer's arms went about Margaret Murphy and she held her close as the strains of "Onward, Christian soldiers," in the distance announced the approach of the annual parade—coming to honor Trenton's survivors of the great war.

"You are going to Arlington tomorrow, Margaret Murphy, and I'm going with you," whispered Mrs. Mortimer. "We are going to Timmie's grave tomorrow."

Brought Psychology to Bear on Boy Problem

An understanding of boy psychology, and the application of a few simple principles growing out of such understanding, have been factors in the success of the Detroit Boys' club.

At one time articles were disappearing with distressing regularity from one of the coat rooms used by the younger boys. Suspicion centered on one who had a reputation for "lifting" things. He was promoted to chairmanship of an anti-theft committee—and there were no more complaints of stolen goods.

"Jim" used to be a gang leader. His profane vocabulary was picturesque and complete. When asked to take the chairmanship of the anti-swearing committee he was flattered and said: "H—ll, yes! I'll make those blankety-blank bozos cut out their swearing." And he did—along with marked improvement in the leader himself.—A. P. Pillides in the American Review of Reviews.

Korean Father's Word Law

Picture a modern American boy who chances to meet his father on the street dropping suddenly to his knees in profound obeisance, yet this is quite the thing in Korea. A young son must never play, nor an older one smoke in his father's presence. For a son to assume a free and easy posture before his father is very ill-mannered and no matter what his age, a room is provided for his recreation, much like our nursery. There are four things that an old proverb tells the son to fear greatly; they are "earthquake, wind, fire and father." Should a prison term be meted out to a Korean father his son takes up his residence in the neighborhood to supply him with food and clothing.—Detroit News.

D.D. and LL.D.

The two degrees, D.D and LL.D, are quite different. The first is Doctor of Divinity, that is a person learned in those subjects that form the education of a divine or theologian. The second, LL.D., is Doctor of Laws, the two L's being the plural form where initials are used. This degree is, or should be conferred upon those deeply learned, in the subjects that make up higher education and culture—in languages, literature, science and philosophy. The former degree is only conferred upon ministers of religion, the latter upon both ministers and laymen.

Geographical Term

Oceania, or Oceanica, was a designation which embraced the land surface which remained after apportioning the continents of Eurasia, Africa and the Americas. The term covered Australia, the Indian archipelago and the Pacific islands. After Australia was set apart as a continent Oceanica was restricted to the Malay archipelago and the islands of the Pacific.

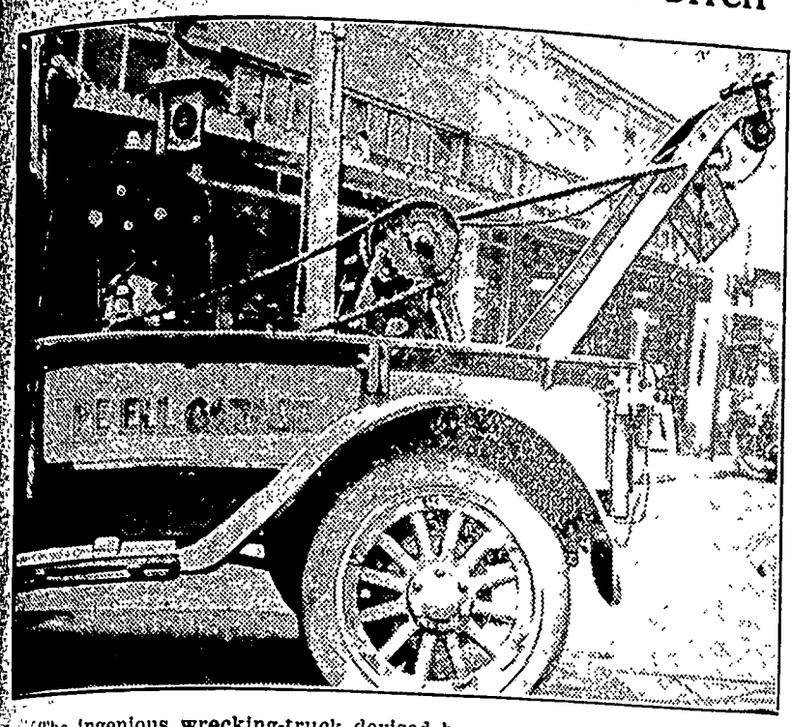
AUTO MOTOR HAULS CARS OUT OF DITCH



The ingenious wrecking-truck devised by a garage man in Pe Ell, Wash. He took the engine from an old auto and installed it on his truck to replace the old method of hand-winch and drum for hauling cars out of ditches. He uses the gear shift lever on the old motor to regulate the speed in hauling. The method is far easier and faster.

SLAUGHTER PENS OF HUMAN BEINGS

Cry for Grade Separations Apparent Immediate Need for Safety.

The cry for grade separations as an apparent immediate need for a decrease in railroad crossing accidents has been taken up by practically every civic, safety and kindred organization within the past few days, according to a bulletin issued by the safety division of the Automobile Club of Illinois. Ten persons killed within a week in the Chicago area alone, not including injured or maimed is the terrible toll extracted by the present skull and cross-bones unprotected crossing system.

Come to Full Stop.

Death stalks upon every motorist who attempts an unprotected crossing without first coming to a complete stop before entering upon the railroad right-of-way. Every effort is being made for the protection of the motorist and pedestrian. "Wider highways are taking form, safety beacons and lights are being installed at precarious intersections, safety means promulgated by various agencies, still unprotected railway crossings continue to chalk up death after death on its mortuary score board," declared Si Mayer, president of the club.

It is high time that the various municipalities band themselves together and demand "safety" at crossings. How much longer will they continue to be the slaughtering pen for humans? "Grade Separations Now, Not Later," should be the slogan of humanity everywhere. "Passing the buck" as to responsibility has become a national sport and pastime among certain folks. If extra taxation is needed to help defray part of the expense of grade separation construction, railroads will find little or no opposition to their plan.

What city, town or village wouldn't be glad to contribute to the safety of human life? Surely the time has come when loss of life ought to make some concession with the many so-called safety committees and life-saving organizations.

Little Done to Relieve.

More than ten years have elapsed since the cry of grade separations was first heard. Since then little has been done in effecting means to relieve the most hazardous of hazards. Evanston, Ill., demanded the raising of tracks years ago and nothing more is ever heard of level-crossing fatalities in that community, but other crossings in the country are working overtime picking up for what good has been accomplished thus far.

Demand them, get your local leaders interested in grade separations. Keep fighting for them. What more humanitarian spirit could prevail than that of saving lives? Don't just stand by and see bodies gronnd to death, mangled juggled as if a mere bag of shells, leaving scores made fatherless, motherless and children destitute because of this existing menace. Grade separations must come sooner or later.

Magistrate Calls Slow Poke Driver Reckless

The motorist who "pokes" along the road is reckless in that he is beedevilment, declared Magistrate Alva A. Fisher of the Traffic court in Baltimore.

"Drivers of this type are generally those who have just secured their motor's card or have a new car and they are breaking in. Rather than we have the seasoned or experienced driver, but one who is reckless. He will cause the regular driver to cut a lot of capers, as the driver who is timid usually makes the move.

"He evidently has his mind on one curve and when the second curve occurs to him he acts impulsively and spontaneously and the driver behind him is obliged to shuffle for himself. This may be done without accident, while on the other hand it may result in a serious acci-

British Traffic Safety

When the British undertake to deal with a puzzling situation by law, they can be expected to be very thorough about it.

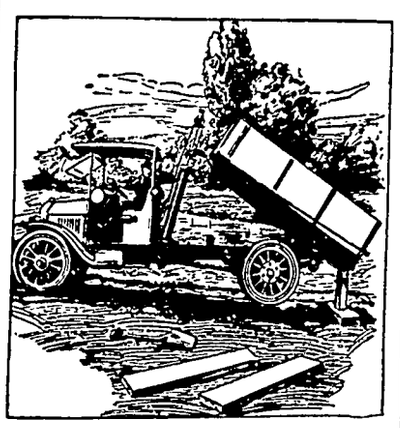
The British parliament is now considering a bill designed to reduce traffic accidents. It goes much further than any law the United States has yet considered, says the Muncie Evening Press.

To begin with it, would license all drivers, make revocation of a license mandatory on conviction of careless driving and compel every autoist to carry liability insurance. It would install mechanical governors on all autos to keep them from exceeding the speed limit. It would borrow from the rules of navigation a provision requiring any driver, when he sees any danger of a collision, to stop his car at once.

These are drastic measures. The British don't do things by halves.

Pulling Trucks Out of Mud Holes Made Easy

On a job in Central America, where a number of self-dumping trucks were used, some of the drivers have a novel and effective method of getting themselves out of mud holes. They merely let the power of the hoist of the truck do the work. The dump body overhangs the rear point of support so that when the front part of the body



Novel Method of Raising Self-Dumping Trucks Out of Mud Holes.

is raised for dumping, the rear end goes downward. Taking advantage of this, the drivers put timber struts under the body as indicated in the drawing. The body, bearing down on the struts, thrusts the wheels out of the mud, permitting the drivers to lay planks under them.—R. C. Hardman, San Jose, Costa Rica, in the Popular Mechanics Magazine.

AUTOMOBILE FACTS

Old friends are the best except in the case of an automobile of 1920 vintage.

* * *

If the world isn't wondering where it can find parking space it is wondering what becomes of all the used cars.

* * *

Collegiate yellow roadsters are out of place in Japan. Yellow, being the mourning color in that country, is not used on automobiles.

* * *

New York is tightening up its traffic ordinances, but it is noted that the jaywalker is to be treated leniently, in deference, no doubt, to the local inhabitant.

* * *

A handy adjunct of the home garage is a battery carrier made from a piece of strip metal fashioned into a "U" shape, with the ends upturned to catch under the handles of the battery.

* * *

Unequal tire pressures mean unequal brakes. Unequal braking friction means a skid in many cases. The motorist interested in safe bad weather car operation will remember this point.

* * *

The popularity of the closed car is blamed for putting two big factories of fur-lined gloves out of business. The management can now commiserate with manufacturers of horse collars.

Plans Outlined to Kill Weeds

Farmers Advised to Plant Smother Crops in Infested Places.

Plans for fighting noxious weeds which cause losses of many thousands of dollars annually to the farmers of Colorado are outlined by Walter Ball of the botany department of the Colorado Agricultural college.

The actual loss due to weeds is not known, but the presence of weed seeds and the large number of weeds actually harvested each year indicate a very high loss, Mr. Ball says.

Principal weed pests on the farms are the perennials such as the wild morning glory, bindweed, poverty weed, Canada thistle and Russian knapweed.

Plan Smother Crops.

In planning crops for this coming spring and summer farmers would benefit by planting smother crops in those places that are heavily infested with bindweed, poverty weed or any of the other more noxious perennial weeds, it is suggested.

"If the weed area is rather large, it should be isolated or farmed alone; if planted in row crops, the rows should be far enough apart to allow thorough and clean cultivation, for eradication of weeds in such an area is more important than the crop produced," declares Mr. Ball.

"If eradication is successful the production of good crops will be possible thereafter.

"If alfalfa is planted on a weedy area, it will suppress the weeds, weaken them and make it possible to kill the weeds after the alfalfa is plowed and cultivation is started again.

"Sweet clover is a very good smother crop and in some cases has eliminated the field bindweed or wild morning glory. By planting sweet clover two years in succession, that is planting the same area twice, a good stand is assured. Being a biennial, clover will give a very effective three years' smother crop."

Pasture Grass Helps.

Tame pasture grass planted in weed-infested areas will be helpful if pastured to sheep, for the weeds will be taken first. Competition for growth, and close grazing by sheep will make it extremely difficult for weeds to grow. If a tame pasture is planted, a good seedbed should be prepared, for grass seeds are very small, and should not be covered deeply. A good seedbed will insure a better stand of grass and therefore greater competition for the weeds.

Much work and trouble with weeds could be avoided by eradicating perennial weeds while in small patches. Everyone confronted by the weed problem should make an effort to learn to distinguish the noxious weeds in order to be prepared to get rid of them when they are first noticed.

Low-Headed Trees Most Desirable for Handling

After the orchard is set is it wise to cut the trees back? It is. With such fruits as peaches and plums the bark is very thin, and if the trees are allowed to head out several feet from the ground it is likely that the exposed body and lower branches will be sun scalded during July or August. When a tree is sun scalded the bark (usually on the west side) peels off and insects enter and damage the trees. To avoid sun scald cut the peach and plum trees back when they are planted to a height of 18 to 20 inches so that the head will start from this height, and the shade furnished by the foliage will protect the body of the tree. Low-headed trees are desirable not only because the possibility of sun scale is eliminated, but because the fruit may be harvested more easily and quickly, and spraying and pruning can be done more thoroughly.

Agricultural Hints

It's the early pruner who gets all his trees in shape.

* * *

Sudan grass is no good for early temporary pasture but it is splendid from July 15 on until frost.

* * *

About three pounds of bright alfalfa or clover hay a day or 400 pounds for the season is usually sufficient for a ewe.

* * *

There is a general rule that it takes 100 tons of alfalfa and about 50 tons of grain to put a 30-pound gain on 1,000 lambs.

* * *

Vaccination or immunization against cholera cannot be safely performed during the last two or three weeks before farrowing.

* * *

Pigs, as also other live stock, seem to be doing better this year on corn of good quality than on what we had to feed them the two previous years.

* * *

The best thing to do for swine flu, which is apparently increasing, is to maintain a high degree of resistance in the herd. Swine should be kept in dry and well-ventilated quarters.

* * *

When it comes to salt the lower animals are "humans." They want salt. And must have it. Lower animals don't get salt sprinkled on their foods, as do humans, but they need it, nevertheless.

John's Mother Praises Doctor

There isn't a mother living who won't agree that no half-sick child should be the subject for an experiment with medicines of uncertain merit. When your child is bilious, headachy, half-sick, feverish, restless, with coated tongue, bad breath, no appetite or energy, you know that nine times out of ten it's a sign his little stomach and bowels need purging. And when you know that for over fifty years leading physicians have endorsed one preparation for this condition, there doesn't seem to be any reason for "trying" things.

Rich, fruity California Fig Syrup clears the little stomach and bowels gently, harmlessly and in a hurry. It regulates the bowels, gives tone and strength to them and to the stomach; and helps to give your child new strength, energy and vitality. Thousands of Western mothers praise it. Mrs. Joseph W. Hill, 4306 Bedford Ave., Omaha, Nebraska, says: "I'll never forget the doctor who got me to give my baby boy, John, California Fig Syrup. Nothing else seemed to help his weak bowels. That was when he was just a baby. He suffered a good deal before I gave him Fig Syrup, but it stopped his trouble quick. I have used it with him for colds and little upset spells ever since. I consider him a Fig Syrup boy."

Insist on the genuine article. See that the carton bears the word "California." Over four million bottles used a year.

First Aid— Home Remedy Week

The Good Samaritan figures in the 1929 "First Aid—Home Remedy Week" and is designated as the "First First Aid." This annual merchandising festival arrives with St. Patrick's Day, continues March 17-23 and marks the eighth anniversary of the plan dedicated to Drugdom by Sterling Products, Incorporated, in 1922 and immediately sponsored by the National Association of Retail Druggists. Seeing the great advertising and sales possibilities in the plan and its helpfulness to humanity, the National Wholesale Druggists' Association has swung behind it with the enthusiastic suggestion that druggists use local newspapers, and providing them with suggestive advertising copy tied to the National slogan, "Fill That Medicine Chest Now!"

Coming at a time when housewives are thinking of house cleaning, the command has added psychological sales value. Secretary S. C. Henry of the N. A. R. D., out of long experience says: "No one knows better than the average retail druggist how much needless suffering there is because most people are neglectful in the matter of making provision for the hour of need which is sure to come when sudden illness or unforeseen accident calls for immediate attention."

"Quick Relief Insurance" is the new definition of First Aid—Home Remedy Week's objective and is thus bringing the nation's "Health Service Stations" into closer every day life.

It's enough to make the pot boil, when the kettle calls it black.

Don't imagine that the hotel runner runs the hotel.

THERE are certain times when nearly every woman should accept the aid and comfort of Bayer Aspirin. Not just for the unexpected headache these tablets relieve so readily. Not just for colds which they check so quickly. Bayer Aspirin brings ease on the days too many women still submit to pain that is not natural, not necessary. This relief is perfectly harmless, as in all uses. Remember this! Look for Bayer on the box and follow proven directions found inside.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

SQUAB RAISING PAYS BIG

Everything You Want in a Fuel

Genuine

KOPPERS CHICAGO COKE

"Clean as the Sun's Heat"

The full-value fuel for home heating. All heat—no smoke, soot or dirt—little ash, none worth sifting. Delivered clean—burns clean. Lighter to lift—quick to respond—makes furnace tending easy. Costs less to buy and less to burn. Enjoy this greater fuel convenience and economy. Order a supply NOW.

Ask Your Dealer to supply you with genuine Koppers Chicago Coke. Be sure you insist on the genuine—only then can you be assured real heating satisfaction.

GUARANTEED

We guarantee genuine Koppers Chicago Coke. If a trial order does not convince you that it is to your advantage to heat your home with this fuel, it is removed at our expense and your money refunded.

KLEMME LOCAL NEWS

Donald Gibbs returned to Klemme last Thursday night. For several weeks he has been working in the east of Iowa, with several other college boys selling subscriptions for magazines. He said the experience was quite novel and that he saw a lot of new country.

Milo Pate: left for Chicago Saturday evening after spending his week's vacation visiting Klemme relatives and friends. Milo is another Klemme boy who is making good Milo is working for a motion picture camera manufacturing cncern.

Dr and Mrs. W F Missman and son Byrnes, expect to leave Sunday for a two weeks vacation at their cottage at Land O'Lakes, Wisconsin. They will be joined by Dr. L. R Parsons and family, of Belmond We expect to hear some great fish stories.

Rev Grosshuesch and family will return the latter part of this week from Menno, South Dakota, where they have been visiting relatives and friend and enjoying a vacation. Rev Grosshuesch will hold services Sunday at the Reformed church.

Miss Gladys Wilson accompanied Miss Agnes Wilson, who has been visiting in Klemme for a week, to her home at Vinton, Friday for a week's visit. Mr Meryle Terry of La Porte City drove up Thursday evening to take the girls to Vinton

Mrs C. F Koraus, Mrs. Frank Muckhohn and Mrs. R. A Jorgenson drove to Britt Wednesday forenoon on business They took carpet rags over to have woven int rugs for the M E Ladies Aid bazaar to be held this fall

A number of relatives and friends had a birthday party on Mrs. Herman Thieman Tuesday, it being her fiftieth birthday Those present at this enjoyable occasion were Gotlieb Goll and family; George Thieman and family; Henry Thieman and family; Henry Jahnke and family; Mr and Mrs Chris Blumer; Mr and Mrs Ed Jacobs; and Mr. and Mrs Fred Warner, of Mason City Mrs Thieman was presented with a fine new kitchen range as a birthday gift.

GOODELL AND VICINITY

Mr a d Mrs Bill Farmen of California are visiting friends here.

Jay Griggs went to Minnesota on business Monday.

Bill Beiers was a Mason City caller Friday.

The Gus O'Krueg family spent Sunday at Bristow.

The hot weather we are having is very unpleasant for harvesting.

Quite a number here attended the American Legion Day at Belmond Thursday.

Most of the farmers are through harvesting now, but the next big job will be threshing.

Miss Garnet Terry of Morris, Ill., is working for Mrs. Jule Cook this summer.

The Sherwood and Cook families attended the Masonic picnic Sunday at Clear Lake.

Mr. Hill of Clarion spent a few days at the home of his daughter Mrs. Hemingway.

Fernon and Nellie Griggs and Dalia Stromer were Mason City shoppers Friday.

Alvin Bachman of Klemme spent Friday with his cousin, Audrey Griggs

Mr. and Mrs. Jule Cook and Mr. and Mrs Leon Sherwood were at Hampton on business Friday.

Mrs Rose Houghton of Marshalltown spent a few days last week with her daughter, Mrs. Conlan.

Mrs. Ed. Hemenway was transacting business in Garner last Wednesday.

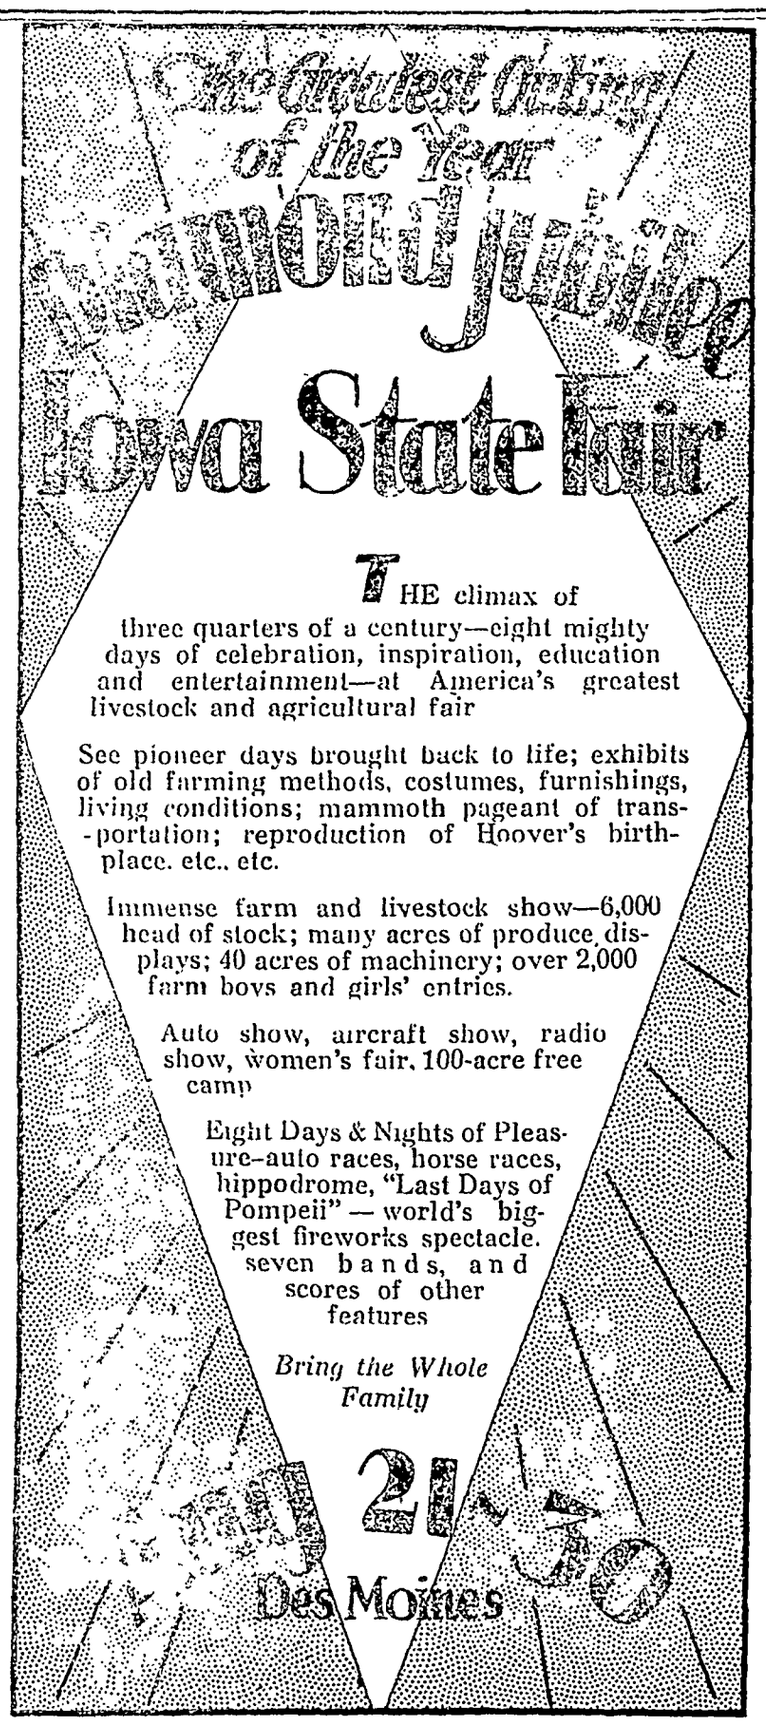
Tony Boller and Geo. Vance spent Sunday sight-seeing at the Grotto at West Bend.

Be sure to attend the Farm Bureau Carnival to be held at the home of Mrs C A Arnold Friday night, August 2nd, and have a good time.

Mr. and Mrs. Tom Roths and sons Junior and Bobby spent Friday at the Rob. Roths home, helping harvest

Mr. and Mrs. Jay Griggs, Nellie and Kenneth visited at the Beckman home near Fertile, and the Gambolle home in Forest City Sunday.

Mr and Mrs. Henry Busse and daughters, Edna, Margaret and Mildred left Saturday morning for St. Cloud, Minnesota where they expect to spend a week with relatives and friends



The Greatest Attraction of the Year
Iowa State Fair
THE climax of three quarters of a century—eight mighty days of celebration, inspiration, education and entertainment—at America's greatest livestock and agricultural fair
See pioneer days brought back to life; exhibits of old farming methods, costumes, furnishings, living conditions; mammoth pageant of transportation; reproduction of Hoover's birthplace. etc., etc.

WHY

Printer's Assistant Is Known as "Devil"

The original printer's devil operated the ink roller in the days of the hand press, says Pathfinder Magazine. In 1683 Joseph Moxon wrote in "Mechanical Exercises" as follows: "The Press-man sometimes has a Week-Boy to Take Sheets, as they are Printed off the Tympan: These Boys do in a Printing-House, commonly black and Dawb themselves; whence the workmen do jocosely call them Devils; and sometimes Spirits, and sometimes Flies." According to a legend, Aldus Manutius, a printer at Venice in the latter part of the Fifteenth century and the first part of the Sixteenth, employed a negro boy as a helper in his shop.

Those were the days when belief in witchcraft was common, and most of the Venetians were not familiar with the colored race. Many people thought the negro boy was an imp or evil genius and began to clamor for an investigation. When the matter came to the attention of Manutius he issued a statement to the following effect: "I, Aldus Manutius, printer to the Doge and the Holy Church, have this day made public exposure of the printer's devil. All who think he is not flesh and blood are invited to come and pinch him." There is no evidence to prove that the incident, if it actually occurred, was responsible for the origin of "printer's devil" as the name of a printer's helper.

Why Transplanting of Races Is Inadvisable

If black absorbs more heat than white, why can the colored race endure hot weather better than the white race?

In speaking of color, in a test made with the various materials dyed different colors and covering blocks of ice to determine which color absorbed the most heat, the blocks under the white material at the end of a given period were larger than the blocks under the black color. The explanation for this, of course, is that white deflects more rays of the sun than black. In speaking of the negro and dark races and their adaptability to heat, this test does not hold good. With the human element it is largely the question of being acclimated. The negro race, as far back as our records run, was a native of the tropical countries. Consequently the transplanting of this race to Northern climates makes its members just as uncomfortable as it would make an Eskimo, also darkskinned, to put him in the extreme South.—Washington Star.

Why Bird Is "Turkey"

In view of the fact that the origin of the turkey is clearly traced to North America, some may wonder how this bird obtained its present name, which would suggest its origin as being Asiatic. Turkeys, on being brought to Spain from the New world, were handled and sold by the Hebrew merchants of that country. As the turkey was quite generally confused with the peacock, it was natural, therefore, that the Hebrew traders should apply to it their name for the peacock, or "tukki." More or less common use of this name followed, which easily became in the English language our present name "turkey." Such an explanation seems to be much more probable than that the name arose as a result of an erroneous impression that the bird originated in or near Turkey.

Why Exercise Is Good
